Agriculture.—In 1955 cash farm income totalled \$518,931,000 (71.3% from crops, 27.9% from livestock, 0.8% from government payments), up 14% from 1954 and 8% from 1953. Wheat accounted for 37.6% (32% in 1954) and cattle for 12.8% of the income in 1955. On Sept. 15, 1956, the commodity index of prices received by the farmers of North Dakota stood at 224% (1909-14 base period), the same as a year earlier.

The spring of 1956 began with inadequate moisture in southern and western counties. Hay was short and cattle were thin and ranges in poor condition; new grass made slow growth. In June drought, heat and hail severely damaged crops and grass along the western edge of the state, in southwestern counties and in spotted areas in the southeast. Rains late in July helped, but by October low moisture made the outlook only fair. In the southwestern counties ranchers had reduced their herds in line with supplies. Black stem rust did little damage to wheat, but drought conditions caused crop yields to vary widely over the state. The flax crop was the largest on record and durum wheat (20,848,000 bu.) the largest since 1914.

In 1955 North Dakota co-operatives had 223,618 stockholders, \$109,727,777 worth of assets and transacted \$247,300,000 worth of business. There were among the co-operatives 282 grain elevators, 136 oil companies, 110 credit unions, 27 creameries and 17 stores.

Employment and Business Activity.—Nonagricultural employment in 1956 (January-August) averaged 113,657, or 2.1% above 1955, compared with 1900 in 1939. The increase was largely in construction. Building permits (January-August) were \$31,358,843, compared with \$24,759,151 in the same months of 1955. In 1956 (January-August) manufacturing workers earned \$74.13 a week (\$69.04 in 1955); on July 1 farm labourers averaged \$155 per month with room and board. In 1955 North Dakota retail sales amounted to \$616,439,654, a record. (E. R.N.)

Mineral Production.—Table II shows the tonnage and value of those mineral commodities produced in North Dakota in 1953 and 1954 whose value exceeded \$100,000. North Dakota ranked 43rd among the states in the value of its mineral output in 1954, with 0.11% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Northwestern States*, 2nd ed. (1946).

Northern Rhodesia: see RHODESIA AND NYASALAND, FEDERATION OF.

Northwest Territories. The Northwest Territories comprise all that part of Canada north of the 60th parallel of north latitude, except the portions thereof within the Yukon Territory and the provinces of Quebec and Newfoundland; it also includes the islands in Hudson bay, James bay and Ungava bay, except those within the provinces of Manitoba, Ontario and Quebec. Area: 1,304,903 sq.mi., of which 665 sq.mi. is water; pop. (1951 census) 16,004, including 144 whites, 3,803 Indians and 6,857 Eskimos.

For purposes of organization and administration, the territories were divided by order in council dated March 16, 1918, into the districts of Mackenzie (527,490 sq.mi.), Keewatin (228,000 sq.mi.) and Franklin (549,253 sq.mi.). The Northwest Territories act, 1952, as amended, provides for the government of the territories by a commissioner under instruction given from time to time by the governor in council or the minister of northern affairs and national resources. Legislative powers are in the hands of a council of nine members.

During 1956 the commissioner of the Northwest Territories

was R. G. Robertson, deputy minister of northern affairs and national resources. Appointed members of the legislative council were: F. J. G. Cunningham, deputy commissioner; L. C. Audette; L. H. Nicholson; C. M. Drury; and Jean Boucher. Elected members were: John Parker; Frank Carmichael; Robert Porritt; and J. W. Goodall.

Education.—In 1956 the department of northern affairs and national resources operated federal schools at Fort Smith, Fort Resolution, Fort Simpson, Hay River, Fort Liard, Fort Rae, Fort McPherson, Rocher River, Fort Good Hope, Fort Norman, Fort Franklin, Arctic Red River, Marie River, Lac la Martre, Aklavik, Coppermine, Tuktoyaktuk, New Aklavik, Chesterfield Inlet, Cape Dorset, Frobisher Bay and Pangnirtung on Baffin Island, Coral Harbour on Southampton Island, and also at Fort Chimo and Port Harrison in the province of Quebec. A number of these schools were for Eskimos. A school was operated by the Discovery Yellowknife mines, 60 mi. N. of Yellowknife, and one was also operated by Eldorado Mining and Refining Ltd. at Port Radium. Schools were operated at a number of the settlements by missions of the various churches with financial assistance from the federal government. Yellowknife had the only organized school districts, where a 12-room public and high school and a 5-room separate school were in operation. Correspondence courses were available free of charge to any child whose parents requested them or to any adult who wished to enrol. A vocational training program suitable for residents of the Northwest Territories and special curriculums for use in the Mackenzie district and in Eskimo schools were being developed.

Public Health and Welfare Services.—Schools in most of the settlements are staffed by teachers who assist with welfare needs and organize community recreational programs in addition to their work in the classrooms.

During 1956, 11 hospitals were operated in the Northwest Territories, 8 by missions, 1 by a locally elected hospital board at Yellowknife and 2 by private companies. Eight nursing stations were in operation. Qualifying hospitals and nursing stations received grants from the territorial government.

Under the National Health Grants program, an eyesight survey was continued in the Mackenzie district, while chest X-rays were carried out during the summer months in conjunction with the department of national health and welfare. Tuberculosis treatment, dental services for children in Yellowknife, Fort Smith and Hay River, and treatment of crippled children was provided without charge. Commencing April 1, 1956, free cancer diagnosis, transportation and treatment were provided.

In 1956 approximately 130 persons received old-age assistance and 18 persons received blind persons' allowance. The territorial government and the government of Canada shared the cost of providing allowances up to \$40 a month to residents permanently and totally disabled.

A physician and dentist accompany the annual eastern arctic patrol, treating persons at points of call and visiting many settlements to make physical examinations and X-ray surveys and to administer preventive inoculations.

Transportation and Communications.—A direct inland water transportation route for a distance of about 1,700 mi. is provided by the Athabasca, Slave and Mackenzie river systems. Subsidiary routes on Lake Athabasca, Great Slave lake and Great Bear river and lake total more than 800 mi. The Mackenzie highway, connecting Grimsby, Alta., with Hay River on Great Slave lake, continued to provide service during 1956. Scheduled air mail, passenger and express services were operated throughout the year to most of the settlements in the Mackenzie district.

Radio communications between nearly all settlements and trading posts in the territories and outside points were maintained through government and private radio stations.

Eastern Arctic Patrol.—The 1956 annual eastern arctic patrol carried out by the government ship "C. D. Howe" discharged administrative responsibilities and continued the extensive annual health program. This ship also carried supplies and replacement staffs to eastern arctic settlements, including Royal Canadian Mounted Police detachments, schools, hospitals and nursing stations, trading posts and missions.

Agriculture and Fisheries.—Limited farming and horticultural activity is encouraged and assisted by the department of agriculture, which maintains an experimental substation at Fort Simpson. A limited experiment was being carried out with Eskimos at Fort Chimo to determine the feasibility of growing field and garden crops and raising livestock and poultry.

During the summer season of 1955 and the winter season of 1955-56, commercial fishing on Great Slave lake and other waters in that vicinity produced a total catch of 7,394,000 lb., with a market value of \$1,530,000. Whitefish, lake trout and Inconnu were the principal species taken.

Hunting and Trapping.—Fur production in the territories, during the year ended June 30, 1955, was valued at \$1,166,919 with a total of 477,611 pelts taken during that period. A large part of the catch was muskrats. Trapping remains the principal occupation of the native population.

The herds of caribou continued to be one of the chief food resources for the Indians and Eskimos, and every effort was being made to preserve this resource for the natives.

Five semidomesticated reindeer herds were maintained by the federal government in the Mackenzie delta region for the benefit of the native population; three of the herds were under Eskimo management and one was privately owned. At the reindeer roundups in 1955 there were about 6,502 animals in the five herds. Large buffalo herds were also maintained in Wood Buffalo National park. A limited slaughter of reindeer and buffalo for meat production is carried out annually.

Mineral Production.—Mineral production in the Northwest Territories during 1955 was valued at \$23,450,792, of which pitchblende accounted for \$12,000,000, gold \$10,990,405 and silver \$101,595. Crude oil is produced and refined at Norman Wells on the Mackenzie river, with 1955 production totalling 374,000 bbl. After being processed at the local refinery, the oil was shipped to various points on the Mackenzie river.

(R. G. R.)

ENCYCLOPEDIA BRITANNICA FILMS.—*Prairie Provinces of Canada* (1943).

Norway.

A democratic monarchy of northern Europe, Norway is bounded north by the Arctic ocean, east by Finland, the U.S.S.R. and Sweden, south and west by the North sea. Area 149,284 sq.mi. Pop.: (1950 census) 3,278,546; (1955 est.) 3,441,000. Capital: Oslo; pop. (1950 census) 434,047, (1956 est.) 451,247. Other principal cities (1950 census): Bergen 112,845; Trondheim 56,669; Stavanger 50,647. Religion: Lutheran Christian. Ruler in 1956: King Haakon VII. Prime minister: Einar Gerhardsen.

Spitsbergen (official name, Svalbard), Norwegian since 1925, is an archipelago lying about midway between northern Norway and the north pole. Area: 23,958 sq.mi. Pop. (1950): 3,761, including 1,156 Norwegians and 2,605 Russians.

History.—Industrial production continued to rise and was up, for the first half of 1956, about 5% over the same period in 1955. Export trade for the same six-month period rose 18.5% over 1955, to a total value of kr. 2,513,000,000 (about \$350,000,000); import surplus was cut almost 10%. Imports came chiefly from Great Britain (16%), west Germany (almost 16%) and the United States (12%). The herring catch was the largest ever—1,200,000 tons, for a value of kr. 247,000,000 (about \$35,000,000).

The new passenger ship "Bergensfjord," 18,500 tons, made its maiden voyage to New York city in June. Agreement was signed with Sweden for the modernization of an ancient trade route; wharfage and oil storage was to be built on Trondheim fiord and a good road constructed across the mountains from Trondheim to Ostersund; Sweden would do part of the building and would bear two-thirds of the cost of the highway.

Norway's merchant fleet was second only to that of Great Britain as a user of the Suez canal—in 1954 a total of 1,728 Norwegian ships passed through the canal (18,700,000 gross tons). Norway was therefore intensely interested in the dispute created by Egyptian seizure of the canal.

Relations with the Soviet Union were not easy. In Nov. 1955 Prime Minister Gerhardsen visited Moscow and negotiated a trade treaty providing for kr. 120,000,000 per year of imports from the U.S.S.R., against somewhat larger exports; and preliminary agreement was reached for the department of power resources on the Pasvik river on the northern border between Norway and the U.S.S.R. The most serious incident of the year was the invasion of Norway's coastal fishing waters by Russian trawlers. Sixteen of the vessels were captured and were fined kr. 629,500 (almost \$90,000) for poaching. After initial protest the Russians accepted the verdict and paid the fines.

Representatives of the Lapps held in the summer of 1956 a three-day conference at Karasjok. About 200 were in attendance, including observers from the Scandinavian lands and England, the United States and west Germany. The delegates of the Lapps in Norway, Sweden and Finland (about 20,000 of the total of

approximately 33,000 Lapps live in Norway) agreed to establish a joint Nordic Lapp council, which would have a majority of Lapp members. The purpose would be to study and recommend action on problems such as education and industrial and mining development affecting the adaptation of the Lapps to modern society. (F. D. S.)

Education.—Schools (1952-53): primary 5,470, pupils 355,655, teachers 12,693; secondary 279, pupils 46,296, teachers 2,564; folk high schools 76, pupils 4,199; vocational 477, pupils 38,649; teacher training schools (including vocational and physical education) 19, students 2,882. Institutions of higher education (1953-54) 10, of which 2 universities; university students (spring 1954) 3,785, other students 1,831.

Finance and Banking.—Monetary unit: krone (pl. kroner), with an exchange rate of kr. 7.143 to the U.S. dollar. Budget: (1955-56 approved est.) revenue kr. 4,560,000,000, expenditure (current) kr. 4,037,000,000; (1956-57 est.) revenue kr. 4,947,000,000, expenditure (current) kr. 4,327,000,000. Internal debt (June 1954) kr. 4,549,900,000; external debt kr. 1,420,500,000. Currency circulation: (Feb. 1955) kr. 2,887,000,000; (Feb. 1956) kr. 2,966,000,000. Deposit money: (Feb. 1955) kr. 6,458,000,000; (Feb. 1956) kr. 6,259,000,000. Gold and foreign exchange: (Dec. 1954) U.S. \$190,600,000; (Dec. 1955) U.S. \$225,800,000.

Foreign Trade.—(1955) Imports kr. 7,782,000,000; exports kr. 4,528,000,000. Main sources of imports: U.K. 20%; Sweden 16%; Germany 14%; other continental E.P.U. (European Payments union countries) 20%; U.S. and Canada 13%. Main destinations of exports: U.K. 22%; Germany 11%; Sweden 9%; other continental E.P.U. 22%; U.S. and Canada 10%. Main exports: fish 15%; wood pulp 12%; paper 10%.

Transport and Communications.—Roads (June 1954) 46,810 km. Motor vehicles in use (Dec. 1954): passenger 102,339, commercial 75,780. State railways (1954) 4,492 km.; passenger-km. (June 1953-54) 1,538,000,000; freight, ton-km. (June 1954-55) 1,476,000,000. Shipping: merchant vessels of 100 gross tons and over (July 1955) 2,351; total tonnage 7,249,087; net freight earnings (1955) kr. 2,235,000,000. Air transport (1955): passenger-km. 264,515,000; freight, ton-km. 7,976,000. Telephones (June 1954) 558,074. Radio receiving sets (1954): 925,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 32,000 (41,000); barley 205,000 (224,000); oats 98,000 (161,000); rye 1,000 (2,000); potatoes 981,000 (1,130,000). Food production (metric tons, 1955): milk (delivered) 1,159,600, butter (factory) 10,560, cheese 28,920; meat (1954): beef and veal 46,000, mutton and lamb 16,000, pork 43,000. Livestock (Sept. 1955): cattle 1,171,000; sheep 1,922,000; horses 150,000; (June 1954) pigs 406,000; goats 123,000. Fish landings (1954) 1,860,000 metric tons. Whale oil production (1954) 177,140 metric tons; value of oil and by-products kr. 248,400,000.

Industry.—Fuel and power (1955): coal 322,800 metric tons; manufactured gas 49,560,000 cu.m.; electricity 22,272,000,000 kw.hr. Production (metric tons, 1955): iron ore (metal content 65%; including ferro-titanium) 1,383,600; pig iron 333,600; crude steel 265,600; zinc (smelter) 44,160; copper (smelter) 13,440; aluminum 77,880; cement 830,400; pyrites (1954) 795,000; nitrogenous fertilizers, N content (1954-55) 194,000; wood pulp (mechanical, 1954) 644,000, (chemical, 1954) 590,000; newsprint (1954) 164,000; other paper (1954) 349,000; sawn softwood (1954) 1,588,000 cu.m.

ENCYCLOPEDIA BRITANNICA FILMS.—Norway (1955); Scandinavia—Norway, Sweden, Denmark (1950); Tale of the Fiords (1955).

Nose and Throat, Diseases of: see EAR, NOSE AND THROAT, DISEASES OF.

Nova Scotia. Second smallest of the Atlantic provinces of Canada, Nova Scotia entered the confederation in 1867. Area: 21,068 sq.mi. Pop.: (1951 census) 642,584; (official est. 1955) 683,000. Capital: Halifax, pop. (1951 census) 85,589.

History.—The Progressive Conservative party, under the leadership of Robert L. Stanfield, defeated the government of Premier Henry D. Hicks in a provincial election on Oct. 30, 1956, ending 23 consecutive years of Liberal party administration in Nova Scotia. Only slight recovery was noted in the declining coal

NORWEGIAN PATROL BOAT (left) closing in on a Soviet fishing trawler off the Norwegian coast near Aalesund, Nor., in Feb. 1956. The Soviet vessel was the fifteenth to be apprehended violating Norwegian territorial rights

industry in the first half of 1956, although economic conditions generally throughout the province gained record levels during 1955 and the early part of 1956. An unusual ice storm in Jan. 1956 caused heavy damage to communications, property, orchards and timberlands, and coupled with subsequent unseasonal rains resulted in further property loss through floods.

A new car ferry service between Yarmouth and Bar Harbor, Me., was inaugurated to promote better communications between the province and the eastern United States. At Baddeck, a museum to commemorate the life and work of Alexander Graham Bell, physician and inventor, was completed and opened to the public.

Education.—Latest available statistics for provincially controlled schools are for 1954 when \$19,145,375 was expended on education. The annual public school enrolment for the term 1954-55 was 151,652 students, with a daily average attendance of 136,496 students. A total of 5,345 teachers were engaged. There were 1,751 rural and village schools with 888 teachers and 250 urban schools with 2,357 teachers.

Public Health and Welfare.—At March 31, 1955, \$1,504,574.90 had been paid in mothers' allowances during the fiscal year to 2,077 persons, while at the same time 5,178 persons were receiving old-age assistance. The total old-age assistance paid during the fiscal year was \$2,128,526.78. Blind pensioners totalled 706, receiving \$330,400.27. Disability pensions were active Jan. 1, 1955, and for the period from January 1 to March 31 of that year, 285 persons received \$24,282.05. On March 31, 1954, there were 3,206 patients registered in 68 public hospitals, while in 1951, 3,140 doctors and nurses, working in 89 hospitals, which had 7,600 beds, provided 871,606 patient days on revenue totalling \$6,159,633.

Transportation and Communications.—In 1954, there were 90,068 passenger automobiles registered. At March 31, 1955, there were 15,139.4 mi. of highways, 1,666.5 mi. of which were paved. In 1951, there were 116,941 telephones in use. In 1953 there were 104,167 radio receiving sets registered, and 9 airports.

Banking and Finance.—At March 31, 1955, the net direct provincial debt, sinking funds, was \$121,011,539.08, while the total direct debt was \$15,327,478. The provincial revenue for the fiscal year ended March 31, 1955, was \$52,915,804.04, while expenditures were \$46,938,708.46. There were six federally chartered banks, with 153 branches, operative in the province at April 30, 1956, and one federal reserve bank (Bank of Canada), Halifax. At Sept. 30, 1954, there were 220 credit unions registered, with membership of 51,952 persons, and total assets of \$7,927,069.37. Only 10 of those chartered were active, and these granted loans totalling \$5,047,301.39. For the fiscal year ended Sept. 30, 1955, there were 218 chartered credit unions, 28 inactive, with assets of \$8,654,478.64 and membership of 51,985, which granted loans totalling \$5,525,364.90.

Agriculture.—Cash income from sale of farm products in 1954 was \$43,100,000 (all figures here, unless otherwise indicated, are official estimates), a higher figure than for the previous year, and gross farm income was \$39,398,000, a lower figure than for 1953. The net income of \$19,912,000 was also lower. The total income from field crops was \$18,233,000 from 18,800 ac. The principal field crops according to income were: hay \$1,195,000, potatoes \$3,421,000, oats \$1,916,000, and roots \$1,152,000. Income from other principal sources were: dairy products \$11,946,000, forest products \$7,260,000, cattle and calves \$5,843,000, eggs \$5,197,000, poultry \$3,863,000, fruits \$2,730,000 and hogs \$2,707,000.

Estimated numbers of livestock on farms at June 1, 1954, were: horses 100,000, cattle 204,000, sheep 99,000, swine 39,000 and poultry 1,707,000. **Fisheries, Furs and Forestry.**—Last available figures on fisheries were for 1953 when the landed value of fish was \$21,410,000. Principal income from forest products in 1954, with quantities marketed in parentheses, were: planks and boards, spruce, \$5,107,743 (71,326 M.B.M. [thousand board measure]); wood pulp mechanically prepared, \$3,526,078 (1,010,000 cwt.), and newsprint, \$18,840,008 (3,138,476 cwt.). The value of furs from animals in captivity at Dec. 31, 1954, was estimated at \$149,780.

Manufacturing.—Factory shipment of manufactured goods during 1954 totalled \$300,073,000 wholesale value, compared with \$320,012,000 in 1953. The gross value of manufactured goods during 1954 was set at \$5,000,000, a lower figure than during the previous two years. In 1951, there were 30,512 employees in 1,474 establishments earning \$63,975,754. **Mining.**—Mineral production for 1955 was approximately \$67,800,000 in value, compared with \$68,000,000 in 1954. Nineteen companies operative in the calendar year 1955 produced 5,730,743 tons of coal, compared with 5,997,761 tons net for the similar period in 1954. Mining of bituminous coal is about 76% of the province's production of mineral wealth, and the industry in 1954 employed a daily average of 10,609 persons. Barytes, 98% of the Canadian production of which comes from the province, totalled 100,300 tons in 1954. Salt totalled 147,457 tons, a record output. The production of gypsum showed an increase over the previous year and the best total to date, at 3,380,669 tons, 80% of the total Canadian production in 1954. (L. S. L.)

Nuclear Studies: see ASTRONOMY; PHYSICS.

Nursing. During 1956 congress took action, long urged by organized nursing, to alleviate the critical shortage of supervisory, administrative and nursing education personnel in the United States. Under title II of the Health Amendments Act of 1956, \$2,000,000 was authorized for the 1956-57 fiscal

year for advanced preparation of professional nurses for positions in these areas. The Health Amendments act also provided for traineeships in graduate or specialized public health training for professional public health personnel, including nurses, and for grants to states to expand and improve practical nurse training under vocational education.

Beginning in 1955 and continuing through 1956 the National League for Nursing made available, through a grant from the Commonwealth fund, a limited number of fellowships for master's and doctoral study to nurses with the highest potential for leadership in administration, research, supervision and teaching. By Nov. 1956, 29 doctoral and 13 master's awards had been made.

In its first year of operation the American Nurses' Foundation, Inc., made seven grants for research studies of nursing functions. The foundation was continuing and expanding the program of nursing research which had been conducted since 1950 by the American Nurses' association. A preliminary report on studies of nursing functions conducted in 17 states was released at the American Nurses' association convention in Chicago, Ill., in May.

The National Institutes of Health made a grant to the American Nurses' foundation for a study of public health nursing. This study was the only one being conducted by the foundation staff itself. It was started in agencies in New York and New Jersey and was to be extended to the south or west.

The U.S. public health service again made available \$625,000 for research grants and fellowships in nursing. These funds were for the fiscal year which began July 1, 1956.

Statements of functions, standards and qualifications for practice in various areas of nursing were approved at the convention in 1956. These statements, in preparation since 1952, were designed to serve as guides in the more efficient use of nursing skills. Nurses throughout the country assisted in their preparation. The statements were to be revised as needed to keep them abreast of changing practice.

During 1956 the National League for Nursing placed increased emphasis on efforts to meet the need for adequate nursing care for the mentally ill. A series of five regional conferences and one national conference were held to discuss preparation of graduate psychiatric nurse specialists.

Activities designed to help hospitals and nursing homes improve the care of patients through better utilization of existing personnel were continued. Regional institutes were held for teacher-trainers, who in turn conducted workshops for nurses assigned by hospitals to train nursing aides. Nearly 100,000 nursing aides employed by participating hospitals had been reached through the teacher-trainer program.

A nation-wide conference was held in 1956 to promote better referral of patients from hospitals to homes so that persons, wherever they may be, might receive the nursing care they need.

A national inventory of professional registered nurses was to be conducted in 1957-58. Rapid progress with plans for the inventory was made possible by widespread adoption of a new registration form for use by state boards of nursing. The new form greatly facilitated the collection throughout the country of uniform data regarding nursing.

New data on earnings, hours and other employment conditions of hospital nurses were collected by the bureau of labour statistics. The bureau surveyed various categories of hospital employees, nonprofessional as well as professional, in representative hospitals in approximately 20 urban areas throughout the country. This was the first time that nurses' salaries and employment conditions had been studied in this way. (See also WORLD HEALTH ORGANIZATION.) (V. L. BT.; J. L. CN.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Home Nursing* (1941).

Nutrition, Experimental. Dietary Fat and Blood Lipids.

Many investigators had associated high plasma lipid (blood fat) levels with atherosclerosis (abnormal thickening and hardening of the walls of the arteries). Therefore, any dietary factor that controls these plasma components might be of great importance.

J. M. R. Beveridge and his associates studied the effects of cholesterol and animal and vegetable fats incorporated into homogeneous formula diets on plasma lipids. Five healthy men, aged 33 to 41 years, consumed alternately their customary diets and homogenized "formula" diets. The formula diets varied both in cholesterol content and in the amount and type of fat. Blood samples were taken throughout the study, and the plasma was analyzed for lipid values.

Each subject ate his customary diet ("rest" diet) for a preliminary period of 14 days. For the next 12 days the subjects were fed formula diets with 28.4% of the total calories supplied by vegetable fat (corn oil). Following another 14-day period on their customary diets, the subjects were fed the same formula diet with the inclusion of cholesterol (200 mg. per 950 cal.) for 11 days. The subjects then returned to their customary diets for two weeks. For the next 11 days they consumed a formula diet with vegetable fat increased to supply 58.5% of the total calories. The next rest period was followed by an 11-day period of formula feeding in which the high vegetable fat diet was replaced by a similar diet which supplied 58.5% of its total calories in the form of butterfat. Following a final rest period, the subjects were fed a high vegetable fat diet supplemented with an amount of cholesterol equal to that contained in the butter diet for 11 days.

The diets containing vegetable fat, with or without supplementary cholesterol, led to decreases in plasma lipid levels. When the subjects were on their customary diets, the lower plasma cholesterol levels that followed the consumption of the vegetable fat formulas returned to pre-experimental levels. Thus, the same levels were present before each experimental period. When butterfat was included in the formula diet, the plasma cholesterol increased on the fourth and seventh days and then returned to initial levels.

The authors concluded that under the conditions of this study there was a highly significant statistical difference between the effects of vegetable fat and animal fat on the blood lipids. The decrease in plasma lipids appeared to be a real effect associated with the diet containing vegetable fats. This effect was not observed when butterfat supplied the dietary fat.

Diet and Serum Cholesterol.—High levels of fat and cholesterol in the blood had been associated with atherosclerosis. It was believed that the concentration of cholesterol in the blood might be affected by various components of the diet.

A. Keys and co-workers studied the effect of dietary cholesterol on blood cholesterol levels in a series of experiments. No relationship between dietary cholesterol and the total amount of cholesterol in the blood was observed in two cross-sectional surveys in Minnesota on young men and four surveys on older men. In two surveys in Sardinia no differences were observed in the serum (blood) cholesterol concentrations of men of the same age, physical activity and relative body weight. Although their general dietary patterns were similar, their cholesterol intakes differed markedly.

In another study, two groups of men of similar age and economic status were studied over a four-year period. The diets of one group of 33 men were consistently low in cholesterol, while the diets of 35 men in the second group were consistently high. No differences were noted in the blood cholesterol levels of these two groups.

In still another experiment, comparisons of blood cholesterol

levels were made of 23 men before and after they had doubled their cholesterol intakes and of 41 men who cut their cholesterol intakes by 50%. No changes in blood cholesterol levels were noted in either group.

After these and several other experiments, it was concluded that the blood cholesterol level in an adult man was essentially independent of the cholesterol in his diet.

Obesity and Physical Activity.—M. L. Johnson and associates studied the relative importance of inactivity and overeating on energy balance in high school girls. These workers compared the food intake and activity of 28 obese and 28 non-obese girls of similar height, age and grade.

Both groups were found to be relatively inactive; 90% of the obese girls' time and 85% of the nonobese group's time was spent in sleeping, lying still or sitting. The nonobese group, however, participated in active sports and other strenuous activities to a much greater extent than the obese group.

Caloric intake of the obese group was significantly lower than that of the nonobese group. Caloric intake and activity were compared for each group to determine the important factor in the development and maintenance of obesity. On a statistical basis, it appeared that inactivity was much more important than overeating in weight gain. Thus, inactivity might be a major factor in the increased incidence of obesity.

Fertilizers and the Nutritional Value of Foods.—The influence of soil improvement on human health by its possible effect on the nutritional composition of plants and animal products has been a subject of much research. This subject was pursued in a ten-year study undertaken by Michigan State college (now Michigan State university, East Lansing) in 1945. The effects of soil fertility on crop quality, animal nutrition and the nutritional value of animal products were observed. In one experiment, two herds of dairy cattle were maintained on feed produced at an experimental farm. Twenty cows were fed rations produced on soil of low fertility, and 16 were fed rations produced on fertilized soil. Careful records were kept of the health of the animals in the herds, their milk production, efficiency of the milk production and the composition and nutritive value of the milk.

The researchers found that the principal effect of soil improvement was to increase the yield of crops; little difference in the composition of the crops produced on the fertilized and on the unfertilized soils was noted. Furthermore, animals consuming crops produced under the two soil fertility levels did not differ in their health or in their milk production. Although some variations in the chemical composition of the milk produced were observed, none of these differences in composition was related to differences in the feed sources. Thus feed produced on low-fertility soil did not have a detrimental effect on the milk produced. The results of this experiment therefore pointed out that soil fertilization affected yield rather than the nutritional quality of the crop.

In the Michigan State university experiment, commercial fertilizers were used almost exclusively. The efficacy of such inorganic fertilizers in contrast with organic sources of fertilizing elements, such as compost and manure, had long been questioned. Claims had been made that the organic sources were superior to the inorganic sources. In addition, some reports stated that the extensive use of inorganic fertilizers had resulted in a decline in the nutritional quality of present-day food supplies.

L. A. Maynard reported that the results of many observations did not substantiate these claims. In one experiment, the nutrient composition of potatoes and seedling rye grown on soil fertilized with manure for a period of 25 years was compared with similar crops grown on soil treated with inorganic fertilizers for the same period of time. No difference in the vitamin C, iron and copper content of potatoes grown on the two soils was observed. Like-

wise, the vitamin C and carotene content of the rye grown on soil treated with organic fertilizers was the same as that in rye raised on soil fertilized with inorganic elements.

These experiments did not substantiate the claims that the use of inorganic fertilizers devitalizes soil and reduces the nutritive value of food supplies. They did indicate that soil fertilization does increase crop yield and thereby affects health by increasing food supplies.

Nuts. Tree nut production in 1956 in the U.S. was about 211,000 tons, 6% larger than in 1955 and 9% above average. Included were a record almond crop, an above average pecan crop, a smaller walnut crop than in 1955 and a filbert crop only one-third as large as in 1955. Carry-over stocks were low, except for pecans. Imports of tree nuts during 1955-56 totalled about 15,000 tons, approximately equal to domestic production, but only 12% consisted of the four major types produced domestically.

The pecan crop was indicated at 160,700,000 lb. as compared with 147,860,000 lb. in 1955 and an average for 1945-54 of 137,880,000 lb. Prices were sharply lower than the record 40.9 cents per pound obtained for improved varieties and 29.6 cents per pound for seedlings received for the 1955 crop.

The U.S. crop of Persian (English) walnuts, produced largely in California, was 72,000 tons as compared with 77,400 tons in 1955 and an average for the previous decade of 73,670 tons. Though smaller imports were anticipated in 1956-57, prices were expected to average below the \$561 per ton received for the 1955 crop.

Production of 84,300 tons of walnuts in other countries was the largest since 1931; Italy produced 55,000 tons as compared with a previous record in 1955 of 29,000 tons.

The California almond crop was a record large one of 51,000 tons, 33% larger than the 38,300 tons of 1955 and 30% above the average for 1945-54 of 39,330 tons. Prices dropped below the high average price of \$861 per ton received for the 1955 crop. The important Mediterranean basin almond crop was greatly damaged by cold. An indicated 40,200 tons (shelled) in 1956 was a record low, about half the average crop of 80,700 tons.

The 1956 U.S. filbert crop from Oregon and Washington, badly damaged by a winter freeze, was the smallest since 1940, 3,035 tons as compared with 7,710 tons in 1955 and an average crop of 7,837 tons. Prices were higher than the average \$420 per ton received for the 1955 crop, and larger imports were in prospect for 1956-57.

The foreign commercial filbert crop was estimated at near 13,500 tons (unshelled) as compared with 119,000 tons in 1955 and an average (1949-53) of 113,200 tons. Turkish commercial production of filberts was estimated at a record 150,000 tons, exceeding the previous 1954 record of 135,000 tons and much in excess of the small 1955 crop of 57,000 tons.

Production of Brazil nuts was indicated at a record 41,000 tons as compared with 38,500 tons in 1955 and an average of 31,000 tons for 1949-53. India, producing as many as 60,000 tons of cashew nuts per year, planted to reach a goal of 80,000 tons by 1960. The pistachio nut crop of Turkey was estimated

at 9,500 tons, 1,000 tons larger than in 1955.

Nyasaland: see RHODESIA AND NYASALAND, FEDERATION OF.

Oats. The 1956 U.S. oat crop of 1,154,595,000 bu. was the second smallest since 1945, 23% less than the record crop of 1955 and 13% below average. Planting intentions in March of 46,063,000 ac., 4% less than 1955, were further reduced by both drought and excessive rainfall, but more especially by some destruction of the growing crop to qualify acreage for the soil bank program. The 35,427,000 ac. harvested were nearly 10% fewer than in 1955 and less than the 1945-54 average of 38,912,000 ac. Average yield was 32.6 bu. per acre as compared with the record 38.3 bu. per acre in 1955 and the 1945-54 average of 34.1 bu. per acre. Minnesota with 171,017,000 bu. displaced Iowa (144,585,000 bu.) as the leading producer, followed by Illinois (139,886,000 bu.) and Wisconsin (129,122,000 bu.).

Table I.—U.S. Oat Crops

Item	Indicated 1956	1955	Average, 1945-54
Total production (thousands of bushels)	1,154,595	1,499,282	1,327,496
Acreage harvested (thousands)	35,427	39,138	38,912
Yields (bushels per acre)	32.6	38.3	34.1

A record high carry-over on July 1 of 347,000,000 bu., plus the new crop, provided a total supply about 303,000,000 bu. less than the 1,805,000,000 bu. record high oat supply of 1955-56. Prices to producers rose, contrary to the usual seasonal trend, from about 62 cents per bushel in the late spring to 69 cents per bushel in October. The official support price on the 1956 crop, lowered to 59 cents per bushel (70% of parity), as compared with 61 cents per bushel on the 1955 crop, was later increased to 65 cents (76% of parity). Imports of about 20,000,000 bu. from Canada were anticipated in 1956-57, as compared with 3,000,000 bu. in the previous year.

Table II.—Oat Production of the Principal Producing Countries

Country	(In thousands of bushels) Indicated 1956	1955	Average, 1945-49	Average, 1935-39
United States	1,154,595	1,499,282	1,376,527	1,045,329
U.S.S.R.	720,000	1,165,000
Canada	535,000	403,835	326,437	338,071
France	275,580	250,770	221,821	329,304
United Kingdom	178,570	189,630	204,692	138,628
Western Germany	163,280	170,680	144,500	194,500
Sweden	72,890	41,130	58,000	87,198
Finland	61,000	47,000	35,275	45,000
Denmark	58,150	59,450	67,820	70,205
Argentina	49,810	49,310	50,182
Australia	70,630	33,249	23,351

World oat production of 4,250,000,000 bu. was smaller than the 4,435,000,000 bu. in 1955 or the 4,367,000,000-bu. average prewar crop but above the 3,920,000,000-bu. average for 1945-49. The 127,190,000 ac. harvested was slightly more than the 126,970,000 ac. in 1955 but far less than the 144,010,000-ac. average for 1935-39. The U.S. accounted for most of the decline; western Europe had a somewhat larger crop than in 1955, and Canada's crop was the largest since the record one of 1942.

Oat stocks on July 1 in the principal exporting countries were 562,000,000 bu. as compared with 460,000,000 bu. a year earlier and the 407,000,000-bu. average for 1945-49. (J. K. R.)

Obituaries. The following is a selected list of prominent men and women of the United States and other countries, who died during the year 1956:

Abbott, Allan, U.S. educator (b. Brooklyn, N.Y., Feb. 15, 1876—d. New York N.Y., March 21, 1956).
Adams, Earl Frederick, U.S. Baptist clergyman (b. Palmyra, N.Y., May 28, 1900—d. Washington, D.C., Nov. 1, 1956).

Adams, Walter Sydney, U.S. astronomer (b. Antioch, Syr., Dec. 20, 1876—d. Pasadena, Calif., May 10, 1956).

Alexander, Will Winton, U.S. government official and clergyman (b. Morrisville, Mo., July 15, 1884—d. Chapel Hill, N.C., Jan. 13, 1956).

Allen, Fred (JOHN FLORENCE SULLIVAN), U.S. humorist (b. Cambridge, Mass., May 31, 1894—d. New York, N.Y., March 17, 1956), entertained a generation of radio (and later television) audiences from the time of his debut on the air in Oct. 1932. Starting in vaudeville as a juggler and humorist, he toured the U.S. and Australia. Later he switched to humour alone. He played in several successful Broadway musical comedies and in such motion pictures as *Thanks a Million* and *Love Thy Neighbor*. Allen and his wife Portland gained fame in their weekly radio program "Allen's Alley," which had an estimated 20,000,000 listeners at the height of its popularity. Allen was a dead-pan humorist, specializing in ad lib remarks and trenchant comments on current affairs. He wrote *Treadmill to Oblivion*, published in 1954.

Althouse, John George, Canadian educator (b. Ailsa Craig, Ont., 1889—d. Toronto, Ont., Aug. 2, 1956).

Ambedkar, Bhimrao Ramji, Indian statesman (b. Ratnagiri, Bombay, April 11, 1893—d. New Delhi, Dec. 6, 1956), devoted his life to the welfare of the people of the depressed classes or the scheduled castes as they later became known. In early life he had personally suffered the humiliations and handicaps of untouchability but through the enlightened intervention of the Maharajah Gaekwar of Baroda he was granted a scholarship which enabled him to study in the United States, Germany and Great Britain. On returning to India he settled in Bombay where he practised as a barrister in the high court, becoming also professor of political economy at Sydenham college. He quickly and permanently established himself as the undisputed leader of the depressed classes, creating trade unions, an Independent Labour party and a weekly newspaper as instruments of policy. He was nominated to represent his people in the Bombay legislative assembly. Ambedkar participated in the round table conferences in London during 1930-32 and served on the joint parliamentary committee (1932) which paved the way for the Government of India act, 1935. During the discussions he had clashed with M. K. Gandhi by urging separate representation in the assemblies for the depressed classes; after bitter controversy he came to a reluctant compromise. His book *What Congress and Gandhi Have Done to the Untouchables* was published in 1940. After 1940 he occupied several important posts, particularly that of minister of law (1948-51) in the government of India, which involved preparation of the draft constitution and superintending its passage through the constituent assembly. He resigned this appointment in 1951 and shortly before his death was converted to Buddhism.

Amoss, Harold Lindsay, U.S. physician and educator (b. Cobb, Ky., Sept. 8, 1886—d. Greenwich, Conn., Nov. 2, 1956).

Anderson, Karl, U.S. artist (b. Oxford, O., Jan. 13, 1874—d. Westport, Conn., May 18, 1956).

Andrews, John Miller, Irish statesman (b. Ardara, Comber, Ire., July 17, 1871—d. Comber, Aug. 5, 1956).

Arlen, Michael (DIKRAN KOUYUMDJIAN), Bulgarian-British author (b. Roustchouk, Bulg., Nov. 16, 1895—d. New York, N.Y., June 23, 1956), acquired fleeting literary fame with his novel, *The Green Hat* (1924), a best-seller later adapted by Arlen as a play. The play, starring Katharine Cornell, was a great Broadway success and the basis for two subsequent motion pictures, *Woman of Affairs* (1929) and *Outcast Lady* (1934). Arlen, who became a British citizen in 1922, wrote a dozen other novels and several scenarios for motion pictures.

Arnold, Edward (GUENTHER SCHNEIDER), U.S. motion-picture actor (b. New York, N.Y., Feb. 18, 1890—d. Encino, Calif., April 26, 1956), joined a stock company at Trenton, N.J., in his teens and subsequently rose to become one of the leading U.S. male motion-picture character actors. One of the relatively few silent film actors to make the successful transition to sound pictures, Arnold starred in such diverse roles as those of king (Louis XIII in *Cardinal Richelieu*); senator (*Jennie Gerhardt*); millionaire (Diamond Jim Brady in *Diamond Jim and Lillian Russell*, John Sutter in *Sutter's Gold*); gangster (*Whistling in the Dark*); and priest (*White Sister*). Arnold had lead parts in several Broadway plays and frequently appeared in radio and television shows, notably the "Mr. President" radio series.

Atkins, Gaius Glenn, U.S. educator and Congregational clergyman (b. Mount Carmel, Ind., Oct. 4, 1868—d. Bethlehem, Pa., April 5, 1956).

Atterbury, Grosvenor, U.S. architect (b. Detroit, Mich., July 7, 1869—d. Southampton, N.Y., Oct. 18, 1956).

Atwood, Harrison, U.S. advertising executive (b. Auburn, Me., Sept. 30, 1886—d. New York, N.Y., Nov. 22, 1956).

Aubrey, Edwin Ewart, U.S. theologian (b. Glasgow, Scot., March 19, 1896—d. Philadelphia, Pa., Sept. 10, 1956).

Aydelotte, Frank, U.S. educator (b. Sullivan, Ind., Oct. 16, 1880—d. Princeton, N.J., Dec. 17, 1956), was president of Swarthmore college at Swarthmore, Pa., from 1921 to 1940 and director of the Institute for Advanced Study at Princeton, N.J., from 1939 to 1947; he was also U.S. secretary of the Rhodes scholarships trustees from 1918 to 1953. Himself a Rhodes scholar at Oxford (1905-07), he had taken his bachelor's degree at Indiana

university in 1900 and his master's at Harvard in 1903. Prior to becoming head of Swarthmore he taught English at Massachusetts Institute of Technology from 1915 to 1921.

Bacharach, Isaac, U.S. public official (b. Philadelphia, Pa., Jan. 5, 1870—d. Atlantic City, N.J., Sept. 5, 1956).

Bacon, (Yvonne) Faith (MRS. SANFORD DICKINSON), U.S. dancer (b. 1910?—d. Chicago, Ill., Sept. 26, 1956).

Badoglio, Pietro, Italian army officer (b. Grazzano Piedmont, It., Sept. 28, 1871—d. Grazzano, Oct. 31, 1956), conquered Ethiopia and engineered the downfall of Mussolini. He studied at the Turin cadet school and, as an artillery officer, first saw active service in the disastrous Italo-Ethiopian war of 1896-97. In 1911-12, as a captain, he fought in Tripolitania. From World War I he emerged as a general and chief of staff of the commander in chief. After the war he was created a senator (Feb. 1919) and up to 1921 served as chief of the general staff of the army. As he did not support Fascist policy he was sent by Mussolini as ambassador to Brazil (1924-25). In June 1925, however, he was made marshal of Italy and soon resumed the post of chief of the general staff of the armed forces. In 1928 he was made Marchese del Sabotino and appointed governor of Libya (1928-33). In Nov. 1935 he assumed the high command of the Italian expeditionary force in Ethiopia and on May 5, 1936, entered Addis Ababa. He was made duke of Addis Ababa and for a short time acted as viceroy of Ethiopia. In Nov. 1939 Badoglio was reappointed chief of the general staff, resigning on Dec. 6, 1940, as a protest against Mussolini's aggression against Greece. On July 25, 1943, having played an important part in overthrowing Mussolini, Badoglio succeeded him as prime minister. On Sept. 8, 1943, he announced that five days earlier Italy had signed the Allies' unconditional surrender terms, and on Oct. 13 he declared war on Germany. After the liberation of Rome he resigned as prime minister (June 18, 1944).

Balendonck, Armand (Edouard), U.S. composer and violinist (b. Liege, Belg., Aug. 9, 1893—d. New York, N.Y., June 27, 1956).

Ball, Stanley Crittenden, U.S. zoologist (b. Shelburne Falls, Mass., Nov. 19, 1885—d. New Haven, Conn., Aug. 9, 1956).

Ballin, Hugo, U.S. painter and motion-picture producer (b. New York, N.Y.—d. Santa Monica, Calif., Nov. 27, 1956).

Bancroft, George, U.S. actor (b. Philadelphia, Pa., Sept. 30, 1882—d. Santa Monica, Calif., Oct. 2, 1956).

Barkley, Alben William, U.S. vice-president from 1949 to 1953 (b. Graves county, Ky., Nov. 24, 1877—d. Lexington, Va., April 30, 1956), was a leading Democratic political figure of the New Deal and Fair Deal eras. (For his early career, see *Encyclopaedia Britannica*.) He served six terms in the U.S. house of representatives (1913-1927, 1st Kentucky district), then was elected to four terms as senator from Kentucky. As majority leader of the senate from 1937 to 1947 Barkley exercised undeviating loyalty to Franklin D. Roosevelt and Harry S. Truman, with one notable exception. That was in Feb. 1944 when he denounced Pres. Roosevelt's veto of a tax bill and resigned the majority leadership in protest. The senate immediately re-elected him, however, and he accepted. In 1948 he was nominated for the vice-presidency by the Democratic party and was elected with Truman the following November, receiving a large share of credit for the unexpected Democratic victory of that year. When Truman announced that he would not run for re-election in 1952, Barkley became a leading candidate for the presidential nomination. But his chances were dealt a mortal blow, shortly before the Democratic convention met in Chicago, by leaders of the American Federation of Labor and the Congress of Industrial Organizations, who rejected him because of his age (he was then 74). In the campaign, Barkley actively supported the Democratic nominee, Adlai E. Stevenson. Meanwhile, his marriage to Mrs. Carleton S. Hadley was a news event of 1949 that captured national attention (Barkley's first wife had died in 1947). In 1954 he ran again for the U.S. senate, winning by a substantial margin and taking office the following Jan. 5 amid a standing ovation in the senate. Barkley was one of the most effective political orators of his time, rarely speaking from text or notes and almost always with anecdotal wit. He was addressing a mock political convention of Washington and Lee university students when he was stricken with a fatal heart attack.

Barnes, Alfred Edward, British physician and educator (b. Sheffield, Eng., June 3, 1881—d. Helensburgh, Oct. 23, 1956).

Baroja y Nessi, Pio, Spanish novelist (b. San Sebastian, Sp., Dec. 28, 1872—d. Madrid, Oct. 30, 1956).

Baum, Walter Emerson, U.S. artist and author (b. Sellersville, Pa., Dec. 14, 1884—d. Sellersville, July 12, 1956).

Beach, Chester, U.S. sculptor (b. San Francisco, Calif., May 23, 1881—d. Brewster, N.Y., Aug. 6, 1956).

Beal, Gifford Reynolds, U.S. painter (b. New York, N.Y., Jan. 24, 1879—d. New York, N.Y., Feb. 5, 1956), a leading U.S. landscape artist of his time, won more than 25 medals in major competitions. His favourite subjects were the New England coast, circus figures and semirealistic landscapes in which colour was made subordinate to design. Beal received his B.A. from Princeton university in 1900 and studied art in New York city. Among his

1956 OBITUARIES: Fred Allen, U.S. comedian; Edward Arnold, U.S. actor; Pietro Badoglio, Italian marshal; Alben W. Barkley, U.S. public official; Lawrence D. Bell, U.S. aircraft manufacturer

best-known paintings are "Across the Valley" and "Albany Boat" in the Metropolitan Museum of Art, New York city, and "Puff of Smoke" in the Art Institute of Chicago.

Beerbohm, Sir Max, British writer and caricaturist (b. London, Aug. 24, 1872—d. Rapallo, It., May 20, 1956), the son of a merchant of Baltic origin and half-brother of Sir Herbert Beerbohm Tree, Henry Maximilian Beerbohm was educated at Charterhouse and at Merton college, Oxford, where he soon became a "long-established" writer who issued in one volume *The Works of Max Beerbohm* (1896), complete with "bibliography." In 1896 he succeeded Bernard Shaw as dramatic critic for the *Saturday Review* where he remained until 1910. In that year he retired to Rapallo in Italy after his marriage to the U.S. actress Florence Kahn (d. 1951). He returned to England during World Wars I and II and was knighted in 1939. A month before his death he married Elisabeth Jungmann, his housekeeper who had tended him in his last days. Beerbohm was a caricaturist of unerring aptness. *Caricatures of Twenty-five Gentlemen*, collected in 1896, showed the limitations as well as the strength of his draftsman's hand. His targets, whether royal or literary, were tellingly hit, but he was never in bad taste. It was sometimes suggested that the "Incomparable Max," as Shaw dubbed him, gained through his wit and fastidious performance a reputation not commensurate with a tiny output. Yet his writings on the theatre to 1924 filled nearly 600 pages. He wrote many essays as well as a famous series of stories varying in tone from *The Happy Hypocrite* (1897) to the gentle and serious *William and Mary* (1921). His novel *Zuleika Dobson* (1911) was perhaps the least controlled of his works. In *A Christmas Garland* (1912) was gathered a collection of parodies of Henry James, Rudyard Kipling, Thomas Hardy (with an unsolicited sequence to *The Dynasts*), Arnold Bennett and others. His wittiness and readability were unquestionable, although sometimes his style had a subtle wilfulness which would have been intolerable in other writers. (See also *Encyclopædia Britannica*.)

Hill, Lawrence Dale, U.S. aircraft designer and manufacturer (b. Mentone, Ind., April 5, 1894—d. Buffalo, N.Y., Oct. 20, 1956), directed the designing of some of the best-known U.S. fighter planes, including the single-engine P-39 Airacobra and the P-63 Kingcobra of World War II; the P-59 (first U.S. jet plane) and the experimental rocket-propelled X-2. The latter established a new air speed record of 1,900 m.p.h. in July 1956 and attained an altitude of 126,000 ft. two months later. After working as a designer and executive for aircraft companies Bell organized (1935) his own company, the Bell Aircraft corporation, in Buffalo, N.Y., which produced military planes, guided missiles, aircraft parts and turned out the first helicopter to receive a commercial licence. Bell received the Collier aviation trophy for developing the Bell X-1, a tiny rocket-powered plane which in 1947 attained supersonic speed.

Blaman, Katherine Jones, U.S. author (b. Carthage, Miss.—d. Jackson, Miss., Nov. 8, 1956).

Bellamy, Paul, U.S. newspaperman (b. Chicopee Falls, Mass., Dec. 26, 1884—d. Bratenahl, O., April 12, 1956), was editor of the *Cleveland Plain Dealer* from 1933 to 1953. A graduate of Harvard (1905), he worked for two years as a cub reporter for the *Springfield* (Mass.) *Union* before moving to Cleveland. An idealist in the footsteps of his father Edward Bellamy, author of the utopian *Looking Backward* (1888), he strove to improve the quality of news coverage and interpretation and vigorously defended criticism of the U.S. press as essential to its good reputation. Prior to his appointment as editor of the *Plain Dealer*, Bellamy was a reporter (1907-10), city editor (1910-16) and managing editor (1920-33) of that paper. He was president of the American Society of Newspaper Editors in 1933-34 and for many years a director of the Associated Press.

Beda, Julien, French essayist and novelist (b. Paris, Dec. 26, 1867—d. Paris, June 7, 1956).

Bennett, John, U.S. author (b. Chillicothe, O., May 17, 1865—d. Charleston, S.C., Dec. 28, 1956).

Bassley, Robert Russell, U.S. anatomist and educator (b. Hamilton, Ont., Nov. 13, 1867—d. Chicago, Ill., June 11, 1956).

Bentley, Edmund Clerihew, British writer (b. London, July 10, 1875—d. London, March 30, 1956).

Benton, John Keith, U.S. educator (b. Banks, Ala., May 24, 1896—d. Nashville, Tenn., Aug. 21, 1956).

Biele, Mrs. Margaret Thompson, U.S. writer (b. Helena, Mont., 1898?—d. Paris, Fr., June 8, 1956).

Bierut, Boleslaw, Polish Communist leader (b. Lublin, Pol., April 18, 1892—d. Moscow, U.S.S.R., March 12, 1956), came early under the influence of Polish left-wing Socialists and in Dec. 1918, when Poland regained independence, joined the newly founded Communist Party of Poland (K.P.P.). During 1921-27 he visited Moscow twice for training and was three times arrested and imprisoned in Poland. He spent five years in the Comintern offices in Berlin, Vienna and Prague, and in 1932 he once more returned to Poland. In 1937, Bierut made his way to Moscow, but in 1938 the K.P.P. was dissolved by the Comintern. He reached Warsaw in Jan. 1943 with orders to lead the new clandestine Polish Workers' (Communist) party

(P.P.R.). In Jan. 1944 he formed the National Council of the Homeland, of which he was chairman. When on July 22, 1944, the Soviet-sponsored Polish Committee of National Liberation was formed at Lublin, Bierut was its chairman. He took the title of provisional president of the Polish republic in June 1945 and was elected to this post on Feb. 5, 1947. From Sept. 3, 1948, he was also secretary-general of the P.P.R. On Nov. 20, 1952, he ceased to be president of the republic and instead became premier. He gave up the premiership on March 19, 1954, retaining the function of first secretary of the United Polish Workers' party (P.Z.P.R.), a new name for the Communist Party of Poland from Dec. 1948. In Feb. 1956 he led the Polish delegation to the 20th congress of the Communist party of the Soviet Union.

Binder, Carroll, U.S. editor (b. Mechanicsburg, Pa., Feb. 20, 1896—d. Minneapolis, Minn., May 1, 1956), was a foreign correspondent and foreign editor of the *Chicago Daily News* from the early 1920s until 1944, and editorial page editor of the *Minneapolis Tribune* from 1945 until his death. As vice-chairman of the United Nations subcommittee on freedom of information from 1948 to 1952, Binder urged that a convention on freedom of the news be drafted that would protect and encourage international exchange of information.

Binford, Lloyd Tilghman, U.S. broker and motion-picture censor (b. Duck Hill, Miss., Dec. 16, 1866—d. Memphis, Tenn., Aug. 27, 1956).

Bingham, Hiram, U.S. senator and explorer (b. Honolulu, Hawaii, Nov. 19, 1875—d. Washington, D.C., June 6, 1956), was Republican senator from Connecticut 1924-33 and chairman of the federal loyalty review board (appointed to review suspected cases of subversion among federal employees), 1951-53. A graduate of Yale university (1898), and with a Ph.D. from Harvard university, he taught history at several eastern U.S. universities and directed the Yale archaeological expedition of 1911 that discovered Machu Picchu, last capital city of the Incas, in Peru.

Birch, Francis Lyall, British historian (b. Dec. 5, 1889—d. London, Eng., Feb. 14, 1956).

Birdseye, Clarence Frank, U.S. inventor (b. Brooklyn, N.Y., Dec. 9, 1886—d. New York, N.Y., Oct. 7, 1956).

Bishop, William Avery, Canadian air marshal (b. Owen Sound, Ont., Feb. 8, 1894—d. Palm Beach, Fla., Sept. 11, 1956), was Canada's premier ace of World War I, having shot down 72 enemy planes in about 175 air engagements. He was a cadet at the Royal Military college, Kingston, Ont., when World War I broke out. Sent overseas, he transferred from the cavalry to the air force, and on March 25, 1917, he shot down his first German plane. Among his many decorations was the Victoria cross, Britain's highest military decoration, awarded for destroying three planes over German territory amid intense ground fire. On a single day he engaged 23 German planes on the western front, downed three and returned to his base unscathed. During World War II Bishop, with the rank of air marshal, directed all recruiting activities for the Royal Canadian air force. He was the author of several books dealing with military aviation and with his reminiscences of World War I.

Black, Harry C., U.S. financier (b. Baltimore, Md., June 23, 1887—d. Boynton Beach, Fla., Nov. 25, 1956).

Black, Loring Milton, Jr., U.S. lawyer and public official (b. New York, N.Y., May 17, 1886—d. Washington, D.C., May 21, 1956).

Blackman, Aylward Manley, British Egyptologist (b. Dawlish, Eng., Jan. 30, 1883—d. Abergele, Wales, March 9, 1956).

Blake, Henry Seavey, U.S. publisher (b. Minneapolis, Minn., Feb. 14, 1888—d. Topeka, Kan., March 10, 1956).

Blanchard, Arthur Alphonzo, U.S. chemist and educator (b. Boston, Mass., May 4, 1876—d. Brookline, Mass., March 25, 1956).

Boeing, William Edward, U.S. aircraft manufacturer (b. Detroit, Mich., Oct. 1, 1881—d. aboard ship in Puget sound, Wash., Sept. 28, 1956), was a pioneer in aircraft and its construction, having early been associated with Glenn L. Martin who instructed him in flying. Boeing attended Yale university (1899-1902) and served with the U.S. navy in World War I. In 1916 he founded the Pacific Aero Products company, which in 1929 became the Boeing Airplane Co. Boeing retired from the company in 1934. In the same year he received the Daniel Guggenheim medal for "successful pioneering and achievement in aircraft manufacture and air transport."

Bogert, John Lawrence, U.S. naval architect and editor (b. Flushing, N.Y., Oct. 27, 1858—d. Southampton, N.Y., Aug. 11, 1956).

Borowski, Felix, U.S. music critic, composer and educator (b. Burton-in-Kendal, Eng., March 10, 1872—d. Chicago, Ill., Sept. 6, 1956), was a music critic for several Chicago newspapers (1906-1956) and annotator of programs for the Chicago Symphony orchestra. He composed several orchestral works and was president of the Chicago Musical college (1916-25) and professor of musicology (1937-42) at Northwestern university, Evanston, Ill.

Bovey, Wilfrid, Canadian legislator (b. Montreal, Que., Dec. 13, 1882—d. Montreal, Oct. 11, 1956).

Bowen, Norman Levi, U.S. geologist (b. Kingston, Ont., June 21, 1887—d. Washington, D.C., Sept. 11, 1956).

66 OBITUARIES: William E. Boeing, U.S. aircraft manufacturer; Louis Mumfield, U.S. author; Bob Burns, U.S. comedian; Guido Cantelli, Italian conductor; Anton J. Carlson, U.S. physiologist

Boyd, William Madison, U.S. educator (b. Morehead City, N.C., April 8, 1916—d. Atlanta, Ga., March 10, 1956).

Bratt, Ivan, Swedish physician (b. Smaland, Swed., 1878—d. Stockholm, Jan. 25, 1956).

Brecht, Bertolt, German poet and playwright (b. Augsburg, Ger., Feb. 10, 1898—d. eastern Berlin, Aug. 14, 1956), was a leading exponent of cynical humour and satire and one of the most controversial figures in the European theatre. He studied natural sciences and philosophy at Munich and Berlin universities, but intellectually he was the product of the great moral ferment that followed World War I. His earlier plays, *Trommeln in der Nacht* and *Baal*, won him the Kleist literary prize in 1922. Six years later *Die Dreigroschen-Oper* (with music by Kurt Weill) was a great success in Germany and abroad. When Hitler came to power Brecht sought asylum successively in Denmark, Sweden and Finland, settling in 1941 in the U.S. In 1947 he was called before the house committee on un-American activities, where he testified that he was not and never had been a member of any Communist party. However in 1948 he returned to east Germany, accepting an offer to conduct in his own way the *Theater am Schiffbauerdamm* in east Berlin. His irony and stern moral pessimism were not easy to reconcile with Marxist ideology and his theatre—the glory of east Berlin in western eyes—was rather an embarrassment to the east German government. Shortly after Brecht's death three of his plays—*Mutter Courage und ihre Kinder*, *Das kaukasische Kreidekreuz* and *Pausen und Trumpheten*—were presented in London by the Berliner ensemble.

Breed, Robert Stanley, U.S. bacteriologist (b. Brooklyn, Pa., Oct. 17, 1877—d. Geneva, N.Y., Feb. 10, 1956).

Brennan, Andrew James, U.S. Roman Catholic prelate (b. Towanda, Pa., Dec. 14, 1877—d. Norfolk, Va., May 23, 1956).

Brody, Samuel, U.S. scientist and educator (b. Garbachi, Lith. [later Pol.], Feb. 8, 1890—d. Columbia, Mo., Aug. 6, 1956).

Bromfield, Louis, U.S. author (b. Mansfield, O., Dec. 27, 1896—d. Columbus, O., March 18, 1956), was almost as well known for his farm conservation theories as for his widely read novels. At his Malabar farm near Lucas, O., he successfully experimented in stepped-up food production through soil enrichment and erosion control. These and other scientific studies were recorded in many books and articles. Earlier, Bromfield had worked on several newspapers and magazines after studying at Cornell and Columbia universities and serving as an ambulance driver during World War I. His first novel, *The Green Bay Tree* (1924), was an immediate success; it was followed by *Possession* (1925); *Early Autumn* (1926), winner of the Pulitzer prize in that year; *A Good Woman* (1927); and a score or more of other best-selling works, including *The Rains Came* and *Mrs. Parkington*. Several of these were made into motion pictures. In politics Bromfield at first supported the New Deal but fell away from it in disagreement with Pres. Franklin D. Roosevelt's farm policy, particularly the program of price supports for agricultural products.

Brown, Gertrude Foster (MRS. RAYMOND BROWN), U.S. suffragist (b. Morrison, Ill., July 29, 1867—d. Westport, Conn., March 1, 1956).

Brown, Roy, U.S. landscape painter (b. Decatur, Ill., April 7, 1879—d. Nashua, N.H., May 16, 1956).

Brown, Sevellon Ledyard, U.S. publisher and editor (b. Washington, D.C., Nov. 23, 1886—d. Tucson, Ariz., Dec. 28, 1956).

Browning, "Peaches" (MRS. FRANCES HEENAN HYNES CIVELLI WILLSON), U.S. child bride of 1920s (b. Columbus, O., June 23, 1910—d. New York, N.Y., Aug. 23, 1956).

Bryan, James Wesley, U.S. public official (b. Lake Charles, La., March 11, 1874—d. Bremerton, Wash., Aug. 26, 1956).

Burns, Bob, U.S. comedian (b. Van Buren, Ark., 1890?—d. Encino, Calif., Feb. 2, 1956), rose to stardom on radio in the 1930s playing his bazooka, a homemade musical instrument contrived from a gas pipe and a funnel (a name later given to the U.S. infantry weapon of World War II). He studied civil engineering at the University of Arkansas at Fayetteville, appeared briefly in motion pictures in 1913 and served with the U.S. marine corps abroad during World War I. The "Arkansas traveler" and "sage of the Ozarks," as he was variously called in the entertainment world, attained success on the radio programs of Bing Crosby and Rudy Vallee with his bazooka and his homespun stories of rural Arkansas. About 1935 he returned to motion pictures, starring in such films as *The Singing Vagabond*, *Rhythm on the Range*, *Mountain Music*, *Wells Fargo*, *The Arkansas Traveler*, *Our Leading Citizen*, *Belle of the Yukon* and *Prarie Schooner*.

Butler, Edward Hubert, U.S. publisher and editor (b. Buffalo, N.Y., June 19, 1883—d. Buffalo, Feb. 19, 1956).

Calhern, Louis (CARL HENRY VOGT), U.S. actor (b. Brooklyn, N.Y., Feb. 19, 1895—d. Nara, Jap., May 12, 1956).

Callahan, James Morton, U.S. historian (b. Bedford, Ind., Nov. 4, 1864—d. Morgantown, W. Va., March 16, 1956).

Campbell, John Bayard Taylor, U.S. editor and author (b. San Francisco, Calif., April 19, 1880—d. Los Angeles, Calif., July 27, 1956).

Cantelli, Guido, Italian musical conductor (b. Novara, It., April 27, 1920—d. Paris, Fr., Nov. 24, 1956), was appointed permanent conductor of the orchestra of La Scala, Milan, little more than a week before his death in a plane crash. He studied at the Milan conservatory and toward the end of World War II returned as a fugitive to Milan where he was seized as a hostage by the Fascist army. At the end of the war he became, at 25, La Scala's youngest conductor. Arturo Toscanini took early note of him, and it was through his influence that Cantelli conducted a New York orchestra in 1948. His first appearance in Great Britain was with Victor de Sabata at the Edinburgh festival of 1950. He had a forceful style and, although his earlier interpretations tended to be superficial, his rendering of Verdi's *Requiem* in London in 1956 was a performance that rated him with the great conductors.

Carleton, Robert Louis, U.S. composer (b. St. Louis, Mo., Nov. 8, 1896—d. Los Angeles, Calif., July 12, 1956).

Carlson, Anton Julius, U.S. physiologist (b. Bohuslän, Swed., Jan. 29, 1875—d. Chicago, Ill., Sept. 2, 1956), was one of the world's greatest physiologists. He was the first (at the age of 29) to explain the origin of the mechanism of the heartbeat in invertebrates. His interests and research included such diverse subjects as the physiology of hunger (he disputed the "conditioned reflex" theory of Ivan Pavlov), blood circulation, saliva formation, the physiology of growing old, alcoholism and the nutritional value of margarine—in all of which he made original and valuable scientific contributions. He was quick to enter public controversy on medical or allied issues, scathingly denouncing antivivisectionists and "monkey-gland rejuvenation" surgeons, among others. Carlson emigrated to the United States from Sweden as a youth of 16 and at first studied for the Lutheran ministry, graduating from Augustana college at Rock Island, Ill., in 1898. His interests veered toward science and medicine, however, and he studied physiology at Stanford university, taking his doctorate there in 1903. He was a research associate with the Carnegie institution (1903-04), then joined the faculty of The University of Chicago, where he advanced from assistant professor to professor and chairman of the department of physiology (1904-40). He then became emeritus professor. He was known as a great teacher. Carlson received the distinguished service gold medal of the American Medical association in 1953.

Carnegie, Hattie (MRS. JOHN ZANET), U.S. fashion designer (b. Vienna, Aus., March 14, 1886—d. New York, N.Y., Feb. 22, 1956), built an \$8,000,000 business out of a millinery-dress shop established on the lower east side of Manhattan in 1909. Her fashion models were designed to appeal to the wealthy and fashionable, and they sold at high prices, in her own shop in New York and in major stores throughout the country.

Carr, Charlotte E., U.S. social worker (b. Dayton, O., May 3, 1890—d. New York, N.Y., July 12, 1956).

Carville, Edward Peter, U.S. public official and lawyer (b. Mound Valley, Nev., May 14, 1885—d. Reno, Nev., June 27, 1956).

Chalmers, Gordon Keith, U.S. educator (b. Waukesha, Wis., Feb. 7, 1904—d. Hyannis, Mass., May 8, 1956).

Chunt, Clarence Augustus, Canadian astrophysicist (b. nr. Toronto, Ont., May 31, 1865—d. Richmond Hill, Ont., Nov. 18, 1956).

Charlot, André Eugene Maurice, French-born theatre manager and actor (b. Paris, July 26, 1882—d. Hollywood, Calif., May 20, 1956).

Charpentier, Gustave, French composer (b. Dieuze, Moselle, June 25, 1860—d. Paris, Feb. 18, 1956).

Chisholm, Louise Brigham (MRS. HENRY ARNOTT CHISHOLM), U.S. author and inventor (b. Boston, Mass.—d. Trenton, N.J., March 30, 1956).

Chrétien, Henri, French scientist (b. Paris, Feb. 1, 1879—d. Washington, D.C., Feb. 7, 1956), developed CinemaScope—the method of screen projection which creates a stereoscopic illusion of depth. He became astronomer at Meudon observatory, Paris, in 1901, chief of the astrophysical department, Nice observatory, in 1906, then a professor of the University of Paris and, from 1920, of the Optical institute (Paris) of which he was a founder. While engaged on research in 1916 he found that anamorphic lenses admit of a wider angle of vision than conventionally ground lenses. Later he saw the possibilities of this discovery in motion pictures. Paramount took a year's option on it in 1929 and Chrétien arranged a demonstration at the 1937 Paris exhibition, but the idea lay fallow until 1952. In 1953 CinemaScope was launched, and Chrétien achieved recognition. He was a knight of the Legion d'Honneur, and in 1954 received from the Academy of Motion Picture Arts and Sciences a technical award for the creation of CinemaScope.

Clausen, Roy Elwood, U.S. geneticist (b. Randall, Ia., Aug. 21, 1891—d. Berkeley, Calif., Aug. 21, 1956).

Coffin, Charles Monroe, U.S. educator (b. Harrod, O., Feb. 20, 1894—d. Pasadena, Calif., July 20, 1956).

Coffin, Oscar Jackson ("Skipper"), U.S. editor and educator (b. Moore county, N.C., Feb. 4, 1887—d. Raleigh, N.C., Oct. 29, 1956).

Collier, William Miller, U.S. diplomat (b. Lodi, N.Y., Nov. 11, 1867—d. West Caldwell, N.J., April 15, 1956).

Comiskey, Grace (MRS. J. LOUIS COMISKEY), U.S. baseball club owner (b. Chicago, Ill., May 15, 1894—d. Chicago, Dec. 10, 1956).

Cooper, Madison Alexander, Jr., U.S. author (b. 1894?—d. Waco, Tex., Sept. 28, 1956).

Corle, Edwin, U.S. novelist (b. Wildwood, N.J., May 7, 1906—d. Santa Barbara, Calif., June 11, 1956).

Cowan, Sir Walter Henry, British admiral (b. Alveston, Eng., June 11, 1871—d. Leamington, Eng., Feb. 14, 1956).

Crampton, Henry Edward, U.S. zoologist (b. New York, N.Y., Jan. 5, 1875—d. New York, N.Y., Feb. 26, 1956).

Crawford, Brenetta Herrman (MRS. E. STETSON CRAWFORD), U.S. painter (b. Toledo, O., Oct. 27, 1876—d. Pasadena, Calif., May 30, 1956).

Cummings, Homer Stillé, U.S. lawyer (b. Chicago, Ill., April 30, 1870—d. Washington, D.C., Sept. 10, 1952), was U.S. attorney general from March 1933 to Jan. 1939, during the first and second administrations of Pres. Franklin D. Roosevelt. In this office his principal task was to try to establish the constitutionality of early New Deal legislation, including the National Industrial Recovery act and the first Agricultural Adjustment act (both ruled unconstitutional by the supreme court), and the securities and exchange, Tennessee Valley authority and social security laws (upheld by the court). It was Cummings who apparently proposed to President Roosevelt the ill-fated plan for "packing" the supreme court with one new justice for each member of the court who had reached the age of 70 and had not retired. During his tenure as head of the department of justice the functions of the Federal Bureau of Investigation were broadened, and the antimonopoly activities of the department were intensified. A graduate of Yale law school (1893), Cummings practised law in Stamford, Conn., until 1933, and was mayor of that city, 1900-02 and 1904-06. Long a Democratic leader, he was offered the appointment as governor general of the Philippines by Roosevelt in Feb. 1933 but accepted the nomination as attorney general when Thomas J. Walsh, Roosevelt's original appointee to the cabinet, died two days before the inauguration. After his resignation from the cabinet, Cummings resumed private law practice in Washington and Stamford. He wrote several books including *We Can Prevent Crime* (1937).

urtis, Harvey Lincoln, U.S. physicist (b. Mason, Mich., Dec. 14, 1875—d. Chevy Chase, Md., April 17, 1956).

urtis, Ernst Robert, German literary historian (b. Thann, Alsace, later Haut-Rhin, Fr., April 14, 1886—d. Rome, It., April 19, 1956), throughout his life studied a wide range of literatures of all ages, his interest being particularly engaged by those deriving from the Latin culture. He was educated at the Protestant gymnasium, Strasbourg, and studied in Berlin and Heidelberg. He taught at Bonn university (1913-19). Marburg (1920-24) and Heidelberg (1924-29); in 1929 he was appointed professor of romance literature and languages at Bonn. For a selection of his works up to 1948 see *Encyclopaedia Britannica*. In 1952 he published *Französischer Geist im 20. Jahrhundert* and in 1953 his comprehensive study *Europäische Literatur und lateinisches Mittelalter* (1948) was translated into English.

ahl, Harold E. ("Whitey"), U.S. adventurer (b. Champaign, Ill., 1909?—d. near Fort Chimo, Que., Feb. 14, 1956), was the central figure in a bizarre episode of the Spanish civil war of 1936-39. A volunteer Loyalist fighter pilot, he was shot down and captured by Gen. Francisco Franco's forces, and was sentenced to death. Franco personally reprieved Dahl after receiving a plea from Mrs. Dahl which was accompanied by a photograph of herself. Freed in 1940, Dahl was a squadron leader for the Canadian air force in World War II, but was accused of irregular traffic in government property. In 1954 he was sentenced in Switzerland to two years' imprisonment for the alleged theft of gold bullion from a Swiss plane he was piloting; he was released on bond the following year after a new trial. Dahl was killed when a plane he was piloting crashed in the wilderness of northern Quebec.

amon, Ralph Shepard, U.S. air line executive (b. Franklin, N.H., July 6, 1897—d. Mineola, L.I., N.Y., Jan. 4, 1956), graduated with honours from Harvard university in 1918 and entered the commercial aviation business in 1922 with the Curtiss Aeroplane and Motor company, of which he became president in 1935. In this and subsequent positions, Damon helped produce some of the more famous U.S. commercial and military aircraft, including the Curtiss Condor and the Republic Thunderbolt. He left Curtiss to join American Airlines, of which he was president from 1945 to 1949. During World War II he was for a time president of Republic Aviation corporation (1941-43). From Jan. 1949 until his death Damon was president of Trans World Airlines.

avis, Nathan Smith, III, U.S. physician (b. Chicago, Ill., June 25, 1889—d. Chicago, April 20, 1956).

avis, Owen, U.S. playwright (b. Portland, Me., Jan. 29, 1874—d. New York, N.Y., Oct. 14, 1956).

watson, Mitchell, U.S. attorney and author (b. Chicago, Ill., May 13, 1890—d. Winnetka, Ill., Sept. 3, 1956), was admitted to the Illinois state bar in 1913 after taking his law degree from The University of Chicago, and practised law in Chicago thereafter. An articulate writer on legal subjects, he was a columnist for the *Chicago Daily News* and other newspapers and wrote articles on law topics for *Encyclopaedia Britannica*. He also was an author of children's stories, including *The Magic Firecrackers* (1949).

Golyer, Everette Lee, U.S. geologist (b. Greensburg, Kan., Oct. 9, 1886—d. Dallas, Tex., Dec. 14, 1956).

La Mare, Walter John, British poet, novelist and essayist (b. Charlton, Kent, April 25, 1873—d. Twickenham, June 22, 1956), was a writer whose sensitive imagination and faculty of seeing with the "innocent eye" of childhood permeated a prolific and varied output. His early works included the short stories "Kismet" (1895) and "The Mote" (1896) and the book of poems *Songs of Childhood* (1902). His poetry was chiefly lyrical and from "The Listeners" (1912) to "The Traveller" (1946) and "O Lovely England" (1954) exhibited no diminution in imaginative power. Notable collections were *The Listeners and Other Poems* (1912), *Peacock Pie* (1913), *Motley and Other Poems* (1918) and *Collected Rhymes and Verses* (1944). That he was an anthologist of great talent was proved by *Early One Morning* (1935) and *Love* (1943), as well as the lengthier *Behold, This Dreamer* (1939). His personal and literary preoccupation with the state of childhood resulted in a sympathy and understanding that was exemplified in his many children's stories, including *The Lord Fish* (1933) and *The Scarecrow* (1945), and in his poems for children. Some of his prose tales, such as the story *Seaton's Mount* (1923), the novels *Henry Brocken* (1904) and *The Return* (1910), were influenced by his interest in the supernatural. His other novel, *Memoirs of a Midget* (1921), showed his psychological insight. He also wrote essays, *Private View* (1953); a play on a fairy theme, *Crossings* (1921); and the "rambling discourse," *Desert Islands* (1930), a *tour-de-force* on the Robinson Crusoe theme which illustrated his uniquely personal outlook, an escapism without urgency. (See also *Encyclopaedia Britannica*.)

amarest, William Henry Steele, U.S. educator (b. Hudson, N.Y., May 12, 1863—d. New Brunswick, N.J., June 23, 1956).

Palma, Ralph, U.S. automobile racer (b. Italy 1883?—d. South Pasadena, Calif., March 31, 1956), was believed to have won more races than any other driver up to the time of his death—reportedly 2,557 out of 2,889. However, he won the Indianapolis (Ind.) 500-mi. speedway race only once, in 1915, driving a Mercedes at an average speed of 89.84 mi. per hour. De Palma, who emigrated to the United States at the age of 10 and became a U.S. citizen in 1920, was twice named national champion of the American Automobile association (1912, 1914) and held a number of other racing championships. He retired from the tracks in 1934. At various times during his career he was associated as engineer, designer, consultant or in other capacities with leading U.S. automobile, aircraft and petroleum companies.

uel, Harry James, Jr., U.S. biochemist and educator (b. St. Paul, Minn., Oct. 15, 1897—d. Pasadena, Calif., April 17, 1956).

ckson, Edward Augustus, U.S. editor and publisher (b. Sheboygan, Wis., Aug. 29, 1879—d. Los Angeles, Calif., Feb. 22, 1956).

cavolo, Antonio, Italian painter (b. Bologna, It., 1878—d. nr. La Spezia, Italy, 10, 1956).

can, Mort, U.S. song writer (b. New York, N.Y., March 20, 1892—d. New

York, March 23, 1956).

Dohna-Schlodien, Nikolaus zu, COUNT OF (BURGGRAF UND GRAF NIKOLAUS RICHARD ZU DOHNA-SCHLODIEN), German naval officer (b. Mallnitz, Ger., 1879—d. Rosenheim, Aug. 21, 1956).

Doran, George Henry, Canadian publisher (b. Toronto, Ont., 1869—d. Toronto, Jan. 7, 1956).

Dorsey, Thomas Francis, Jr. (Tommy), U.S. band leader (b. Mahanoy City, Pa., Nov. 19, 1905—d. Greenwich, Conn., Nov. 26, 1956), rose from boy trombonist in the orchestra of his father, a Pennsylvania coal miner and music teacher, to become one of the best-known and highest paid U.S. band leaders of the 20th century. An exponent of what critics called "sweet jazz," he was nicknamed the "sentimental gentleman of swing." His recordings, including his theme song "I'm Getting Sentimental Over You," were estimated to have sold more than 100,000,000 impressions. After playing in various name bands such as those of Paul Whiteman and Vincent Lopez, Dorsey organized his own band with his brother Jimmy, a saxophonist, in 1934. Despite periodic fallings-out, the two brothers continued to perform as a musical team. Tommy Dorsey and his trombone were featured in a number of motion pictures and TV-radio programs and in occasional classical concerts.

Draper, Ruth, U.S. monologist (b. New York, N.Y., Dec. 2, 1884—d. New York, Dec. 30, 1956), entertained theatregoers throughout the world for four decades with her humorous and wistful solo portrayals, in several languages, of 40 or more different characters. The granddaughter of Charles A. Dana (1819-97), publisher of the old *New York Sun*, she occasionally appeared on the stage with her nephew Paul Draper, the dancer. She toured all continents and was received with equal warmth in Java, Ceylon, the United States, South Africa or South America. Miss Draper gave her "farewell" performance in New York city in 1954 but later returned to the stage and was making another series of appearances on Broadway when she died suddenly in her Manhattan home.

Dreyer, Sir Frederic Charles, British naval officer (b. Parsonstown, Eng., Jan. 8, 1878—d. Winchester, Dec. 11, 1956).

Drinker, Cecil Kent, U.S. educator and physician (b. Philadelphia, Pa., March 17, 1887—d. Falmouth, Mass., April 14, 1956).

Drummond, Alexander M., U.S. educator (b. Auburn, N.Y., July 15, 1884—d. Ithaca, N.Y., Nov. 29, 1956).

Duckworth, Wynfrid Laurence Henry, British anthropologist and anatomist (b. Liverpool, Eng., June 5, 1870—d. Cambridge, Feb. 14, 1956).

Duff, G(eorge) Lyman, Canadian pathologist and educator (b. Hamilton, Ont., Jan. 26, 1904—d. Montreal, Que., Nov. 1, 1956).

Duggar, Benjamin Minge, U.S. botanist and educator (b. Gallion, Ala., Sept. 1, 1872—d. New Haven, Conn., Sept. 10, 1956), in 1948 isolated the antibiotic aureomycin, one of the most widely used of the "miracle drugs." Duggar led a team of scientists who discovered it at the Lederle laboratories of the American Cyanamid company in Pearl River, N.Y., where he was employed as a research and production consultant after his compulsory retirement from teaching at the University of Wisconsin in 1943. He was a graduate of Harvard (B.A., 1894; M.A., 1895) and took his doctorate at Cornell university, Ithaca, N.Y., in 1898, later continuing his studies in Germany, Italy and France. From 1912 to 1927 he was professor of plant physiology at Washington university, St. Louis, Mo., and from 1927 to 1943 professor of physiology and botany at Wisconsin.

Dunn, Sir James Hamet, Canadian financier (b. Bathurst, N.B., Oct. 29, 1875—d. St. Andrews, N.B., Jan. 1, 1956).

Edge, Walter Evans, U.S. senator, state governor and diplomat (b. Philadelphia, Pa., Nov. 20, 1873—d. New York, N.Y., Oct. 29, 1956), was a conservative Republican leader for more than 50 years. He attained business success as an advertising executive, banker and publisher before entering public life in 1910 as a member of the New Jersey state assembly. After serving in the state senate for two terms (1911-16), Edge was elected governor of New Jersey for the term 1917-20, but resigned to become U.S. senator from New Jersey (1919-29). He resigned from the senate to become Pres. Herbert Hoover's ambassador to France (1929-33). Edge was again governor of New Jersey from 1944 to 1947.

Edmonds, Sir James Edward, British army officer and historian (b. Dec. 25, 1861—d. announced London, Eng., Aug. 7, 1956).

Edwards, Richard Stanislaus, U.S. admiral (b. Philadelphia, Pa., Feb. 18, 1885—d. Oakland, Calif., June 2, 1956).

Eisenstein, Judah David, U.S. editor and publisher (b. Miedzyrzecz, Pol., Nov. 12, 1854—d. New York, N.Y., May 17, 1956).

Eldred, Byron E., U.S. physicist (b. Jackson, Mich., Feb. 12, 1873—d. Torrington, Conn., May 26, 1956).

Elizabeth (ELIZABETH CHARLOTTE JOSEPHINE VICTORIA ALEXANDRA), former queen of Greece (b. Sinaia, Rum., Sept. 29, 1894—d. Cannes, Fr., Nov. 14, 1956), was the daughter of King Ferdinand and Queen Marie of Rumania and the sister of King Carol II; she was a great-granddaughter of Queen Victoria. She was strikingly beautiful when she married the crown prince (later King George II) of Greece in Bucharest on Feb. 27, 1921, but a severe illness rendered her incapable of having children. The royal pair became king and queen in Sept. 1922, but in Dec. 1923 they were exiled to Rumania as a result of a republican movement. In 1935 Elizabeth divorced her husband (who shortly afterward returned to Greece as king) on the grounds of unfaithfulness and desertion. She left Rumania in Jan. 1948, finally settling in Cannes in 1952.

Ely, Joseph Buell, U.S. public official and attorney (b. Westfield, Mass., Feb. 22, 1881—d. Westfield, June 13, 1956).

Emerson, John, U.S. playwright and actor (b. Sandusky, O., May 29, 1874—d. Pasadena, Calif., March 8, 1956).

Evershed, John, British astronomer (b. Gomshall, Surrey, Eng., Feb. 26, 1864—d. London, Nov. 17, 1956).

Ewing, Fayette Clay, U.S. surgeon and author (b. La Fourche parish, La., May 28, 1862—d. Pineville, La., April 15, 1956).

Fadeyev, Aleksandr Aleksandrovich, Russian writer (b. Kimry, near Kalinin, Dec. 24, 1901—d. Moscow, May 13, 1956), passed his youth in the Urals and the far east, receiving his schooling in Vladivostok. He joined the Communist party in 1918 and fought as a partisan in Siberia against the "White" Russians. From 1926 he began to take a leading part in literary life, and in 1929 published the first of the four volumes of a novel devoted to the civil war in the far east, *Posledny iz Udege* ("The Last of the Udege"); it was completed in 1940. At that time he was a member of the board of the Soviet Writers' union, of which in 1946 he became secretary-general. In 1945 he published *Molodaya Gvardia* ("The Young Guard"), a novel about the exploits of young Ukrainian partisans behind the German front. He was awarded a Stalin prize for this work in 1948, but later he re-wrote it after the Politburo had assailed it as "falsely showing panic in the early days of the Patriotic War." In 1948, when chief Soviet delegate at the International Cultural Congress for Peace at Wrocław, Pol., he declared, "If hyenas could type and jackals could use fountain pens, they would write like T. S. Eliot, Eugene O'Neill and Jean-Paul Sartre." At various times Fadeyev was a member of the central committee.

Fairey, Sir Charles Richard, British aircraft designer (b. Hendon, Eng., May 5, 1887—d. London, Sept. 30, 1956), was educated at Merchant Taylors' school and at Finsbury technical college, where he studied engineering and chemistry. In 1915, after two years as chief engineer to Short Brothers, he founded the Fairey aviation company and became its executive chairman. During 1922-24 he was chairman of the British society of aircraft constructors and he was director-general of the British air commission in Washington, 1942-45. Sir Richard was twice president of the Royal Aeronautical society (1930-31, 1932-33) and in 1936 the society awarded him the Wakefield gold medal for the invention and development of the wing flap. He stimulated many advances in aircraft design and among the famous aircraft built under his leadership were the Swordfish, the Gannet (which in 1954 was the first gas-turbine engine antisubmarine aircraft) and the Fairey Delta II, the first aircraft to fly at more than 1,000 m.p.h. Fairey was also a distinguished yachtsman, owning and racing such famous vessels as the 12-m. "Flica" and the J class "Shamrock V." He was knighted in 1942.

Feininger, Lyonel (Charles Adrian), pioneer U.S. modernist painter (b. New York, N.Y., July 17, 1871—d. New York, N.Y., Jan. 13, 1956), was a member of the famous "Blue Rider" group of expressionist painters who first exerted a potent influence on American painting shortly after 1910. Originally trained as a musician, he was in middle age still composing works for public performance, but as early as 1907 he had become a professional and full-time artist, having studied art in Germany and Paris, Fr. From 1919 until the early 1930s he taught painting at the Bauhaus laboratory school of art in Weimar and Dessau, Ger. He returned to the U.S. after the Nazi regime had condemned his work as degenerate. His work was widely exhibited (1930-50) in the U.S. and elsewhere.

Field, Marshall, III, U.S. publisher and philanthropist (b. Chicago, Ill., Sept. 28, 1893—d. New York, N.Y., Nov. 8, 1956), was the grandson of the founder of Marshall Field & Co., pioneer Chicago department store, from whom he inherited a fortune estimated at between \$150,000,000 and \$200,000,000. He was educated at Eton college and Cambridge university in England. After World War I, in which he served as a U.S. artillery officer in France, Field engaged in real estate and investment bank operations. In 1940 he established the liberal New York daily *PM*, which later discontinued publication; and the following year the pro-New Deal *Chicago Sun*, later merged with the tabloid *Times* to form the successful *Sun-Times*. Field founded Field Enterprises, Inc., a holding company for large investments in the *Sun-Times*, *World Book Encyclopedia*, the publishing houses of Simon & Schuster and Pocket Books, Inc., and other concerns. He was a benefactor and director of numerous civic and philanthropic organizations, including the Field museum in Chicago, founded by his grandfather and later renamed the Chicago Natural History museum.

Findley, Earl Nelson, U.S. editor and publisher (b. Xenia, O.—d. Washington, D.C., July 11, 1956).

Fink, Denman, U.S. artist (b. Springdale, Pa., Aug. 29, 1880—d. Miami, Fla., June 7, 1956).

Fitzgerald, Richard Joseph, Irish Roman Catholic prelate (b. Middleton, Ire., Aug. 12, 1881—d. Gibraltar, Feb. 15, 1956).

Fleming, John Adam, U.S. geophysicist (b. Cincinnati, O., Jan. 28, 1877—d. San Mateo, Calif., July 29, 1956).

Flynn, Vincent Joseph, U.S. Roman Catholic priest and educator (b. Avoca, Minn., Sept. 11, 1901—d. St. Paul, Minn., July 6, 1956).

Ford, Mrs. Frances M., U.S. author (b. Elmira, N.Y.—d. Philadelphia, Pa., June 15, 1956).

Foster, Michael, U.S. novelist (b. Hardy, Ark., Aug. 29, 1904—d. Reno, Nev., March 25, 1956).

Franklin, Herbert Henry, U.S. automobile manufacturer (b. Lisle, N.Y., 1878—d. Syracuse, N.Y., April 16, 1956).

Friend, Albert Mathias, Jr., U.S. educator and archaeologist (b. Ogontz, Pa., Feb. 27, 1894—d. Princeton, N.J., March 23, 1956).

Gardner, Lester Durand, U.S. publisher (b. New York, N.Y., Aug. 7, 1876—d. New York, Nov. 23, 1956).

Gaston, Herbert Earle, U.S. banker and government official (b. Halsey, Ore., Aug. 20, 1881—d. Los Angeles, Calif., Dec. 7, 1956).

Gauvreau, Emile Henry, U.S. journalist (b. Centerville, Conn., Feb. 4, 1891—

d. Suffolk, Va., Oct. 15, 1956), originated new techniques of journalism that spurred the circulation of papers he edited, including the old *New York Evening Graphic* (1924-29) and the *New York Daily Mirror* and *Sunday Mirror* (1929-35). One of these techniques was the "composograph," consisting of retouched photographs of persons in the news. Gauvreau also led drives to establish Mark Twain's home in Hartford, Conn., as a literary monument; and to restore full military honours in 1945 to Gen. William (Billy) Mitchell (1879-1936), pioneer advocate of air v. sea power who was court-martialled in 1925 for making statements deemed contrary to military discipline. Gauvreau's books, some of which were made into motion pictures, included *Hot News; What So Proudly We Hailed; The Wild Blue Yonder*; and *My Last Million Readers*, his autobiography.

Ghulam Mohammed, Pakistani statesman (b. Lahore, Pak., Aug. 29, 1895—d. Karachi, Aug. 29, 1956), was governor-general of Pakistan from Oct. 1951 until failing health forced his resignation in Sept. 1955. Educated at Aligarh Moslem university he passed into the Indian audit service in 1920. During 1932-34 he was commissioner of development in Bhopal state and held several senior appointments with the government of India, 1934-42. He became finance member in the nizamat of Hyderabad's executive council in 1942 and, on resigning from the public service in 1945, was appointed a director of Tata's iron and steel works and became an active member of the council of the All-India Moslem league. In 1947, in the newly created state of Pakistan, he was appointed finance minister and minister of commerce and economic affairs, succeeding to the governor-generalship in Oct. 1951. Ghulam Mohammed shouldered with courage and determination the heavy responsibilities falling on the governor general before the framing of the new constitution. He twice dismissed ministries of the central government and in 1954 he dissolved the constituent assembly for failure to fulfil its duties.

Gibbon, John Heysham, Sr., U.S. surgeon and educator (b. Charlotte, N.C., March 16, 1871—d. Philadelphia, Pa., March 13, 1956).

Gibbs, Arthur H., U.S. composer (b. Savannah, Ga., Dec. 25, 1895—d. New York, N.Y., March 17, 1956).

Gibson, Irene Langhorne (Mrs. CHARLES DANA GIBSON), U.S. model (b. Danville, Va.—d. Greenwood, Va., April 20, 1956).

Gieseeking, Walter Wilhelm, German pianist (b. Lyons, Fr., Nov. 5, 1895—d. London, Eng., Oct. 26, 1956), had no regular musical training until 1911 when he began studying under Karl Leimer at the Hanover Musical conservatory. He made his first appearance in 1913 but his career was interrupted by World War I during which he served as a regimental bandsman. He first appeared in London in 1923 and gave many concerts throughout Europe and North America which included works by Beethoven, Debussy, Liszt and Scarlatti. After World War II he was ostracized for his associations with the nazis but admiration for his outstanding artistic ability soon caused resentment to die down. His compositions include a set of variations and a sonatina for flute and piano.

Gilliatt, Sir William, British gynecologist and surgeon (b. Boston, Eng., 1884—d. Chertsey, Surrey, Sept. 27, 1956).

Glانville, Stephen Ranulph Kingdon, British Egyptologist (b. Westminster, Eng., April 26, 1900—d. Cambridge, April 26, 1956).

Glaoui, Haj Thami ben Mohammed el-Mezuari el-, Moroccan chieftain (b. Teluet, 1874?—d. Marrakesh, Jan. 23, 1956), was the son of the head of the Berber Glaoui tribe of the Great Atlas. His youth was spent largely in local wars. Morocco was then in an anarchic condition and the sultan's word prevailed little among the mountain tribes. In 1907 Madani, Thami's elder brother and lord of Tafilalet, overthrew the sultan Abdul Aziz who in 1908 was succeeded by Mulai Hafid. Madani became grand vizier (premier) while Thami succeeded his brother as pasha of Marrakesh. When in 1912 the French succeeded in establishing their protectorate over the sherrifian empire, Thami welcomed them and fought with them to quell the Berber tribes. The chief "friend of France," he maintained his feudal authority and the right to levy taxes and administer justice. He owned four palaces, half the city of Marrakesh, and shares in many businesses. The beginning of the end of el-Glaoui's career took form in 1953 when he was used by the French in deposing the sultan Mohammed V ben Yusuf as a means of suppressing nationalism. Twice in 1954 (Feb. 20 and March 5) he narrowly escaped assassination. Later when the French decided to call back Mohammed V, el-Glaoui's opposition was ignored; he finally called for his own return but on Nov. 8, 1955, in Paris, he acknowledged the reinstated sultan. "Be cursed those who have misled me!" he muttered.

Godbout, Joseph Adélard, Canadian legislator (b. St. Eloi, Que., Sept. 24, 1892—d. Montreal, Sept. 18, 1956).

Goldman, Edwin Franko, U.S. composer and conductor (b. Louisville, Ky., Jan. 1, 1878—d. New York, N.Y., Feb. 21, 1956).

Graves, Frank Pierrepont, U.S. educator and lawyer (b. Brooklyn, N.Y., July 23, 1869—d. Albany, N.Y., Sept. 13, 1956).

Griffin, Bernard William, British Roman Catholic prelate (b. Birmingham, Eng., Feb. 21, 1899—d. New Polzeath, Eng., Aug. 20, 1956), was educated at Cotton college, Staffordshire, and served in the royal naval air service near the end of World War I before entering the seminary of the Birmingham

1956 OBITUARIES: Hattie Carnegie, U.S. fashion designer; Tommy Dorsey, U.S. band leader; Marshall Field III, U.S. businessman; Walter W. Gieseeking, German pianist; Frank Hague, U.S. politician

archdiocese at Oscott. From 1921 to 1926 he studied at English seminaries in Rome, receiving doctorates in divinity and canon law, having been ordained in 1924. He was secretary to the archbishops of Birmingham (1927-37) and also chancellor of the archdiocese (1929-38). In 1938 he was consecrated bishop auxiliary of Birmingham, and in Dec. 1943, nine months after Cardinal Hinsley's death, he was appointed archbishop of Westminster. He was made cardinal (the youngest in the Sacred college at the time) by Pope Pius XII in 1946 and pursued his subsequent career with such unmitigated energy and determination that he suffered several breakdowns in health, notably in Jan. and Sept. 1949. He was on holiday in Cornwall, after an arduous sequence of engagements, when he died. Though not "primate" of all Roman Catholics in Great Britain, his designation being that of permanent chairman of the bishops' meeting in England and Wales only, and having no jurisdiction outside his own archdiocese, he nevertheless showed qualities of leadership and example which influenced all British Catholics. He made many visits abroad. In addition to pastoral letters, he published a collection of sermons and addresses, *Seek ye First* (1949).

Giulmi, Osvaldo Louis, U.S. painter (b. Cairo, Egy., April 9, 1906—d. Amagansett, N.Y., Sept. 3, 1956).
zik, Jacob ("Greasy Thumb") (alias JACK ARNOLD), U.S. gangland figure (b. Chicago, Ill., 1887?—d. Chicago, Feb. 21, 1956).

Hague, Frank, U.S. politician (b. Jersey City, N.J., Jan. 17, 1876—d. New York, N.Y., Jan. 1, 1956), was one of the last of the old-time city bosses who wielded enormous political power in the latter 19th century and the first half of the 20th century. For more than 25 years, until 1949, he held absolute control of New Jersey state politics and had proportionate influence in the national Democratic party. He served as mayor of Jersey City for eight consecutive four-year terms, ending in 1947. With little formal education, Hague worked as a railroad machinist in his youth and in his early twenties was elected constable of his ward district in Jersey City. He held various municipal jobs and in 1913 was elected city commissioner. By the early 1920s he was the unquestioned boss of the state, and in 1922 was elected Democratic national committeeman. He supported Alfred E. Smith in the Democratic convention of 1932 but switched to Franklin D. Roosevelt after the latter's nomination and enthusiastically supported him in the four subsequent presidential campaigns. Hague drew national attention in 1937 when he arrested or ejected a group of C.I.O. labour organizers from Jersey City, a procedure that was enjoined by court ruling the next year. In the early 1940s he successfully fought Gov. Charles Edison's attempt to weaken his hold on the state by adoption of a new constitution; this proposal was defeated in the state elections of Nov. 1944. Two years later, however, Hague's machine was badly defeated in a Republican state landslide, and Hague retired as mayor in 1947. In 1949 he was toppled as state boss when his hand-picked candidates for mayor of Jersey City and governor of New Jersey were successfully defeated. In April 1952 he also was turned out of his post as Democratic national committeeman.

Jones, William Cassius ("Cyclone"), U.S. meteorologist (b. Reinersville, O., Feb. 1, 1887—d. St. Louis, Mo., April 7, 1956).

Halley, Rudolph, U.S. attorney, crime investigator and city official (b. Harrison, N.Y., June 19, 1913—d. New York, N.Y., Nov. 19, 1956), became a familiar figure to millions of Americans who watched the televised proceedings of Sen. Estes Kefauver's senate crime investigating committee in 1950-51. As chief counsel of that committee Halley helped send a number of underworld characters to prison and secure more effective local and federal control over organized crime. He took his law degree from Columbia University at the age of 21, was law secretary to a U.S. district judge, 1934-7, then was an assistant U.S. attorney for the southern district of New York state for five years. From 1942 to 1945 he was assistant, then chief counsel for Harry S. Truman's senate war investigating committee. During the next five years, prior to his appointment to the Kefauver committee, he was in private law practice. After his resignation from the Kefauver committee in May 1951 he was elected president of the New York City Council on the liberal ticket for a two-year term. In 1953 he ran for mayor of New York city, again as a liberal-independent, but he was defeated by the Democratic candidate, Robert F. Wagner, Jr.

Hjgren, Mauritz Alfred, U.S. editor and author (b. Chicago, Ill., June 18, 1899—d. Baltimore, Md., Nov. 10, 1956).

Johnson, Thomas Truxton, U.S. football player, attorney and author (b. Philadelphia, Pa., Oct. 12, 1878—d. Radnor, Pa., Feb. 2, 1956).

Jones, M(artha) Anstice, U.S. educator (b. Madison, Wis., Aug. 2, 1857—d. Elmira, N.Y., Jan. 14, 1956).

Koser, Ernst Alfred, U.S. chemist and educator (b. Vienna, Aus., July 20, 1896—d. Cambridge, Mass., Feb. 10, 1956).

Leard, William Thomas, British clergyman (b. Neuadd, Sennybridge, Eng., Oct. 23, 1880—d. Gwbert-on-sea, Cardigan, Wales, Aug. 17, 1956).

Lowwood, Harry Le Roy, U.S. editor and author (b. Clermont county, O., Nov. 1, 1886—d. Cedar Rapids, Ia., Feb. 25, 1956).

Trick, Cheesman Abiah, U.S. educator (b. Redwood, N.Y., July 21, 1866—d. Philadelphia, Pa., Feb. 27, 1956).

Hersholt, Jean, U.S. motion-picture actor (b. Copenhagen, Den., July 12, 1886—d. Hollywood, Calif., June 2, 1956). played in his first motion picture

in his native Denmark in 1905 and in his last in the U.S. in 1955. His half century of film roles included successes in such notable silent and sound pictures as *Stella Dallas*, *Alias the Deacon*, *The Country Doctor* (in which he portrayed Allan Dafeo, the doctor who delivered the Dionne quintuplets), *Reunion*, *Heidi*, *Abie's Irish Rose*, *Greed* and *Private Lives*. On radio Hersholt acquired new distinction as "Dr. Christian" in a series introduced in 1937 and continued for more than 15 years. Hersholt emigrated to the United States in 1913 and became a citizen in 1920. He was knighted by King Christian X of Denmark in 1946. He was a student and admirer of Hans Christian Andersen, and translated many of the storyteller's tales into English and eventually possessed the world's greatest collection of Andersen letters, manuscripts and first editions. He played in an estimated 400 motion pictures and was president of the Academy of Motion Pictures Arts and Sciences from 1945 to 1949.

Herzel, Paul, U.S. sculptor (b. Silesia, Ger., 1880—d. New York, N.Y., May 11, 1956).

Heusser, Edward Burlton ("Big Ed"), U.S. baseball player (b. Murray, Utah, May 7, 1909—d. Aurora, Colo., March 1, 1956).

Heuven Goedhart, Gerrit Jan Van, Dutch journalist and UN official (b. Bussum, Neth., March 19, 1901—d. Geneva, Switz., July 8, 1956).

Hinshaw, (John) Carl (Williams), U.S. legislator (b. Chicago, Ill., July 28, 1894—d. Bethesda, Md., Aug. 5, 1956).

Hitler, Adolf, German nazi leader (b. Braunau-am-Inn, Aus., April 20, 1889—d. Berlin, Ger., April 30, 1945). On Oct. 25, 1956, his death by suicide was declared official by a German court.

Hodge, Frederick Webb, U.S. ethnologist (b. Plymouth, Eng., Oct. 28, 1864—d. Santa Fe, N.M., Sept. 28, 1956).

Hodgson, Sir Robert Macleod, British diplomat (b. West Bromwich, Eng., Feb. 25, 1874—d. London, Oct. 18, 1956).

Hollingworth, Harry Levi, U.S. psychologist and educator (b. De Witt, Neb., May 26, 1880—d. Montrose, N.Y., Sept. 17, 1956).

Holmes, Arthur Dunham, U.S. chemist and educator (b. Walpole, N.H., July 19, 1884—d. Amherst, Mass., July 18, 1956).

Hopper, James Marie, U.S. author (b. Paris, Fr., July 23, 1876—d. Carmel, Calif., Aug. 28, 1956).

Horowitz, Louis Jay, U.S. builder (b. Chencstochowa, Pol., Jan. 1, 1875—d. Palm Beach, Fla., Dec. 2, 1956).

Ho Tung, Sir Robert, Hong Kong financier (b. Hong Kong?, Dec. 22, 1862—d. Hong Kong, April 26, 1956), was in appearance and manner the epitome of an old-time Chinese gentleman. From lowly beginnings and after education at what later became Queen's college, Hong Kong, he rose steadily in business, gaining the highly advantageous position of Chinese agent in Jardine, Matheson and Co. By 1900 he was already said to be a millionaire, and thereafter he extended his financial activities to participation in the administration of many important businesses both in Hong Kong and outside its boundaries. Much of his wealth supported philanthropic causes, particularly education.

Howard, Cecil de Blaquiére, U.S. sculptor (b. Niagara Falls, Ont., April 2, 1888—d. New York, N.Y., Sept. 5, 1956).

Howard, Kathleen, U.S. opera singer and actress (b. Niagara Falls, Ont.—d. Hollywood, Calif., Aug. 15, 1956).

Hughes, Rupert, U.S. author (b. Lancaster, Mo., Jan. 31, 1872—d. Los Angeles, Calif., Sept. 9, 1956), had a wide range of literary output, including a number of novels, plays, reference works in music, poetry and biography—notably his three-volume *George Washington* (1926-30) and a biography of Thomas E. Dewey (1940). A graduate of Western Reserve university, Cleveland, O. (1892), he took his master's degrees there (1894) and at Yale (1899). Hughes was an editor for various magazines from 1901 to 1905, and for *Encyclopaedia Britannica*. He saw service in three U.S. wars—on the Mexican border in 1916, and in World Wars I and II. From the latter 1940s he devoted most of his time to motion-picture writing in Hollywood, Calif., although he continued to publish books.

Hull, Gordon Ferrie, U.S. physicist (b. Garnet, Ont., Oct. 7, 1870—d. Hanover, N.H., Oct. 7, 1956).

Hunt, Samuel McPherson ("Sam Golf Bag"), U.S. gangland figure (b. Jasper, Ala.—d. Schenectady, N.Y., Aug. 19, 1956).

Hurley, Raymond Joseph, U.S. industrialist (b. Chicago, Ill., Jan. 4, 1895—d. Evanston, Ill., May 28, 1956).

Hutchinson, Paul, U.S. religious editor and author (b. Madison, N.J., Aug. 10, 1890—d. Beaumont, Tex., April 15, 1956), edited the influential Protestant journal *Christian Century* from 1947 until his retirement on Jan. 1, 1956, previously having been managing editor since 1924. Under his editorship the publication became internationally known for its liberal approach to political and economic issues, for its support of church unity and positive social action by religious leaders. Graduating from Lafayette college at Easton, Pa., in 1911, he entered religious journalism in 1914 as assistant editor of the *Epworth Herald*, weekly publication for Methodist youth. In 1915 he received a divinity degree from Garrett Biblical institute at Evanston, Ill., and the next year was appointed editor of the *China Christian Advocate* at Shanghai. He returned to the United States in 1921 and handled public relations for the Methodist missions for two years before joining *Christian Century*. Hutchinson was author of works on Methodism, Christianity generally and current national and international problems.

66 OBITUARIES: Rudolph Halley, U.S. lawyer; Jean Hersholt, U.S. actor; Marie Joliot-Curie, French physicist; Jesse H. Jones, U.S. government official; Charles T. Joy, U.S. admiral

Hutson, Frederick Leroy, U.S. educator (b. Pittsburgh, Pa., April 12, 1875—d. Hightstown, N.J., Aug. 28, 1956).

Hyde, Alexander C., U.S. composer (b. Hamburg, Ger., Feb. 17, 1898—d. Santa Monica, Calif., July 7, 1956).

Isaacs, Edith (Juliet) Rich (MRS. LEWIS MONTEFIORE ISAACS), U.S. editor and author (b. Milwaukee, Wis., March 27, 1878—d. White Plains, N.Y., Jan. 10, 1956).

Janis (Bierbower), Elsie, U.S. actress (b. Columbus, O., March 16, 1889—d. Beverly Hills, Calif., Feb. 26, 1956), was the first U.S. actress to entertain the American expeditionary forces in Europe during World War I. Her performances earned her the sobriquets of "sweetheart of the A.E.F.," "playgirl of the western front" and "idol of the army." Miss Janis made her stage debut at 8 years of age and scored her first Broadway success at 16. A versatile performer, she was also a talented mimic. She wrote many of her own routines, composed more than 50 popular songs and wrote a number of motion-picture scenarios. Her autobiography, *So Far, So Good*, was published in 1932.

Jenkins, David Abbot (Ab), U.S. politician and auto racing driver (b. Spanish Fork, Utah, Jan. 25, 1883—d. Milwaukee, Wis., Aug. 9, 1956).

Johnson, Charles Spurgeon, U.S. educator (b. Bristol, Va., July 24, 1893—d. Louisville, Ky., Oct. 27, 1956), was the first Negro president of Fisk university, founded for Negroes at Nashville, Tenn., in 1867 and later opened to all races. In this position, to which he was elected in 1946, Johnson became one of the United States' leading proponents of interracial amity. After graduating from The University of Chicago in 1917 and serving in World War I, he was a staff member of the Chicago Commission on Race Relations (1919-21) and later research director of the National Urban League in New York city. In 1928 he joined the faculty of Fisk, where he was instrumental in establishing the university's institute of race relations.

Johnson, Franklin Winslow, U.S. educator (b. Jay, Me., Aug. 17, 1870—d. Waterville, Me., Feb. 19, 1956).

Joliot-Curie, Irène, French physicist (b. Paris, Sept. 12, 1897—d. Paris, March 17, 1956), was the daughter of Pierre and Marie Sklodowska Curie, the discoverers of radium. Trained by her mother, she worked for her at the Institut de Radium, obtaining an unrivalled knowledge of the physical and chemical aspects of radioactivity. Her doctoral thesis (1925) was on the X-rays of polonium. (She was co-author, with Georges Boussières, of the article *POLONIUM* in *Encyclopædia Britannica*.) In 1926 she married Frédéric Joliot (later Joliot-Curie), an assistant to her mother. By their study (1932) of the radiation caused in beryllium by X-particles they reached the threshold of the discovery of the neutron. Systematic investigation (which had also marked the collaboration of her parents) led Irène and Frédéric to the discovery of "induced" or artificial radioactivity, announced in 1934. For this they were awarded the Nobel prize for chemistry in 1935. This work, and Irène's subsequent researches, were necessary steps toward the gaining of a knowledge of fission and atomic energy. She was under-secretary for scientific research (June-Sept. 1936) in Léon Blum's cabinet and in the same year she was made an officer of the Légion d'Honneur. From 1945 to 1951 she was a commissioner of the French atomic energy commission. Her husband, also a commissioner, was dismissed in 1950 for being a communist. Her death, through leukemia, was the result of prolonged exposure to radiation.

Jones, Isham, U.S. composer and orchestra leader (b. Coalton, O., Jan. 31, 1894—d. Hollywood, Fla., Oct. 19, 1956).

Jones, Jesse Holman, U.S. business executive and government official (b. Robertson county, Tenn., April 5, 1874—d. Houston, Tex., June 1, 1956), served as chairman of the Reconstruction Finance corporation, depression-born federal loan agency, 1933-45, during which time the RFC loaned private business and public agencies an estimated \$50,000,000,000. Jones was also secretary of commerce from 1940 until 1945, when he resigned at the request of Pres. Franklin D. Roosevelt, who named Henry A. Wallace to succeed him. Prior to his government service (he had also been a Red Cross official during World War I), Jones had amassed a fortune of several million dollars as a Texas lumber dealer, real estate operator and financier; he was also publisher of the *Houston Chronicle*. Jones was chairman of the Democratic party's finance committee from 1924 to 1928. Following his retirement from the cabinet in 1945 he returned to private business in Texas.

Joy, Charles Turner, U.S. naval officer (b. St. Louis, Mo., Feb. 17, 1895—d. San Diego, Calif., June 6, 1956), was head of the United Nations armistice delegation in Korea from July 1951 to May 1952, where he gained international attention for his refusal to yield to North Korean-Chinese Communist demands regarding disposition of prisoners and other phases of the Korean settlement. After graduating from the U.S. naval academy, Annapolis, Md., in 1916, Joy saw active naval service during World Wars I and II and in 1949 was appointed commander of U.S. naval forces in the far east. Following the Kaesong negotiations he was superintendent of the U.S. naval academy (1952-54).

Kaempffert, Waldemar Bernhard, U.S. science writer (b. New York, N.Y., Sept. 23, 1877—d. New York, N.Y., Nov. 28, 1956), spent most of his adult life writing for lay readers intelligible and accurate expositions of new technical and scientific developments. Taking a bachelor's degree from the City College of New York and a law degree from New York university (he was admitted to the bar but never practised law), Kaempffert was assistant editor of *Scientific American* from 1897 to 1911 and managing editor of that magazine from 1911 to 1915. For the next five years he was editor of the monthly *Popular Science*, then wrote free lance. In 1927 he was appointed science editor of the *New York Times*, holding this position until his death except for a period of three years (1928-31) when he was the first director of the Museum of Science and Industry in Chicago. Kaempffert's articles and books embraced all the physical and biological sciences. He was generally credited with having effectively introduced the proposal for co-operative research in cancer.

Karig, Walter, U.S. journalist and author (b. New York, N.Y., Nov. 13, 1898—d. Bethesda, Md., Sept. 30, 1956), was a co-author of *Battle Report*, a history in several volumes of the U.S. navy's part in World War II, upon which was based the TV series "Victory at Sea." He was also the author of several novels and books for children. Beginning his career as a sports writer, he later joined the staff of the *Newark* (N.J.) *Evening News* and was head of its Washington bureau from 1934. In World War I he served in the U.S., Polish and French armies. During World War II he saw naval combat service in the Mediterranean.

Kaye-Smith, Sheila (MRS. THEODORE PENROSE FRY), British novelist (b. Hastings, Eng., 1887—d. nr. Rye, Jan. 15, 1956).

Keeler, Stephen Edwards, U.S. Episcopal bishop (b. New Canaan, Conn., April 16, 1887—d. nr. Heidelberg, Ger., Sept. 25, 1956).

Kelly, Paul Michael, U.S. actor (b. Brooklyn, N.Y., Aug. 9, 1899—d. Beverly Hills, Calif., Nov. 6, 1956).

Kibbee, Guy Bridges, U.S. motion-picture actor (b. El Paso, Tex., March 6, 1886—d. East Islip, L.I., N.Y., May 24, 1956), appeared in stock company and vaudeville productions for a quarter century before achieving his first Broadway hit in 1930 (*Torch Song*) and his first motion-picture role (*Man of the World*) in 1931. His reputation for comic treatment of semiserious roles was by then solidly established, and he starred in more than 100 films. One of his best-known parts was that of "Scattergood Baines" in film versions of the popular stories by Clarence Budington Kelland.

Kilgore, Harley Martin, U.S. senator (b. Brown, W.Va., Jan. 11, 1893—d. Bethesda, Md., Feb. 28, 1956), was one of the last New Deal legislators, with a record of uniform support of Roosevelt and Truman policies from the time of his first election to the senate in 1940. Kilgore graduated from West Virginia university, Morgantown, in 1914 and was admitted to the state bar that year. Private practice at Beckley, W.Va., was interrupted by army service in World War I (1917-20) and by election as judge of the Raleigh county (W.Va.) criminal court in 1932. Kilgore was re-elected to the U.S. senate in 1946 and 1952, thus becoming the first West Virginia senator ever chosen for three successive terms. At the time of his death he was chairman of the senate judiciary committee.

King, Ernest Joseph, U.S. fleet admiral (b. Lorain, O., Nov. 23, 1878—d. Portsmouth, N.H., June 25, 1956), was commander in chief of the U.S. fleet during most of its participation in World War II (Dec. 1941 to Nov. 1945), and concurrently held the additional post of chief of naval operations (March 1942 to Dec. 1945). He was the first U.S. naval officer to hold both offices at the same time. His career spanned three wars. In the Spanish-American war he served on patrol duty in the Atlantic, and during World War I was assistant to the chief of staff of the U.S. fleet's commander in chief. A graduate of the U.S. naval academy, Annapolis, Md. (1901), he became rear admiral in 1933 and vice-admiral in 1938, and was advanced to the newly created rank of fleet admiral on Dec. 14, 1944, along with Adm. Chester W. Nimitz and Adm. William D. Leahy. King's global strategy as chief of naval operations during World War II was held to be largely responsible for the destruction of the Japanese fleet and merchant marine. He attended most of the high-level international conferences of the World War II period, including those at Yalta and Potsdam. After his retirement in Dec. 1945 he opposed the unification of the U.S. armed services.

Kinsey, Alfred Charles, U.S. biologist (b. Hoboken, N.J., June 23, 1894—d. Bloomington, Ind., Aug. 25, 1956), attained international fame with a single book, *Sexual Behavior in the Human Male* (1948), which, despite its unadorned statistical presentation, sold about 500,000 copies. The book was the tabulated result of personal interviews with about 5,000 men and boys in the United States, and was followed by *Sexual Behavior in the Human Female* (1953), based on interviews with about 6,000 women and girls. His findings, shocking to many and discounted by others, got wide publicity in the United States and abroad. Kinsey, a graduate of Bowdoin college, Brunswick, Me. (B.S., 1916), and of Harvard (Sc.D., 1920), taught zoology and botany at Harvard before joining the faculty of Indiana university as an assistant professor of zoology in 1920. He became full professor in 1929 and director of the university's institute for sex research in 1942. The latter was sponsored jointly with the university by the Rockefeller foundation (until 1954) and the National Research council.

Kirby, Gustave Town, U.S. sportsman, inventor and lawyer (b. Philadelphia, Pa., Jan. 22, 1874—d. Bedford Hills, N.Y., Feb. 27, 1956).

Kleiber, Erich, Austrian-born orchestra conductor (b. Vienna, Aus., Aug. 5, 1890—d. Zurich, Switz., Jan. 27, 1956).

Knight, Frank A., U.S. newspaperman (b. Chicago, Ill., Oct. 4, 1907—d. Charleston, W.Va., July 6, 1956).

Konchalovsky, Pyotr P., Russian painter (b. 1876—d. announced Moscow, U.S.S.R., Feb. 3, 1956).

Korda, Sir Alexander, British motion-picture producer (b. Turkeve, Hung., Sept. 16, 1893—d. London, Jan. 24, 1956), was a leading figure in the motion-picture industry in Great Britain, the United States and Europe and made major contributions to its development. He was educated at the Reformist college and the Royal university, Budapest, Hung. Before he was 20 he entered journalism but the challenge presented by motion pictures in their infancy attracted him and he left newspaper work to rent a small building outside Budapest which became his studio. He bought a camera, wrote scripts and began producing films. He soon found work as a director with Sascha Films, a pioneer firm in Vienna. *The Prince and the Pauper*, his first production, was praised for the improved technique, experimental approach and high standard it represented. From Vienna he went to Berlin where he made several films for the UFA studios and attracted the attention of Hollywood (Calif.), by then the most important motion-picture centre. He served as a director for leading Hollywood companies but, discouraged and dissatisfied by their reluctance to give his talents free rein, he returned to Europe. Finding himself in Paris with little money at a time when the European companies were having financial difficulties, he nevertheless attempted, with some friends, to launch a new studio. Paramount then asked him to direct its work in Europe. He accepted and moved to London and the Elstree studios, where he made *Service for Ladies* (1931), which

brought immediate fame. Soon after this triumph, he founded his own firm, London Film Productions which in 1943 amalgamated with the Metro-Goldwyn-Mayer British Studios, Ltd., Korda becoming chairman and managing director of the new undertaking. After World War II he broke away from M-G-M, and London Film Productions resumed independent existence with Korda at its head. His productions included *The Scarlet Pimpernel* (1935), *Catherine the Great* (1934), *The Private Life of Henry VIII* (1933), *The Shape of Things to Come* (1936), *The Third Man* (1949), *The Fallen Idol* (1948), *The Wooden Horse* (1950), *Seven Days in Noon* (1950) and *The Sound Barrier* (1952). He was knighted in 1942.

Farge, Christopher, U.S. author (b. New York, N.Y., Dec. 10, 1897—d. Providence, R.I., Jan. 5, 1956), revived the novel-in-verse literary form with success in his first book, *Hoxsie Sells His Acres* (1934) and later works. *The Sudden Guest* (1946), set in New England during the hurricane of 1938, was a fiction best seller in the United States. La Farge prepared for an architectural career at the Pennsylvania School of Architecture after his graduation from Harvard university in 1920. He was a practising architect in New York city (1924–32) before abandoning that profession to spend his full time writing. He was also a painter of merit. His other books include *Each to the Other* (1939), *Poems and Portraits* (1940), *East by Southwest* (1944), *Mesa Verde* (1945) and *Beauty for Ashes* (1953).

Lane, Arthur Bliss, U.S. diplomat (b. Bay Ridge, L.I., N.Y., June 16, 1894—d. New York, N.Y., Aug. 12, 1956), occupied key foreign service posts for the United States during and after World War II. As the first postwar ambassador to Poland, Lane repeatedly called U.S. attention to the Communist stranglehold on that nation. In 1947 he returned to private life to devote all his time to anti-Communist activities, including publication of *How Russia Rules Poland* (1947) and *I Saw Poland Betrayed* (1948). Educated in Paris, Fr., and at Yale university (B.A., 1916), Lane entered the U.S. foreign service in 1916 and held a number of diplomatic posts in Europe, Mexico and Nicaragua prior to his appointment as ambassador to the three Baltic states of Lithuania, Latvia and Estonia in 1936. The next year he was named ambassador to Yugoslavia, and there witnessed the German occupation of Belgrade in 1941, after King Peter (with his backing) had renounced Yugoslavia's ties with the axis. Following his return to the U.S., Lane was minister to Costa Rica, then ambassador to Colombia, and in Sept. 1944 was appointed ambassador to the Polish exile government in London.

Langford, Sam, U.S. boxer (b. 1880?—d. Cambridge, Mass., Jan. 12, 1956).

Lang, Charles Downing, U.S. landscape architect (b. Newburgh, N.Y., Sept. 3, 1877—d. Stratford, Conn., Feb. 15, 1956).

Lynton, John (Johnny), U.S. billiards player (b. 1886?—d. St. Louis, Mo., Jan. 18, 1956).

Mason, Spencer Stottisbury Gwatkin, British Anglican bishop (b. Twickenham, Eng., Oct. 9, 1892—d. London, Jan. 27, 1956).

Prince, Joseph Albert Augustin, U.S. sanitary engineer (b. Leeds, Eng., Aug. 8, 1875—d. Memphis, Tenn., Feb. 10, 1956).

Rick, Harry, U.S. song writer (b. Philadelphia, Pa., Jan. 25, 1896—d. New York, N.Y., July 5, 1956).

Ree, "Little Jack" (JOHN LEONARD), U.S. singer and pianist (b. London, Eng., May 28, 1900—d. Hollywood, Fla., April 9, 1956).

Reddale, Clara Savage (MRS. HAROLD A. LITLEDIALE), U.S. editor (b. Belfast, Me., Jan. 31, 1891—d. New York, N.Y., Jan. 9, 1956).

Lonardi, Eduardo, Argentine army officer (b. Entre Rios province, Arg., Sept. 15, 1896—d. Buenos Aires, March 22, 1956), won his niche in history during a brief two-month period in 1955 as leader of the military revolution that ousted Juan Perón as dictator of Argentina. Lonardi was proclaimed provisional president Sept. 23 but was ousted by the army Nov. 13 and succeeded by Gen. Pedro Aramburu. After several weeks in the United States he returned to Argentina a short time before his death. Lonardi, a graduate of Argentina's military academy, was military attaché in Washington, D.C., for a few months after World War II and later served as commander of the Argentine third army. Open criticism of the Perón regime led to his forced retirement in 1951, and thereafter he led several movements to overthrow Perón prior to the successful coup of Sept. 16–19, 1955.

Wett, Robert Morss, U.S. educator (b. Boston, Mass., Dec. 25, 1870—d. Chicago, Ill., Feb. 8, 1956).

Blasko, Bela, Hungarian-born actor (b. Lugos, Hung. [later Rum.], Oct. 20, 1888—d. Los Angeles, Calif., Aug. 16, 1956), was in 1913 the leading actor of the Royal National theatre, Budapest. After 1918 he left Hungary, and in 1922 appeared on the New York stage. Still in the United States, two years later he turned to motion pictures. He appeared as the vampire Dracula (on both stage and screen) and continued his ghoulish portrayals in *Murders in the Rue Morgue* and the *Frankenstein* films. In 1944 he returned to the stage, touring the United States in *Arsenic and Old Lace*.

Ward, William Edward, U.S. educator (b. Lisbon, Me., Jan. 13, 1882—d. Haverford, Pa., Nov. 10, 1956).

Ward, Douglas Ellsworth, U.S. editor and author (b. Monticello, Minn., June 9, 1897—d. White Plains, N.Y., Aug. 27, 1956).

MacArthur, Charles, U.S. playwright (b. Scranton, Pa., Nov. 5, 1895—d. New York, N.Y., April 21, 1956), combined wit, fast action and cynicism to turn out plays such as *The Front Page* (with Ben Hecht, 1928), a boisterous account of Chicago newspaperdom in prohibition days. *The Front Page*, which reflected its authors' careers, was followed by other plays and a series of successful motion-picture scenarios including *The Sin of Madelon Claudet* (1931) starring Helen Hayes, whom MacArthur had married in 1928. MacArthur began his journalistic career in 1914 at Chicago and continued as a reporter there and in New York city until 1923, except for military service on the Mexican border in 1916 and with the United States forces in France during World War I. In addition to plays co-written with Hecht, Sidney Howard and Edward Sheldon, MacArthur was sole author of *Johnny on a Spot* (1941). One of his best-known motion-picture adaptations was *Wuthering Heights*. For a few years prior to 1950 he was editor of *Theatre Arts*.

McCord, Alvin Carr, U.S. inventor and industrialist (b. Paris, Ill., Nov. 24, 1867—d. Detroit, Mich., Aug. 6, 1956).

McCormick, Lynde Dupuy, U.S. naval officer (b. Annapolis, Md., Aug. 12, 1895—d. Newport, R.I., Aug. 16, 1956).

Macelwane, James Bernard, U.S. geophysicist and educator (b. nr. Port Clinton, O., Sept. 28, 1883—d. St. Louis, Mo., Feb. 15, 1956).

Macfarland, Charles Stedman, U.S. diplomat and clergyman (b. Boston, Mass., Dec. 12, 1866—d. Mountain Lakes, N.J., Oct. 26, 1956).

Mack, Connie (CORNELIUS ALEXANDER MCGILLICUDDY), U.S. baseball manager (b. East Brookfield, Mass., Dec. 23, 1862—d. Philadelphia, Pa., Feb. 8, 1956), was the "grand old man" of U.S. baseball in the first half of the 20th century, managing the Philadelphia Athletics from 1901 to 1950. Nine times during that period his team won the American league pennant and five times the world championship (1910, 1911, 1913, 1929 and 1930). Twice Mack broke up pennant-winning teams—after the 1905 and 1914 seasons—to start afresh with practically new playing talent. Mack entered baseball with his native town team in 1883 as a catcher, moving the next year to Meriden, Conn. In 1885 he transferred to the Hartford (Conn.) team of the New England league, in 1886 to the Washington, D.C., club of the old National league, and in 1890 to Buffalo, N.Y. (Brotherhood league). From 1891 to 1896 he played with, and then managed, Pittsburgh in the National league, and during the next four seasons was catcher-manager of the Milwaukee (Wis.) club of the Western association. After he became manager and part owner of the Athletics in 1901 he retired as an active player. Gradually he acquired ownership of the team. In 1954, at the age of 91, he sold the Athletics, whose American league franchise was then transferred to Kansas City, Mo. Mack was among the first 13 immortals elected to baseball's hall of fame, opened in 1939, at Cooperstown, N.Y. He was known as one of the game's greatest strategists.

MacKaye, Percy, U.S. poet-dramatist (b. New York, N.Y., March 16, 1875—d. Cornish, N.H., Aug. 31, 1956), was a prolific writer, an innovator of new forms of drama and an authority on Shakespeare. His cycle of four plays, *The Mystery of Hamlet, King of Denmark*, was staged at the Pasadena (Calif.) playhouse in 1949. MacKaye, who graduated from Harvard university in 1897, was the recipient of a number of honours and awards in poetry. (See also *Encyclopædia Britannica*.)

McKelvie, Sam Roy, U.S. editor, publisher and politician (b. Fairfield, Neb., April 15, 1881—d. nr. Mesa, Ariz., Jan. 6, 1956).

McKinney, Madge Maude, U.S. educator (b. Rome, O., Nov. 21, 1893—d. New York, N.Y., July 29, 1956).

McNulty, John Augustin, U.S. author (b. Lawrence, Mass., 1895—d. Wakefield, R.I., July 29, 1956).

Mankin, Mrs. Helen Douglas, U.S. legislator (b. Atlanta, Ga., Sept. 11, 1896—d. Atlanta, July 26, 1956).

Marchal, Léon, French diplomat (b. Badonviller, Fr., June 8, 1900—d. Strasbourg, Sept. 24, 1956).

Marcus, Ruth, U.S. educator (b. San Francisco, Calif., Aug. 17, 1900—d. Chicago, Ill., Dec. 25, 1956).

Margolin, Arnold D., Russian-U.S. jurist and author (b. Kiev, U.S.S.R., Nov. 17, 1877—d. Washington, D.C., Oct. 30, 1956).

Marie Louise (FRANZISCA JOSEPHA LOUISE AUGUSTA MARIE CHRISTIANA HELENA), British princess (b. London, Aug. 12, 1872—d. London, Dec. 8, 1956), was a daughter of Princess Helena Augusta Victoria and Prince Christian of Schleswig-Holstein and a granddaughter of Queen Victoria. In 1891 she married Prince Aribert of Anhalt but returned to England on the dissolution of her marriage in 1900. Thereafter she spent the greater part of her life in serving the community as a member of committees and in philanthropic activities which reflected her kindly and capable personality. The charities which benefited from her interest included University College hospital, the Friends of the Poor and the South Eastern Hospital for Children. The princess moved in a broad range of society, and refused to be unduly bound by the conventions of the past. Her publications comprised letters written to her sister Princess Helena Victoria in 1925 from West Africa and *My Memories of Six Reigns*, published shortly before her death.

Marks, Percy, U.S. novelist and educator (b. Covelo, Calif., Sept. 9, 1891—d. New Haven, Conn., Dec. 27, 1956).

Martínez, Luis María, Mexican Catholic archbishop (b. Molino de Caballeros, Michoacán, Mex., June 9, 1881—d. Mexico City, Feb. 9, 1956), was the first to hold the title of Roman Catholic primate of Mexico. His liberal sentiments and strong anti-Fascism helped restore amicable church-state relations in Mexico after years of mutual recrimination. Martínez was educated at the Morelia (Michoacán) seminary and was ordained to the priesthood in 1904. Thereafter he taught at the Morelia seminary and became its rector. In 1923 he was named a titular bishop and in 1934 titular archbishop of Mistia. On Feb. 20, 1937, he was appointed archbishop of Mexico.

Mason, Maud M., U.S. painter (b. Russellville, Ky., March 18, 1867—d. New York, N.Y., Aug. 28, 1956).

Mead, Edward Sherwood, U.S. educator and author (b. Medina, O., Jan. 25, 1874—d. Philadelphia, Pa., Aug. 21, 1956).

Mencken, H(enry) L(ouis), U.S. author, editor and philologist (b. Baltimore, Md., Sept. 12, 1880—d. Baltimore, Jan. 29, 1956), provoked more controversy than any other U.S. literary figure of the first half of the 20th century, with the possible exception of Sinclair Lewis. His attacks on the U.S. middle class ("booboisie"), prudery and Fundamentalism ("Bible belt") and sham and mediocrity in literature brought him fame and contumely as early as 1910, and his influence was still strong 25 years later. Mencken's formal education ended with high school. He was hired as a reporter for the *Baltimore Morning Herald* in 1899 and four years later was city editor. In 1906 he went to the *Baltimore Sun*, beginning an association with the Sunpapers that lasted off and on for the next 50 years. With George Jean Nathan he was editor of the iconoclastic magazine *Smart Set* from 1914 to 1923; from 1924 to 1933 he edited the famous *American Mercury*. These two magazines helped establish the reputations of such U.S. authors as

Theodore Dreiser, Sinclair Lewis, Edgar Lee Masters, James Branch Cabell and Sherwood Anderson. Among the 45 or more books of which Mencken, the "sage of Baltimore," was author, co-author, editor or translator, the most ambitious was *The American Language*, published in several editions and supplements. Mencken described the labour involved as formidable and appalling. Of his other books, the series of *Prejudices*, collections of essays (the first published in 1919 and the sixth and last in 1927), were perhaps most widely read and quoted. Mencken's *Minority Report* (1956) was published posthumously. He had retired in 1948.

Merkle, Fred(erick Charles), U.S. baseball player (b. Watertown, Wis., Dec. 20, 1888—d. Daytona Beach, Fla., March 2, 1956).

Merrill, Charles Edward, U.S. investment banker and stockbroker (b. Green Cove Springs, Fla., Oct. 19, 1885—d. Southampton, L.I., N.Y., Oct. 6, 1956), founded in 1914 the firm which ultimately became, after many mergers, one of the largest brokerage companies in the world—Merrill Lynch, Pierce, Fenner & Beane. Merrill was one of a few brokers who foresaw the stock market crash of Oct. 1929, and so counselled his clients. His firm underwrote the capital of some of the largest corporations in the United States, including S. S. Kresge company, Superior Steel and Safeway stores. The firm also pioneered efforts to interest small investors in buying private securities.

Miklas, Wilhelm, Austrian statesman (b. Krems, Lower Austria, Oct. 15, 1872—d. Vienna, March 20, 1956), was educated at Vienna university and became a school teacher at Trieste and later at Horn, which he represented in the Austrian *Reichsrat* (parliament), 1907-18 and again in 1920. A leading Christian Democrat, he was president of the Austrian republic during 1923-27 and from Dec. 5, 1928, to March 13, 1938 (being re-elected on Oct. 9, 1931). During the *Anschluss* crisis he refused to approve the annexation of Austria to Germany.

Miles, Alfred Hart, U.S. naval officer (b. Norfolk, Va., Nov. 2, 1883—d. Norfolk, Oct. 6, 1956).

Milne, A(Ian) A(lexander), British author and playwright (b. London, Jan. 18, 1882—d. Hartfield, Sussex, Jan. 31, 1956), was educated at Westminster and at Trinity college, Cambridge, where as editor of *Granta* he first showed talent for writing. He was assistant editor of *Punch*, 1906-14, and became known as a humorist in his own right. Invalided out of the army during World War I, his play *Wurzel Flummery*, completed in 1917, was the first of many successes; *Mr. Pim Passes By* (1919), *The Romantic Age* (1920), *The Dover Road* (1922), *The Fourth Wall* (1928), a skilful, murder play, and *Toad of Toad Hall* (1930), an adaptation of Kenneth Grahame's *The Wind in the Willows*, followed. He specialized in light comedy and his plays were interwoven with wit and fantasy. A. A. Milne is best known, however, for his nursery verses and stories, which have a world-wide appeal to children and adults alike. His nursery classics, *Winnie-the-Pooh* (1926) and *The House at Pooh Corner* (1928), won his bear "Pooh" international renown. His Christopher Robin books of verse, *When We Were Very Young* (1924) and *Now We Are Six* (1927), are equally well known. In 1934 he wrote *Peace With Honour*, a vigorous plea against war; and his autobiography, *It's Too Late Now*, was published in 1939. In later years his short stories were well received both in the U.S. and in England. *Year In, Year Out* (1952) was his last work.

Mistinguett (JEANNE BOURGEOIS), French singer and dancer (b. La Pointe de Raquet, Fr.—d. Bougival, Jan. 5, 1956).

Mitchell, David, U.S. psychologist and educator (b. Aldershot, Can., Oct. 13, 1884—d. New Milford, Conn., July 14, 1956).

Moffat, Douglas Maxwell, U.S. diplomat and attorney (b. Stanhope, N.J., Nov. 16, 1881—d. Canberra, Austr., Aug. 30, 1956).

Molloy, Thomas Edmund, U.S. Roman Catholic prelate (b. Nashua, N.H., Sept. 4, 1885—d. Brooklyn, N.Y., Nov. 26, 1956).

Moore, Ethelbert Allen, U.S. industrialist and author (b. Kensington, Conn., Nov. 30, 1864—d. Ormond Beach, Fla., Feb. 13, 1956).

Moore, George Thomas, U.S. botanist (b. Indianapolis, Ind., Feb. 23, 1871—d. St. Louis, Mo., Nov. 27, 1956).

Morgan, Ralph (RALPH WUPPERMAN), U.S. actor (b. New York, N.Y., July 6, 1888—d. New York, June 11, 1956).

Moscadé Iruarte, José, Spanish army officer (b. Madrid, Oct. 26, 1878—d. Laredo, near Santander, April 12, 1956).

Mulford, Clarence Edward, U.S. author (b. Streator, Ill., Feb. 3, 1883—d. Portland, Me., May 10, 1956).

Murfin, Orin Gould, U.S. naval officer (b. Ohio Furnace, O., April 13, 1876—d. San Diego, Calif., Oct. 22, 1956).

Murray, John Gregory, U.S. Roman Catholic prelate (b. Waterbury, Conn., Feb. 26, 1877—d. St. Paul, Minn., Oct. 11, 1956).

Murray, William Henry ("Alfalfa Bill"), U.S. governor (b. Collinsville, Tex., Nov. 21, 1869—d. Oklahoma City, Okla., Oct. 15, 1956), was one of the most colourful and tempestuous political figures of the 1930s, particularly because of his frequent denunciations of Pres. Franklin D. Roosevelt and because of his unorthodox manner of enforcing many of his measures as governor of Oklahoma (1931-35) by calling out the national guard. Murray had served as chairman of Oklahoma's constitutional convention in 1907, when the state was admitted to the union, and was a member of the U.S. house of representatives (1913-17).

Myers, William Starr, U.S. educator and author (b. Baltimore, Md., June 17, 1877—d. Princeton, N.J., Jan. 27, 1956).

Neuberg, Carl Alexander, U.S. biochemist (b. Hanover, Ger., July 29, 1877—d. New York, N.Y., May 30, 1956).

Neurath, Konstantin von, German statesman (b. Klein-Gratbach, Württemberg, Ger., Feb. 2, 1873—d. Enzweihingen, Aug. 14, 1956).

Newcomb, Kate Pelham, U.S. physician (b. Wellington, Kan., July 26, 1886—d. Wausau, Wis., May 30, 1956).

Newton, Robert, British actor (b. Shaftesbury, Dorset, Eng., June 1, 1905—d. Beverly Hills, Calif., March 25, 1956).

Nixon, Paul, U.S. educator (b. Des Moines, Ia., May 23, 1882—d. West Harpswell, Me., Oct. 27, 1956).

Nolan, Dennis Edward, U.S. army officer (b. Akron, N.Y., April 22, 1872—d. New York, N.Y., Feb. 24, 1956).

Noonan, Herbert C., U.S. Jesuit educator (b. Oconto, Wis., Sept. 7, 1875—d. Omaha, Neb., July 6, 1956).

Novikoff, Laurent, Russian dancer and ballet master (b. Moscow, U.S.S.R., 1888—d. New Buffalo, Mich., June 18, 1956).

Nufer, Albert F., U.S. diplomat (b. New York, N.Y., Oct. 21, 1894—d. Manila, P.I., Nov. 6, 1956).

Obermann, Julian Joel, U.S. educator (b. Warsaw, Pol., June 14, 1888—d. New Haven, Conn., Oct. 17, 1956).

Ofstie, Ralph Andrew, U.S. naval officer (b. Eau Claire, Wis., Nov. 16, 1897—d. Bethesda, Md., Nov. 18, 1956).

Ogata, Taketora, Japanese editor and political leader (b. Fukuoka, Jap., Jan. 30, 1888—d. Tokyo, Jan. 28, 1956), spent most of his career as a journalist (reporter for the Asahi chain of dailies from 1911 and chief editor from 1934) before his appointment in 1944 as minister of state and later propaganda minister in the struggling Japanese cabinets of the last months of World War II. From 1945 to 1947 he was interned by order of Gen. Douglas MacArthur but was permitted to resume political activities in 1951. He was deputy premier under Shigeru Yoshida and in Nov. 1955 helped form the new Liberal Democratic party which returned Premier Ichiro Hatoyama to power. An ardent anti-Communist, Ogata became second man of the party and at the time of his death was believed to be next in line to succeed Hatoyama.

O'Hara, Edwin Vincent, U.S. Roman Catholic prelate (b. Lanesboro, Minn., Sept. 6, 1881—d. Milan, It., Sept. 11, 1956).

Olin, Robert (Bob), U.S. boxer (b. New York, N.Y., July 4, 1908—d. New York, Dec. 16, 1956).

Olsted, James Montrose Duncan, U.S. physiologist (b. Lake City, Ia., May 21, 1886—d. Berkeley, Calif., May 25, 1956).

Oppenheimer, Louis, British diamond mining company executive (b. Friedberg, Ger.—d. Gerrard's Cross, Eng., Jan. 19, 1956).

Ortner, Hermann Heinz, Austrian dramatist (b. Bad Kreuzen, Upper Aus., Nov. 4, 1895—d. Salzburg, Aug. 18, 1956).

O'Shaughnessy, Thomas Augustin, U.S. mural artist (b. Chariton Cty., Mo., April 14, 1870—d. Chicago, Ill., Feb. 12, 1956).

Oxx, Francis Hudson, U.S. army officer (b. Jamestown, R.I., Sept. 13, 1898—d. Frederick, Md., Feb. 15, 1956).

Paasikivi, Juho Kusti, Finnish statesman (b. Tampere, Fin., Nov. 27, 1870—d. Helsinki, Dec. 14, 1956), was elected president of Finland in March 1946 and after being re-elected in 1950 he continued in office until Feb. 1956. He studied law at Stockholm, Uppsala and Leipzig universities and from 1899-1902 was a lecturer in law at Helsinki university, subsequently entering the banking and insurance business. In 1907 he was elected a member of the Finnish *Eduskunta* (diet) and the following year became minister of finance in the semiautonomous government of the grand duchy of Finland. After the Russian revolution and Finland's declaration of independence, he headed the Finnish delegation which on Oct. 14, 1920, signed at Tartu, Estonia, the peace treaty with the U.S.S.R. In independent Finland Paasikivi became prominent as a banker and businessman. Shortly before World War II he was appointed minister to Sweden. He was recalled from Stockholm in Oct. 1939 to lead the delegation which unsuccessfully attempted to reach a peaceful settlement with the U.S.S.R. In March 1940 he negotiated peace and in April was appointed minister to Moscow, resigning from this position in May 1941. Disagreeing with government policy he virtually retired from politics from 1941 to Nov. 1944 when he became prime minister of a government pledged to peaceful co-operation with the U.S.S.R. He succeeded Marshal C. G. Mannerheim as president in March 1946. In 1948, he agreed to conclude a treaty of mutual assistance with the U.S.S.R. but although pursuing a policy of co-operation with this powerful neighbour he firmly resisted Communist penetration in Finland. Yet, despite his lack of sympathy with communism, he was awarded in Sept. 1954 one of the highest of Soviet distinctions, the Order of Lenin.

Papini, Giovanni, Italian author and philosopher (b. Florence, It., Jan. 9, 1881—d. Florence, July 8, 1956).

Parshall, De Witt, U.S. artist (b. Buffalo, N.Y., Aug. 2, 1864—d. Santa Barbara, Calif., July 7, 1956).

Patterson, Grover Hiram, U.S. editor (b. Rochester, Minn., Nov. 5, 1881—d. Toledo, O., Aug. 7, 1956).

1956 OBITUARIES: Harley M. Kilgore, U.S. senator; Ernest J. King, U.S. admiral; Alfred C. Kinsey, U.S. biologist; Eduardo Lonardi, Argentine army officer; Bela Lugosi, U.S. actor

Harrison, Paul Linton, U.S. lawyer and legislator (b. Kent, O., July 18, 1900—d. Portland, Ore., Jan. 31, 1956).
Hack, Randolph Everghim, U.S. attorney and government official (b. Hackensack, N.J., Aug. 8, 1890—d. Washington, D.C., Feb. 6, 1956).
Merosi, Lorenzo, Italian composer of religious music (b. Tortona, It., Dec. 20, 1872—d. Rome, Oct. 12, 1956).
Metegorsky, David W., U.S. political scientist (b. Ottawa, Ont., May 31, 1915—d. New York, N.Y., July 15, 1956).
Petersen, Martin, U.S. artist (b. Denmark, Nov. 23, 1866—d. New York, N.Y., Nov. 20, 1956).
Hillips, Fred, U.S. musician and song writer (b. Boston, Mass., Oct. 17, 1890—d. Bethpage, N.Y., Oct. 13, 1956).
Hillips, Thomas Wharton, Jr., U.S. businessman and congressman (b. New Castle, Pa., Nov. 21, 1874—d. Butler, Pa., Jan. 2, 1956).

Pick, Lewis Andrew, U.S. army officer and engineer (b. Brookneal, Va., Nov. 18, 1890—d. Washington, D.C., Dec. 2, 1956), directed the construction of such engineering feats as the Ledo supply road to China from India and Burma in World War II, the U.S. strategic air base at Thule, Greenland, and a number of multipurpose dams and reservoirs in the Missouri river valley of the United States. Graduating from Virginia Polytechnic institute in 1914 and from the army engineers school at Ft. Belvoir, Va., in 1924, Pick was an engineers officer in France during World War I, and by 1951 had advanced to the rank of lieutenant general. He was chief of the U.S. army engineers from March 1949 to Feb. 1953. The 478-mi. Ledo road, familiarly known to Pick's subordinates as "Pick's Pike," was built under seemingly impossible conditions of jungle and mountain and was a major logistics factor in the defeat of Japan in World War II. After the war Pick took over the Pick-Sloan plan, a project he had co-authored with the U.S. bureau of reclamation several years before, to control floods and provide irrigation in the Missouri river basin.

Sis, Filippo de, Italian painter (b. Ferrara, It., May 11, 1896—d. Milan, April 2, 1956).

Pollock, Jackson, U.S. artist (b. Cody, Wyo., Jan. 28, 1912—d. East Hampton, L.I., N.Y., Aug. 11, 1956), was perhaps the most controversial American painter of his time, and one of the most widely imitated among younger artists. His career fell roughly into four parts. The earliest, in the 1930s, was a period of realism and naturalism after the style of Thomas Hart Benton, under whom Pollock had studied at the Art Students league in New York city (1929-31). In his second stage of development, in the middle 1940s, he turned to expressionism and abstraction. The third stage (about 1947-50) made him the vortex of a storm in the art world. With his canvases tacked to the floor, he dripped paint on them in successive layers, often mixed with sand, creating rhythmic and colourful designs. His fourth and last period was marked by a return to more conventional techniques, including use of the brush, with his colours limited mostly to brown and black. Pollock held a number of one-man shows in New York city, Chicago and San Francisco. His paintings were exhibited in the principal galleries of the United States, bringing prices to \$10,000. He was killed in an automobile accident near his home.

Spe, Mildred Katharine, British educator (b. Paddock Wood?, Kent, Eng., Jan. 28, 1872—d. Oxford, Sept. 16, 1956).
Porter, Lew (Lewis John Tableporter), U.S. composer (b. New York, N.Y., Feb. 4, 1892—d. N. Hollywood, Calif., Jan. 29, 1956).
Post, Charles Johnson, U.S. author and government official (b. New York, N.Y., Aug. 27, 1873—d. New York, Sept. 25, 1956).
Post, Charles Edwin, U.S. businessman (b. Brooklyn, N.Y., July 3, 1873—d. New York, N.Y., Aug. 28, 1956).
Revel, Harford, U.S. author and editor (b. Philadelphia, Pa., Aug. 20, 1887—d. Concord, Mass., Aug. 17, 1956).
Rampoloni, Enrico, Italian painter (b. Modena, It., 1894—d. Rome, June 17, 1956).
Ruff, Charles, U.S. educator (b. Brooklyn, N.Y., Oct. 13, 1892—d. New York, N.Y., Jan. 7, 1956).

Ruff, Fletcher, U.S. author (b. Buffalo, N.Y., April 25, 1897—d. Long Branch, N.J., June 10, 1956), was known primarily as a naval historian (*Preble's Boys*, *The Monitor and the Merrimac*, *Fleet Against Japan*), although his versatility also led him to write in such diverse fields as science fiction, cooking, mediaeval history, cryptography and translations. During World War II he was a military writer for the *New York Post*. His *Ordeal by Fire* (1935), a history of the American Civil War, won wide acclaim.

West, James Percy, U.S. legislator (b. Carters Creek, Tenn., April 1, 1900—d. Nashville, Tenn., Oct. 12, 1956).
Wouty, Jed, U.S. actor (b. Boston, Mass., 1879?—d. New York, N.Y., May 10, 1956).

Quirino, Elpidio, second president of the Philippine republic (b. Vigan, P.I., Nov. 16, 1890—d. Novaliches, near Manila, P.I., Feb. 28, 1956), succeeded the first president, Manuel Roxas y Acuna, upon the latter's death April 15, 1948, then was re-elected to a full four-year term in 1949. He was defeated for another term by Ramon Magsaysay in 1953, and re-

tired from office early the next year. Quirino's six years as president were marked by notable post-World War II reconstruction progress and by general economic gains, although members of his administration were accused of corruption in office—a fact that contributed to his 1953 defeat despite his vigorous campaigning in the midst of serious illness. Quirino attended the University of the Philippines and in 1915 was admitted to the bar. In 1917 he was appointed secretary to Manuel Quezon, who later was to become first head of the new Philippine commonwealth (1935). Two years later he was elected to the Philippine congress, and from 1925 to 1935 he was a senator, becoming floor leader and delegate to the constituent assembly of 1934-35. In Quezon's commonwealth government Quirino was secretary of finance and later secretary of the interior. Imprisoned by the Japanese during World War II, Quirino suffered a great personal tragedy when his wife and three of their children were slain by the occupiers shortly before the liberation of Manila early in 1945. After the war Quirino was president *pro tem* of the Philippine senate and vice-president under Roxas. In the latter office he was also secretary of finance and first secretary of foreign affairs.

Raemaekers, Louis, Dutch cartoonist (b. Roermond, Neth., April 6, 1869—d. Scheveningen, July 26, 1956).
Rankine, Alexander Oliver, British physicist (b. Guildford, Eng., 1881—d. London, Jan. 19, 1956).
Raudenbush, George King, U.S. composer and musical conductor (b. Jersey Shore, Pa., March 13, 1899—d. San Diego, Calif., May 26, 1956).

Raymond, Alexander Gillespie, U.S. cartoonist (b. New Rochelle, N.Y., Oct. 2, 1909—d. near Westport, Conn., Sept. 6, 1956), was the creator of several newspaper comic strips, including "Flash Gordon," "Jungle Jim," "Rip Kirby," and (with Dashiell Hammett) "Secret Agent X-9." Raymond began his career as a stockbroker's clerk, and after an apprenticeship as a feature artist (1930-32) launched his first successful strip in 1934. He was a combat artist with the U.S. marines in World War II.

Reed, Chauncey William, U.S. congressman (b. West Chicago, Ill., June 2, 1890—d. Washington, D.C., Feb. 9, 1956), was a leading Republican member of the midwest conservative bloc during his tenure as representative from the 14th (formerly 11th) Illinois district (1935 until his death). Admitted to the Illinois bar in 1915, he was state's attorney of Du Page county, Ill., before his election to the U.S. congress in 1934. In the 83rd congress (1953-54) Reed was chairman of the house of representatives judiciary committee.

Rentschler, Frederick B(rant), U.S. aircraft manufacturer (b. Hamilton, O., Nov. 8, 1887—d. Boca Raton, Fla., April 25, 1956).
Rhodes, Sir (Robert) Heaton, New Zealand statesman (b. Purau, Lyttelton, N.Z., Feb. 27, 1861—d. Christchurch, July 30, 1956).
Ricard, Pierre-René, French industrialist (b. Cannes, Fr., April 3, 1899—d. Paris, April 4, 1956).
Rice, Alexander Hamilton, U.S. explorer and physician (b. Boston, Mass., Aug. 29, 1875—d. Newport, R.I., July 23, 1956).
Rich, Frederic Efram (Freddie), U.S. orchestra leader (b. Warsaw, Pol., Jan. 3, 1898—d. Beverly Hills, Calif., Sept. 8, 1956).
Richter, Irma Anne, British artist (b. Paris, Fr., 1876—d. Rome, It., Feb. 8, 1956).
Ridley, Henry Nicholas, British botanist (b. Norfolk, Eng., Dec. 10, 1855—d. London, Oct. 24, 1956).
Rist, Edouard, French bacteriologist (b. Strasbourg, Fr., March 16, 1871—d. Paris, announced April 14, 1956).
Robinson, Orin Pomeroy, Jr., U.S. submarine builder (b. Corning, N.Y., July 17, 1891—d. New London, Conn., Feb. 27, 1956).
Rodgers, Cleveland, U.S. editor and author (b. Greenville, S.C., March 3, 1885—d. New York, N.Y., May 21, 1956).
Rosenberg, Israel, U.S. rabbi (b. Lomza, Pol., March 15, 1875—d. New York, N.Y., Jan. 26, 1956).
Royden, (Agnes) Maude (Mrs. George William Hudson Shaw), British social worker and preacher (b. Birkenhead, Eng., Nov. 23, 1876—d. London, July 30, 1956).
Rumshinsky, Joseph (M.), U.S. composer and pianist (b. Vilna, U.S.S.R., April 9, 1881—d. New York, N.Y., Feb. 6, 1956).
Runbeck, Margaret Lee, U.S. author (b. Des Moines, Ia., Jan. 25, 1910—d. Beverly Hills, Calif., Sept. 30, 1956).

Russell, John, U.S. author (b. Davenport, Ia., April 22, 1885—d. Santa Monica, Calif., March 6, 1956).
Russo, Danny, U.S. song writer and orchestra leader (b. Chicago, Ill., Oct. 14, 1885—d. Hollywood, Calif., Sept. 5, 1956).
Ruthven, Walter Patrick Hore-Ruthven, 9TH LORD and 2ND BARON OF, British army officer (b. London, Eng., June 6, 1870—d. Bath, April 16, 1956).
Ryan, James Augustine, U.S. army officer (b. Danbury, Conn., Oct. 22, 1867—d. St. Petersburg, Fla., Jan. 14, 1956).

Ryti, Risto Heikki, Finnish statesman (b. Huittinen, Fin., Nov. 3, 1889—d. Helsinki, Oct. 25, 1956), was president of Finland during World War II, and his own tragedy reflected the tragedy of his country. Educated at Helsinki university he practised law from 1909. After the restoration of his country's independence in 1918 he was elected deputy (1919) and two years later, at 32, became the youngest minister of finance of the world. In 1923 he was appointed governor of the Bank of Finland. When on Nov.

56 OBITUARIES: Connie Mack, U.S. baseball club owner; H. L. Mencken, S. author and critic; A. A. Milne, British author; Lewis A. Pick, U.S. army officer; Elpidio Quirino, Philippine statesman

30, 1939, the U.S.S.R. invaded Finland Ryti formed a coalition government (Dec. 1). On the death of Kyösti Kallio, president of the republic, Ryti was elected in his place on Dec. 19, 1940. Re-elected in 1943 he pledged to Hitler, in June 1944, that Finland would not make a separate peace with the U.S.S.R. On Aug. 1, 1944, however, he was forced to resign. On Nov. 6, 1945, he was arrested, brought to trial and in 1946 condemned to ten years' imprisonment as a war criminal, but was released in 1949 because of illness.

Sabath, Joseph, U.S. jurist (b. Bohemia, March 2, 1870—d. Winnetka, Ill., May 3, 1956).

Saha, Meghnad, Indian nuclear physicist and politician (b. Calcutta, India, 1893—d. New Delhi, Feb. 16, 1956).

Sammons, Wheeler, U.S. publisher (b. Tacoma, Wash., Dec. 1, 1889—d. Chicago, Ill., Feb. 21, 1956), owned and published *Who's Who in America* and similar U.S. regional and specialized biographical reference works. Graduating from Harvard university in 1912, he entered the publishing field in Chicago the next year, becoming president of A. W. Shaw company in 1925. In 1928 he joined the A. N. Marquis company, publishers of *Who's Who*, as part owner, later becoming president and principal owner.

Sanders, Henry Arthur, U.S. educator (b. Livermore, Me., Oct. 22, 1868—d. Ann Arbor, Mich., Nov. 16, 1956).

Sarton, George (Alfred Leon), Belgian-U.S. historian and humanist (b. Ghent, Belg., Aug. 31, 1884—d. Cambridge, Mass., March 22, 1956), was one of the greatest of modern science historians and author of the classic *Introduction to the History of Science* (1927 et seq.). His works ranged through mathematics, philology, the physical and biological sciences, theology, technology, art, politics and humanism. A graduate of the University of Ghent (Belg.), Sarton went to England at the start of World War I and to the United States the next year. There, after several lectureships, he joined the faculty of Harvard university in 1920. He became full professor in 1940 and held this post until his retirement in 1951. Sarton founded and edited *Isis*, a quarterly periodical of science history (1912), and *Osiris*, a companion publication (1936). He was engaged in writing a nine-volume history of science, having completed but two volumes at the time of his death.

Sayre, Daniel Clemens, U.S. engineer and educator (b. Columbus, O., Feb. 1, 1903—d. Princeton, N.J., Oct. 19, 1956).

Schilling, David Carl, U.S. air force officer (b. Leavenworth, Kan., 1919?—d. nr. Mildenhall, Suffolk, Eng., Aug. 14, 1956).

Schmidt, Otto Yulevich, Russian explorer, geographer and mathematician (b. 1892?—d. Moscow, U.S.S.R., Sept. 7, 1956).

Schneider, Walter Arthur, U.S. nuclear physicist (b. East London, S.Af., Jan. 2, 1899—d. New York, N.Y., Nov. 20, 1956).

Schwartz, Jean, U.S. composer (b. Budapest, Hung., Nov. 4, 1878—d. Sherman Oaks, Calif., Nov. 30, 1956).

Scott, Sir (Henry) Harold, British physician (b. Eng., Aug. 3, 1874—d. Baintree, Aug. 6, 1956).

Selbach, Albert Carl ("Kip"), U.S. baseball player (b. Columbus, O., March 24, 1874—d. Columbus, Feb. 17, 1956).

Sell, Frederic Carl, German-U.S. educator (b. Bonn, Ger., Jan. 6, 1892—d. South Hadley, Mass., Aug. 11, 1956).

Seyffert, Leopold, U.S. painter (b. California, Mo., Jan. 6, 1887—d. Bound Brook, N.J., June 13, 1956).

Seymour, Edward Loomis Davenport, U.S. horticulturist (b. Boston, Mass., April 29, 1888—d. Huntington, N.Y., Aug. 3, 1956).

Shatzky, Jacob, U.S. historian and editor (b. Warsaw, Pol., Aug. 16, 1894—d. New York, N.Y., June 13, 1956).

Sherrill, Stephen H., U.S. army officer (b. East Hampton, N.Y., March 13, 1893—d. Washington, D.C., June 28, 1956).

Shinicky, Patrick Henry (SHIN IKHI), South Korean politician (b. 1893?—d. Iri, S. Kor., May 5, 1956).

Shorr, Ephraim, U.S. biologist (b. New Haven, Conn., June 1, 1897—d. New York, N.Y., Jan. 6, 1956).

Short, Hassard (Hubert Edward Hassard-Short), U.S. stage director (b. Edlington, Eng., Oct. 15, 1877—d. Nice, Fr., Oct. 9, 1956).

Shumway, Waldo, U.S. educator and botanist (b. New Brunswick, N.J., May 8, 1891—d. New York, N.Y., March 8, 1956).

Simmons, Al (Aloysius Harry Szymanski), U.S. baseball player (b. Milwaukee, Wis., May 22, 1903—d. Milwaukee, May 26, 1956), was elected to baseball's hall of fame in 1953; his lifetime batting average in the major leagues was .334 in 2,215 games extending over 21 seasons (1924-44). Simmons began professional ball with the old Milwaukee Brewers of the American association. He entered the major leagues with Connie Mack's Philadelphia Athletics in 1924 and remained with that club as a slugging outfielder until 1932, when his contract was sold to the Chicago White Sox. He later played with the Detroit Tigers, Washington Senators, Boston Braves, Cincinnati Reds, and again with Philadelphia. He quit active playing in 1944. Simmons was voted the most valuable player of 1929 in the American league and twice won the league's batting championship, in 1930 with .381 and in 1931 with .390. He batted .329 in four world series and .462 in three All-Star games.

Simon, Sir Francis (Eugene), British scientist (b. Berlin, Ger., July 2, 1893—d. Oxford, Eng., Oct. 31, 1956).

Sinclair, Harry Ford, U.S. oil executive (b. Wheeling, W. Va., July 6, 1876—d. Pasadena, Calif., Nov. 10, 1956), was a principal figure in the Teapot Dome scandals originating during the administration of Pres. Warren G. Harding in 1922. In that year Albert B. Fall, Harding's secretary of the interior, leased the Teapot Dome (Wyo.) oil reserve of the U.S. navy to an oil company controlled by Sinclair. The latter was acquitted on a charge of conspiracy in 1928 but the next year was convicted of contempt of court and of the U.S. senate and served several months in prison. Originally a pharmacist, Sinclair entered the petroleum business in 1901 in Kansas and within a decade became one of the most important independent producers in the United States. In 1916 he organized his own oil production, refining

and marketing company, which later became one of the largest "integrated" petroleum companies in the world—Sinclair Oil corporation. He retired as president of this corporation in 1949. During World War II Sinclair was a member of the Petroleum Industry War council.

Skelton, Sir Reginald William, British naval officer (b. Long Sutton, Eng., June 3, 1872—d. Aldingbourne, Sept. 5, 1956).

Slaughter, N. Carter ("Tod"), British actor (b. Newcastle upon Tyne, Eng., March 19, 1885—d. Derby, Feb. 19, 1956).

Slootnick, Morris Miller, U.S. oil scientist (b. Zelva, U.S.S.R., Dec. 21, 1901—d. Dallas, Tex., May 7, 1956).

Smith, Addison Taylor, U.S. public official (b. nr. Cambridge, O., Sept. 5, 1862—d. Washington, D.C., July 5, 1956).

Smith, Cecil M(ichener), U.S. music critic and author (b. Chicago, Ill., July 12, 1906—d. London, Eng., May 28, 1956).

Smith, Earl Baldwin, U.S. educator (b. Topsham, Me., May 25, 1888—d. Princeton, N.J., March 7, 1956).

Smith, Frederick Cleveland, U.S. public official (b. Shanesville, O., July 29, 1884—d. Marion, O., July 16, 1956).

Soddy, Frederick, British scientist (b. Eastbourne, Sussex, Sept. 2, 1877—d. Brighton, Sept. 22, 1956), was one of the pioneers of research into atomic disintegration; his work on the nature of isotopes also contributed significantly to modern science. He was educated at Eastbourne college, at the University college of Wales and at Merton college, Oxford. His work with Ernest Rutherford (afterward Lord Rutherford) at McGill university and later with William Ramsay in London on radioactive research won him the Nobel prize for chemistry in 1921. After ten years as lecturer in physical chemistry and radioactivity at Glasgow university (Scot.), he was professor of chemistry at Aberdeen, 1914-19, then Lee's professor of chemistry at Oxford from 1919 until his retirement in 1936 as professor emeritus. His publications included *The Interpretation of Radium* (1909, rev., 1920), and *The Interpretation of the Atom* (1932). He had been elected F.R.S. in 1910 and was awarded the Albert medal in 1955.

Söderman, Harry, Swedish criminologist (b. Stockholm, Swed., 1902?—d. Tangier, Mor., March 16, 1956).

Somoza, Anastasio, Nicaraguan president (b. San Marcos, Nic., Feb. 1, 1896—d. Balboa, C.Z., Sept. 29, 1956), ruled Nicaragua as virtual dictator from 1935 until his assassination in 1956. Educated at Nicaragua's Instituto Nacional de Oriente and at the Pierce business school in Philadelphia, Pa., Somoza became war minister (1932) in the cabinet of Pres. Juan B. Sacasa, and after various revolutions seized the reins of government when Sacasa resigned in 1936, becoming the duly elected president of the nation the following year. In 1947 he hand-picked Leonardo Argüello to succeed him, but the two fell out and Somoza executed a successful coup that ousted Argüello on May 25, 1947. He subsequently installed his uncle, Victor M. Román y Reyes, in the presidency. After the latter's death in May 1950 Somoza was again elected provisional president and in 1951 was elected for the full term ending in 1957. His administration was marked by close relations with the U.S., but internally his totalitarian policies earned him many political enemies. He was shot by an assassin Sept. 21, 1956, at León, Nic., but was believed to be recovering when he died eight days later in a U.S. Canal Zone hospital. The Nicaraguan congress on Sept. 29 unanimously elected Somoza's eldest son, Luis, to succeed him.

Spain, Will Cook, U.S. physician (b. Murfreesboro, Tenn., Aug. 10, 1891—d. New York, N.Y., May 12, 1956).

Speyer, Leonora, U.S. poet (b. Washington, D.C., Nov. 7, 1872—d. New York, N.Y., Feb. 10, 1956), won the 1927 Pulitzer poetry prize for her book of verse *Fiddler's Farewell* (1926). Her other works included *The Naked Heel* (1931) and *Slow Wall* (1936). In 1955 she was awarded the Poetry Society of America's gold medal.

Spier, Larry, U.S. music publisher and composer (b. New York, N.Y., April 3, 1901—d. New York, Nov. 10, 1956).

Spyridon (SPYRIDON VLACHOS), archbishop and primate of Athens and all Greece (b. Hili, Turk., 1874—d. Athens, Gr., March 21, 1956).

Stamm, John Samuel, U.S. Evangelical bishop (b. Alida, Kan., March 23, 1878—d. Kansas City, Mo., March 5, 1956).

Stauffer, Edna Pennypacker, U.S. painter and educator (b. Chester county, Pa., 1887—d. Ashfield, Mass., Aug. 27, 1956).

Steed, Henry Wickham, British journalist (b. Long Melford, Suffolk, Oct. 10, 1871—d. Wootton-by-Woodstock, Oxford, Jan. 13, 1956).

Stephenson, Henry, British actor (b. Grenada, B.W.I., April 16, 1874—d. San Francisco, Calif., April 24, 1956).

Stern, Bernhard Joseph, U.S. anthropologist (b. Chicago, Ill., June 18, 1894—d. New York, N.Y., Nov. 22, 1956).

Stern, Kurt Guenter, U.S. biochemist (b. Tilsit, Ger., Sept. 19, 1904—d. London, Eng., Feb. 3, 1956).

Stevens, Leslie Clark, U.S. naval officer (b. Kearney, Neb., Feb. 19, 1895—d. Sanford, Fla., Nov. 30, 1956).

Stewart, Marshall Bowyer, U.S. theologian (b. Galveston, Tex., Sept. 4, 1880—d. Sewanee, Tenn., July 28, 1956).

Stewart, Matthew John, British pathologist (b. Dalmellington, Eng., May 4, 1885—d. Stoke Poges, Nov. 7, 1956).

Storrs, John Bradley, U.S. sculptor (b. Chicago, Ill., 1885—d. Mer, Loiret-Cher, Fr., April 22, 1956).

Stout, William Bushnell, U.S. aviation engineer (b. Quincy, Ill., March 16, 1880—d. Phoenix, Ariz., March 20, 1956), designed the Ford Tri-Motor transport (1925) and several other famous planes, including the first all-metal plane for the U.S. navy in 1922. In 1926 he inaugurated the first all-passenger air route in the United States, between Detroit and Grand Rapids, Mich. He also designed automobiles and railway cars, and in the latter part of his career operated his own engineering research laboratories in Phoenix, Ariz.

Sullivan, Francis Loftus, British actor (b. London, Eng., Jan. 6, 1903—d. New York, N.Y., Nov. 19, 1956).

Illivan, Gael E., U.S. government official (b. Providence, R.I., Nov. 28, 1904—d. New York, N.Y., Oct. 27, 1956).

Leikert, Robert, U.S. auto racing driver (b. Los Angeles, Calif.—d. Salem, Ind., June 17, 1956).

Mayo, Franz, Bolivian author (b. La Paz, Bol., 1879—d. La Paz, July 30, 1956).

Ortkower, Savieli Grigoryevich, Russian chess authority (b. Rostov-on-Don, U.S.S.R., Feb. 9, 1887—d. Paris, Fr., Feb. 6, 1956).

Sum, Art, U.S. musician (b. Toledo, O., Oct. 13, 1910—d. Los Angeles, Calif., Nov. 5, 1956), was generally considered one of the greatest jazz pianists and technicians of his time. As a boy he studied violin and piano, joining a dance orchestra at the age of 16. In the early 1930s he first attracted national attention in a New York city night club for his piano solos, and later he organized his own dance band. Still later, believing that a full band did no justice to his individualistic technique, he organized a jazz trio with a double-bass player and a guitarist.

Taylor, Frank Sherwood, British scientist (b. Bickley, Kent, Nov. 26, 1897—d. London, Jan. 5, 1956).

Wall, Gardner Callahan, U.S. author and artist (b. Eau Claire, Wis., March 6, 1878—d. Rhinebeck, N.Y., July 22, 1956).

Worman, Lewis Madison, U.S. psychologist (b. Johnson county, Ind., Jan. 15, 1877—d. Palo Alto, Calif., Dec. 21, 1956).

Thomas, Benjamin Platt, U.S. historian and author (b. Pemberton, N.J., Feb. 22, 1902—d. Springfield, Mass., Nov. 29, 1956).

Thomas, Frederick William, British orientalist (b. Staffordshire, Eng., March 11, 1867—d. nr. Banbury, May 6, 1956).

Thompson, James Matthew, British historian and theologian (b. Iron Acton, Eng., Sept. 27, 1878—d. Oxford, Oct. 8, 1956).

Turnhill, Claude E. ("Tiny"), U.S. football coach (b. 1893?—d. Berkeley, Calif., June 29, 1956).

Turner, Walter, U.S. neurologist (b. New York, N.Y., Feb. 24, 1874—d. St. Petersburg, Fla., Feb. 12, 1956).

Tinkham, George Holden, U.S. congressman (b. Boston, Mass., Oct. 29, 1870—d. Cramerton, N.C., Aug. 28, 1956), served 14 consecutive terms in the U.S. house of representatives (1915-43) as a Republican for the 10th Massachusetts district, without once conducting a political campaign. An expert big-game hunter, he would usually depart on a hunting expedition or travel abroad instead of electioneering; yet he received large pluralities in a district normally Democratic. A graduate of Harvard (1894) and an attorney, Tinkham was a Boston alderman and a Massachusetts state senator before being elected to congress. In the house he was noted for his unqualified opposition to U.S. intervention in foreign affairs, and to national prohibition and all other forms of restraint on individual freedom. He was believed to be the first American to fire a shot (against Austrian troops near the Italian border) in World War I after the United States declared war on Germany, April 6, 1917.

Tracy, Mathew Adrian, U.S. physician and army officer (b. Council Bluffs, Ia., March 5, 1876—d. Council Bluffs, March 11, 1956).

Trin, George Timothy, U.S. artist (b. Weybridge, Vt., July 26, 1864—d. Tr. Albans, Vt., May 5, 1956).

Tracy, Charles Cutler, U.S. educator (b. East Hardwick, Vt., Dec. 20, 1863—d. Chicago, Ill., Nov. 12, 1956).

Truente, Cosme de la, Cuban statesman (b. Ingenio La Isabel, Cuba, June 7, 1872—d. Havana, Dec. 8, 1956).

Trenchard, Hugh Montague Trenchard, 1st Viscount of Wolfeton, British air force officer (b. Taunton, Somerset, Feb. 3, 1873—d. London, Feb. 10, 1956), joined the Royal Scots fusiliers in 1893 and served as an officer on the Indian frontier and in the South African War, in which he was seriously wounded. In 1903 he was posted to the West African frontier force. He won the D.S.O. and played an important part in pioneering the administration of Southern Nigeria, commanding the Southern Nigerian regiment, 1908-12. On his return to England he became interested in the early experiments in flying, trained as a pilot in the royal flying corps and rose rapidly until in 1914 he commanded the R.F.C. 1st wing in France. In 1915 he became commander of the R.F.C. Quick to perceive the importance of air power in warfare, Trenchard evolved a policy of aggression to maintain air supremacy—the continual emergencies of war helped him in this. On Jan. 1918 he became the first chief of air staff, but disagreed over policy with Lord Rothermere, then secretary of state for air, and resigned in April. He then was appointed leader of the Independent air force, formed with the intention of bombing Germany into submission, but this project was not put into practice as the war ended in November. In 1919 Trenchard was appointed chief of air staff and from then until 1929 he devoted his great abilities and energies to establishing and developing the royal air force. During 1921-25 he was principal air A.D.C. to George V, and in 1927 became first marshal of the R.A.F. On relinquishing the post of chief of air staff in 1930 he embarked on a new career in the police force, and the reorganization he carried out as metropolitan police commissioner (1931-35) perhaps equalled his achievements as "father of the royal air force." In 1936 Trenchard began a third and final career, in business, when he became chairman of the United Africa company within the Unilever group, retaining the post until his retirement in 1953. Trenchard was created a baron in 1930 and a viscount in 1936, and during his long career received numerous other honours.

Trean, John William, British physiologist (b. Bodmin, Cornwall, Eng., July 23, 1887—d. Addiscombe, Oct. 13, 1956).

Treor, John Bond, U.S. lawyer and industrialist (b. Yonkers, N.Y., Nov. 19, 1878—d. New York, N.Y., Feb. 20, 1956).

Treman, Sir Arthur Elijah, British geologist (b. April 26, 1894—d. Ealing, Eng., Jan. 5, 1956).

Trout, Max O'Rell, U.S. lawyer (b. Millersburg, Mo., Jan. 25, 1904—d. Washington, D.C., Feb. 2, 1956).

Trubauer, Frank, U.S. musician (b. Carbondale, Ill., May 30, 1901—d. Kansas City, Mo., June 11, 1956).

Truderos, Emmanuel, Greek financier and wartime premier (b. July 19, 1882, Methymon, Crete—d. Genoa, Feb. 10, 1956).

Tucker, Preston Thomas, U.S. automobile promoter (b. Capac, Mich., Sept. 21, 1903—d. Ypsilanti, Dec. 26, 1956), introduced a radically new type of automobile in 1946-47 but was unable to produce it in quantity. His 150-h.p. "Tucker Torpedo" had its engine in the rear, "tear-drop" design, front fenders that turned with the wheels and many other novel features, but only 40 Tuckers were built, all assembled by hand. His company collapsed in 1949 and he was indicted for fraud but was acquitted in 1950. Prior to World War II Tucker had built racing cars and during the war he produced successful combat cars and gun turrets for the U.S. army. After his company's bankruptcy he returned to Ypsilanti, Mich., to manage a machine-tool plant. He continued, however, his attempts to promote the Tucker car.

Tyson, Carroll Sargent, U.S. artist (b. Philadelphia, Pa., Nov. 23, 1877—d. Philadelphia, March 19, 1956).

Ugaki, Kazushige, Japanese soldier and politician (b. Okayamaken, Jap., June 1868—d. Tokyo, April 30, 1956).

Uhler, Horace Scudder, U.S. physicist and educator (b. Baltimore, Md., Aug. 5, 1872—d. Meriden, Conn., Dec. 6, 1956).

Underwood, Thomas Rust, U.S. editor and public official (b. Hopkinsville, Ky., March 3, 1898—d. Lexington, Ky., June 29, 1956).

Upham, Roy, U.S. gastroenterologist (b. Dartmouth, Mass., March 16, 1879—d. New York, N.Y., Jan. 5, 1956).

Van Kirk, Walter William, U.S. Methodist clergyman and radio commentator (b. Cleveland, O., Nov. 11, 1891—d. Wellesley I., N.Y., July 6, 1956).

Van Leer, Blake Ragsdale, U.S. educator (b. Mangum, Okla., Aug. 16, 1893—d. Atlanta, Ga., Jan. 23, 1956).

Vanoni, Ezio, Italian politician (b. Morbegno, Sondrio, It., Aug. 3, 1903—d. Rome, Feb. 16, 1956).

Varè, Daniele, Italian diplomat and author (b. Rome, It., 1880—d. Rome, Feb. 27, 1956).

Vassilenko, Sergei Nikiforovich, Russian composer (b. Moscow, U.S.S.R., March 30, 1872—d. Moscow, March 11, 1956).

Velimirovich, Nicholai, Serbian Orthodox church bishop (b. Yugoslavia, 1882?—d. South Canaan, Pa., March 18, 1956).

Ventris, Michael George Francis, British scholar and architect (b. Wheat-hampstead, Eng., July 12, 1922—d. near Hatfield, Sept. 6, 1956).

Von Leeb, Wilhelm Joseph Ritter Franz, German field marshal (b. Landsberg, Ger., Sept. 5, 1876—d. Augsburg, April 29, 1956).

Von Tilzer, Albert (ALBERT GUMM), U.S. composer (b. Indianapolis, Ind., March 29, 1878—d. Los Angeles, Calif., Oct. 1, 1956).

Wadsworth, Alfred Powell, British editor (b. Rochdale, Eng., May 26, 1891—d. Manchester, Nov. 4, 1956).

Wagner, Charles L., U.S. impresario (b. Charleston, Ill., Sept. 20, 1878?—d. New York, N.Y., Feb. 25, 1956).

Walker, Walter, U.S. publisher and public official (b. Marion, Ky., April 3, 1883—d. Grand Junction, Colo., Oct. 8, 1956).

Walsh, Edmund Aloysius, U.S. Jesuit educator (b. Boston, Mass., Oct. 10, 1885—d. Washington, D.C., Oct. 31, 1956).

Wanamaker, William H. Jr., U.S. clothing retailer (b. Philadelphia, Pa., July 29, 1870—d. Philadelphia, Oct. 21, 1956).

Wartenberg, Robert, U.S. neurologist and educator (b. Grodno, U.S.S.R., June 19, 1887—d. San Francisco, Calif., Nov. 16, 1956).

Watson, Thomas John, U.S. industrialist (b. Campbell, N.Y., Feb. 17, 1874—d. New York, N.Y., June 19, 1956), was president of International Business Machines corporation and its predecessor company, 1914-49, and its board chairman from 1949 until his death. Often called the greatest salesman in the world, he built the multimillion-dollar corporation from a small company known as the Computing-Tabulating-Recording company, which merged with I.B.M. in 1924. Before 1914 Watson had been with the National Cash Register company for 15 years. There he originated his famous placard motto "THINK," which he later hung by the thousands on the walls of I.B.M. offices and plants in 80 nations. At the time of Watson's death I.B.M., with its electronic computers, tabulating machines and other business equipment products, employed 60,000 persons and had estimated assets of more than \$600,000,000. Watson, a trustee of Columbia university in New York city for 23 years, was noted for his philanthropic activities and large-scale bequests.

Weaver, George Davis (Buck), U.S. baseball player (b. Stowe, Pa., Aug. 18, 1891—d. Chicago, Ill., Jan. 31, 1956).

Webb, Maurice, British politician (b. Lancaster, Eng., Sept. 26, 1904—d. Pinner, Middlesex, June 10, 1956).

Webb-Bowen, Sir Tom Ince, British air force officer (b. Tenby, Eng., Jan. 17, 1879—d. Haverfordwest, Oct. 29, 1956).

Weber, Frederick Theodore, U.S. portrait painter, etcher and sculptor (b. Columbia, S.C., March 9, 1883—d. New York, N.Y., Jan. 1, 1956).

Weidman, Frederick Deforest, U.S. dermatologist (b. Bristol, Conn., Oct. 16, 1881—d. Bailey Island, Me., Aug. 30, 1956).

Welker, William Henry, U.S. biochemist (b. Red Hill, Pa., Aug. 20, 1879—d. Spooner, Wis., July 7, 1956).

Wellings, Augustus Joseph, U.S. naval officer (b. Chelsea, Mass., Feb. 3, 1897—d. Bethesda, Md., Nov. 29, 1956).

Weskamm, Wilhelm, German Roman Catholic prelate (b. Helsen, Waldeck, Ger., March 13, 1891—d. Berlin, Aug. 21, 1956).

Wesson, Charles Macon, U.S. army officer (b. St. Louis, Mo., July 23, 1878—d. Washington, D.C., Nov. 24, 1956).

Weston, Karl Ephraim, U.S. art educator (b. Winchendon, Mass., Oct. 7, 1874—d. Williamstown, Mass., May 4, 1956).

Weyerhaeuser, John Philip, Jr., U.S. timberman (b. Rock Island, Ill., Jan. 18, 1899—d. Tacoma, Wash., Dec. 8, 1956).

Wheeler, Hallie Erminie Rives (MRS. POST WHEELER), U.S. novelist (b. Christian county, Ky., May 2, 1878—d. New York, N.Y., Aug. 16, 1956).

Wheeler, Post, U.S. diplomat and author (b. Owego, N.Y., Aug. 6, 1869—d. Neptune, N.J., Dec. 23, 1956).

Whitby, Sir Lionel Ernest Howard, British bacteriologist (b. 1895—d. London, Eng., Nov. 24, 1956).

Whiteley, Martha Annie, British inventor and editor (b. Nov. 11, 1866—d. London, Eng., May 24, 1956).

Whiteside, Horace Eugene, U.S. educator and law consultant (b. Bell Buckle, Tenn., June 5, 1891—d. Ithaca, N.Y., June 9, 1956).

Whittaker, Sir Edmund Taylor, British mathematician (b. Southport, Oct. 24, 1873—d. Edinburgh, Scot., March 24, 1956), was educated at Manchester grammar school and at Trinity college, Cambridge, where he became a fellow in 1896. He was elected a fellow of the Royal society in 1905. He lectured in mathematics at Cambridge and was appointed in 1906 Royal Astronomer of Ireland, principally a teaching post in Dublin university. From 1912 to 1946 he was professor of mathematics at Edinburgh university. He excelled not only in mathematics but also as a science historian. His prolific mathematical contributions were in mathematical physics as well as in dynamical problems and his work on differential equations and functions had great influence. *A History of the Theories of Ether and Electricity* . . . (1910, revised in 1951-53), showed the philosophic depth behind his mathematical thought. Whittaker was co-author with Albert Einstein and Sir James Jeans respectively of the articles *SPACE-TIME and RELATIVITY* in *Encyclopædia Britannica*. He became a Roman Catholic in 1930 and wrote several works on the relationship between science and natural theology. He was knighted in 1945.

Whittlesey, Derwent Stainthorpe, U.S. geographer (b. Pecatonica, Ill., Nov. 11, 1890—d. Boston, Mass., Nov. 25, 1956), was a pioneer U.S. authority on geopolitics, which he once defined as "the utilization of geography in the service of national governments." Whittlesey was one of the first scholars to point out the great influence of the German geographer Karl Haushofer (1869-1946) and his Institute of Geopolitics (Munich) on Adolf Hitler's plans for German expansion and ultimate world supremacy. Educated at The University of Chicago, where he took his doctorate in 1920, Whittlesey taught geography at that university from 1919 to 1928, when he transferred to Harvard, where he became full professor in 1943. During World War II he was a consultant for the U.S. war, navy and state departments and for the office of strategic services. He was the author of several works on political and economic geography.

Wilcox, James Mark, U.S. congressman (b. Willacoochee, Ga., May 21, 1890—d. White Springs, Fla., Feb. 2, 1956).

Williams, Stanley Thomas, U.S. educator and author (b. Meriden, Conn., Oct. 25, 1888—d. New Haven, Conn., Feb. 4, 1956).

Williams, Wuthe, U.S. foreign correspondent and broadcaster (b. Meadville, Pa., Sept. 18, 1881—d. Jersey City, N.J., July 13, 1956).

Willis, Raymond Eugene, U.S. politician and publisher (b. Waterloo, Ind., Aug. 11, 1875—d. Angola, Ind., March 21, 1956).

Wilson, Frank H., U.S. Negro actor and playwright (b. New York, N.Y., May 4, 1891?—d. New York, N.Y., Feb. 16, 1956), was creator of the title role in the drama *Porgy* in 1927. Other famous roles he played were those of Lem in *Emperor Jones*, Moses in *The Green Pastures* and Abraham McCranie in *In Abraham's Bosom*. Wilson also starred in motion pictures and television. He was the author of several plays, including *Sugar Cane*.

Wilson, George Lloyd, U.S. educator (b. Philadelphia, Pa., July 10, 1896—d. Philadelphia, April 11, 1956).

Wilson, John Henry, Hawaiian politician and engineer (b. Honolulu, T.H., Dec. 15, 1871—d. Honolulu, July 2, 1956).

Wilson, Philip Whitwell, British-U.S. journalist (b. Kendal, Westmoreland, Eng., May 21, 1875—d. New York, N.Y., June 6, 1956).

Winans, James Albert, U.S. educator (b. Sidney Center, N.Y., Feb. 8, 1872—d. Ithaca, N.Y., Nov. 20, 1956).

Winkelman, Nathaniel William, Sr., U.S. neurologist (b. Philadelphia, Pa., Oct. 28, 1891—d. Philadelphia, Feb. 13, 1956).

Wirth, Karl Joseph, German politician (b. Freiburg, Baden, Sept. 6, 1879—d. Freiburg, Jan. 3, 1956). In 1914, as a member of the Centre (Roman Catholic) party, he was elected to the *Reichstag*, in 1919 to the Weimar national assembly and in March 1920, appointed minister of finance. In May 1921 he became chancellor with an avowed policy of the fulfilment of treaty obligations. The decision on the partition of Upper Silesia between Germany and Poland (Oct. 20, 1921) increased the opposition to the policy of fulfilment. Wirth resigned on Oct. 22, 1921, but resumed office four days later. With Walther Rathenau as foreign minister, Wirth represented Germany at the Genoa Economic conference and on that occasion concluded the German-Soviet treaty of friendship at Rapallo (April 16, 1922). Unable to carry out the necessary financial measures to stop the depreciation of the mark, he resigned in Nov. 1922. In 1929-30 he served as minister for the provinces occupied by the Allies. In 1930 he became minister of the interior and retired in Oct. 1931, returning to Freiburg. After Hitler came to power he went to Paris and later to Switzerland. Returning to Germany in 1948 he opposed the policy of rearming the German Federal Republic and its joining the North Atlantic Treaty organization, supporting instead the policy of a reunited but neutral Germany. In Dec. 1955 he was awarded the Stalin peace prize. (See also *Encyclopædia Britannica*.)

Wislocki, George Bernays, U.S. anatomist (b. San Jose, Calif., March 25, 1892—d. Milton, Mass., Oct. 22, 1956).

Witmer, Lightner, U.S. author and psychologist (b. Philadelphia, Pa., June 28, 1867—d. Philadelphia, July 19, 1956).

Wittmack, E. Franklin, U.S. artist (b. New York, N.Y., July 10, 1894—d. New York, April 25, 1956).

Wohlenberg, Walter Jacob, U.S. educator (b. Lincoln, Neb., Feb. 17, 1888—d. New Haven, Conn., Aug. 8, 1956).

Wolf, Irwin Damasius, U.S. merchant (b. Paragould, Ark., July 8, 1894—d. Pittsburgh, Pa., April 18, 1956).

Woll, Matthew, U.S. labour leader (b. Luxembourg, Jan. 25, 1880—d. New York, N.Y., June 1, 1956), was one of the most conservative of 20th-century U.S. union officials and a staunch Republican. Emigrating to the United States with his family in 1891, he attended Lake Forest (Ill.) university, 1901-04, and in 1906 became president of the International Photoengravers' union—a position he kept for 23 years. Woll also rose high in the executive ranks of the American Federation of Labor, and when the latter merged with the Congress of Industrial Organizations in 1955 he was named a vice-president of the combined A.F. of L.-C.I.O. A Catholic and a vehement anti-Communist, Woll served on a number of federal and private philanthropic agencies.

Wood, Philip Worsley ("P.W."), British educator and mathematician (b. Hammersmith, Eng., April 26, 1880—d. Cambridge, April 15, 1956).

Woodruff, John Kellogg, U.S. painter and sculptor (b. Bridgeport, Conn., Sept. 6, 1879—d. Nyack, N.Y., June 14, 1956).

Woolley, Clarence Mott, U.S. manufacturer (b. Detroit, Mich., Sept. 15, 1863—d. Newport Beach, Calif., July 18, 1956).

Woolson, Albert, U.S. civil war veteran (b. Antwerp, N.Y., Feb. 11, 1847—d. Duluth, Minn., Aug. 2, 1956), was the last survivor of the Union army of the American civil war. He joined the northern army Oct. 10, 1864, as a rifleman but saw no active fighting before being mustered out Sept. 7, 1865; most of his service was spent as a drummer boy with the 1st Minnesota heavy artillery regiment in Tennessee. Woolson became the final member of the Grand Army of the Republic in 1953, having become senior vice-commander in chief of the veterans' organization three years earlier. He and five others attended the final encampment of the G.A.R. at Indianapolis, Ind., in 1949.

Wright, Fielding Lewis, U.S. political leader (b. Rolling Fork, Miss., May 16, 1895—d. Jackson, Miss., May 4, 1956), was one of the founders of the States' Rights Democrat ("Dixiecrat") party that revolted from the regular Democratic party in 1948 over the question of civil rights. Wright was the vice-presidential nominee of the short-lived party, which polled 39 electoral and 1,169,021 popular votes in the national election of 1948. Gov. J. Strom Thurmond of South Carolina was the presidential candidate of the Dixiecrats. Wright, a lifelong foe of desegregation for Negroes, was a graduate of the University of Alabama law school and practised law before serving in the Mississippi state senate (1928-32) and state house of representatives (1932-40). He was lieutenant governor of Mississippi from 1944 to 1946 and governor from 1946 to the end of 1952.

Wright, William Kelley, U.S. philosopher (b. Capton, Ill., April 18, 1877—d. Hanover, N.H., March 29, 1956).

Wyckherly, Margaret, U.S. actress (b. London, Eng., Oct. 26, 1881—d. New York, N.Y., June 6, 1956).

Wynn, Harold Edward, British Anglican bishop (b. Buckhurst Hill, Essex, Eng., Jan. 15, 1889—d. Cambridge, Aug. 12, 1956).

Ybarnegaray, Jean, French lawyer (b. Uhart-Cize, Fr., Oct. 16, 1883—d. Paris, April 25, 1956).

Yerkes, Robert Mearns, U.S. psychobiologist and author (b. Breadysville, Pa., May 26, 1876—d. New Haven, Conn., Feb. 3, 1956).

Young, Ella, Irish poet and educator (b. Dublin, Ire., 1867—d. Oceana, Calif., July 23, 1956).

Young, Victor, U.S. composer of popular songs (b. Chicago, Ill., Aug. 8, 1900—d. Palm Springs, Calif., Nov. 10, 1956), composed and arranged the scores for a number of U.S. motion pictures and wrote such popular hit songs as "Sweet Sue," "Ghost of a Chance" and "Can't We Talk It Over?" Trained as a classical musician at Imperial conservatory at Warsaw, Pol., he made his U.S. debut as a violinist at Chicago in 1921. Later he turned to popular music composition, writing or arranging the scores for *Scaramouche*, *For Whom the Bell Tolls*, *Story of Will Rogers*, *Lady in the Dark*, *Three Coins in the Fountain*, *Johnny Guitar*, *Country Girl* and many other motion pictures.

Zaharias, Mildred ("Babe") Didrikson, U.S. athlete (b. Port Arthur, Tex., June 26, 1914—d. Galveston, Tex., Sept. 27, 1956), was termed by many sports writers and observers the greatest woman athlete of all time. Prior to her appearance in the Olympic games at Los Angeles (Calif.) in 1932—when she won the 80-metre hurdle event and the javelin throw—she had become a top performer in baseball, basketball, swimming, diving and most competitive field sports. Yet her greatest achievements were to come in golf, which she began playing about 1935. During the next 15 years she won every major women's golf championship, including the U.S. national open three times (1948, 1950 and 1954), the national amateur tournament (1946), the world championship tournament four times (1948-51), the British amateur tournament in 1947 (the first U.S. winner of that event) and numerous lesser titles. She became a professional golfer in 1947. First stricken with cancer in 1953, she recovered to win still more major tournaments, including the women's national open in 1954; but she suffered a relapse in 1955. Her autobiography, *This Life I've Led*, was published in 1955.

1956 OBITUARIES: Anastasio Somoza, president of Nicaragua; Art Tatum, U.S. jazz pianist; Thomas J. Watson, U.S. industrialist; Albert Woolson, U.S. soldier; Mildred ("Babe") D. Zaharias, U.S. athlete

Oceanography.

Comprehensive views on modern oceanographic knowledge and on the problems to be studied in the future were supplied in 1956 by the publication of four volumes containing contributions from most of the world's oceanographers. One collection was published to honour Henry B. Bigelow, "father of American oceanography," while another—largely biological—honoured Allan Hancock of the University of Southern California, Los Angeles. The third publication contained the papers presented at a convocation held in 1954 to dedicate the Laboratory of Oceanography of the U.S. Office of naval research at Woods Hole, Mass., while the thoughts, plans and hopes for future research were evident in the proceedings of a deep sea symposium held at Washington, D.C. Although scientists from the U.S.S.R. were not represented in these publications, the year provided information that Soviet oceanographers were active, particularly in the Sea of Okhotsk and in the Black sea. Some fine theoretical work was performed by P. S. Lineykin.

Plans for the International Geophysical year (1957-58) included the study of deep currents, multiple ship operations, and observations, ocean polar front surveys and carbon dioxide measurements. The main emphasis of the program would be the study of the rate of movement and transport of the subsurface deepwater masses. To answer many fisheries problems and to prevent the danger of nuclear-waste pollution, it had become more and more important to know the age of deepwater in the ocean. Estimates based on various methods varied from 100 to 1000 years. In the Atlantic ocean, changes were to be measured that had taken place in physical and chemical properties of the water since the surveys of the "Meteor" and other vessels during the period 1925-35. In the Pacific ocean where such previous observations were not available, the same kind of detailed survey could be made, so that it would be possible to repeat the observations in a future geophysical year.

As a basis for planning the International Geophysical year, extensive surveys were made in both the Atlantic and Pacific oceans. The greatest survey of its kind, Operation "Norpac" (North Pacific), took place at the end of 1955. About 20 ships from Japan, the U.S. and Canada took part and published their data during 1956. Another major investigation, Operation "Suapac" (equatorial Pacific), took place in the fall of 1956. Six U.S. and Canadian ships, a large number of Japanese vessels and a ship from French New Caledonia.

Data to test some concepts of sedimentation in geosynclines (narrow troughs of sediment) were obtained by several cruises in the Persian gulf, while the "Atlantis" studied geosynclines along the South American coast, adjacent to the Andes. A new depth of 4,180 fathoms was found in the Bartholomew Sea, 39 mi. off Antofagasta, Chile.

Although each year more and more rugged relief is found on the ocean bottom, there remain large, comparatively smooth ocean basins which are thought to hide their actual relief under a carpet of sediment. In the Pacific basin about four-fifths of the smooth area (4,000,000 sq.mi.) is around groups of existing crowned islands and has the form of aprons. Seismic measurements showed that volcanic rocks are several kilometres thick in the vicinity of all islands studied and bury the pre-existing terrain.

The marked contrast between oceanic and continental structures was reported in the latest of an important series of papers from the Lamont Geological observatory of Columbia university. Exclusive of the water column the oceanic crust is less than one-fifth as thick (7.35 km.) as the continental crust in the western Atlantic basin.

In marine meteorology the emphasis was on hurricane research and the prediction of storm surges. The latter studies were particularly advanced by oceanographers in Germany, the Netherlands and England. Attempts to study 50 years of North Atlantic temperature records to correlate hurricane frequency versus sea-surface temperature were not successful; however, it was evident that the resulting charts could be used to consider other oceanographic problems, including long-range weather forecasting.

In the Caribbean area, a new oceanographic vessel, the R.V. "Crawford," and an oceanographic aircraft studied the birth of a hurricane in attempts to learn under what conditions a depression develops into a hurricane.

During recent years basic research on ocean waves led to pilot studies of ships' motions; results obtained by engineering facilities were expected to lead to radical changes in ship designs and operations. Wave and air temperature observations made from weather ships showed that a belief widely held by many seafarers was true: significantly higher waves are generated in cold air than in warm air (i.e., roughly a 10% increase of the warm air values in height per degree centigrade).

Why the great commercial fish populations change in abundance and location had been a vexing puzzle to all fishermen. Both in Japan and in the U.S. programs were started to determine to what extent shifts in climatic and oceanographic conditions relate to these changes.

Important advances had been made in oceanographic instrumentation during the last decade, but there remained many variables in the sea which could not be measured directly. The direct observation of subsurface currents would be particularly desirable. Although there was no scarcity of designed instruments, few observations existed. Two promising methods were tested at sea: one was a parachute drogue and the other consisted of neutral-buoyancy floats designed to stabilize themselves at a given depth and fitted with means of sending out acoustic signals to indicate their position.

Ohio. A north central state of the United States, popularly known as the "Buckeye state," Ohio became a state of the union in 1803, but because there was some question about the formality of the action, the U.S. congress in 1953 jestingly went through the motions of formally admitting the state to the union. Area: 41,222 sq.mi., including 222 sq.mi. of water. Pop. (1950 census): 7,946,627, including 5,578,274 urban and

2,368,353 rural; 6,566,531 white and 1,380,096 nonwhite. As of July 1, 1956, the U.S. bureau of the census estimated the population to be 9,096,000. The principal cities and their 1950 population figures are: Cleveland, 914,808; Cincinnati, 503,998; Columbus, 375,901; Toledo, 303,616; Akron, 274,605; Dayton, 243,872; Youngstown, 163,330; and Canton, 116,912.

History.—Three special sessions of the Ohio general assembly were called in 1956. The first session met on Jan. 16. Its purpose was to implement the \$150,000,000 capital improvement program on which the state embarked when the voters in Nov. 1955 approved a constitutional amendment authorizing a bond issue of that amount. This would provide new facilities for pupils in impoverished school districts, students in the six state universities, the mentally ill and the criminally delinquent. At this session the general assembly passed measures setting up the mechanics of issuing up to \$30,000,000 a year in bonds for this program; appropriated \$37,000,000 for use in 1956, \$15,000,000 of it to go for institutions for the mentally ill and criminally delinquent, \$15,000,000 for state universities and \$7,000,000, which was to come from the state's surplus, for impoverished school districts; and increased the state tax on cigarettes from 2 to 3 cents a pack, earmarking the third cent for bond retirement purposes.

The second special session, which met on June 28, was devoted principally to passing laws to reimburse city and town governments for the \$12,000,000 loss in revenue they suffered when an Ohio supreme court decision invalidated certain taxes against shares and capital of financial institutions.

The third special session convened Nov. 26 to consider Gov. Frank J. Lausche's request for emergency authority to take over striking utility companies. This was prompted by a strike of telephone company employees which had left Portsmouth, O., without telephone service since Oct. 15.

Ohio's new state board of education, the 23 members of which were elected in the Nov. 1955 election, organized in 1956 and Robert A. Manchester was elected president. One of the first steps of the board was to assist hard-pressed school districts. For that purpose it had on hand \$10,000,000, of which \$7,000,000 had been appropriated by the January special session of the general assembly and \$3,000,000 had been voted in the regular legislative session in 1955. The board ordered, at a cost of \$75,000, a report from a research firm to try to determine the state's future school needs. This report was made Oct. 9. It predicted that pupil enrolment in Ohio public schools would increase from 1,575,950 in 1956 to 2,022,590 by 1960, requiring 9,707 additional classrooms in that period. The report estimated the construction cost of these classrooms at \$324,000,000 and predicted that local boards of education could bear all but \$49,500,000 of that amount. In November the board announced the appointment of Harold S. Vincent as superintendent of public instruction in Ohio, effective July 1, 1957.

Republicans swept the state offices in the November general election, but Gov. Lausche (Dem.) defeated Sen. George Bender in the race for the U.S. senate seat. C. William O'Neill of Marietta was elected governor. Other state officers chosen by the voters were: Paul Herbert, lieutenant governor; William Saxbe, attorney general; James A. Rhodes, auditor; Roger W. Tracy, treasurer; and Ted W. Brown, secretary of state. The presidential vote in Ohio was 61.1% Republican, 38.9% Democratic.

Two amendments to the Ohio constitution were passed. One provided for the issuance of bonds up to \$90,000,000 to pay a bonus not to exceed \$400 to each Korean war veteran or certain of his survivors. The other changed from two years to four years the term of office for members of the Ohio senate.

Education.—In 1956 the state had 3,623 public and private elementary schools with an estimated total enrolment of 1,236,291 and a total teaching staff of 38,828; 143 junior high schools with an estimated enrolment

of 102,827 and a teaching staff of 3,751; 1,160 senior high schools with an enrolment of 465,117 and a teaching staff of 21,244. There were 1,200 kindergarten classes. State expenditures on education for 1955-56 approximated \$372,000,000. Employed teachers holding only temporary certificates numbered 3,500.

Social Insurance and Assistance, Public Welfare and Related Programs.—The average number of recipients of general relief per month in the fiscal year ended June 30, 1956, was 80,751 and the total assistance extended was \$29,842,307. The average number per month receiving aid for the aged was 99,773, and they received \$69,791,284; aid to dependent children, 62,404 cases received a total of \$17,936,137; aid to the blind, 3,758 cases received a total of \$2,593,113; aid for the disabled, 8,118 cases received a total of \$4,843,259. Administrative expenditures totalled \$9,816,554. Benefits paid by the Ohio bureau of unemployment compensation in the fiscal year ended June 30, 1956, totalled \$52,570,462 in compensation for 1,857,722 weeks of unemployment.

Ohio's correctional institutions had an average daily population of 10,453 for the fiscal year ended June 30, 1956. The industrial training schools had an average daily population of 1,092 and the juvenile diagnostic centre an average daily population of 89. Hospitals for the mentally ill had an average daily population of 27,521 and state schools for the retarded 7,554. Total cost of operating the correctional institutions for the fiscal year was \$8,617,321; industrial training schools, \$1,869,305; juvenile diagnostic centre \$659,239; hospitals for the mentally ill \$29,205,447; schools for the retarded, \$7,926,085.

Communications.—Ohio had 83,065 mi. of highways in 1956 outside municipalities. Of this total, 15,921 mi. were classified as rural state, 29,139 mi. as county and 38,004 mi. as township. Total state expenditure on highways in the fiscal year ended June 30, 1956, were \$120,446,392.

In 1956 Ohio had 104 airports and 68 landing fields certified by the Ohio Aviation board for commercial operation. There were 188 uncertified landing fields. On Jan. 1, 1956, the state had 8,419 mi. of railroads and 3,316,500 telephones.

Banking and Finance.—There were 396 state and private banks and 226 branches in Ohio with deposits (June 30, 1956) of \$5,177,680,583 and resources of \$5,730,577,928. There were 230 active national banks in the state with deposits (June 30, 1956) of \$4,711,260,000 and resources of \$5,133,558,000.

State-chartered savings and loan institutions numbered 456 with total resources (June 30, 1956) of \$2,619,883,824. There were 135 federal savings and loan associations with total assets (Dec. 31, 1955) of \$1,546,944,195.

State of Ohio budgetary receipts for the 1955-57 biennium were \$736,034,000; budgetary expenditures \$732,100,000. The state debt at the end of 1955 was \$623,200,000.

Manufacturing.—Preliminary statistics in the annual survey of manufactures made by the bureau of census of the U.S. department of commerce indicate that the total value added by manufacture in Ohio in 1954 was \$10,153,718,000 as compared with \$11,192,103,000 in 1953 and \$10,933,105,000 in 1952. Ohio in 1954 had 14,532 industrial establishments which employed 1,270,157 workers who were paid \$5,665,852,000. Average weekly earnings of production workers in the state reached a high of \$86.70 in July 1955.

Agriculture.—Cash receipts from farm marketings, January through July 1956, were \$540,912,000 as compared with \$529,700,000 for the same period of 1955. Livestock and products increased to \$350,596,000 against \$336,640,000 in 1955; crops declined to \$190,315,000 from \$193,060,000

Table I.—Principal Industries of Ohio

	All employees 1954	Salaries and wages 1954 (in 000s)	Value added by manufacture 1954 (in 000s)	Value added by manufacture 1953 (in 000s)

1955. Cattle increased to 2,416,000 head (of which 930,000 were milk cows) valued at \$253,680,000 from 2,369,000 head and \$244,007,000 at beginning of 1955. Stock sheep declined 1% to 1,036,000 head; hogs increased 10% to 2,836,000 head and horses declined 10% to 73,000 head. Chickens decreased 3%; turkeys increased 10%.

Mineral Production.—Table III shows the tonnage and value of those minerals produced in Ohio in 1953 and 1954 whose value exceeded \$100,000. In 1954 Ohio was first among the states in output of fire clay and lime, second in coke production and consumption, in pig iron output and in stone, third in peat, fourth in cement shipments and petroleum barrel sales and fifth in output of salt and of sand and gravel. It ranked 14th in value of its mineral output, with 2.03% of the U.S. total in 1954. *ENCYCLOPEDIA BRITANNICA FILMS.*—*Middle States*, 2nd ed. (1955); *Ohio* (1955).

Oklahoma. A west south central state of the United States, admitted as the 46th state on Nov. 16, 1907. The name "Oklahoma" is from the Choctaw and Chickasaw words meaning "red people," and was first applied to the Indian territory in 1866. The popular name "Sooner state" was derived from the term "sooner" used in reference to a person who entered the Indian territory before the date staked a claim sooner than the law stipulated when the first public lands in the Indian territory were opened to white settlement by the act for homesteads, April 22, 1889. Area: 69,919 sq. mi., including nearly 1,000 sq. mi. of water surface (artificial lakes and rivers). Pop.: (1950 census) 2,233,351; (July 1, 1956, provisional est.) 2,237,000. The two largest cities are (1950 census) Oklahoma City, the capital, 243,504; and Tulsa, 182,740. Other cities (1950 pop.) are Muskogee, 37,289; Enid, 36,017; Lawton, 34,757; Norman, 27,006; Shawnee, 22,948; Stillwater, 22,338; Ponca City, 20,180; Bartlesville, 19,228; Okmulgee, 18,317; Ardmore, 17,890; McAlester, 17,878; Ada, 15,995; Chickasha, 15,842.

History.—Oklahoma's 1956 expansion program to balance the state's agricultural economy with a variety of industries made a record in history: 51 new manufacturing plants over the state at a cost of \$6,700,000; the expansion of established plants at a cost of \$200,000,000; and two installations totalling \$56,000,000 (government contract), one a plant for production of powder and rocket-propelled missiles (at Pryor) and the other a navy chemical plant (at Muskogee). Millions of visitors numbered at all-time high in 1956 at recreational facilities and areas in Oklahoma: the recently established "Indian City" (a large acreage with primitive type dwellings of the American Indian) and the annual (Aug.) American Indian exposition, both at Anadarko; the National Aircraft show, only one of its kind backed by the U.S. defense department (army, navy, air force and marines), held for five days in Oklahoma City; and other historic institutions and scenic wonders over the state, including 15 state parks and 100 lakes.

Official returns from the state election board on the Nov. 6, 1956, elections showed that Pres. Dwight D. Eisenhower won the Oklahoma electoral votes by a slightly greater majority than in 1952. Sen. Mike Monroney, Democrat, was re-elected to a six-year term in the U.S. senate. The U.S. house of representatives retained the same membership from Oklahoma, one Republican and five Democrats being elected (five holdovers) in 1956. The initiative petition for redistricting the congressional districts in the state, submitted by the Republicans, won by a plurality of votes but lost in the elections for lack of the ratio and percentage of votes as required by state law. Traditional Democratic control of the state offices was maintained in those which were up for election in 1956: corporation commissioner, one judge of the criminal court of appeals and four justices of the state supreme court.

The chief state officers during 1956, all Democrats, elected on Nov. 2, 1954, were Raymond Gary, governor; Cowboy Pink Williams, lieutenant governor; Andy Anderson, secretary of state; A. S. J. Shaw, state auditor; Mac Q. Williamson, attorney general; John D. Conner, state treasurer; Oliver Hodge, superintendent of public instruction.

Education.—The total enrolment in Oklahoma public schools for the term 1955-56 was 527,196 (elementary and high schools) with 20,512 teaching personnel. The total cost for maintaining the elementary and high schools was tentatively given as \$104,000,000 for current expenses. The public schools maintained 129 special education classes with 6,023 children enrolled, of which number 521 were home bound. State institutions of higher learning included the University of Oklahoma and the Oklahoma Agricultural and Mechanical college, both graduate schools, Oklahoma College for Women (Chickasha), Panhandle Agricultural and Mechanical college (Goodwell), Langston university (Langston), and six colleges for teacher training (Ada, Alva, Durant, Edmond, Tahlequah, Weatherford), all state-owned senior colleges. There were 16 two-year junior colleges, of which 7 were state-owned (including the Oklahoma Military academy, Claremore), 3 were independent with church affiliations and 6 were municipal. There were also 6 independent senior colleges with church affiliations.

Social Insurance and Assistance, Public Welfare and Related Programs.—On Aug. 31, 1956, the Oklahoma department of public welfare reported 95,078 old-age assistance cases receiving an average of \$64.34 per case (a total of \$6,116,994); 15,848 dependent children cases (representing 56,045 persons), each case receiving an average of \$83.23 (a total of \$1,319,982); 1,967 blind cases receiving an average of \$78.48 per case (a total of \$154,370); 6,747 cases of disabled, each case receiving an average of \$58.93 (a total of \$397,629). State supported institutions included two tuberculosis sanatoria, one general hospital, four mental hospitals, two schools for mental defectives, two schools for deaf and blind, one reformatory and one penitentiary.

Communications.—The summary of disbursements by the state highway department for construction and maintenance from Jan. 1, 1956, to Sept. 1, 1956, was \$33,794,550.04. The highway department was responsible for 10,636 mi. of highway system in the state as of Jan. 1, 1956. The total public open roads in Oklahoma as of Jan. 1, 1956, was approximately 93,557 mi. Railroad and electric mileage approximated 6,000 mi., not including sidings. There were 15 cities served by five major air lines in Oklahoma.

Banking and Finance.—The state budget office reported state expenditures and payments on bonded debt at \$340,728,805.68, for the fiscal year ending June 30, 1956. The bonded state debt was \$2,561,832.21. State receipts for the fiscal year 1955-56 were \$347,433,767.27. The 25th state legislature appropriated \$230,902,174.98 for the biennium July 1, 1955, to June 30, 1957.

The Oklahoma bank commissioner reported 198 national banks in the state with a total deposit of \$1,714,000,000 on June 30, 1956, and 188 state banks with a total deposit of \$401,263,000. The 29 state savings and loan associations chartered by the state in Oklahoma reported total resources and liabilities of \$118,660,000 as of June 30, 1956.

Agriculture and Livestock.—Oklahoma farmers and ranchers were confronted with a critical situation as a result of the continued drought to the middle of Oct. 1956. Production and supplies of hay and most feed grain crops had been reduced to low levels, and feed on pastures was short, farmers and ranchers already having to market or move large numbers of livestock. Rains the middle of October were too late for fall crop production over most of the state.

Table I.—Principal Crops of Oklahoma

Crop	Indicated		Average, 1945-54
	1956	1955	
Wheat, bu.	64,272,000	24,160,000	77,872,000
Corn, bu.	4,452,000	8,112,000	17,824,000
Oats, bu.	12,506,000	11,968,000	14,433,000

The state soil conservation board reported 86 soil conservation districts in Oklahoma in 1956, with a total of 69,562 farmers operating 19,133,807 ac. under the conservation plan.

Manufacturing.—The Oklahoma Employment Security commission reported that the monthly average nonfarm employment in Oklahoma for the first six months of 1956 amounted to 561,700; manufacturing employment for the same period averaged 90,500, these figures including employees of government, small firms and certain nonprofit institutions not covered by the Oklahoma Employment Security act. Average covered employment in the state for the calendar year 1955 was 327,000. Wages paid to these workers during the year amounted to \$1,250,000,000. There was an annual average of 84,100 manufacturing workers covered by the law during 1955, and they received \$352,000,000 in wages. (M. H. W.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Oklahoma in 1953 and 1954 whose value exceeded \$100,000. In 1954 the state was third among the states in output of natural gas and fourth in crude petroleum and zinc output. It ranked fifth in the value of its mineral output, with 4.66% of the U.S. total.

Olympic Games. Stars from 67 nations competed in the games of the XVIth Olympiad held at Melbourne, Austr., from Nov. 22 through Dec. 8, 1956, and attracted a record attendance of more than 2,000,000 spectators. Participating athletes established 11 new world records and 36 new Olympic standards. A record field of 75 countries that had entered was reduced because of the outbreak of fighting in Egypt and the armed repression of freedom in Hungary by the U.S.S.R. Switzerland, the Netherlands, Spain, Iraq, Lebanon and Communist China all withdrew in protest of the warfare and Egypt did not enter. Despite the world tension, the competitors in general got along in friendly fashion. A number of European athletes did not return to their homelands after the Olympics, but sought political refuge in Australia and the United States.

The United States dominated the track and field events, which comprise the main competition of the games, winning 16 gold medals. Australian stars scored heavily in swimming and in the women's track and field tests. Although there is no over-all team championship at stake in the Olympic games, the Soviet Union, with a preponderance of strength in gymnastics and the Graeco-Roman type of wrestling, led in the unofficial scoring.

The games were proclaimed open on Nov. 22 by the duke of

Table I.—Team Standings, Summer Games, 1956

(Unofficial scoring of nations, based on ten points for first place, five for second, four for third, three for fourth, two for fifth and one for sixth)

Country	Points	Country	Points

Edinburgh. A crowd of 100,000 jammed the Olympic stadium for the colourful inaugural ceremonies when the Olympic flame, kindled by the rays of the sun on Mount Olympus in Greece, was carried into the arena. The flame burned brightly until Dec. 8 when the contests were officially closed by Avery Brundage of Chicago, Ill., president of the International Olympic committee.

Basketball.—Maintaining its record of never having lost an Olympic tournament game, the United States won the gold medals in the court competition. An 89-55 victory over the Soviet Union in the final clinched honours for the Americans. Bill Russell, who accounted for 13 points, and Bo Jeannerard, with 16 tallies, starred for the U.S. Uruguay took third-place medals by conquering France, 71-62.

Boxing.—Peter Rademacher, a hard puncher from Grandview, Wash., and an army man, captured the heavyweight crown with a technical one-round knockout of Lev Moukhine of the U.S.S.R. James Boyd of Rocky Mount, N.C., also with the army at Fort Benning, Ga., won the light-heavyweight gold medal for the U.S. with a unanimous decision over Gheorghe Negrea of Rumania. Laszlo Papp of Hungary, who won in the light-middleweight class, became the first man to win three Olympic gold medals in boxing, having triumphed at London in 1948 and at Helsinki in 1952.

Equestrian Events.—Because of Australia's quarantine on horse importations the site of the equestrian competition was transferred to Stockholm. King Gustav Adolf opened the contests in Stockholm stadium on June 10 and the events ran through June 17. Petrus Kastenman of the host nation finished first in the trying three-day individual tests. Kastenman, a cavalry lieutenant, won with 66.53 points. The British team of Frank Weldon, Lawrence Rook and Albert (Bertie) Hill also was victor. Maj. Henri St. Cyr, a winner in 1952, again took the individual prize in dressage and rode with G. Persson and G. Boltenstern to gain team laurels for Sweden. German riders led by Hans Gunther Winkler won both the individual and team prizes in the Grand Prix jumping.

Gymnastics.—Soviet athletes added 11 gold medals to their collection with a great display of prowess in gymnastics. In the men's competition, Takashi Ono of Japan triumphed on the horizontal bar and Helmut Bantz of Germany tied with Valentine Mouratov, U.S.S.R., on the long horse to break the Soviet Union's monopoly. Russian and Hungarian stars shared the gold medals in the women's division, Agnes Keleti of Hungary and Larisa Latynina of the U.S.S.R. being outstanding.

Rowing.—Yale university's eight that had lost in the opening round made the greatest comeback in the history of Olympic rowing to triumph in the final. Given a second chance by the *repêchage* system used in the games, the Yale sweep-swingers became the first ever to win gold medals after losing in the preliminary heats. A crowd of 40,000 along the banks of the 2,000-m. course on Lake Wendouree at Ballarat saw the Elis defeat the Canadian and Australian crews to which they had lost earlier. Yale's thrilling feat capped a day of unprecedented Olympic rowing successes for the United States, which took two other gold, two silver and one bronze medal. Jack Kelly, Jr., of Philadelphia, Pa., making his last Olympic effort in singles sculling, had to be content with third place behind Vyacheslav Ivanov, European champion from the Soviet Union, and Stuart MacKenzie of Australia. Art Ayrault, Conn Findlay and Kurt Seiffert won the pairs with coxswain for the United States, and the U.S. team of James Fifer and Duvall Hecht won the pairs without coxswain.

Swimming.—The close competition between Australian and U.S. stars in both men's and women's events proved a feature of the games and kept the swimming stadium rocking with cheers and applause. Mermen established two new world records and five other Olympic standards while the naiads set one universal mark and four others for the games. The host country's swimmers captured the major share of the gold medals although the U.S. took honours in three of the four diving events. Mrs. Pat Keller McCormick of Lakewood, Calif., won both the women's springboard and platform diving championships to repeat the feat she had accomplished in 1952. Bob Clotworthy of Mountaine, N.J., took the men's springboard contest. George Breen of Buffalo, N.Y., had the misfortune of losing in the 1,500-m. free-style final after setting a world record of 17 min. 52.9 sec. in a qualifying trial. The listed mark was 18 min. 19 sec. Murray Rose, Australia's ace, defeated Breen in the final in 17 min. 58.9 sec. Rose was a triple gold medal winner, taking the 400-m. free style in 4 min. 27.3 sec. as against the games' record of 4 min. 30.7 sec., and with Kevin O'Halloran, John Devitt and Jon Henricks he swam to a world record of 8 min. 23.6 sec. in the 800-m. relay. The mark in the books was 8 min. 29.4 sec. The other universal standard came in the women's 400-m. relay when the Australian

Below: Wrestlers D. A. Hodge (right), U.S., and G. H. Farquhar, Great Britain, in a middleweight bout, won by Hodge

quartet of Dawn Fraser, Faith Leech, Sandra Morgan and Lorraine Crapp won in 4 min. 17.1 sec. to better the listed time of 4 min. 24.4 sec. One of the closest races of the Olympics came in the women's 100-m. backstroke final when Judy Grinham of Great Britain defeated Carin Cone of Ridge-wood, N.J. Both were clocked in the new Olympic time of 1 min. 12.9 sec., but the judges ruled that Miss Grinham was victor by an inch. The listed Olympic mark for the event was 1 min. 13.8 sec. although that time had been cut to 1 min. 13.0 sec. by Britain's Margaret Edwards in a trial heat. Miss Edwards placed third in the final. Shelley Mann, Nancy Jane Ramey and Mary Jane Sears swept the first three places for the United States in the 100-m. butterfly race.

Track and Field.—Four world records and 21 other Olympic marks were shattered in the greatest track and field display in the history of the games. U.S. stars won 16 gold medals and a lion's share of the place awards although Vladimir Kuts of the U.S.S.R. was hailed as the top individual performer because of his triumphs in the 5,000- and 10,000-m. events in which he set up new Olympic times. He won the 5,000 m. in 13 min. 39.6 sec. and the 10,000 m. in 28 min. 45.6 sec. The former standards were 14 min. 6.6 sec. and 29 min. 17 sec., both set by Emil Zatopek, Czechoslovakian. Bobby Morrow of San Benito, Tex., became the first man to take both sprints since the feats of Jesse Owens in the 1936 games at Berlin. Morrow captured the 100 m. in 10.5 sec., set a games' mark of 20.6 sec. in the 200 m. and helped the 400-m. relay team win in the world record time of 39.5 sec. The listed record for the 200-m. dash was 20.7 sec. The quartet of Walter Baker, Lea King, Ira Murchison and Morrow lowered the listed universal standard of 39.8 sec. for the 400-m. relay, which had been set by a U.S. team fired by Jesse Owens at Berlin in 1936.

In winning the javelin throw, Egil Danielsen of Norway made a toss of 281 ft. 2½ in. to surpass the world's listed standard of 268 ft. 2½ in. Mildred McDaniel of Atlanta, Ga., leapt 5 ft. 9¼ in. to win the high jump. The highest any woman ever had jumped before was 5 ft. 7¾ in. The Australian 400-m. relay team of Shirley Strickland de la Hunty, Norma Croker, Fleur Mellor and Betty Cuthbert lowered the world clocking of 45.6 sec. to 44.5 sec. Bob Richards retained his Olympic title in the pole vault, winning at 14 ft. 11½ in., which was ¼ in. higher than the record for the games that he set in 1952. United States entries made a sweep of the hurdles gold medals as Glenn Davis of Clinton, O., won the 400-m. test in 50.1 sec. and Lee Calhoun of Gary, Ind., took the 110-m. high event in 13.5 sec. Listed Olympic marks for the events were 50.8 sec. and 13.7 sec. Ron Delany won Ireland's first Olympic gold medal since 1932, the Villanova university (Villanova, Pa.) ace taking the 1,500-m. run in 3 min. 41.2 sec., the listed Olympic standard for the "metric mile" being 3 min. 45.2 sec.

France, which had not won a track or field event since the 1928 games, gained a first when Alain Mimoun finished out in front in the tortuous marathon. The defending champion, Emil Zatopek, placed fifth. Americans finished one-two in the grueling ten-event decathlon. Milton Campbell of Plainfield, N.J., amassed 7,937 points for a new Olympic record to defeat Rafer Johnson of Kingsburg, Calif., who tallied 7,587 points. The former high score for the games was 7,887 set by Bob Mathias of the U.S. in 1952.

Betty Cuthbert helped Australia score heavily in the women's division. In addition to helping set a new world relay record, she won the 100-m. dash in 11.5 sec., and the 200-m. sprint in 23.4 sec. to tie the games and world standards.

The 1960 Olympic summer games were scheduled to be held at Rome, It. **Winter Games.**—Athletes from the Soviet Union, competing in winter Olympic events for the first time, starred in the seventh competition held at Cortina d'Ampezzo, It., Jan. 26-Feb. 5. The Soviet squad led in the most medals won with seven gold, three silver and five bronze, and scored 121 points in the unofficial point standing to pace a field of 32 nations. Austria gained 11 prizes, including 4 for first places. Finland, Sweden, Switzerland and the United States followed. The United States scored only two triumphs, both in figure skating. Hayes Alan Jenkins of Colorado Springs, Colo., led a sweep of medals in the men's division when he amassed 166.4 points to defeat Ronald Robertson of Long Beach, Calif., and his younger brother, David Jenkins. Tenley Albright of Newton Center, Mass., defeated Carol Heiss of Ozone Park, N.Y., for the women's skating laurels, but only after the closest competition from the little New Yorker. Miss Albright was credited with 169.6 points, Miss Heiss with 168.1. Ingrid Wendt of Austria was third. Individual star of the games was Austria's Anton (Toni) Sailer, who registered the only triple of the meeting when he captured the special slalom, giant slalom and downhill race. Sailer won additional honours as the world Alpine champion of the year inasmuch as the Olympic victors gained International Ski federation recognition as the universal champions for the 1956 season.

Two world records and four Olympic records were shattered in the speed skating as the Soviet Union team registered victories in three of the four events. Yevgeni Grishin won the 500-m. event in 40.2 sec. and Grishin and

Table II.—Team Standings, Winter Games, 1956

(Unofficial scoring of nations, based on ten points for first place, five for second, four or third, three for fourth, two for fifth and one for sixth)

U.S.S.R.	121	Canada	16
Austria	78½	France	10
Finland	66	Netherlands	7
Sweden	62	Poland	6
Switzerland	55½	Japan	5
United States	54½	Czechoslovakia	5
Norway	47	Hungary	4
Italy	31½	Great Britain	4
Germany	24	Spain	3

Yuri Mikhailov tied for first in the 1,500 m. in 2 min. 8.6 sec. for Olympic and universal marks. Boris Shilkov, U.S.S.R., bettered a games' mark by winning the 5,000-m. event in 7 min. 48.7 sec. Sigge Ericsson, Swedish ace, broke the Soviet monopoly on the speed skating prizes when he carried off the honours in the 10,000-m. grind. Ericsson established a new Olympic standard of 16 min. 35.9 sec.

The eighth winter Olympics were scheduled for Squaw Valley, Calif., in 1960.

Basketball

Team—United States.

Boxing

Flyweight—Terence Spinks, Great Britain.
Bantamweight—Wolfgang Behrendt, Germany.
Featherweight—Vladimir Safranov, U.S.S.R.
Lightweight—Richard McTaggart, Great Britain.
Light welterweight—Vladimir Enguiban, U.S.S.R.
Welterweight—Nicolae Linca, Rumania.
Light middleweight—Laszlo Papp, Hungary.
Middleweight—Guenadii Chatkov, U.S.S.R.
Light heavyweight—James Boyd, Rocky Mount, N.C.
Heavyweight—Peter Rademacher, Grandview, Wash.

Canoeing

1,000-m. Canadian singles—Leon Rottman, Rumania, 5 min. 5.3 sec.
1,000-m. kayak singles—Gert Fredriksson, Sweden, 4 min. 12.8 sec.
1,000-m. Canadian pairs—Alexe Dumitru and Simion Ismailciuc, Rumania, 4 min. 47.4 sec.
1,000-m. kayak pairs—Michel Scheuer and Meinrad Miltenberger, Germany, 3 min. 49.6 sec.
10,000-m. Canadian singles—Leon Rottman, Rumania, 56 min. 41 sec.
10,000-m. Canadian pairs—Pavel Kharine and Graisan Botev, U.S.S.R., 52 min. 2.4 sec.
10,000-m. kayak singles—Gert Fredriksson, Sweden, 47 min. 43.4 sec.
10,000-m. kayak pairs—Janos Uranyi and Laszlo Fabian, Hungary, 43 min. 37 sec.
500-m. women's kayak singles—Elisaveta Dementieva, U.S.S.R., 2 min. 18.9 sec.

Cycling

1,000-m. sprint—Michel Rousseau, France.
*1,000-m. time trial—Leandro Faggin, Italy, 1 min. 9.8 sec.
2,000-m. tandem—Australia (Ian Browne and Tony Marchanti).
4,000-m. team pursuit—Italy, 4 min. 37.4 sec.
Individual road race (116.65 mi.)—Ercolo Baldini, Italy, 5 hr. 21 min. 17 sec.
Team road race—France, 22 points.

Equestrian

(At Stockholm, Sweden)

Three-day, individual—Lieut. Petrus Kastenman, Sweden.
Three-day, team—Great Britain (Lieut. Col. Frank Weldon, Bertie Hill, Lawrence Rook).
Dressage Grand Prix, individual—Mai. Henri St. Cyr, Sweden.
Dressage Grand Prix, team—Sweden (St. Cyr, G. Persson, G. Boltenstern).
Jumping Grand Prix, individual—Hans Gunther Winkler, Germany.
Jumping Grand Prix, team—Germany (Winkler, A. Luetke-Westhues, Fritz Thiedemann).

Fencing

Men's team foil—Italy.
Men's team épée—Italy.
Men's individual foil—Christian D'Oriola, France.
Men's individual épée—Carlo Pavesti, Italy.
Men's team sabre—Hungary.
Women's foil—Gillian Sheen, Great Britain.
Men's individual sabre—Rudolf Karpoti, Hungary.

Field Hockey

Team—India.

Gymnastics, Men

Pommel horse—Boris Chakhline, U.S.S.R., 19.25 points.
Parallel bars—Victor Tchoukarine, U.S.S.R., 19.2 points.
Free standing exercises—Valentine Mouratov, U.S.S.R., 19.2 points.
Rings—Albert Azarian, U.S.S.R., 19.35 points.
Horizontal bar—Takashi Ono, Japan, 19.6 points.
Combined exercises—Victor Tchoukarine, U.S.S.R., 114.25 points.
Long horse—Helmuth Bantz, Germany, and Valentine Mouratov, U.S.S.R., tied for first, 18.85 points.
Team combined exercises—U.S.S.R., 568.25 points.

Gymnastics, Women

Balance beam exercises—Agnes Keleti, Hungary, 18.800 points.
Combined exercises—Larisa Latynina, U.S.S.R., 74.931 points.
Free standing exercises—Agnes Keleti, Hungary, and Larisa Latynina, U.S.S.R., tied for first, 18.732 points.
Side horse vaulting—Larisa Latynina, U.S.S.R., 18.833 points.
Parallel bars—Agnes Keleti, Hungary, 18.966 points.
Team exercises—Hungary, 75.2 points.
Team combined exercises—U.S.S.R., 444.80 points.

Modern Pentathlon

Individual—Lars Hall, Sweden, 4,833 points.
Team—U.S.S.R., 13,690.5 points.

Rowing

Eights—United States, Yale (Donald Beer, Thomas Charlton, John Cooke, Caldwell Esselstyn, Charles Grimes, Richard Wailes, David Wight, Robert Morey, stroke, William Becklean, coxswain), 6 min. 35.2 sec.
Fours with coxswain—Italy (Angelo Vanzin, Romano Sghez, Alberto Winkler, Franco Trincavelli, Ivo Stefanoli), 7 min. 19.4 sec.
Fours without coxswain—Canada (Archibald McKinnon, Lorne Loomer, Ignace d'Hondt, Donald Arnold), 7 min. 8.8 sec.
Pairs with coxswain—United States (Art Ayrault, Conn Findlay and Kurt Seiffert), 8 min. 26.1 sec.
Pairs without coxswain—United States (James Fifer, Duval Hecht), 7 min. 55.4 sec.
Double sculls—U.S.S.R. (Alexandre Berkoutov, Iuri Tiukalov), 7 min. 24 sec.
Single sculls—U.S.S.R., Vyacheslav Ivanov, 8 min. 2.5 sec.

Shooting

Free pistol—Pentti Limnosvuo, Finland, 556x600.
Clay pigeon—Galliano Rossini, Italy, 195x200.
*Free rifle (300 m.)—Vassili Borissov, U.S.S.R., 1,138 points.
Running deer—Vitalii Romanenko, U.S.S.R., 441x500.
Small-bore rifle (prone, kneeling, standing)—Anatoli Bogdanov, U.S.S.R., 1,172 points.
*Rapid silhouette pistol—Stevan Petrescu, Rumania, 587x600.
†Small-bore rifle—Gerald Ouellette, Canada, 600x600.

Soccer

Ontario. Largest in population, second largest in area, the province of Ontario was an original member of the confederation in 1867. Area, 412,582 sq.mi. Pop.: (1951 census) 4,597,542, (1956 est.) 5,300,000. Capital, Toronto (*q.v.*) (1951) 675,754, (official est., 1956) 681,857. Metropolitan Toronto, an administrative area comprising 13 contiguous municipalities, had an estimated 1956 population of 1,304,363. Other large cities (1951 census, 1956 est. in parentheses) were: the twin cities of Kitchener-Waterloo 56,858 (75,482); and Windsor 120,049 (120,525). Others with 1951 census figures, were: London, 95,343, Ottawa (*q.v.*) 202,045, Hamilton 208,321.

History.—New legislation in 1956 was directed toward facilitating industrial expansion, which brought the value of manufactures to a new high of \$9,600,000,000, a gain of 15.6% over 1955. First midterm census compilations for Ontario showed a shift of rural dwellers to urban centres, as industry expanded. A legislative result was the establishment by the Ontario government of a Water Resources commission, with wide powers to augment local urban water supplies from the Great Lakes or other sources by pumping stations and a system of mains.

Other new legislation in 1956 included setting up a Hospitals commission to regulate the future location and type of hospitals to be built in order to provide maximum service at minimum capital cost. Passage of national legislation to finance a natural gas pipeline (Trans-Canada) from western Canada to Ontario, and rapid development of new electrical sources on the St. Lawrence river by the Hydro-Electric Power commission, spurred industrial expansion in most urban areas.

Education.—An increase of 62,000 in public- and secondary-school enrolment over 1955 raised the population in these schools to 1,050,000. In 1955-56, 2,300 new classrooms were provided at a cost of \$59,500,000. In fiscal 1956-57 provincial grants were set at \$5,800,000, distributed on the basis of average daily attendance. With other grants to these schools, the aggregate would be \$84,000,000. Grants to universities were raised to a total of \$16,000,000, and to agricultural and veterinary colleges, to \$24,982,000. Over-all educational costs were budgeted for the fiscal year at \$117,000,000, equivalent to 28% of all estimated ordinary revenue for the period.

Public Health and Welfare.—Appropriations for health (1956-57) totalled \$65,900,000, up \$5,000,000; for welfare \$31,300,000, up \$2,900,000. Special capital grants for hospitals and other health totalled \$8,600,000. Standard grants were increased to \$21,400,000, with 2,219 active treatment beds and 456 chronic beds under construction. Costs for mental patient care were placed at \$26,900,000 with upward of 20,000 patients in mental hospitals. Provincial payments on capital account for welfare establishments were budgeted at \$2,900,000.

Transportation and Communication.—Combined capital and ordinary expenditure on highways for fiscal 1956-57 was placed at more than \$210,

000,000, up \$53,000,000. Road subsidies to municipalities rose to \$50,000,000, matching local costs for capital and maintenance accounts. In 1955 there were 6,200 mi. of provincial highways and 78,000 mi. of municipal roads. Motor vehicles registered in 1955 totalled 1,617,000.

Banking and Finance.—On March 1, 1956, the government reported a surplus on ordinary account of \$749,000, from net revenues of \$411,342,000. The net balance carried to surplus account was after a special allocation of \$17,630,000 to sinking funds. For the fiscal year 1956-57 a net surplus of \$768,000 was forecast, after allotting \$17,729,000 to sinking funds from net ordinary revenue of \$420,519,000. Gross net capital debt rose to \$1,066,161,000 as of March 31, 1955, with net debt at \$661,000,000, up \$30,600,000. Canadian chartered banks had 1,528 branches in Ontario. Credit unions had more than 1,300 branches serving 350,000 members, assets exceeding \$100,000,000, and in 1955 disbursed loans totalling \$2,260,363. Province of Ontario Savings office (1956) had 21 branches, more than 80,000 depositors, and total deposits of \$79,700,000.

Agriculture.—Gross value of agricultural production in 1955 gained slightly to an aggregate of \$1,041,760,000. Cash income rose to \$744,108,000, a gain of \$29,729,000. The index of farm living costs fell to 201.6 from 202 (1935-39=100). Late seeding and bad weather for maturing crops reduced the gross value of crops, and the official estimate for cash income was a 3% drop for 1956.

Manufacturing.—Output in 1955 rose to a new peak of \$9,800,000,000. In July 1956 persons at work totalled 2,140,000, about 40% of the national total. Industrial establishments at Jan. 1, 1956, totalled 13,300,000, with direct wage and salary payments running at \$2,050,000,000 annually.

Mining.—Mining production (1955) totalled \$578,000,000, up from \$503,700,000 in 1954. An official estimate for 1956 placed current production in excess of \$720,000,000 as a result of production from new uranium, base metals and iron ore sources. The new record total for 1955 included: metallics \$467,300,000, nonmetallics \$15,700,000, structural materials \$88,900,000, fuels \$6,000,000. (C. A. Sn.)

Oregon. A state of the United States, located in the Pacific northwest, Oregon was admitted Feb. 14, 1859, as the 33rd state. Area: 96,981 sq.mi., including 666 sq.mi. of water. Pop.: (1950 census) 1,521,341; (July 1, 1956, provisional est.) 1,718,000. Capital: Salem (43,140 in 1950). Chief city: Portland (373,628).

History.—In the 1956 election Oregon voters gave the Republican presidential ticket of Dwight D. Eisenhower and Richard M. Nixon a lead of 77,000 over the Democratic ticket of Adlai E. Stevenson and Estes Kefauver. In 1952 the Eisenhower lead over Stevenson was 150,000. Democratic candidates were successful in most of the other state and national contests electing three of the state's four congressmen, the governor and attorney general. Democrats gained a majority in the 1957 state house of representatives, and an even division with the Republicans in the state senate.

Voters defeated a constitutional amendment to permit use of the emergency clause on legislative tax measures, and a bill for a cigarette tax. They approved a bill prohibiting certain commercial fishing in coastal streams south of the Columbia river.

Elective state officials (administrative) in 1956 were: governor, Elmo Smith (following the death of Gov. Paul Patterson in Jan. 1956); secretary of state, Earl T. Newbry; treasurer, Sig Unander; attorney general, Robert Y. Thornton; labour commissioner, Norman O. Nilsen; superintendent of public instruction, Rex Putnam.

Education.—Enrolment in public schools for the school year 1954-55 was 324,775, including 79,434 high school students. The number of classroom teachers employed was 12,334, and the average professional salary was \$4,339. Total operating expenses of public schools were \$97,980,388 for the year 1954-55. Average cost per pupil in daily attendance was \$343.86. Total capital outlays, including debt service, for the year were \$39,263,604.

Total enrolment in the eight campus units of the state system of higher education for the year 1955-56 was 19,571. Enrolment in extension courses was 14,010. Total operating expenses of the state system were \$22,888,672 for the year. State appropriation for capital outlay for the biennium ending June 30, 1957, was \$4,021,569.

Social Insurance and Assistance, Public Welfare and Related Programs.—Expenditures for the year ending June 30, 1956, under the state public welfare program, including cost of administration, were \$31,679,819. The program embraces general assistance, old-age assistance, aid to the blind, to dependent children and to permanently and totally disabled, and foster care. Payments for unemployment compensation in the fiscal year 1955-56 were \$18,242,545. Highest number of weekly payments during the year was

32,558. As of June 30, 1956, the number of persons actively seeking employment was estimated at 18,000.

The number of inmates in 11 state health, penal, correctional and eleemosynary institutions as of June 30, 1956, was 9,402. Total operating costs for the institutions for the fiscal year ending June 30, 1956, were \$11,837,944. Expenditures of the state commission for the blind were \$282,715 for the year 1955-56.

Communications.—Steam railway mileage in Oregon as of Dec. 31, 1955, was 3,527 mi. of main line, operated by 24 common carriers. One electric railway operated 37.4 mi. of main line.

Total mileage of the state highway system on June 30, 1956, was 7,437, of which 7,067 mi. were surfaced. Total mileage of county roads was 30,545, of which 19,876 mi. were surfaced. Total number of miles of roads in national and state forests, parks and reservations and nonhighway city streets was 24,530, of which 11,529 mi. were surfaced. Total expenditure of the state highway department in the year ending June 30, 1956, was \$58,552,515.

The total number of passenger automobiles registered in the state during 1955 was 737,745; trucks 78,524; buses 1,488. The number of telephones in service as of Dec. 31, 1955, was 556,211.

Banking and Finance.—The state bonded debt as of July 1, 1956, was: gross \$171,569,000, net \$114,339,530. The gross debt of municipal subdivisions as of July 1, 1954, was \$223,241,336, the net debt \$209,532,026.

State treasury receipts from all sources for the fiscal year ending June 30, 1956, were \$402,821,790. Total assessed valuation of property as of Jan. 1, 1956, was \$2,046,911,258.

Bank deposits on June 30, 1956, totalled \$1,818,974,900. On that date there were 39 state banks and 13 national banks in operation. Branch banking is permitted.

The total number of corporations registered in Oregon as of June 30, 1956, was 18,881, of which 10,659 were profit corporations.

Agriculture.—Cash receipts from farming in Oregon for 1955 were: all commodities \$399,919,000, divided into crops, \$230,352,000, and livestock and livestock products, \$169,567,000. Government payments to farmers amounted to \$2,589,000. Livestock on farms as of Jan. 1, 1956: all

cattle 1,456,000 head; sheep and lambs 830,000; hogs 157,000; horses 48,000; chickens 3,623,000; turkeys 289,000.

Manufacturing and Industry.—Oregon is the principal lumber manufacturing state in the nation. The cut of logs in 1955 was 9,719,878,000 bd.ft. Total lumber manufacture in 1955 was 8,850,000,000 bd.ft. Plywood manufacture in 1955 was 2,753,398,200 sq.ft., $\frac{3}{8}$ -in. basis.

Tourist travel is rated as the state's third most important industry. Tourist expenditures in Oregon in 1956 were estimated at \$141,000,000. (C. A. Sp.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in Oregon in 1953 and 1954 whose value exceeded \$100,000. In 1954 the state was third among the states in chromite and di-

omite output and fifth in pumice, and ranked 38th in the value of its mineral output, with 0.23% of the U.S. total.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Far Western States*, 2nd ed. (1956); *Oregon* (1955).

Organization for European Economic Cooperation:
see INTERNATIONAL TRADE.

Organization of American States. The Organization of American States in 1956 functioned pursuant to the terms of the charter signed at Bogotá, Colombia, in 1948. It was a continuation of the system of inter-American relations which had its inception in 1890 when the first Pan American conference met in Washington, D.C., and established the Pan American Union. Through the organization the 21 American republics seek to achieve an order of peace and justice, promote their solidarity, strengthen their collaboration and defend their sovereignty, territorial integrity and independence. The organization functions through six organs, namely, the Inter-American conference, the meetings of consultation of ministers of foreign affairs, the council of the organization, the Pan American Union, the specialized conferences and the specialized organizations.

The outstanding event of 1956 was the meeting in Panamá of the presidents of the American republics, a meeting originated by a decision by the council of the Organization of American States to hold in the city of Panamá a commemorative meeting in honour of the 1826 Congress of Panamá convoked by Simón Bolívar. Subsequent to this action, the president of Panamá invited the presidents of the other American republics to a meeting which would coincide with the commemorative session agreed upon by the council of the organization. The commemorative meeting was held in Panamá, July 18–22, 1956, with the participation of presidents from 16 countries. Bolivia, El Salvador and Peru were represented by their presidents-elect; Colombia and Honduras were not represented.

The principal feature of the meeting was the signing of the Declaration of Panamá in which the chiefs of state reiterated certain fundamental principles governing the relations among the American republics. U.S. Pres. Dwight D. Eisenhower proposed that each president designate a representative to serve on a committee to make the Organization of American States a more effective instrument and to formulate practical suggestions in the economic, financial, social and technical fields which the organization might adopt. This committee met in Washington on Sept. 17, 18 and 19 for a preliminary exchange of views and to receive suggestions from each participant and agreed to hold a further meeting early in 1957.

MEETING OF THE 1956 INTER-AMERICAN CONFERENCE at Washington, D.C., Sept. 17, 1956. Representatives of the 21 American republics were present

At the meeting in Panamá, the president of Venezuela, Gen. Marcos Pérez Jiménez, proposed the creation of a special fund to be used for economic development purposes. This suggestion was formalized in a communication from the minister of foreign affairs of Venezuela to the Organization of American States presented at a meeting of the council of the organization on Sept. 13, 1956. It proposed that each member state of the organization contribute a fixed percentage of its national budget to a common fund, and stated that Venezuela was disposed to contribute up to 3.75% or \$32,000,000. The proposal was transmitted to all the member states of the organization for comment, and March 6, 1957, was fixed as the date for a meeting of the council to further consider the proposal.

As a sequel to the situation that occurred in 1955 between Costa Rica and Nicaragua, and that gave rise to the application of the Inter-American Treaty of Reciprocal Assistance, representatives of the two countries signed two agreements on Jan. 9, 1956, at a ceremony held at the Pan American Union. One agreement embodied the measures to be taken by both parties to avoid a repetition of the 1955 incident; the other related to the organization and functioning of a commission of investigation and conciliation which would be permanently at the disposition of the two parties should any situation develop that might jeopardize relations between them.

On May 9, 1956, the council of the organization approved the statutes of the Inter-American Peace committee which was charged with the responsibility of seeking the solution of conflicts that might arise among the American republics, and of making its facilities available to the interested parties. At the meeting of Aug. 6, the council selected the five countries to constitute the committee and designated Mexico for five years, the United States for four, Brazil for three, Argentina for two and Cuba for one year.

The third meeting of the Inter-American Council of Jurists was held in Mexico from Jan. 17 to Feb. 4, 1956. Among the conclusions adopted was a declaration of jurisdiction over territorial waters which stated that each state was competent to fix its territorial waters within reasonable limits, taking into consideration geographical, geological and biological factors as well as the economic needs of its populations, its security and defense. In the light of claims advanced by a number of Latin-American countries to jurisdiction over territorial waters extending 200 mi. off the coast, this declaration assumed great importance and gave added emphasis to the Specialized Conference on the Continental Shelf and Marine Waters which met in Ciudad Trujillo, Dominican Republic, March 15 to 28, 1956. The resolution adopted at that meeting recognized that the sea bed and subsoil of the continental shelf appertain to the riparian state but declared that agreement does not exist with respect to the juridical regime of the waters which cover the said submarine areas nor with respect to the problem of whether certain living resources belong to the sea bed or to the maritime waters. It was agreed that this problem required further study.

Other inter-American meetings held during 1956 included the second Inter-American Conference of Ministers of Education and the second meeting of the Inter-American Cultural council, both of which met in Lima, Peru, in May 1956 simultaneously with a regional meeting of UNESCO (the United Nations Educational, Scientific and Cultural organization) on fundamental education. An Inter-American Port and Harbor conference was held in San José, Costa Rica, in April 1956; the Inter-American Commission of Women held its 11th assembly in Ciudad Trujillo in June; and in September the directing council of the Pan American Sanitary organization met in Guatemala. The council of the organization and the Inter-American Economic and Social council took preliminary steps for the holding of an economic conference

at Buenos Aires, Arg., in Aug. 1957.

The Inter-American Economic and Social council in 1956 continued to sponsor a program of technical co-operation of the Organization of American States in conjunction with the inter-American specialized organizations and the Pan American Union, which consisted of a training centre in economic and financial statistics in Santiago, Chile, sponsored by the Pan American Union and the Inter-American Statistical institute; an inter-American housing centre located in Bogotá, and a centre for training rural normal-school teachers in Venezuela, both sponsored by the Pan American Union; a centre in Brazil for the evaluation of natural resources organized by the Pan American Institute of Geography and History; workshops on the administration of children's services conducted by the American International Institute for the Protection of Childhood; a research and training institute on foot-and-mouth disease conducted in Brazil by the Pan American Sanitary bureau; and a comprehensive program of education in agricultural and rural life organized by the Inter-American Institute of Agricultural Sciences.

(W. Mr.)

Osteopathy. Doctors of osteopathy consider the musculoskeletal system as fundamentally important in an approach to the problems of health and disease. Their frequent employment of osteopathic manipulative treatment is a distinctive characteristic of osteopathic care of the patient. To become an osteopathic physician, the student must have successfully completed four years of high school, three years of pre-medical training in an accredited college or university and four years of professional education in one of the six approved osteopathic colleges in the United States. A 12th educational year consists of an internship in an osteopathic hospital approved for intern and resident training. Postgraduate training in the common fields of specialized medicine is provided and leads to certification in a given specialty, such as surgery, obstetrics, psychiatry, internal medicine, etc.

In 1956 more than 13,000 doctors of osteopathy were in practice, the majority of whom were members of the American Osteopathic association with headquarters at 212 E. Ohio St., Chicago 11, Ill. Its president for 1956-57 was Robert D. McCullough, Tulsa, Okla. The 61st annual convention was to be held in Dallas, Tex., in July 1957.

(R. P. K.)

O.T.C. (Organization for Trade Cooperation): *see* **TARIFFS.**

Ottawa. The capital of Canada, located at the confluence of the Gatineau, Rideau and Ottawa rivers, in the province of Ontario, Ottawa covers 47.6 sq.mi. Pop.: (1951 census) 202,045, (1956 est.) 216,662; tax assessment (1956) \$377,053,000.

Mayor Charlotte Whitton continued in office during 1956 and at the inaugural meeting of the council on Jan. 3 said that because of new and realigned assessments and the more just assumption of federal government tax-lieu payments, the tax rate had been lowered or kept relatively stable and taxes had also been equalized. The city's budget had risen from roughly \$15,500,000 in 1950 to \$23,180,955 in 1955, but the percentage thereof required from taxation revenue had actually dropped from 68.13% to 66.65%, because of increased tax-lieu payments of federal authorities from 6.87% to 9.45% of the total and increased grants from the province of Ontario from 4.28% to 6.91%.

In spite of tremendous expansion, general debt charges at 16.83% of expenditures were a smaller proportionate item than in 1950 at 20.82%, the heaviest increase being in education,

which it was estimated would take practically 30% of all expenditures in 1955 against 24.5% in 1950, this being 49.9 cents of every tax dollar.

As the result of an architectural competition in which 37 entries were received, the board of assessors reported to the city council in Jan. 1956 that it approved as the winning design for a new city hall building that of Rother, Bland and Trudeau, of Montreal, and the council accepted the recommendation, selecting Green Island at the mouth of the Rideau river as the site for the new city hall. A program for improving facilities at the Ottawa Civic hospital at a cost of \$1,500,000 was approved by the council.

Because of the tremendous increase in traffic within the city's limits in 1956, a department of traffic engineering services was established and, by virtue of special legislation, a parking authority was set up.

The city of Ottawa presented a brief to the Royal Commission on Economic Resources and another brief to the joint senate-commons committee on federal district commission operations, suggesting in the last-mentioned presentation that the city might be forced to stop temporarily the development of new subdivisions because it faced such heavy capital expenditures for services to new housing schemes. As an alternative to such action, the city might decide to force developers to provide full local services for their subdivisions, causing them to pay in full for roads, water, sewers, electricity and possibly a contribution toward school facilities.

In 1956 the federal government's grant to Ottawa was set at \$2,800,000, with provincial grants at \$1,700,000 and other revenue amounting to \$1,100,000.

(M. L. S.)

ENCYCLOPEDIA BRITANNICA FILMS.—*Industrial Provinces of Canada* (1943).

Outer Mongolia: *see* **MONGOLIAN PEOPLE'S REPUBLIC.**

Pacific Islands, British. Under this heading are grouped the territories administered by the high commissioner for the western Pacific.

Area	Area (sq.mi.)	Population†
British Solomon Islands protectorate*	11,500	103,000
Gilbert and Ellice Islands colony†	369	40,000
Central and Southern Line islands }		
Totals	11,869	143,000

*With the Santa Cruz, Lord Howe (Ontong Java), Reef and Duff groups and Mitre Island.
†With Phoenix and Northern Line islands and Ocean Island. Phoenix Islands include Canton, an Anglo-U.S. condominium with international airport; and Northern Line Islands include Christmas Island with international sea aerodrome.

‡1955 est.

The New Hebrides (*q.v.*), an Anglo-French condominium, also are administered by the western Pacific high commissioner.

Populations: Melanesians predominate in Solomons, Micronesians in Gilbert and Ellice Islands. Headquarters: Honiara (pop. about 2,000), on Guadalcanal, Solomon Islands. High commissioner in 1956, John Gutch; resident commissioner, Gilbert and Ellice Islands, M. L. Bernacchi.

History.—The British prime minister, Sir Anthony Eden, announced in June that it had been decided to carry out a limited number of nuclear test explosions in the megaton range, during the first half of 1957, in a remote part of the Pacific ocean, far from any inhabited islands. The main base of the aircraft taking part would be Christmas Island.

In the Solomons work began on the restoration of the Henderson and Munda airfields abandoned after World War II. In Honiara a new radio station for aeronautical communications was completed. The World Health organization conducted a four-month campaign against yaws. The future of the cocoa scheme in which the government co-operated with Unilevers Pacific Ltd. was rendered uncertain by the unsuitability of the soils in the

area selected for development.

(D. W. F.)

Education.—*Solomon Islands* (schools, 1955): government primary 6, native council primary 3, higher primary 1 (92 pupils); Chinese 1, European 1, mission schools 5. *Gilbert and Ellice Islands* (schools, 1955): primary 264, pupils 8,627; secondary 1, pupils 60. *Fiji* (schools, 1954): primary 456, pupils 58,535, teachers 1,387; secondary 29, pupils 1,932, teachers 105; 1 teacher training school, students 175; Central Medical school, students (1952) 192; educational research institute (established 1952). *Tonga* (schools, 1954): primary 134, pupils 12,830; secondary 7, pupils 2,648. *Tonga* High school (primary and secondary), pupils (1954) 102. Teacher training college 1, students 55, teachers 9. *Pitcairn Island* (1953): 1 primary school, 1 teacher.

Finance and Trade.—Monetary unit: Australian pound (£A1.25=£1 sterling=U.S. \$2.80), used in *Solomon Islands* and *Gilbert and Ellice Islands*. *Fiji* and *Pitcairn* islands use the Fijian pound (£F1.1=£1 sterling); New Zealand and U.K. currencies also circulate in Pitcairn. *Tonga* uses the Tongan pound (£T1=16s. sterling=U.S. \$2.24).

	Revenue	Budgets Expenditure	Foreign Trade Imports	Exports
<i>Solomon Islands</i> (1955 est.)	£A875,487	£A996,341	(1955) £A1,294,827	£A1,999,485
<i>Gilbert and Ellice Islands</i> (1955 est.)	£A497,280	£A453,492	(1955) £A782,013	£A1,458,091
<i>Fiji</i> (1955 est.)	£F5,152,000	£F5,324,000	(1954) £11,642,801	£11,239,985
<i>Tonga</i> (1955 est.)	£430,000	£445,000	(1954) £782,000	£1,080,000
<i>Pitcairn Island</i> (1953 est.)	£F10,699	£F7,284

Main exports: *Solomon Islands*: copra, scrap metals, timber, trochus shell. *Gilbert and Ellice Islands*: copra, phosphate. *Fiji*: copra, sugar. *Tonga*: copra, bananas.

Pacific Islands, French. Under this heading are grouped two overseas territories of the French union, and the Anglo-French condominium of the New Hebrides (*q.v.*). Areas and populations are:

Territory	Area (sq.mi.)	Population (1951 census)
New Caledonia and dependencies	7,654	65,300*
French Settlements in Oceania	1,544	62,700

*Census of non-natives; estimate of natives.

Population, *New Caledonia* proper (6,533 sq.mi.) and the dependencies: Melanesian with Polynesian admixtures; Europeans 60,415, mainly French; 3,434 Javanese; 4,323 Vietnamese. Seat of commissioner-general: Nouméa, pop. (1951 est.) 20,000. Commissioner-general for the Pacific ocean in 1956, Aimé Grimald.

The *French Settlements in Oceania* consist of the Society Islands (the largest of which is Tahiti), the Marquesas, Tuamotu and other smaller islands. Population: Polynesian, majority Christian; Europeans (1951) 2,347, mainly French; Chinese 8,333. Seat of governor: Papeete, on Tahiti, pop. (1951 census) 55,214. Governor in 1956, Jean Toby.

History.—Elections to the French national assembly were held in January: M. H. Lenormand (Overseas Independent) for New Caledonia and Puvanaa (Peasant) for Oceania both retained their seats.

An agreement was reached under which the Broken Hill Proprietary Co. of Australia was to take deliveries of iron ore from New Caledonia. A direct air service between Paris, Fr., and Nouméa was inaugurated. It was decided that ships of the Messageries Maritimes line were to call regularly at the Marquesas.

On Aug. 30 Gen. Charles de Gaulle landed in Tahiti. In a speech he referred to the widespread tendency toward national autonomy and stressed the need for the peoples of the world to adhere to larger groups.

(See also FRENCH UNION.)

(HU. DE.)

Foreign Trade.—(1955) Monetary unit: franc C. F. P. (Colonies Françaises du Pacifique)=5.5 metropolitan French francs. U.S. \$1=350 metropolitan francs. *New Caledonia*: imports 1,637,000,000 fr. C. F. P., including 639,000,000 fr. C. F. P. from France, 433,000,000 fr. C. F. P. from Australia, 257,000,000 fr. C. F. P. from the U.S.; exports 1,940,000,000 fr. C. F. P., including 1,544,000,000 fr. C. F. P. to France, 159,000,000 fr. C. F. P. to Japan. Principal exports: nickel 1,600,000,000 fr. C. F. P. *Oceania*: imports 701,000,000 fr. C. F. P., including 205,000,000 fr. C. F. P. from France and 224,000,000 fr. C. F. P. from the U.S.; exports 618,000,000 fr. C. F. P., including 337,000,000 to France, 161,000,000 to Japan. Principal exports: copra 229,000,000 fr. C. F. P., phosphates 185,000,000 fr. C. F. P. *New Hebrides*: imports 238,000,000 fr. C. F. P., including 162,000,000 fr. C. F. P. from Australia; exports

250,000,000 fr. C. F. P., including 230,000,000 fr. C. F. P. to France. Principal export copra, 200,000,000 fr. C. F. P.

Pacific Islands, U.S.: see GUAM; HAWAII; SAMOA, AMERICAN.

Pacific Islands under Trusteeship: see MARSHALL, CAROLINE AND MARIANA ISLANDS; TRUST TERRITORIES.

Paints and Varnishes. The value of paint production in 1956 in the United States was estimated at \$1,600,000,000 compared with the corrected 1955 total of \$1,516,224,000. This increase was probably restrained somewhat by lower production of automobiles and by a prolonged strike in the steel industry. Small price increases to cover inflated costs were announced by leading producers.

Materials for manufacture of paint were generally in good supply. The linseed crop at 49,000 bu. was the largest since 1948 and the soybean crop at more than 456,000,000 bu. was the largest in history. Safflower oil emerged as a new, major oil for paint and reached a new U.S. high with a 1956 crop of about 40,000,000 lb., almost all grown in California. Castor oil as a domestic crop was encouraged by the joint development by the U.S. department of agriculture and private enterprise of a mechanical harvester and of a new variety of castor beans which ripen more evenly and with lower loss from shattering of pods.

Isophthalic acid came into major production, after engineering delays, and probably constituted the largest single new paint material of the year. New and increased production of synthetic

JELLY PAINT, a product designed for "do-it-yourself" painters and available in 1956. Dumped from the can, as shown, the paint has the consistency of jelly or pudding but immediately thins to painting consistency with the pressure of a brush or roller. Advantages of the new product are that it is virtually driplless and requires no stirring before application

glycerine, trimethylolethane, trimethylolpropane, acrylic esters, vinyl acetate and vinyl toluene gave a wealth of choice for makers of alkyds and other polymers for paint vehicles. Reduction in price of rubber grade styrene to 15 cents and with a future price of 12 cents was important to producers of latex paints and soluble type styrene copolymers.

Two revolutionary automotive production finishes were announced. One was a lacquer based on soluble acrylic polymers with claims of better durability and lessened tar staining than the long established nitrocellulose lacquers. The other, a baking finish related to established household appliance finishes, used non-drying, oil-modified alkyds in place of soybean or other drying oil alkyds, each in conjunction with melamine or urea resins. A baking type enamel based on acrylic polymers was announced.

Coating of metal parts by dipping the heated parts into air-fluffed beds of pigmented, powdered plastics was introduced by two custom finishers. This novel method of finishing competed with both the plastisol technique which had grown rapidly in the past decade and the much older methods of brushing, dipping, spraying, etc. Tube packages were extended beyond their established use for tinting colours to contain a ready-to-use paint of thixotropic consistency. Aerosol packages of paint increased steadily in popularity with the consuming public.

Scientific papers on paint-related subjects showed wide interest in coatings from copolymers of toluene diisocyanate with polyesters and with raw castor oil. Nuclear radiation was used to polymerize styrene-polyester combinations and tung and other fatty oils. Visible radiation was studied both for the mechanism of its effect on degradation of paint films and for its polymerization of paint vehicles with catalysis by organic dyes. The scientific aspects of colour matching of practical paints received industry-wide attention with the offering of several commercially produced colour meters.

(Jo. C. W.)

Pakistan. A member of the Commonwealth of Nations in the Indian subcontinent, Pakistan is a federal Islamic republic, comprising two provinces. East Pakistan, with 55% of the population, is in the northeastern part of the subcontinent, 850 mi. by air from West Pakistan in the northwest. Karachi (pop., 1951 census, 1,126,000), the federal capital, is geographically in West Pakistan.

Province	Capital (pop. 1951 census)	Area (sq.mi.)	Population (1951 census)
West Pakistan	Lahore (849,476)	310,236*	33,779,165*
East Pakistan	Dacca (276,033)	54,501	42,063,000
Total		364,737	75,842,165†

*Including small areas in Karachi not part of West Pakistan province but reserved to the federal government. Excluding Kashmir (q.v.), under dispute between India and Pakistan. †1954 est. 80,167,000.

Language: Urdu (official, and widely understood), Punjabi, Sindhi, Pushtu, Baluchi and Gujarati in West Pakistan; Bengali (official) in East Pakistan; English used for many official purposes and higher education. Religion: Moslem 85.7%; Hindu 12.8%; Christian 0.7% *i.e.*, about 539,000; Sikh, Parsee and other minorities. Chief towns other than federal and provincial capitals (pop., 1951 census, including cantonments): Hyderabad 241,801; Rawalpindi 237,219; Multan 190,122; Lyallpur 179,144; Sialket 167,543; Peshawar 151,776; Chittagong 145,777; Gujranwala 120,860; Quetta 84,343. Acting president Maj. Gen. Iskander Mirza. Prime ministers in 1956: Mohammed Ali and (from Sept. 12) H. S. Suhrawardy.

History.—On Feb. 29, 1956, the constitution which had been under preparation since 1947 was finally passed in the constituent assembly by the Moslem league majority against the opposition of the Awami league and the Congress party members, who objected to certain limitations in the provincial autonomy of East Pakistan and to the reservation of the office of president

PAKISTAN TROOPS ON REVIEW for U.S. Secretary of State John Foster Dulles during his visit to Karachi to attend a conference of the Southeast Asia Treaty organization in March 1956

of Pakistan for Moslems. This constitution made Pakistan a federal Islamic republic, while ensuring to all citizens such fundamental rights as freedom of religion, freedom of speech and assembly, equality of status and protection of property. The national assembly would consist of 300 members elected by adult suffrage; the provincial assemblies of East Pakistan and West Pakistan would be similar in size. In all three bodies ten seats were reserved for women for the first ten years. The cabinet was to be responsible to the legislature. English (for 20 years), Urdu and Bengali were recognized as official languages. Administrative powers were divided between the centre and the provinces according to three lists of subjects—federal, concurrent and provincial. On March 2 the assembly decided by 42 votes to 2 to remain within the commonwealth. On March 5, Maj. Gen. Iskander Mirza, the governor general, was chosen as provisional president until such time as general elections based on adult suffrage should provide the permanent electoral college—the national assembly and the two provincial assemblies—to choose the president. On March 23 the republic of Pakistan was proclaimed with full ceremony.

Neither at the centre nor in the provinces did political life run smoothly. On Jan. 19 the new interim provincial assembly of West Pakistan was chosen by indirect election. Differences arose between the Moslem majority and the chief minister, Khan Sahib, who in April formed a new party, the Republican party, which steadily drew strength from independents and from dissident Moslem leaguers until it commanded a majority in the provincial assembly. Khan Sahib continued to enjoy the support of the prime minister Mohammed Ali, and the central government. The Moslem league, having lost power in West Pakistan as well as in East Pakistan, became increasingly critical of the prime minister. It continued to lose membership to the Republicans, who, with the United Front, came to form a majority in the assembly, and supported the prime minister. Mohammed Ali, however, resigned both from the cabinet and the government on Sept. 8; and on Sept. 12 an Awami league-Republican coalition

under H. S. Suhrawardy, until then the leader of the opposition, took office.

In East Pakistan, A. H. Sarkar's United Front government became increasingly unpopular. In March Fazlul Huq left the federal ministry of the interior to become governor. The opposition parties—Awami league, United Progressives, Ganatantra Dal, Congress—closed their ranks and demanded a meeting of the assembly, which had stood prorogued since June 1955. When it met on May 22, 1956, the speaker adjourned the house sine die on the ground that insufficient time remained for discussion. On May 26 the president suspended the constitution but on June 1 the Sarkar ministry resumed office. Distribution of food was taken over by the military. Complaints continued and on Aug. 30 the Sarkar ministry resigned and the president again suspended the constitution. A new coalition ministry under Aftab Rahman (Awami league) took office on Sept. 6. The legislative assembly met, and the budget was passed.

There were no marked changes in Pakistan's external alignments. In March a meeting of the Southeast Asia Treaty organization council in Karachi supported Pakistan's position in the "Pakhtunistan" dispute with Afghanistan and affirmed the need for an early settlement of the Kashmir question, thereby showing its opposition to the statements made by the Soviet leaders N. A. Bulganin and N. S. Khrushchev in the course of their Indo-Afghan tour (Nov.-Dec. 1955). The prime minister attended in April a ministerial meeting of the Baghdad pact powers, and in June-July attended the conference of commonwealth prime ministers in London. There agreement was reached on Pakistan's continued membership in the commonwealth. Mohammed Ali Jinnah had amicable talks with the prime minister of India, Jawaharlal Nehru, over Kashmir but maintained his objections to the proposal put forward by India in March that Kashmir should be partitioned on the basis of the cease-fire line. No further progress was made toward a settlement, and Pakistan decided to refer the question again to the Security council. On Oct. 10, however, the Kashmir constituent assembly, having reaffirmed the accession of Kashmir to India, passed legislation to establish a constitution, and on Nov. 1 when the States Reorganization act came into force in India "Jammu and Kashmir" was incorporated into India as one of its 14 states. The validity of this legislation and this act of incorporation was not recognized by Pakistan and on Nov. 17 Suhrawardy issued a statement to the effect that Kashmir's future must be settled by a free and impartial plebiscite in accordance with resolutions of the UN Security council which had still to be implemented.

Pakistan took a prominent part in the London conference on the Suez canal dispute (Aug. 16-23). H. H. Chowdhury, Pakistan's foreign minister and delegate to the conference, speaking also on behalf of Iran, Turkey and Ethiopia, proposed certain amendments to the U.S. plan for a settlement which were accepted by the majority of delegates and enabled the plan to go forward with the support of 18 out of 22 nations represented at the conference. After the Franco-British attack on Egypt, however, there were hostile demonstrations in Karachi and Pakistan voted with the majority of nations in the UN general assembly calling for a cease fire and the withdrawal of Israeli, British and French forces from Egyptian territory.

Pakistan's economic position was adversely affected by purchases of food abroad; for although the bulk of these purchases were made under foreign aid, the surplus of Rs. 170,000,000 on the balance of payments announced by the State bank up to June 30 was reduced before the end of the year by about the amount of the surplus accumulated during the first six months. The level of commercial and industrial imports was little affected. Total trade (Rs. 2,848,000,000) continued the previous year's steady rise. Revenue estimates for 1956-57 stood at Rs. 1,304,-

500,000 as against estimated expenditure of Rs. 1,304,400,000. A comprehensive five-year development plan for 1955-60 was outlined by the Planning board in May.

(See also INDIA.)

(L. F. R. W.)

Education.—Schools (1954): primary 42,474, pupils 3,969,879, teachers (1951) 88,697; secondary 5,315, pupils 1,188,490, teachers (1952) 43,823; vocational 242. Teacher training colleges (1952) 136, students (1952) 6,930. Universities 6, students 57,509; other institutions of higher education 169. Adult education centres 881.

Finance and Banking.—Monetary unit: Pakistan rupee, with exchange rates of 4.730 (buying) and 4.782 (selling) to the U.S. dollar in March 1956. Budget: (1955-56 revised est.) revenue Rs. 1,277,000,000, ordinary expenditure Rs. 1,276,000,000; (1956-57 est.) revenue Rs. 1,310,000,000, expenditure Rs. 1,304,000,000. Currency circulation: (Jan. 1955) Rs. 2,626,000,000, (Jan. 1956) Rs. 3,088,000,000. Deposit money: (Jan. 1955) Rs. 1,224,000,000, (Jan. 1956) Rs. 1,554,000,000. Gold and foreign exchange, official holdings: (March 1955) U.S. \$326,000,000, (March 1956) U.S. \$385,000,000.

Foreign Trade.—(1955) Imports Rs. 1,085,000,000; exports Rs. 1,505,000,000. Main sources of imports: U.K. 24%; India 3%; other sterling area 9%; continental E.P.U. (European Payments union countries) 19%; Japan 14%; U.S. and Canada 12%. Main destinations of exports: U.K. 15%; India 13%; other sterling area 11%; continental E.P.U. 26%; Japan 12%; U.S. and Canada 8%. Main exports: cotton 27%; jute 45%.

Transport and Communications.—Roads (1953): 114,600 km. Motor vehicles in use (1953): passenger 32,400, commercial 19,000. Railways (1955): 11,300 km.; traffic (April 1954-55): passenger-km. 9,070,000,000; freight, ton-km. 5,330,010,000. Shipping (July 1955): merchant vessels of 100 gross tons and over 48, total tonnage 152,125. Air transport (1955): passenger-km. 111,540,000; freight, ton-km. 2,556,000. Telephones (Jan. 1955) 35,006. Licensed radio receivers (1954) 99,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): rice 12,247,000 (12,810,000); wheat 3,223,000 (3,742,000); barley 143,000 (158,000); maize 341,000 (447,000); tobacco 90,700 (92,500); jute 1,015,000 (846,000); cotton, lint 282,000 (284,000); cottonseed 594,000 (568,000); tea 24,600 (25,300); chick-peas 642,000 (655,000); sugar, raw value 112,000 (98,000); linseed (1954) 14,000, (1953) 12,000; rapeseed (1954) 329,000, (1953) 276,000; sesame (1954) 37,000, (1953) 37,000. Livestock (Sept. 1952): cattle 24,069,000; sheep 6,570,000; horses 494,000; mules 41,000; asses 959,000; buffaloes 4,980,000.

Industry.—Fuel and power (1955): coal and lignite 531,600 metric tons; electricity (excluding industrial generation) 610,800,000 kw.hr.; natural gas (1953) 43,600,000 cu.m. Production (metric tons, 1955): crude oil 276,000; cement 600,000; woven cotton fabrics 414,480,000 m.; chrome ore (metal content, 1954) 11,000 metric tons.

ENCYCLOPEDIA BRITANNICA FILMS.—*India* (Pakistan and the Union of India) (1952); *Pakistan* (1955).

Palaeontology. **Vertebrate.**—As in past years, vertebrate palaeontologists concerned themselves in 1956 with the problem of vertebrate origins. Comparison of the microstructure of the plates of carpid echinoderms and agnathan fish by K. E. Caster and T. H. Eaton, Jr., strengthened the position of the echinoderms as the putative ancestors of the vertebrates. A survey of the stratigraphy and faunas of early Palaeozoic North American and European localities from which primitive fish were known convinced A. S. Romer that vertebrates arose in fresh water, whereas essentially the same evidence led R. H. Denison to believe that the earliest vertebrates inhabited salt water.

The year 1956 was marked by the appearance of a new edition of *A Classification of Fishes Both Recent and Fossil* by L. S. Berg. Berg was honoured by a memorial volume including a biography of Berg and other papers, noteworthy among which was a study of the microstructure of the scales and armour of Silurian and Devonian vertebrates by A. P. Bistrov. W. M. Lehmann reported a primitive lungfish from the lower Devonian of Germany, among the oldest-known occurrences of fossil dipnoans. D. H. Dunkle and B. Schaeffer described a new palaeoniscoid fish from the Upper Palaeozoic of Brazil, and B. Accordi described a new semionotid holostean from the Lower Triassic of the Dolomite Alps, Italy. B. Schaeffer illustrated mosaic evolution (De Beer, 1954) in subholostean fishes. The description and palaeoecology of the Tertiary anacanthin fishes of the North American west coast were the subject of a study by L. R. David. The synchronicity of development of Tertiary piscifunas of Europe and the North American coastal plain was verified by E. I. White's studies of the Eocene fishes of Alabama.

A. S. Romer surveyed the progress during the past half-century in understanding of the fish-to-tetrapod transition. F. R. F. von Huene devoted a work of approximately 700 pages to the palae-

ontology and phylogeny of the lower tetrapods. The lineage of the Permian brachyopid labyrinthodont amphibians was traced by D. M. S. Watson. Field parties from Harvard university discovered amphibians preserved in fossil tree trunks from new Carboniferous horizons in Nova Scotia. E. H. Colbert and J. Imbrie revised the taxonomy of the Upper Triassic metoposaurid labyrinthodonts, basing their conclusions upon statistical analyses and upon analogies to the ranges of living amphibians. The Permian archegosaurid and intasuchid amphibians of the U.S.S.R. were studied by E. D. Konzhukova. I. A. Efremov and B. P. Viushkov compiled a catalogue of localities for Permian and Triassic tetrapods of the U.S.S.R. R. G. Zweifel described two new Tertiary pelobatid frogs from the western United States. W. Auffenberg discussed the Miocene frogs of Florida and C. J. Goin and Auffenberg the fossil sirenid salamanders.

D. M. S. Watson and A. S. Romer classified the 688 species of therapsid reptiles described from the Permian Karroo beds of South Africa, pointing out the need for detailed stratigraphic study of the source beds prior to the description of new forms. A. S. Brink scrutinized the osteology of the therapsid *Diademodon*, with particular attention to structures which might suggest a mammalian type of birth, homeostasis and tooth succession. E. A. Maleev reported upon carnivorous dinosaurs and ankylosaurs from Mongolia, and C. C. Young upon a new sauropod from the Upper Jurassic of Szechwan, China. E. E. Williams described from the late Tertiary of Peru the first American fossil pelomedusid turtle showing close relationship to a living form. M. Hecht reported a new xantusiid lizard from the Eocene of Wyoming. E. Trost examined the position of the parietal foramen among living reptiles and in the labyrinthodonts. T. Edinger demonstrated that, contrary to previous opinion, the size of the parietal foramen in reptiles can reflect the size of the parietal organ. A milestone in the study of osteology was the completion of *Osteology of the Reptiles* by A. S. Romer. This abundantly illustrated volume of approximately 700 pages is composed of two major parts, a discussion of the skeleton in fossil and living reptiles and a classification of the reptiles based on their osteology.

A valuable aid to research was the new check list of fossil birds of North America by A. Wetmore. P. Brodkorb increased the knowledge of the fossil avifauna of Florida with descriptions of two new Miocene forms, a study of the Bone valley avifauna and numerous Pleistocene records.

C. C. D. Shute analyzed components of the auditory region in reptiles and mammals, with special regard to the evolution of these structures in the mammalia. J. T. Woods reported new remains of the unique extinct marsupial *Thylacoleo*, concluding that the animal was carnivorous. Study of Oligocene material from Wyoming led J. Hough to revive the insectivorous family Apternodontidae. Study of fossils of the same age from South Dakota and other material prompted P. M. Butler to revise the major classification of the insectivora. W. Le G. Clark recorded a near-perfect skull of a loriform lemuroid from the Miocene of East Africa, and contributed a volume summarizing the fossil evidence for human evolution.

The machairodontine felids of Transvaal, Union of South Africa, were studied by R. F. Ewer and the carnivores of Hopefield, Cape Province, by Ewer and R. Singer. S. J. Olsen revised the taxonomy of the caninae of the Miocene Thomas Farm locality, Florida. The value of quantitative techniques in modern taxonomy was exemplified by B. Kurten's treatment of the Quaternary Hyaenidae. M. Crusafont-Pairo and J. Truyols-Santonja illustrated a new biometric technique, masterometry, by an application to evolution in the fissiped carnivores. T. Downs described two new sea lions from the Miocene of California.

J. Kulczycki presented an osteological study of the mammoth based upon collections from the Soviet-Polish border. Excellent skulls and partial skeletons of Miocene and Pleistocene tubulidentates from East Africa were described by D. G. MacInnes.

D. B. Kitts revised the species of the Eocene horse *Hyracotherium* and presented the first detailed study of its postcranial skeleton. The taxonomy of the horses of the Thomas Farm Miocene of Florida was elucidated by the quantitative study of large samples by R. S. Bader. The Oligocene and Miocene anthracotheres of North America were reviewed by J. R. MacDonald. C. B. Schultz and C. H. Falkenbach contributed a seventh volume to their extensive revision of the Merycoidodontidae. C. C. Black and A. E. Wood illustrated the variation and replacement of teeth in a Miocene mylagaulid. C. de P. Couto summarized the studies of late Cenozoic mammals in northwestern Brazil. Notable among the dozen or more basic studies of Tertiary mammalian faunas was that of the Mascall Miocene of Oregon by T. Downs.

The report by P. H. Abelson of amino acids in vertebrate fossils up to 300,000,000 years old indicated the continued development of the new science of palaeobiochemistry, a promising tool for the vertebrate palaeontologist.

(CN. R.)

Palaeobotany.—Of particular interest to anyone concerned with the past history of the world's vegetation was the discovery of a palmlike plant from rocks of Triassic age in southwestern Colorado. Described under the name *Sanmiguelia lewisi* (named for the San Miguel river at the type locality, and G. Edward Lewis of the U.S. geological survey, the discoverer) the specimens consisted of characteristically pleated palmlike leaves up to 15 in. long. Several leaves were found attached, at intervals of about 1½ in., to what is thought to have been the terminal portion of a low-growing plant. The Middle to Upper Triassic age of *Sanmiguelia* constitutes a record that is 10,000,000-20,000,000 years earlier than that for any previously described fossil flowering plant. Authentic records of flowering plants from the overlying Jurassic period are in fact quite rare, and it was not until Cretaceous times that the group became abundant. In view of the general supposition that the palms were an advanced rather than a primitive family, this discovery suggested that the flowering plants originated at a much earlier date than had formerly been supposed. (Roland Brown, 1956.)

Another especially significant contribution was Alfred Traverse's (1955) study of the fossil pollens found in the Brandon lignite of Vermont. This was a small deposit of poor-grade coal that had interested geologists and palaeontologists for more than a century, partly because of its rarity in that area and because of the abundance of fossil plant remains which compose the lignite. The Brandon deposit was reopened and rather extensive collections of fossil plants were obtained, under the direction of Elso S. Barghoorn of Harvard university, during the summers of 1947 and 1948. The fossils included abundant fruits, seeds, wood and pollens, and the report by Traverse dealt comprehensively with the latter material. The 76 different pollens and spores found included several algae and ferns, a pine and *Glyptostrobus*, a modern Chinese conifer which occupies a habitat similar to that of the southern bald cypress. A significant number of the Brandon fossils appeared to be closely related to modern plants found in southeastern United States. These included the water elm (*Planera*); southern leatherwood (*Cyrilla*), a genus not found north of southeastern Virginia at the present time; loblolly bay (*Gordonia*), a genus that is now distributed through the tropics and subtropics of southeastern Asia and in southeastern North America; and the tupelo (*Nyssa*), found today as far north as New England but principally warm temperate. Also included in the Brandon flora were plants belonging to the walnut, oak, elm, mulberry, sweetgum, holly, grape, linden,

heath, tea and sapidilla families. This abundant and interesting flora thus suggested an appreciably warmer climate for the central Vermont area during Upper Oligocene times; it may be dated approximately 25,000,000 years old.

Numerous other studies appeared during 1956 which dealt with fossil spores, pollens and other microscopic organisms. One of the most noteworthy was a comprehensive account of the fossil microplankton, found in the southern hemisphere, by Georges Deflandre and Isabel Cookson (1955). (The plankton include free-swimming and floating marine plants and animals; some of these, such as the diatoms, occur in fabulous quantities and constitute the ultimate source of food for most of the larger forms of marine life.) The Deflandre-Cookson report described many new forms of dinoflagellates (a unique group of unicellular algae) and numerous hystrichosphaerids, a highly problematical assemblage of microorganisms known from as far back as Pre-Cambrian times.

The study of a wide variety of fossil microorganisms is a major phase of both theoretical and applied palaeontology. Indeed, so many workers are engaged in this field that a new periodical, *Micropaleontology*, was inaugurated in 1955, published under the auspices of the department of micropaleontology of the American Museum of Natural History in New York City. A 1956 issue contained a comprehensive article by Leonard Wilson which was of particular interest to anyone wishing to gain some knowledge of the over-all aspects of this young and rapidly expanding science. His account included a two-page chart listing the various kinds of microfossils with brief descriptions, their geologic range and the habitats they occupied in life.

A new genus of conifers, *Parataxodium*, was described from northern Alaska. It is thought that this represents a line of plants that stems from *Sequoia* stock, having split off in Cretaceous times and became established in the far north in contrast with the mid-latitudes region that *Sequoia* itself has seemingly always favoured. It is also possible that *Metasequoia*, the dawn redwood of west central China, and *Taxodium*, the bald cypress of subtropical North America, were derived from *Parataxodium* in Cretaceous and Tertiary times respectively.

Several contributions appeared which expand the knowledge of Coal Age (*Carboniferous*) floras. One of the most noteworthy was a comprehensive review of the medullosas, a distinctive group of seed ferns that constituted an important element in the Upper Carboniferous forests of North America and Europe and believed to be the ancestral line from which the modern cycads originated. The medullosas were vinelike plants or trees, some of which attained a trunk diameter of a foot or more, bore fern-like foliage, seeds and curious bell-shaped organs in which the pollen was contained. (Wilson Stewart and Theodore Delevoryas, 1956.)

Palestine: see ISRAEL; JORDAN; UNITED NATIONS.

Panamá. A republic on the isthmus joining the continents of North and South America, Panamá is bounded on the north by Costa Rica and on the south by Colombia, and is bisected by the Panama Canal Zone, which is leased to the United States. Area: 28,753 sq.mi.; pop.: (1950 census) 805,285,

PRESIDENTS OF AMERICAN NATIONS listening to invocation by the archbishop of Panamá before meeting to sign the Declaration of Panamá on July 22, 1956. U.S. President Eisenhower is third from left

(1956 official est.) 934,000, both exclusive of the Canal Zone. The capital is Panamá city (pop., 1950 census) 127,874; other principal cities are Colón 52,204; David 14,847; La Chorrera 8,652; Puerto Armuelles 5,734; and Santiago 5,886. Language: Spanish. Religion: predominantly Roman Catholic. Presidents in 1956: Ricardo Arias Espinosa until Oct. 1; thereafter Ernesto de la Guardia, Jr.

History.—Ernesto de la Guardia, Jr., was inaugurated president on Oct. 1, 1956, bringing to a close the interim period which began on Jan. 2, 1955, with the assassination of Pres. José Remón. Remón's second vice-president, Ricardo Arias Espinosa, had served as president during most of this time after Remón's first vice-president, José Ramón Guizado, was imprisoned for complicity in Remón's murder. Many aspects of this crime remained unexplained, and although Rubén Miró, alleged principal in the case, remained in custody, he had never been brought to trial.

The principal event of 1956 during the Arias administration was the special session of the Organization of American States from July 18 to 22 in Panamá city to celebrate the 130th anniversary of the first Pan American conference called by Simón Bolívar in Panamá city in 1826. Presidents or presidents-elect of 19 American republics attended, only Honduras and Colombia being unrepresented. The importance of the attendance of U.S. Pres. Dwight D. Eisenhower was emphasized by the postponement of the meeting for one month when he suffered a serious illness in June. The ideals of hemispheric solidarity were reaffirmed when delegates signed the Declaration of Panamá, reiterating joint support of freedom, antitotalitarianism and peace. The full extent of U.S. participation was interpreted as an answer to critics who deplored the deterioration of the "good neighbour" policy.

Panamá protested in August when it was not invited to send a representative to the London meetings which were called to work out a solution to the Suez canal problem. Panamá was interested on two counts: because of the responsibility which its own isthmian strategic location imposed upon it, and because it is the country of registration, although not of ownership, of one of the largest merchant fleets in the world. The question of Panamá's sovereignty over the Canal Zone also arose, but when it was elucidated only minor differences of interpretation remained.

The former dictator of Argentina Juan Perón, who arrived in Panamá in Nov. 1955, was the centre of much attention until he moved on to Venezuela in August.

At the end of September, the unicameral national assembly moved into its new glass, concrete and steel building designed by Ernesto de la Guardia III, son of the new president, whose inauguration a few days later was the first official function to be celebrated within the new building. President de la Guardia controlled the national assembly through the 42 members of his *Coalición Patriótica Nacional*. The defeated candidate Víctor F. Goytia maintained an active opposition, however, although his Liberal party adherents held only 12 seats.

Several new projects to hasten the country's economic development were planned during 1956. As work continued on the section of the Pan American highway to join Panamá and Costa Rica, a survey team made the first difficult traverse along the route of the proposed inter-American highway between Chepo, Pan., and Turbo, Colom. The Panamá Refining company signed a contract in May to start a large refinery, and Petroquímica de Panamá was installing a plant to produce synthetic rubber and plastics. The discovery of a good oil-producing area in Costa Rica adjacent to the Panamá province of Chiriquí, and the threat to world oil supplies posed by the Suez crisis, spurred extraordinary oil exploration, especially in Chiriquí and Bocas del Toro provinces. The two most active companies were Union Oil company of California and Cataract Mining corporation of New York. Sears, Roebuck opened a store in Colón in March, and the free trade zone there was beginning to attract enterprises in both manufacturing and distribution. (R. HN.)

Education.—In the school year 1954-55 there were 1,081 public and private primary schools with 132,743 pupils enrolled, and 90 post-primary schools with 23,783 students. The national university had 2,152 students. The 1950 census showed that 28.3% of the population over ten years of age, excluding tribal Indians, was illiterate. About 21% of the 1956 budget was earmarked for education.

Finance.—The monetary unit is the balboa, at par with the U.S. dollar. The national budget for 1956 balanced ordinary revenue and expenditure at \$47,594,761 and extraordinary revenue and expenditure at \$10,948,400. Total revenue in 1955 was \$48,386,184; expenditure, \$53,877,000 (including unpaid commitments of \$5,490,815). The national debt on Dec. 31, 1955, totalled \$43,270,900, of which \$10,857,500 was external. Demand deposits totalled \$35,300,000 on June 30, 1956. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$479,000,000, over 50% of which represented investments in oil tankers registered under the Panaman flag. The cost-of-living index (Panamá city) stood at 99 in June 1956 (1953=100).

Trade and Communications.—Domestic exports in 1955 totalled \$19,281,795; re-exports, \$2,397,128; imports, \$75,684,653. The leading customers were the U.S. (94%), Colombia (2%) and Puerto Rico and the U.S. Virgin Islands (1%); leading suppliers, the U.S. (60%), the Canal Zone (10%), Colón free trade zone (5%), the U.K. (4%) and Germany (4%). Chief exports were bananas (64%), fresh shrimp (14%), cacao (5%), coffee (4%) and abacá (4%). The traditionally adverse balance of trade is generally offset by invisible exports to the Canal Zone in the form of tourist expenditures, sales to ships and wages of Panamanians employed there.

Railway mileage is 220. Highways in 1955 totalled 1,350 mi., of which 440 mi. were paved. Motor vehicles totalled 19,425 on Dec. 31, 1955. According to *Lloyd's Register of Shipping*, 555 vessels (100 tons and over) aggregating 3,922,529 gross tons were registered under the Panaman flag on June 30, 1955. Telephones (Jan. 1, 1955) numbered 18,237, of which 77.9% were automatic.

Agriculture.—Exports of bananas in 1955 totalled 7,017,842 stems, all of which went to the U.S. Exports of other export crops included cacao 1,401 metric tons; abacá 1,770 tons; coconuts 5,795,800 nuts. Production of rice in the 1955-56 season was about 215,600,000 lb.; sugar 33,000,000 lb. In June 1955 there were an estimated 578,200 cattle and 214,600 pigs. In 1955, 1,920 metric tons of fresh shrimp and 5,080,000 sq.ft. of timber and lumber were exported.

Manufactures.—Installed electric energy capacity (Panamá city and Colón) totalled 35,000 kw. on Dec. 31, 1955; production was 113,712,000 kw.hr. in 1955. Production of manufactured gas (Panamá city and Colón) was 691,294,000 cu.ft.; rum 659,958 l.; beer 14,850,276 l.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Central America* (1944); *Panama* (1955).

Panama Canal Zone.

A United States military reservation embracing a 10-mi. strip across the Isthmus of Panamá, leased for the protection and administration of the Panama canal, the Panama Canal Zone has an area of 553 sq.mi., including 191 sq.mi. of fresh water. Population: (1950 census, inclusive of uniformed military personnel) 52,822; (1954 est.) 58,000. The largest city is Silver City, which in 1950 had 5,726 inhabitants. La Boca (4,235), Balboa (4,162) and North Gamboa (3,074) were next largest. Adminis-

trative centre: Balboa Heights (pop., 1950, 363). Governors in 1956: Maj. Gen. John S. Seybold (until May) and Brig. Gen. William E. Potter.

History.—During the first six months of the fiscal year ending June 30, 1956, the number of vessels using the canal increased to 4,083 as compared with 3,947 during the same period in fiscal 1955. According to the retiring governor, Maj. Gen. John S. Seybold, who was replaced by Brig. Gen. William E. Potter in May 1956, the lock-operated canal was approaching capacity, and he urged its replacement by a sea-level canal.

Problems arose during 1956 in making operative certain clauses of the 1955 treaty governing relations between the United States and Panamá concerning the Canal Zone. On Jan. 1, 1957, the provision excluding Panamanian employees from trading at Canal Zone commissaries would go into effect. This stipulation, which was sponsored by the Panamá business community, would affect about 15,000 employees and would give Panamá merchants an additional \$12,000,000 to \$15,000,000 in retail trade annually, but employees would be forced to pay Panamá prices which were appreciably higher. Panamanian officials claimed that while the treaty was being negotiated, they understood that the Panama Canal company would make an increase in pay to offset the higher prices. This was denied by the company, and the upshot was a strong movement by workers for renegotiation of the treaty.

Congress also considered several other Canal Zone measures not related to the treaty. A bill was enacted to exclude the Canal Zone from the \$1.00 per hour U.S. minimum wage law which had threatened to upset local wage patterns. Another important matter, likely to become law, would transfer the Canal Zone from the jurisdiction of the U.S. army department to that of the commerce department. This was part of a long campaign on the part of shipping companies to reduce tolls which they asserted were having to sustain an undue proportion of military costs besides losses in the operation of a steamship line, a railroad, two hotels and ship repair facilities.

Steamship companies continued their suit to recover \$27,000,000 in tolls which they alleged the Panama Canal company had collected illegally since 1951. Although the suit was dismissed in the federal district court in New York city on June 29, 1956, it was appealed to the U.S. appellate court. (R. HN.)

Education.—In the fiscal year ending June 30, 1955, there were for U.S. children 10 kindergartens, 15 elementary and secondary schools and a junior college with enrolment on Oct. 15, 1954, of 6,629. For Latin-American children there were 4 kindergartens, 11 elementary and secondary schools and a junior college with enrolment of 4,044.

Canal Traffic.—During the fiscal year ending June 30, 1955, 7,997 commercial vessels (300 net tons and over), aggregating 38,567,769 canal net tons, and 296 U.S. government vessels passed through the canal. The commercial vessels carried cargo aggregating 40,646,301 long tons and paid tolls totalling \$33,849,477. Of the cargo carried, 22,227,295 tons were from Pacific to Atlantic and 18,419,006 tons were from Atlantic to Pacific. Major commodities in the Pacific-Atlantic traffic were ores 4,089,474 tons, lumber 3,747,151 tons and mineral oils 1,981,242 tons; in the Atlantic-Pacific traffic, mineral oils 4,305,771 tons, coal and coke 3,274,001 tons and iron and steel manufactures 1,792,150 tons. Of the 7,997 commercial vessels passing through the canal, 2,102 were U.S., 1,145 British, 904 Norwegian, 551 Panaman, 464 Japanese, 428 Honduran, 384 Liberian, 375 German, 323 Danish and 207 Swedish; the remaining 1,114 were of 25 other nationalities. According to preliminary figures, 8,209 commercial vessels, aggregating 40,646,000 canal net tons, and 266 U.S. government vessels passed through the canal in the fiscal year ending June 30, 1956. (J. W. Mw.)

Paper and Pulp Industry.

The production of paper and paperboard in the United States in the first half of 1956 was estimated at 16,071,000 short tons, an increase of 1,342,000 tons over the same period in 1955. Estimated production for the entire year 1956 was between 31,000,000 and 32,000,000 tons. Paper consumption in 1955 amounted to 34,526,000 tons, and during that year 5,500,000 tons

Table I.—U.S. Production and Consumption of Paper, Wood Pulp and Pulpwood

Year	Paper and Paperboard (short tons)		Wood Pulp (short tons)		Receipts of Pulpwood (cords)		
	Production	Consumption	Production	Consumption	Domestic	Imported	Total
1925	9,182,204	10,590,090	3,962,217	5,590,304	5,005,445	1,088,376	6,093,821
1931	9,381,840	11,403,850	4,409,344	6,005,713	5,896,446	826,320	6,722,766
1935	10,506,195	12,490,886	5,032,299	6,877,869	6,590,942	1,037,332	7,628,274
1940	14,483,709	16,620,632	8,959,559	9,781,739	12,307,138	1,435,820	13,742,958
1945	17,370,965	19,665,487	10,167,140	10,825,412	15,245,000	1,729,000	16,974,000
1950	24,377,222	29,013,060	14,827,152	16,483,201	20,702,000	1,834,000	22,536,000
1955	29,896,748	34,526,162	20,827,562	20,659,000	30,894,000	1,928,000	32,822,000

total consumption of wood pulp increased from 1,834,000 tons in 1954 to slightly more than 2,000,000 tons in 1955. The supply and demand situation relative to newsprint was expected to be out of balance until 1958-59. (R. G. M.)

were imported and 845,000 tons were exported. The prediction for paperboard production in 1956 was 14,900,000 tons.

The per capita consumption of paper reached a high of 418 lb. at the end of 1955. Thirty new paper machines were scheduled to come into production in 1956, which would add about 1,700,000 tons to the annual capacity. Pulpwood consumption was expected to amount to 36,160,851 cords in 1956, while wood pulp

capacity was expected to reach 20,197,000 tons during the year.

Canada.—The production of paper in Canada in 1955 was about 7,200,000 tons, of which 6,190,647 tons were newsprint. Pulpwood consumption was 12,500,000 cords, compared with 12,475,600 cords in 1954. In 1955, 5,070,211 tons of newsprint were exported to the United States and 734,902 tons to overseas countries. Per capita consumption of paper was 280 lb. There were 96 paper mills and 34 wood pulp mills in 1956, and 80% of the paper production was being exported.

Table IV.—Canadian Paper and Paperboard Production

Kind	(In short tons)			
	1950	1952	1954	1955

United Kingdom.—The production of paper and paperboard in 1955 amounted to 3,646,960 long tons. There were 1,416,860 tons imported and 334,600 tons exported. The per capita consumption for the year was 187 lb. Production of esparto papers increased from 268,705 tons in 1954 to 282,871 tons in 1955. The

Territory	Area (sq.mi.)	Population (1954 census)	
		Native	Non-native*

Islands included in trust territory 	23,000	171,466	
Total	183,590	1,695,145	17,755

*About 76% European, 13% Asian, 11% other races. †Including d'Entrecasteaux, Louisiade, and Trobriand (with Woodlark) Islands (total area 2,754 sq.mi.). ‡Including adjacent minor islands. §Bismarck archipelago (including New Britain 14,150 sq.mi., New Ireland 3,340 sq.mi., New Hanover 460 sq.mi., Admiralty Islands 800 sq.mi.) and some of Solomon Islands (including Bougainville 4,080 sq.mi.).

Native population, Papuan and (especially in Bismarcks, Solomons and coastal New Guinea) Melanesian; Negrito and Micronesian minorities. Religion: pagan with Christian minorities. Capital of joint administration, Port Moresby (pop. about 13,800). Administrator in 1956, Brig. D. M. Cleland.

History.—As a result of intensified patrolling during the past six years the administration had reached all parts of Papua and New Guinea. Only a little more than 25,000 sq.mi. of the country remained outside full administrative control and it was expected that the whole of the territory would be under control by the end of 1959. The political development of the indigenous people was being fostered through the system of local government councils.

Progress in the economy of the territory was reflected in the increasing volume and value of the production and exports of local products. Timber production was greatly increased, more than 55,000,000 super feet of logs being produced in 1955-56 (in 1954 a modern plywood factory with an annual capacity of 48,000,000 sq.ft. of plywood had been opened at Bulolo). Cocoa and coffee planting and production also was increasing. The internal revenue of the territory is supplemented by an annual grant from the Australian government (£8,443,823 for 1955-56).

(R. R. My.)

Education.—(1954) *Papua*: Administration schools 33, pupils 1,875; mission schools 817, pupils 43,261. *New Guinea*: Administration schools 79, pupils 4,495; mission schools 2,773, pupils 88,492.

Production.—*Papua* (metric tons): rubber (exports, 1955) 3,700, (1954) 3,500; copra and coconut oil (exports, copra equivalent, 1954) 11,700; copra (1953) 8,800; coconut oil (1955) 6,500, (1954) 7,500; sawn hardwood (1954) 20,000 cu.m. *New Guinea* (metric tons): copra (1954) 71,780, oil equivalent (June 1954-55) 10,215; cocoa beans (1954) 713; gold mined (1954) 90,857 oz.; sawn hardwood (1954) 123,000 cu.m.

Finance and Trade.—Monetary unit: Australian pound used throughout Papua-New Guinea (£A1=U.S. \$2.20). *Papua* (1954): revenue £A3,296,593; expenditure £A3,240,309. Imports £A5,722,166; exports (including exports not of local origin) £A1,921,162, including copra £A883,814, rubber £A612,788, desiccated coconut £A27,211. Main sources of imports: Australia 73%, U.K. 7.3%, U.S. 7.3%; main destination of exports: Australia. *New Guinea*: revenue (1953-54) £A5,094,789 (Australian government grant £A3,103,076); expenditure £A5,094,789. Total imports £A9,444,628; exports (including exports not of local origin) £A9,192,110. Principal exports: copra £A5,031,676; gold £A1,409,480; coconut products £A1,503,861; cocoa beans £A245,950; shell £A170,321; timber £A93,313. Principal imports: foodstuffs £A2,701,257; machinery and metal manufactures £A2,857,755; clothing and textiles £A969,038.

Paraguay. This landlocked republic in central South America is bounded north and east by Brazil, north and west by Bolivia and south by Argentina. Area: 157,047 sq.mi., of which 95,338 sq.mi. constitutes the sparsely populated Chaco, while the 61,709 sq.mi. lying east of the Paraguay river contains

95% of the population. Pop.: (1950 census) 1,408,400; (1956 est.) 1,601,000. The people are a homogeneous amalgam of Spanish and Guaraní stock, with some Portuguese and Italian, which has developed into a racial type. Official language: Spanish. The Guaraní tongue has survived more than the blood, but is secondary and recessive. Capital and chief centre: Asunción, pop. (1950) 201,340. Other large cities (1950 census): Villarrica 14,680, Concepción 14,640, Encarnación 13,321. Official religion: Roman Catholic. President in 1956: Gen. Alfredo Stroessner, also commander of the armed forces.

History.—The termination of the Juan Perón regime in Argentina in the autumn of 1955 strongly affected Paraguay, whose economy was geared to Argentina's and whose army officers had Peronist proclivities. The powerful Central Bank hoped for a Perón restoration which would again mean trade and financial advantages. In Dec. 1955 the younger officers at Campo Grande staged a revolt. The loyalty of the senior officers enabled President Stroessner to suppress the movement, and he dealt mildly with the defectors. In Jan. 1956 he appointed a new head of the Central Bank, and called in a panel from the International Monetary fund to reform and simplify the currency and the commercial system. The results were somewhat favourable to production and many of the exports, but increased the consumer prices of imports and local products. The outlawed Liberal party, hoping that the diminution of Peronist tendencies might give a political opening, took advantage of consumer unrest to incite student riots in May. There was a minor reshuffling of the cabinet and the administration remained unchallenged during the summer.

Brazil showed increased friendliness by signing four agreements in January to release Paraguayan funds accumulated against prior Brazilian loans, to take steps for actual construction of the Paraguayan highway to south Brazil, to plan an international bridge at Iguassu and to make practical studies for joint hydroelectric development of the Upper Paraná river. The United States renewed its Foreign Operations mission and technical assistance agreements, and in April agreed to deliver \$3,000,000 of farm surplus foodstuffs, to be paid in guaraníes which in turn would be loaned to Paraguay for economic development. Trade pacts were maintained with West Germany, Italy, Hungary, Poland and Uruguay; and reciprocity with Bolivia was expanded. Paraguay approved the Pan American Postal Union agreement of 1955 as well as the convention creating the International Finance corporation.

Education.—In 1953 there were 1,794 elementary schools with 252,393 pupils, 87 secondary schools with 13,420 pupils and the national university with 2,100 pupils. Vocational and normal schools, with U.S. aid, and religious secondary schools increased strongly. The national budget in 1956 provided 127,500,000 guaraníes for education.

Finance.—The monetary unit is the guaraní, whose parity was reduced in March 1956 from 21 to 60 guaraníes per U.S. dollar. The intricate system for controlling trade by differential exchange rates was abolished, and imports and exports in general moved at parity. Control by licences was continued, and exchange reserves were built up to \$4,000,000 by midyear. The national revenues in 1955 were 862,800,000 guaraníes, and expenditures 871,100,000 guaraníes. The 1956 budget contemplated receipts at 1,159,100,000 guaraníes, and expenditures at 1,127,200,000. The internal public debt Jan. 1, 1956, was 270,700,000 guaraníes, and the external debt \$9,304,536, both showing reductions. Money in circulation June 30, 1956, was 860,000,000 guaraníes, and demand deposits 590,000,000 guaraníes. The reserves of the Central Bank were \$12,243,000 of which \$6,263,000 were in Argentine-convention dollars partly available. Bank credit Jan. 1, 1956, was 2,347,700,000 guaraníes, compared with 1,435,600,000 guaraníes a year earlier. Asunción's three foreign branch banks, Argentine, Brazilian and British, held about 8% of this credit.

Communications.—The British controlled Paraguay Central has 296 mi. of railway from Asunción to Encarnación, and in 1954 carried 2,000,000 passengers and 150,000 tons of freight. Quebracho and timber companies have 404 mi. of small railway outlets, with heavy traffic. All-weather highways total 628 mi., and seasonal or ox-cart roads have about 4,000 mi. Automobiles, trucks and buses number about 5,100. A much needed trans-Chaco road was in active construction in 1956. Bids were opened in 1956 for a hydraulic dredge to keep the upper Paraná river open longer in low water years, as traffic was light in 1955. The number of telephones was 6,500, all government-operated, with both land-line and radio-telephone circuits to Argentina. There were 3,500 mi. of telegraphs, mainly state owned, with radio telegraph connection to nearby countries. There were ten small radio stations and 40,000 radio sets.

Trade.—Exports in 1955 were valued at \$35,097,000 and imports at \$28,955,000; and the first half of 1956 showed good increases. Timber exports were down to \$13,038,000 in 1955 because of low river levels and Argentine policies. Quebracho exports were \$5,628,000, cotton \$5,499,000, meat products \$2,324,000 and oleaginous products \$1,939,000. Other exports were hides, yerba maté, essential oils and tobacco. Leading imports were breadstuffs, petroleum products, machinery, vehicles, textiles, paper, chemicals and drugs. The leading destinations of exports and sources of imports, by countries and percentages, were as shown in the table.

Countries	Per cent exports	Per cent imports	Countries	Per cent exports	Per cent imports
Argentina	45.7	43.4	Netherlands	4.1	3.5
United States	18.0	13.9	Uruguay	2.8	1.5
United Kingdom	9.5	7.0	France	2.3	4.5
Germany (West)	4.7	4.7	Belgium	1.3	0.6

Agriculture.—Cotton is the largest cash crop, and in 1955-56 fell to 10,000 tons (50,000 bales), 30% less than the previous season. Sugar production rose to 20,000 tons, making the country almost self-sufficient. Tobacco, about 9,000 tons, was superior in quality. The rice crop of 17,000 tons was normal. The other leading crops, maize, mandioca, cowpeas, yams and peanuts, were hard hit by the drought and unprecedented freezes in 1955. Cattle decreased in 1955 to about 3,500,000, but the reopening in 1956 of a large packing plant to slaughter 60,000 head gave stimulation to the industry.

Manufactures.—The industrial index, based on 1946 as 100, stood at 104 early in 1955 and showed no subsequent rise. Typical leading manufactures in 1952 or 1953 were: flour 50,000 tons, cotton 15,500,000 yd., quebracho 35,000 tons, sugar 23,000 tons, yerba maté 12,000 tons and liquors 19,080,000 l. Other important manufactures were leather, glass and ceramics, soap, essential and vegetable oils, alcohol, tobacco products, shoes, pharmaceuticals, brushes, lace and printed matter.

Mines and Forests.—Paraguay has virtually no metals, petroleum or coal. Its cement plant at Valle Mi brought capacity in 1956 to 30,000 bbl. per month, enough for current needs. Brick and tile in 1953 were 48,000,000 units, cobbles and rock 50,000 tons and lime 12,000 tons. Logs and beams exported in 1953 were 160,000 tons, and lumber output 19,000 tons, both hardwoods and semihardwoods.

Paris. Capital and largest city of France, Paris had a population according to the 1954 census of 2,850,189. Presidents of the municipal council in 1956: Jacques Féron and (from June 18) Pierre Ruais.

The ordinary budget for Paris, adopted on Jan. 26, 1956, amounted to 76,818,000,000 fr., and the cost-of-living index

PARIS "BREAD LINE," housewives waiting to obtain loaves of bread during a general strike by bakers in the French capital in 1956

slowly increased, as compared with that for 1955. The municipal council was preoccupied with the housing crisis which persisted in spite of new buildings. It was estimated that about 500,000 houses were needed in the Paris area. The housing situation was complicated by the fact that an annual average of 60,000 persons entered Paris, many being French persons who had left North Africa because of the troubles there. The rebuilding of the Rond-Point de la Défense began; on June 19 the first stone was laid for the Palais du Centre National des Industries et des Techniques. The reopening of the schools on Oct. 1 once more posed the grave problem of the lack of accommodations; the primary schools of Paris and the Seine *département* received 30,000 more pupils in 1956 than in 1955. In Paris 300 new classes were started, and 600 were started in the Seine area. Motor traffic continued to increase; the subway in the Place de l'Alma was opened at the beginning of October for the inauguration of the motor show. The lighting was improved, particularly in the Avenue des Champs-Élysées and the Avenue de l'Opéra.

During Jan. 29–31, 1956, ceremonies took place to link Paris and Rome. There was a corresponding linking of the Avenue de l'Opéra with the Via Frattina in Rome; during June 12–16 the public was invited to identify in the shop windows of the Avenue de l'Opéra a typical Italian object, and the winner obtained a free trip to Rome. The annual shop-window competition took place in the Rue du Faubourg St. Honoré in the fortnight beginning May 29. The theme in 1956 was "Celebrities of Paris, Past and Present." Among the figures shown were Ste. Genevieve discovering Paris in 452, Louis XIV, Madame de Sévigné, the Comte d'Orsay, the beautiful Otéro, Marcel Proust and the Fratellini clowns. Some new streets were named on Jan. 22 commemorating Gérard de Nerval, the actress Julia Bartet and the writers J. H. Rosny (the elder) and Henri Duvernois. Two historical houses were no longer endowed, the Hôtel d'Aumont in the Rue de Jouy, and, near the Avenue de l'Opéra, the Hôtel Ventadour, which had been refused funds by the minister of Finance.

Patents and Trade-Marks. During the fiscal year ending June 30, 1956, the United States patent office granted 43,798 patents, including 104 for designs, 88 for plants and 141 reissues. This was 11,490 more than the number issued in 1955.

Although applications for patents continued to be filed at a high rate, the total of 81,055 represented a decrease of 3,178 from the preceding fiscal year. The total number of patent applications pending on June 30, 1956, was approximately 218,000, of which about 122,000 were awaiting action by the office, the remainder being under rejection awaiting response by applicants, or in interference or appeal proceedings.

The largest number of trade-marks ever registered in a single year, 21,613, added to 3,315 renewals, established a record figure for registrations and renewals, 24,928. This was an increase of 231 over the 1955 figure. On June 30, 1956, approximately 19,778 applications for registration, renewal and republication were pending, of which 10,428, or slightly more than half, were pending before the examiners.

By June 30, 1956, the patent office had granted more than 6,750,000 patents since the consecutive numbering system began in 1836. Complete classified and numerical sets of United States

patents are available for the use of the public in the patent office search room. Information concerning the patents issued each week is contained in the *Official Gazette* of the United States patent office, which is available for reference in approximately 340 of the more than 550 government depository libraries in nearly every state of the United States. Copies of patents may be seen in 22 libraries in the country. Printed copies of patents are sold for 25 cents each, designs and trade-marks for 10 cents each.

During the 1956 fiscal year the patent office distributed more than 7,500,000 copies of United States patents and trade-marks, selling nearly 4,500,000 copies to the public, depositing about 900,000 in libraries throughout the United States and shipping more than 1,500,000 to foreign countries under exchange agreements.

The patent office developed an eight-year program for reducing the backlog of pending applications and for reducing the average time required for an application to eventuate into a patent. This program was set forth in a pamphlet, "The United States Patent Office, What It Is, How It Functions, What It Needs," published in 1955.

To further a program for retrieving technical and scientific information, the patent office established a new organization unit known as the office of research and development. This group, in collaboration with the national bureau of standards, devoted full attention to this problem pursuant to the recommendations of the Vannevar Bush committee on the Application of Machines to Patent Office Operations.

A revised edition of the trade-mark rule booklet, which had been out of print for more than a year, was issued under date of June 1956, with a new title "Trademark Rules of Practice of the U.S. Patent Office." A new edition of the "Rules of Practice of the United States Patent Office in Patent Cases" was published in Sept. 1955.

Net receipts for the fiscal year ended June 30, 1956, were the highest in history, \$6,547,469. Obligations incurred under all patent office appropriations amounted to \$14,471,723, compared with \$11,629,317 for the preceding year. (R. C. W.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Draftsmen of Dreams* (1955).

Peaches: see FRUIT.

Peanuts. The U.S. 1956 crop of picked and threshed peanuts was a small one of 1,488,575,000 lb., 5% less than the 1,564,530,000 lb. of 1955 and 18% below the 1945–54 average. A total of 1,509,000 ac. were indicated for harvest (as compared with a final official acreage allotment of 1,650,342 ac.), 10% below the 1,691,000 ac. of 1955 and far below the 2,387,000 ac. average for the previous decade. The indicated average yield of 986 lb. per acre was high as compared with 925 lb. in 1955 and 790 lb. for 1945–54.

U.S. Peanut Production by Leading States

State	(In thousands of pounds)		Average 1945–54
	Indicated 1956	1955	
Georgia	557,925	513,240	608,353
North Carolina	294,000	204,250	286,900
Virginia	213,500	180,960	206,466
Alabama	203,775	213,750	258,706
Texas	88,550	239,235	252,600
Florida	61,600	61,500	58,650
Oklahoma	46,125	128,640	106,218

Peanut acreage allocation for 1956, as in 1954, was set at the minimum permitted by law of 1,610,000 ac. as compared with 1,731,000 ac. in 1955. However, the large kernel Virginia and Valencia types were in short supply, hence an additional 40,000 ac. were subsequently allocated to those types, mostly grown in Virginia and North Carolina. Production of that area was

510,050,000 lb. as compared with 388,060,000 lb. in 1955 and a 1945-54 average of 496,499,000 lb.

Other peanut types, mostly used for oil, were not in short supply and acreage allotments were held at the minimum. The southeast area produced 836,050,000 lb. as compared with 800,540,000 lb. in 1955 and the 942,772,000 lb. average for 1945-54. The southwest area, hard hit by drought, produced only 142,475,000 lb. as compared with 375,930,000 lb. in 1955 and 370,279,000 lb. average for 1945-54.

As one of the six basic crops, peanut acreage allotted for 1956, except that for production of the Virginia and Valencia type peanuts, was eligible for participation in the acreage reserve phase of the soil bank at the rate of 3 cents per pound for the yield which would have been obtained from the diverted acreage. Participation was on a limited scale except in Texas and Oklahoma.

U.S. consumption of peanuts (shelled) in 1956 was indicated at 4.7 lb. per capita, 9% above 1955 and pre-World War II.

Early indications were for a new record world crop of 12,788,500 tons, as compared with the previous (1955) record of 12,516,500 tons and approximately double the prewar average. About 34,325,000 ac. were devoted to this warm climate crop. India produced 4,700,000 tons, China 2,700,000 tons, French West Africa 950,000 tons, Nigeria and the Cameroons 900,000 tons, and the U.S. 744,300 tons. Argentina, an exporter, was indicated for 177,500 tons, second only to its record 187,100 tons of 1954.

(J. K. R.)

Pears: see FRUIT.

Pearson, Lester Bowles (1897-). Canadian politician and federal cabinet minister, was born on April 23 in Toronto, Ont. He was educated at collegiate institutes in Toronto, Peterborough and Hamilton, Ont., at Victoria college, the University of Toronto, and at St. John's college, Oxford university. In 1923 he joined the staff of the University of Toronto as lecturer in history, later becoming assistant professor.

In 1928 he entered the department of external affairs as first secretary and served in Ottawa until 1935, though special missions took him to Washington, D.C., London, The Hague, Geneva and throughout Canada. In 1935 he was appointed to the office of the high commissioner for Canada in London, Eng., and later became secretary of that office, remaining until 1941 when he was recalled to Ottawa to become assistant under-secretary of state for external affairs. After several other posts, in Jan. 1945 he was named Canadian ambassador to the United States, but in Sept. 1946 he returned to Ottawa as undersecretary of state for external affairs, becoming secretary of state for external affairs in the federal cabinet in Sept. 1948. Elected to the house of commons for Algoma East, Ont., in Oct. 1948, he was re-elected in 1949 and 1953.

In March 1956 Pearson attended a meeting of the presidents of the United States and Mexico and the prime minister of Canada at White Sulphur Springs, W.Va. In May he acted for Canada at the ministerial meeting of the North Atlantic council, Paris, Fr., and was named a member of the "committee of three" to "advise on ways and means to improve and extend NATO co-operation in nonmilitary fields and to develop greater unity within the Atlantic community." He attended the meeting of the NATO committee of three in Paris in June, and the Commonwealth prime ministers' conference in London in July. His book *Democracy in World Politics* was published in 1956.

(M. L. S.)

Pecans: see NUTS.

Pennsylvania. A middle Atlantic state and one of the 13 original states of the union, the commonwealth of Pennsylvania is popularly known as the "Keystone state." Area: 45,333 sq.mi., including 288 sq.mi. of inland waters. Pop.: (U.S. census, 1950) 10,498,012; (July 1, 1956, provisional est.) 10,964,000. Capital: Harrisburg, pop. (1950) 89,554. Other cities with population greater than 75,000 in 1950: Philadelphia, 2,071,605; Pittsburgh, 676,806; Erie, 130,803; Scranton, 125,536; Reading, 109,320; Allentown, 106,756; Altoona, 77,177; Wilkes-Barre, 76,826. The urban population in 1950 numbered 7,403,036 and the rural 3,094,976.

History.—In 1955, in order to solve the fiscal problem of the state, the legislature passed a 3% sales tax. Gov. George M. Leader, the first Democrat in 20 years to hold the gubernatorial office, was faced with a legislative fight which prolonged the session until May 22, 1956.

Major elements of Leader's promised 1954 campaign program which were passed included: (1) reorganization of the duplicative and unco-ordinated administrative agencies and departments of the executive arm; (2) resuscitation of distressed areas of the state with a Pennsylvania industrial development authority; (3) establishment of an urban redevelopment program; (4) expansion of the welfare services in the field of mental health, with the appointment of the first mental health director in the state's history and a \$42,000,000 program for mental health, and the building of three 1,000-bed hospitals for retarded children; (5) provision for the largest single school construction program in the history of the nation (\$500,000,000) and for the training and guidance of physically and mentally handicapped children; (6) provision of a new system of penalties to decrease highway fatalities in the state; (7) inauguration of a new concept in meeting the problems of juvenile delinquency by providing, among other things, mobile forestry camps for juvenile delinquents.

The state's chief elective officials in 1956 were: George M. Leader (Dem.), governor; Roy E. Furman (Dem.), lieutenant governor; Genevieve Blatt (Dem.), secretary of internal affairs; Charles R. Barber (Rep.), auditor general; Weldon B. Heyburn (Rep.), state treasurer.

In the general election, Nov. 6, 1956, the Pennsylvania voters by a substantial majority gave the state's 32 electoral votes to Pres. Dwight D. Eisenhower. However, Joseph Sill Clark, Jr. (Dem.), former mayor of Philadelphia, defeated Sen. James Henderson Duff (Rep.) for a seat in the U.S. senate, by a small margin. The state fiscal offices were won by Republicans. For state treasurer (term beginning May 1957), Robert Kent defeated James Knox, and for auditor general, Charles Smith defeated Francis Smith.

Education.—Statistics for 1956-57 showed a net enrolment of 1,831,929 pupils, including 104,271 in kindergarten, 1,053,871 in the elementary division apart from kindergarten, and 673,787 in secondary school. During 1954-55 there were 1,488 kindergarten teachers, 32,322 elementary teachers and 26,200 secondary or high school teachers; 1,177 elementary principals, 944 secondary school principals, 634 supervising principals and 998 supervisors. The state administration estimated that 50.38% of its total 1955-57 biennial general fund budget, or \$623,462,352, would be expended upon public education. In 1956 Pennsylvania had 123 institutions of higher education; colleges and universities numbered 84.

Social Insurance and Assistance, Public Welfare and Related Programs.—In the first six months of 1956 expenditures by the department of public assistance reached \$61,059,000, including \$35,312,000 of state funds and \$25,747,000 of federal funds. The assistance rolls contained an average of 133,919 cases, including 53,067 cases of old-age assistance, 28,402 cases receiving aid to dependent children, 23,078 general assistance cases, 16,599 blind pensioners and 12,773 cases receiving aid for the permanently and totally disabled. An appropriation of \$15,400,000 was approved for the 1955-57 biennium. The budget of the mental rehabilitation program involving 22 institutions with approximately 49,000 mental patients and including general operations, salaries and expenses and monies for the Council for the Blind, totalled \$143,550,000.

Transportation.—Of the 100,695 mi. of highways in Pennsylvania in 1954, 41,080 mi. were in the state highway system under the supervision of the department of highways. Included in this total were 637 mi. in the cities of Pennsylvania and 2,370 mi. in the boroughs. The Pennsylvania Turnpike, by 1955 consisting of 360 mi. of highway operated by the Pennsylv-

vania Turnpike commission, now stretched from the Delaware river to the Ohio state line. There were 11,136.24 mi. of railroads in operation in Pennsylvania in 1953.

Banking and Finance.—As of Dec. 31, 1955, 304 banking institutions operated under state charters, with total resources of \$7,612,760,397.16. There were 804 insured commercial banks, of which 522 were national banks, 93 were state banks with membership in the federal reserve system and 189 were state banks not members of the federal reserve system. Seven insured mutual savings banks also functioned in the state. The total assets and liabilities of insured commercial banks in Pennsylvania on Dec. 31, 1955, were \$13,918,094,000. The number of depositors in all state banking institutions was 4,902,718. As of Dec. 31, 1955, 724 building and loan associations with assets of \$1,012,442,697.70 were operating in the commonwealth.

The total 1955-57 appropriations proposed by the state administration to the Pennsylvania general assembly from the general fund amounted to \$1,312,197,463. Appropriations and allocations from the motor licence fund from 1955-57 were estimated at \$494,165,656. The gross bonded debt of the commonwealth as of Sept. 1, 1954, stood at \$415,150,000.

Agriculture.—In 1955 the commonwealth had 128,887 farms. The farms of Pennsylvania covered 13,162,093 ac., 45.7% of the total land area. In 1955 Pennsylvania ranked 14th in total cash income from farm marketings,

with \$734,513,000 in agricultural earnings. Thirty-three per cent was derived from dairy products, while 25% was obtained from poultry and eggs. The income from all livestock and poultry amounted to \$559,706,000, or 77% of the total farm cash income. The value of fruits and crops totalled \$174,807,000.

Manufacturing.—According to the records of the state department of labour and industry, the business and industrial establishments of the commonwealth covered by the Pennsylvania unemployment compensation law at the end of 1954 totalled 196,000 concerns, employing an average of 3,020,808 workers, earning \$11,066,855,000 in wages and salaries during that year. It was estimated that 20,100 manufacturing companies operated during 1954, with 1,470,343 workers engaged in manufacturing getting \$5,900,940,000 in earnings for these 12 months. By a 1953 estimate, Pennsylvania's industrial establishments produced \$24,600,421,000 worth of products for the U.S. market.

Mineral Production.—Table III shows the tonnage and value of those minerals produced in Pennsylvania in 1953 and 1954 whose value exceeded \$100,000. In 1954 Pennsylvania led in production and consumption of coke, was first in output of pig iron and steel and in crushed stone, was second in output of coal (the only state that produces anthracite coal), fire clay and slate, third in lime production and fourth in petroleum asphalt sales and in output of selenium. It ranked fourth among the states in value of its mineral output, with 6.21% of the U.S. total.

Persian Gulf States. The following are British-protected Arab sheikhdoms of the Persian gulf area. The headquarters of the British political resident, Persian gulf, is at Manama, Bahrein. Agent in 1956, Sir Bernard Burrows.

Bahrein.—This archipelago lies 20 mi. off the gulf coast of Saudi Arabia. Total area, 231 sq.mi.; pop. (1955 est.), 120,000 (about 50% Shia Moslems). Chief towns (pop., 1955 est.): Manama (cap.) 45,000; Muharrek 20,000. Sheikh, Sulman bin Hamad al-Khalifah; British political agent in 1956, C. A. Gault.

Katar (Qatar).—Area, 8,500 sq.mi.; pop. (1955 est.), 35,000. Cap., Doha (or Bida). Sheikh, Ali bin Abdullah al-Thani; British political agent in 1956, D. C. Carden.

Kuwait.—Area, 8,000 sq.mi.; pop. (1954 est.), 200,000. Cap., Kuwait, pop. (1953 est.), 25,000. Sheikh, Abdullah bin Salim as-Subah; British political agent in 1956, G. W. Bell.

Trucial Sheikhdoms (or Trucial Oman, Trucial Coast).—Abu Dhabi, Ajman, Dubai, Fujairah, Ras al-Khaiman, Sharjah and Kalba, and Umm al-Kawain sheikhdoms. Total area, 5,792 sq.mi.; total pop. (1955 est.), 80,000. Chief towns: Dubai (chief port and British political agent's headquarters); Sharjah; Abu Dhabi (port). British political agent in 1956, J. P. Tripp.

History.—The year 1956 was marked by the emergence of nationalism and democratic movements in the principalities of the Persian gulf. In Kuwait, despite the great wealth from oil and the rapid transformation of the country into a welfare state, the opposition to the autocratic and mediaeval character of the sheikh's government grew steadily.

In Bahrein there was an antigovernment and anti-British demonstration during the British foreign secretary's visit early in March. Subsequently the reformers were able to express their demands in a moderate movement called the Committee of National Union, and the sheikh formed an administrative council including civil servants. During the Suez crisis demonstrations in favour of Egypt took place in Kuwait, Bahrein and Katar, and as a result of the Anglo-French military action against Egypt, rioting broke out in Bahrein and the Katar oil pipeline was blown up.

(E. S. AH.)

Production.—Oil production in metric tons for recent years was as follows:

Area	1952	1953	1954	1955
Bahrein.	1,505,000	1,500,000	1,500,000	1,500,000
Katar	3,297,000	4,056,000	4,776,000	5,448,000
Kuwait*	37,637,000	43,284,000	48,575,000	56,018,400

*Including Kuwait neutral zone.

Finance and Trade.—*Muscat and Oman.*—Monetary units: Indian rupee (official) valued at 21 cents U.S.; Maria Theresa dollar (common medium of exchange) and (in Dhofur province) half dollar; in interior generally, copper baiza (200 baizas=1 Maria Theresa dollar=about Rs. 2.5) with nickel coins for multiples. Foreign trade (1954–55): £2,688,300, exports £1,348,250; imports from U.K. (1955) £328,088; re-exports from U.K. £2,393; exports to U.K. £21,725. Chief imports: cereals, tea, coffee, sugar, tobacco, cotton goods. Chief exports: dates (1955) £612,757, fish and fish products £382,747; pomegranates and limes £169,387.

Kuwait.—Monetary unit: Indian rupee. Foreign trade (1954): imports £30,000,000, exports £4,000,000. Imports from U.K. (1955) £8,099,303; exports to U.K. £125,604,753. Chief exports: petroleum and pearls.

Bahrain and Katar.—Monetary unit: Indian rupee. Foreign trade (including tracial Oman) (1954): Imports £13,400,000. Imports from U.K. (1955) £12,521,006; exports to U.K. (1955) £20,947,880. Chief exports: petroleum products, rice, pearls. Chief imports (Bahrain): textiles, machinery, motor vehicles, sugar.

Trucial Sheikhdoms.—Monetary unit: Indian rupee. Foreign trade (1954): imports Rs. 28,444,211; exports Rs. 4,638,066. Chief products and exports: pearls, dates, dried fish.

Peru. A republic situated on the west coast of South America and bounded on the north by Ecuador and Colombia, on the east by Brazil and Bolivia, on the south by Chile and on the west by the Pacific ocean, Peru has an area of 506,189 sq.mi. The population, 9,396,000 according to a 1955 official estimate, is composed approximately of 52% "white" and mestizo and 46% Indian; there are also some Negro and Asian elements to the extent of about 2%. Lima, the capital, has a population (1952 est.) of 926,400. The population estimates for other major cities are: Callao, 104,500; Arequipa, 100,900; Cuzco, 58,400; Trujillo, 49,600; Iquitos, 44,000; Chiclayo, 41,600; Huancayo, 36,500; Sullana, 28,470; Ica, 27,300; and Piura, 25,600. Language: Spanish, although Quechua is still spoken by some of the highland Indians. Religion: predominantly Roman Catholic. Presidents in 1956, Gen. Manuel Odría until July 28; thereafter Manuel Prado y Ugarteche.

History.—During 1956 Pres. Manuel Odría's administration continued its policy of order and progress. Occasionally prospects dimmed for a free and democratic election, but an honest presidential balloting was held as Odría promised. Although eight candidates entered the presidential race, five dropped out in May because they either lacked support, anticipated fraud or did not wish to divide the vote hopelessly. Among the three remaining candidates were independent Hernando de Lavallo, backed by the pro-Odría party; Fernando Belaúnde Terry, an independent; and former (1939–45) Pres. Manuel Prado y Ugarteche, backed by the Movimiento Democrático Pradista. More than 79% of the registered voters turned out to give Lavallo 233,000 votes, Belaúnde Terry about 458,000 votes and Prado more than 568,000 votes. Independent candidates were most successful in the chamber of deputies contests, and *pradistas* were strongest in the races for the senate.

Immediately following his July 28 inauguration, President Prado decreed general amnesty for political prisoners and exiles and restored the legal status of the outlawed party Alianza Popular Revolucionaria Americana. He abolished censorship, obligatory broadcasting of government releases and certain privileges of military officers. Investigations of the previous administration were begun, and various reforms were instituted.

Odría's last year in office was marked by a sound currency, a budgetary surplus, the building of many public works, renewed diplomatic relations with Ecuador, increased petroleum exploration and improved metals and ores exports. Problems which faced both Odría and his successor included a year's drought and severe spring frosts on the Altiplano. As much as 60% of some crops were ruined; pastures were in a very bad state. To avert famine U.S. surplus food was imported. Meanwhile, coastal cotton growers were distinctly unhappy about United States dumping of surplus cotton, and the sugar cane producers were angry at being allocated only 51,871 tons of the United States sugar market.

Inflation caused labour to demand wage increases. Postal and telegraph employees struck briefly during April in several cities. Textile workers were restless, and municipal railway workers in Lima struck in May. Settlement of the latter walkout resulted in increased fares, which precipitated a paralyzing and violent general strike late in June. It was joined by students who had been striking for some time to oust the director of San Marcos university and to obtain a greater voice in the university's administration. The general strike produced a 30-day suspension of civil rights which was not lifted until just before the inauguration of President Prado. The general strike was settled on July 2. The students ended their 73-day walkout on July 23.

(R. HN.)

Education.—In 1953 there were 10,421 public primary schools with 23,147 teachers and 908,936 pupils and 1,348 private schools with 4,214 teachers and 137,900 pupils. The 114 public secondary schools had 2,686 teachers and 47,873 students; 204 private secondary schools had 3,100 teachers and 35,471 students. University education was available at four public universities—Lima (8,771 students in 1952), Arequipa (890), Cuzco (791) and Trujillo (1,616)—and at the Catholic university of Lima (1,453).

Finance.—The monetary unit is the sol, valued at 5.26 cents U.S. currency, exchange certificate rate, and at 5.25 cents, free rate, on Nov. 24, 1956. The 1956 budget, including special accounts, was balanced at 3,885,473,412 soles. The public debt on Dec. 31, 1954, totalled 1,989,800,000 soles, of which 359,600,000 soles represented the external debt. Currency in circulation (June 30, 1956) totalled 1,767,000,000 soles; demand deposits, 2,420,000,000 soles. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$301,000,000, of which mining and smelting investments accounted for \$193,000,000. The cost-of-living index (Lima) stood at 119 in Aug. 1956 (1953=100). National income in 1954 was estimated at 18,690,000,000 soles.

Trade and Communications.—Exports in 1955 totalled 5,146,335,000 soles; imports, 5,764,114,000 soles. Leading exports were cotton (25%), sugar (14%), copper (11%), lead (10%) and petroleum and products (8%); leading imports, machinery and vehicles (34%), food, drink and tobacco (15%) and chemicals and drugs (10%). Leading customers were the U.S. (36%), Chile (13%), the U.K. (10%), Germany (7%) and Belgium (6%); leading suppliers, the U.S. (50%), Germany (9%), the U.K. (9%), Argentina (5%) and the Netherlands (3%).

Railroads (1951) totalled 2,800 mi.; highway mileage was 19,466, of which 7,894 mi. were hard-surfaced. On Jan. 1, 1955, there were 51,471 automobiles, 39,940 trucks and 4,940 buses. According to *Lloyd's Register of Shipping*, the merchant marine had 47 vessels (100 tons and over) aggregating 98,492 gross tons on June 30, 1955. Telephones (Jan. 1, 1955) numbered 60,300, 82.3% of which were automatic and 69% of which were located in Lima.

Agriculture.—Production estimates in 1955–56 (preliminary figures) included cotton (lint) 99,000 metric tons; sugar 690,000 tons; rice (rough) (1954–55) 227,000 tons; wheat 167,000 tons. In 1955, 85,160 tons of cotton and 497,239 tons of sugar and derivatives were exported. In Dec. 1954 there were 538,000 horses, 3,476,000 cattle, 16,821,000 sheep, 1,351,000 pigs; (1953) 2,283,000 goats; (1952) 3,380,900 alpacas and llamas. In 1955, 3,694 metric tons of wool were exported.

Minerals.—Production of the principal minerals in 1955 (preliminary figures) was as follows: copper (in ore) 48,142 short tons; lead 122,902 tons; zinc (in ore) 166,718 tons; silver 20,954,823 oz.; gold 160,310 oz.; antimony 1,055 tons; iron ore (metal content 60%) 1,940,500 tons. Petroleum production totalled 17,190,000 bbl.

(J. W. Mw.)
ENCYCLOPEDIA BRITANNICA FILMS.—*Land of the Incas* (1955); *Peru (People of the Mountains)* (1940).

Petroleum. In 1956 the interest of the petroleum world centered on the Suez canal crisis. An average of 1,500,000 bbl. of petroleum a day moves through the canal. The nationalization of the canal by Egypt raised not only the possibility of the cutting of this vital transport link, but the question of whether a wave of nationalization might sweep across the oil-rich countries of the middle east upon whose resources Europe, the far east and even the United States had become increasingly dependent.

World petroleum production for the first nine months of 1956 totalled 4,597,309,000 bbl., of which the United States accounted for 42.50%, a decline from the 44.56% for the full year 1955 and 60.04% for 1945. (Table I.) In 1956 the middle east contributed 24% of the world total compared with 10.1% in 1947.

However, the middle east had 70% of the world's crude oil reserves estimated at 153,000,000,000 bbl. The United States and Venezuela continued to produce more oil than the middle east, but they had not the comparable reserves, and the United States had become a net importer of crude oil, with 15% to 20% of its imports coming from the middle east.

Emergency steps taken to meet any oil crisis included programs to supply the free world, and particularly Europe, principally from the United States, which had an estimated shut-in production in excess of 2,000,000 bbl. per day, supplemented by Venezuelan and Canadian sources; the pooling of transport facilities; the ordering of new supertankers and the withdrawal of a number of large tankers from the United States mothball fleet. The transport plans were devised to meet the possible need of long hauls around the Cape of Good Hope and to anticipate any reduction or stoppage of flow of middle eastern oil through existing pipelines to the Mediterranean.

Fears that Egypt's surprise move might ignite a wave of nationalization in the middle east subsided after the first shock. Iraq and Saudi Arabia had the experience of Iran to look back upon as a sobering influence and were reported to have given assurances that they contemplated no such action. During the last few years, countries wishing to develop their oil resources had tended from, rather than toward, nationalization. With one or two exceptions, petroleum laws adopted had been phrased so as to invite foreign capital and participation. They had embraced a 50-50 profit-sharing principle between government and company and liberal depletion allowance during the exploration phase. As a result, a wave of wildcatting unprecedented in history swept over the world. Not only did the large "international" oil companies expand their operations in many countries, but companies formerly interested solely in domestic producing, with sufficient resources, went into foreign exploration and development. For instance, in 1956, a Tulsa independent company acquired 4,300,000 ac. in Cuba as its first move into foreign search. At the same time it acquired about 700,000 ac. in four areas in the Philippines.

United States.—United States liquid hydrocarbon reserves totalled 35,450,735,000 bbl., as of Dec. 31, 1955, an increase of 445,532,000 bbl. over 1954. Crude oil production in 1955 increased to 2,484,521,000 bbl. from 2,314,988,000 bbl. in 1954. (Table II.) The production of motor fuel continued to rise dur-

ing the first seven months of 1956, and in 1955, 1,361,323,000 bbl. were produced compared with 1,261,304,000 bbl. in 1954. (Table III.) Distillate and residual fuel oil production for 1955 was 1,023,493,000 bbl. against 959,035,000 bbl. in 1954. (Table IV.)

Canada.—Operations in Canada were at an all-time peak in 1956 with midyear production at about 415,000 bbl. daily. Inaccessibility rendered this source less immediate than Latin America, nevertheless authorities predicted pipeline outlets and markets for 550,000 bbl. daily by 1960 and 1,000,000 bbl. daily by 1970. Reserves estimated in 1956 at about 3,000,000,000 bbl. were expected to reach close to 11,000,000,000 bbl. by 1980. Prospects for Alberta's Pembina field continued to improve and in 1956 the field passed the 100,000 bbl. per day mark.

Europe.—Italy had under consideration in 1956 a petroleum bill which was considered an exception to the trend in that it ignored the usual 50-50 principle and imposed a number of restrictions on operations of foreign companies. Unfavourable leg-

MIDDLE EAST OIL EXPORTS, in number of barrels per day

isolation in 1955 drove one U.S. company from Italy after it had opened up promising Po valley prospects, and restrictions also caused interruption in developments in Sicily by a U.S. company.

Standard Oil (New Jersey), which opened up a new field in southern France in 1954, expanded its exploration there, as did British Petroleum and several other companies.

Asia.—A sensational strike was made at Qum, north central Iran—a rank wildcat 200 mi. from the nearest source of production, by the National Iranian Oil company. Reported to flow 80,000 bbl. daily, it caught fire but finally was controlled and shut down. In Israel late in 1956, eight wildcats in widely separated areas were drilling in an attempt to expand the country's 1955 initial production from its three-well field at Heletz. India's movement toward nationalization of oil slowed down in 1956 when the government accepted a broad compromise agreement with Assam Oil company, a subsidiary of Burmah Oil company, on the role each would play in a new industry developing around Upper Assam's growing Nahorkatiya field.

South America.—In Venezuela sometime before the Suez canal seizure, a boom was in progress, largely stimulated by Venezuela opening up new territory for bids for the first time since 1948. Eagerly sought, the concessions covered about 300,000 ac. of proved and semiproved oil lands for lease and brought the Venezuelan government nearly \$400,000,000. The early development of this new acreage promised a substantial increase in Venezuela's production of 2,200,000 bbl. a day.

Colombia, producing about 120,000 bbl. of petroleum a day and ranking second to Venezuela among South American countries, followed its neighbour's example in encouraging new exploration. New applications were asked for on 70 options covering more than 7,500,000 ac. Sixteen companies were engaged in exploratory activity in Peru, principally on the eastern side of the Andes.

In 1956 a new petroleum law in Chile was prepared, an early draft indicating that the most promising areas would be reserved for the government-owned company, which produces about 4,000 bbl. a day in the far south. In Argentina a projected concession to be given a U.S. company was vitiated by the fall of Juan Perón. The new regime announced itself in favour of foreign investment except in the oil and electric power fields.

Central America.—In Panama two independent U.S. companies were granted concessions or shares in concessions of 10,000,000 ac. and 2,240,000 ac. respectively. Two concessions in Honduras were granted to two Texas firms, one covering 10,300,000 ac. and the other an interest in 50,000,000 ac. A new petroleum law was before the legislators in Costa Rica in 1956. The country had granted a large concession to a U.S. company which had drilled five wells, one of which in 1956 gave promise of becoming Central America's first producer. Guatemala put a new petroleum law in effect in 1955, and in 1956 was in the process of allotting 7,500,000 ac. to 29 companies for exploration and

development.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Conservation of Natural Resources* (1937); *Story of Petroleum* (1947).

Philadelphia. The estimated population of the city and county of Philadelphia, Pa., was 2,179,000 in 1956, an increase of nearly 108,000 over the 1950 national census count of 2,071,605. Public and parochial schools had in 1956 a combined enrolment of 366,490. Philadelphia is the third largest city in the United States and the largest in Pennsylvania. It covers 135 sq.mi., including 7.8 sq.mi. of water. Within its borders lie the 4,045 ac. of Fairmount park, the largest municipal park in the United States.

Commercial and industrial activity continued high during 1956. Employment in Philadelphia, and in the seven-county area, of which the city is the hub, showed a slight increase. Available estimates placed employment in manufacturing industries of this greater area at 575,000, while nonmanufacturing employment stood at 860,000, a rise of 23,000 over 1955. Of the total estimated labour force of 1,637,000, which included self-employed and agricultural workers, an estimated 56% were Philadelphia residents.

Philadelphia, whose fresh-water port located on the Delaware river is the largest of its kind in the world, was the nation's second biggest port in terms of total tonnage in 1955. Total exports and imports in 1955 amounted to 86,858,625 short tons, an increase of about 9% over 1954. Of this amount, 47,096,886 tons were moved in domestic coastal traffic. Foreign water-borne tonnage included 3,610,961 tons of exports (up 39%) valued at \$324,076,600, and 36,150,777 tons of imports (up 20%) valued at \$799,653,100. This volume of foreign import tonnage represented 25% of the nation's total. Philadelphia's department of commerce estimated unofficially that foreign water-borne commerce would reach at least 40,000,000 short tons in 1956.

Retail sales in the city reached \$2,854,760,000 in 1955 and bank clearings totalled \$59,962,000,000.

The city's assessed real estate value for 1956 was \$3,732,301,325 and Philadelphia's realty tax was \$3.025 per \$100. The city's funded indebtedness consisted on Sept. 1, 1956, of \$568,197,800 of issued bonds, of which \$205,438,138 were self-supporting and not charged against the city's borrowing limit. Operating budget appropriations for 1956 were \$202,215,411; appropriations in 1955 were \$192,051,609.

Of slightly more than \$42,000,000 in public works contracts let by the city during the first nine months of 1956, water and sewer improvements accounted for \$24,340,000; street paving and repair, \$6,447,000; street lighting, \$2,733,000; transit facilities, \$991,000; recreation facilities, \$1,578,000; and other building improvement and repairs \$5,982,000.

Passenger traffic at International airport increased 18% in 1956, and the city commenced work on a parallel instrument runway to accommodate the largest jet planes. In the field of city planning, private enterprise joined with the municipal government in launching a program to redevelop and rehabilitate the centre of the city at an estimated cost over the next 15 years of \$250,000,000. The program contemplated activity in residential, commercial and light industrial areas. In 1956, the city also undertook a vast port improvement program, which would culminate in the construction of a five-berth marine terminal with the most advanced cargo-loading equipment. Following the opening of a new 22-block section of the Market street subway, the city in 1956 removed the archaic elevated structure which had previously carried the high-speed trains. Work was completed on the rehabilitation of the city's commercial exhibition buildings, after which they were combined with Convention hall into a trade and convention centre.

At Penn Center, west of city hall, two more buildings—a transportation centre and the city's first new hotel in 25 years—became part of the Philadelphia sky line.

In the 1955 municipal elections, the Democratic party retained control of the administration with a virtual sweep of city offices. Richardson Dilworth defeated W. Thacher Longstreth by 132,000 plurality and succeeded Joseph S. Clark, Jr., as mayor. (RN. D.)

Philanthropy: see DONATIONS AND BEQUESTS.

Philately. The fifth International Philatelic exhibition was held in the Coliseum in New York city. April 28 to May 6, 1956. The stamp show drew a total of 65,000 admissions the first day.

From the point of view of sales, 1956 was said to be one of the most remarkable in the entire history of philately. Sales from the estate of Alfred H. Caspary, New York broker, realized \$1,240,697 in six sessions. Sales from this estate were to continue through 1958, and were expected to bring more than \$3,000,000, the largest sum ever realized in stamp auctions from a single owner. The Philatelic agency, established by the U.S. post office department in Washington, D.C., for the sale of unused United States stamps to and for collectors, grossed \$1,894,854 in the year ending June 30, 1956. This brought the total sales by the agency to collectors in 35 years to \$46,256,175.

A third development in the philatelic world was the interest in stamps by the president of the United States as a means of establishing good will. Of the philatelic items released during 1956, two were selected for White House ceremonies. The first was in the nature of a preview when Pres. Dwight D. Eisenhower presided over ceremonies relating to the three-cent Labor day commemorative on Sunday, Sept. 2. The stamp itself was released in Camden, N.J., on Sept. 3. The second occasion was the issuance of the three-cent children's friendship stamp, which went on sale Dec. 15. An impressive group of youth leaders were invited to the White House, Dec. 20, for special ceremonies.

Another milestone was the appearance in late October of part I of the *Minkus New World Wide Stamp Catalog*. So long as the average collector and professional could recall, there had been only the Scott catalogs to consider. The Minkus catalog was produced in collaboration with a large number of American authorities.

There were 22 philatelic items released in the United States during 1956. All the remaining values of the so-called "liberty series" were issued. These individual stamps were: Jan. 10, Woodrow Wilson stamp, Staunton, Va.; Feb. 22, 1½-cent Mount Vernon; March 19, \$5 Alexander Hamilton; April 13, 20-cent Monticello; June 14, 9-cent "Alamo"; and July 4, 10-cent Independence hall.

Other special stamps released during 1956 were: the 300th anniversary of the birth of Benjamin Franklin, Jan. 17 at Philadelphia; and the 100th anniversary of the birth of Booker T. Washington, at the Booker T. Washington birthplace (Va.), April 5.

For the fifth International Philatelic exhibition the post office department authorized four items. They were the 11-cent souvenir sheet, embracing the 3- and 8-cent "liberty" values (April 28); a special 3-cent stamp with a view of the Coliseum (April 30); a 16-cent airmail envelope (May 2); and a 2-cent postal card (May 4).

Other special stamps included the wild turkey (May 5), pronghorn antelope (June 22) and king salmon (Nov. 13) conservation stamps; the three-cent Pure Food and Drug acts golden jubilee; three-cent "wheatland" commemorative of Aug. 5; the Labor day stamp of Sept. 3; the odd black on orange Princeton hall stamp

U.S. STAMP ISSUE of May 5, 1956, the first of three designed to emphasize the importance of wildlife conservation

of Sept. 22; the three-cent Devil's Tower monument stamp of Nov. 9; and the deferred and bandied three-cent children's friendship adhesive which finally appeared Dec. 15.

The final emissions of 1956 were the four-cent international postal card and the eight-cent (four-cent plus four-cent) international reply postal card, released Nov. 16 at New York city during the eighth annual American Stamp Dealers' association show.

Scheduled for 1957 release were the Alexander Hamilton bi-centennial; coast and geodetic survey 150th anniversary; Oklahoma state golden jubilee; American teachers; and a fourth wildlife conservation stamp.

The United Nations Postal administration was faced with an unexpected demand for its postal issues. Long before the final special adhesives of 1956 were released, stocks of the older emissions were being sold out. At the end of the year the only stamps available were the Human Rights day adhesives issued Dec. 10, 1956. In all, eight stamps were released by the United Nations during 1956—ITU, WHO, UN day and Human Rights day sets of three- and eight-cent values.

In foreign emissions, commemoratives and special issues were the rule. Several nations committed themselves to the release of stamps honouring Benjamin Franklin. Nations interested and participating were the United States, France, Argentina, Cuba, Turkey and the U.S.S.R.

The most popular field was emissions pertaining to the Olympic games at Melbourne, Austr. (F. R. B.)

Philippines, Republic of the. The Philippines is a republic situated in the western Pacific ocean east of Indochina and consisting of an archipelago of 7,100 islands, totalling 115,707 sq.mi. The 1948 census tabulated 19,234,182 persons (1956 est. 22,265,000). The chief city is Manila, whose metropolitan area contains about 1,450,000 persons. Other cities (pop. 1954 est.) are Cebu 182,000, Iloilo 121,000 and Bacolod (1952) 126,200. Statistics listed Davao at 128,000, Basilan at 127,000 and Zamboanga at 120,000 on July 1, 1956, but the cities are far smaller, since all three politically include large rural areas and populations. The official capital is Quezon City, whose 125,000 persons are included in the figure for metropolitan Manila, but most government offices remain in Manila. In 1956 there were 28 chartered cities. Official statistics list 5,512 Americans, 4,212 other occidentals and 132,000 Chinese resident in the islands, but the totals in each group are believed to be much larger.

Most Filipinos are Roman Catholic or native Aglipayan Catholic in religion, the total estimated at more than 19,500,000. In the southern islands live an estimated 850,000 Moslems, whereas 475,000 Protestants and 700,000 pagans are widely scattered. President in 1956: Ramón Magsaysay.

History.—The Nov. 1955 elections gave President Magsaysay's Nacionalista party a clear majority in congress. This reflected the popularity of the president and the approval by the voters of his domestic program of land reform, improving efficiency in government and developing a program of industrialization, and his foreign policy of friendship to the United States and participation in programs of the free nations of the world. In the congress, however, delaying tactics and opposition to the president continued to hinder reform and efficiency measures. The regular session of congress adjourned without completing legislation on many measures requested by the president, as did the special session also. Opposition seized the issue of alleged perpetual United States control over military bases in the Philippines, in an attempt to create popular opposition to the president. United States announcement that no perpetual control was desired dissolved the opposition without creating a crisis.

In general the year was uneventful in the islands in respect to major happenings, but there was steady implementation of irrigation and power projects, land settlement projects, reorganization of government services and other steps in the president's program. The industrial development program for the future was significantly aided by legislative approval of most of the president's 1956-57 fiscal year budget, which involved significant borrowing and allocation of a very marked share of the total funds to basic development programs.

Education.—The national budget for the year 1956-57 authorized an expenditure of \$120,300,000 upon all forms of public education. Including private schools, for which no expense data were obtainable, there were, in June 1955, 26,576 elementary schools having 4,156,000 pupils and 88,514 teachers, 1,620 secondary schools having 647,000 pupils and 21,579 teachers, and 377 collegiate institutions with an enrolment of 182,450 students taught by 4,034 professors. Total enrolment was 4,985,450.

Finance.—The basic monetary unit is the peso, divided into 100 centavos, with exchange selling and buying rates held very close to the par value of 2 pesos to the U.S. dollar by government action. In July 1956 the internal purchasing power of the peso stood at 0.3305, against a 1941 base of 1, with the cost of living standing at 302.6 against a 1941 base of 100. On June 30, 1956, there were 75 banks in operation, and total bank resources were \$892,600,000. Currency in circulation increased slightly to \$337,500,000 as of June 30, 1956. Foreign exchange reserves dropped slightly during the year to \$233,800,000. The national debt rose somewhat to \$757,480,000.

The national expense budget for 1956-57 was passed by congress at \$615,000,000.

With government revenues estimated at \$479,000,000, an expanded pattern of deficit financing was required to provide for the basic development programs in agriculture, power, transport and communications which were a key element in the president's program. National income for the calendar year 1955 was estimated at \$3,902,000,000, the highest figure yet attained and a modest increase from the 1954 total.

Communications.—Railroad mileage operative in early 1956 was 690, freight carried was 1,352,000 tons for the year 1955, and passengers carried numbered 8,464,000 for the year. Highways totalled 19,550 mi. at the end of 1955, with 118,000 licensed motor vehicles, about equally divided between cars and trucks-buses. There were 56,300 telephones at the end of 1955 and 18,000 mi. of wire lines along 4,880 mi. of pole lines in the telegraph system. Forty-six radio broadcasting stations were listened to through an estimated 415,000 radio sets.

Trade.—The total export trade of the islands in the calendar year 1955 totalled \$419,255,000. The ranking items comprised copra \$120,960,000, sugar \$103,900,000, minerals and metals \$49,340,000, logs, lumber and timber \$44,000,000, abacá \$27,770,000, coconut oil \$16,100,000, desiccated coconut \$12,050,000, embroideries \$10,900,000, pineapple \$5,500,000, copra meal and cake \$4,240,000, the above categories amounting to almost 95% of the total export value. The import trade totalled \$536,340,000, resulting in another unfavourable balance. The ranking items were textiles \$135,320,000, petroleum products \$53,830,000, machinery \$52,170,000, electrical products \$42,845,000, metal manufactures \$39,140,000, transport equipment \$38,050,000, grains and products \$35,110,000, dairy products \$27,180,000, paper and products \$33,630,000, chemicals and drugs \$22,380,000, the above categories amounting to 87% of the total import volume. During the year the United States took 59.6% of Philippine exports and supplied 65% of its imports. Japan took 15.2% of the exports and supplied 7.9% of the imports.

Agriculture.—Land cropped during the 1955-56 crop year amounted to 16,000,000 ac. Rice harvested totalled only 6,560,000 ac., significantly less than during the previous year, partly because of poor weather conditions. Maize totalled 3,450,000 ac., coconuts 2,445,000 ac., fruits and nuts 833,000 ac., root crops 675,000 ac., sugar cane 662,000 ac. and abacá 538,000 ac. The index of agricultural production reached 126 against a 1952 base of 100. Livestock figures on Dec. 31, 1955, indicated water buffalo 3,109,000, cattle 824,000, goats 423,000, horses 233,000, sheep 22,400, pigs 5,700,000 and chickens 47,577,000. An estimate indicated 5,900,000 persons directly employed in agriculture, producing \$1,638,000,000 in national income.

Manufacturing.—The manufacturing index increased to 143 against a 1952 base of 100. Total "factories" were 11,800, but detailed data were

unobtainable, though an estimate indicated 2,507,000 workmen were employed in all phases of manufacturing, and other data indicated \$1,482,000,000 in national income from all types of manufacturing.

Mining.—The index of mining production stood at 149.1 for 1955 against a 1949 base of 100. Data for the calendar year 1955 showed production of gold at 419,000 oz., silver 502,000 oz., copper 17,461 metric tons, manganese 11,912 metric tons, chromite 595,000 metric tons, iron ore 1,432,000 metric tons, coal 130,200 metric tons and lead 2,318 metric tons. (J. E. Sp.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Philippines* (1955).

Philology: see ARCHAEOLOGY.

Philosophy. The trends that had characterized philosophy activity since World War II continued throughout 1956 without important interruption or alteration. In the face of a continuing resurgence of metaphysical writing, there was the same strong positivistic inclination of those who tend to identify knowledge with *scientific* knowledge, whose distrust of metaphysics and speculation has given contemporary thought much of its distinctive quality. There was the same interest, nevertheless, in the re-examination of the foundations of moral philosophy in the hope of discovering some escape from the value relativism that denies the possibility of moral absolutes and insists that there can be no science of ethics. In particular, much attention was given to the nature of the moral judgment and its analysis from the standpoint of emotive language. There was the same increasing interest in religion as a personal, social and cultural phenomenon, while the subject matter of religion, its history and literature and the critical examination of its basic ideas had obviously achieved a secure academic acceptance in institutions of higher learning.

Existentialism, the European-born philosophy that takes its stand on the hard facts of the human predicament, if not still increasing in general popularity, was in 1956 quite certainly enjoying its newly achieved academic respectability and was exerting extensive influences on the intellectual life especially of western nations. The major work of the French existentialist Jean Paul Sartre was published in English translation by Hazel E. Barnes as *Being and Nothingness: an Essay on Phenomenological Ontology*. Partly as a result of the impact of existentialism, the year saw a continued increase in philosophical research and writing relating to psychoanalysis and depth psychology.

The perennial problem of the nature of time was treated from the standpoint of physical or "real" time in a posthumous publication of the German-American logician and philosopher of science Hans Reichenbach, *The Direction of Time*. Reichenbach's work was oriented in terms of recent developments in mechanics, thermodynamics, quantum theory and macrostatistics. A leading philosopher of science, the Harvard physicist P. W. Bridgman, added to his already impressive fund of philosophical stimulants his *Reflections of a Physicist*, a volume of essays concerned with such diverse themes as operational analysis, freedom, time, cosmic inquiry and the social responsibility of scientists. P. J. Chaudhury published *The Philosophy of Science* in Calcutta, India, which promised to be of special interest to occidentals as a leading eastern treatment of fundamental scientific concepts. A volume of essays by the Polish-American mathematician and logician Alfred Tarski was edited by J. H. Woodger with the title *Logic, Semantics, Mathematics: Papers from 1923 to 1938*. *Intuitionism* by A. Heyting of Amsterdam, Neth., dealt with intuitive proof in mathematics.

In the philosophy of religion, an outstanding event was the publication of the British philosopher H. J. Paton's Gifford lectures, *The Modern Predicament*, which were delivered earlier at the University of St. Andrews, Scot. Paton described the modern predicament as the need to reconcile religious belief and empirical knowledge. The German-American philosophical theologian Paul Tillich, who has through his existentialist theology

contributed greatly to the intellectual foundations of the current resurgence of biblical religion, published an extensive essay on *Biblical Religion and the Search for Ultimate Reality*. A source of considerable controversy, ethical and political as well as religious, was *Secularism Is the Will of God* by Horace M. Kallen, who has over many years been a vigorous and effective advocate of pragmatic humanism, both as an opponent of traditional theism and as a foundation for a democratic society. *Reinhold Niebuhr, His Religious, Social, and Political Thought*, edited by Charles W. Kegley and Robert W. Bretall, was an important document in contemporary philosophy, being a critical examination, by various authors, of the theology and social philosophy of an influential Protestant theologian and religious leader.

A major event in moral philosophy was the publication of the 1954 Woodbridge lectures by the celebrated American philosopher C. I. Lewis under the title *The Ground and Nature of the Right*. *Christian Ethics and Moral Philosophy* by George F. Thomas was a detailed analysis of the philosophical, theological and anthropological bases of the Christian concepts of virtue and moral right and duty. Herbert W. Schneider's *Three Dimensions of Public Morality* dealt with the interdependence of liberty, equality and fraternity.

The philosophy of history, given new life in recent decades by the work of Oswald Spengler and Arnold Toynbee, continued to arouse the interest of scholars and laymen, both in speculation on the nature and implications of large-scale historical processes and in critical analysis of the assumptions and methodological principles of historians themselves. The Gifford lectures of the German theologian Rudolf Bultmann, published as *History and Eschatology*, analyzed European thought on the nature of history from the viewpoint of fundamental Christian concepts. In England Geoffrey Barraclough's *History in a Changing World* was a critical commentary on the usual assumptions and methods in the treatment of history. The Dutch historian Pieter Geyl analyzed the historical perspectives of the present in his *Use and Abuse of History*.

Of quite special interest to those interested in fundamental, social and cultural issues was a report by Richard McKeon of the University of Chicago, published by *The Journal of Philosophy* in January, of round-table discussions conducted on the subject of "Human Relations and International Obligations." The discussions were held under the auspices of UNESCO (the United Nations Educational, Scientific and Cultural organization) in 1954 in India and in 1955 in the United States.

Among important works in metaphysics, concerned with the theory of reality and the analysis of the most fundamental assumptions in thought, was *The Structure of Metaphysics* by Morris Lazerowitz. In opposition to the general trend toward fragmentation in the treatment of philosophic problems, as well as to the multiplication of specialized movements, was Morton White's *Toward Reunion in Philosophy*, treating metaphysical, ethical and logical issues. Analytical philosophy, which has for several decades flourished especially in Great Britain, was given a generous expression in *Essays in Conceptual Analysis*, edited

Antony Flew. Indicative of a growing concern for the aims of education, the *Harvard Educational Review* published a symposium on the philosophy of education which presented the views of a large number of leading U.S. philosophers on current fundamental issues in educational theory and practice.

An important contribution to the literature of the history of philosophy was *The Philosophy of Jonathan Edwards*, edited by Harvey G. Townsend, which presented important and previously unpublished material from the notebooks of the greatest of America's colonial philosophers. Marking the centennial anniversary of America's foremost metaphysician, Josiah Royce, *The Journal of Philosophy* published a memorial issue of several ana-

lytical essays on Royce's philosophy. A major contribution to intellectual history was *Faith, Trinity, Incarnation*, vol. i of *The Philosophy of the Church Fathers* by the distinguished Harvard scholar, Harry A. Wolfson, dealing with the early philosophers of the Christian church and the relevance to their thought of Aristotelian, Stoic, Neoplatonic and Gnostic ideas. Vol. v of the monumental *History of Indian Philosophy* by the Hindu philosopher S. Dasgupta dealt with the schools of Saivism of southern India. *Plato's Philosophy of Mathematics* by Anders Wedberg made its appearance in Stockholm, Sweden.

Of interest especially to scholars was the announcement by the International Institute of Philosophy of an international *Bibliography of Philosophy*, a quarterly bulletin to be published in Paris with its content beginning Jan. 1954. *The Bibliographia Philosophica 1934-1945*, edited in two volumes by G. A. DeBrie, was published in Utrecht, Neth., under a grant from UNESCO, presenting an exhaustive bibliography for the history of philosophy and philosophical literature in all its branches. The first 4 volumes of a projected monumental philosophical anthology of 15 volumes had been published in Milan, It., under the editorship of Carlo Margorati, with the general title *Grande antologia filosofica*.

Among new philosophical publications were *Zeitschrift für Mathematische Logik und Grundlagen der Mathematik*, an international journal of mathematical logic.

The fourth Inter-American Congress of Philosophy and the first Congress of the Inter-American Federation of Philosophical Societies were held in July in Santiago, Chile, the sessions being directed to the theme, "Philosophy in the Contemporary World." The third International Congress of Aesthetics convened in Venice, It., in September. (S. M. Mc.)

Phosphates: see MINERAL AND METAL PRODUCTION AND PRICES.

Photography. Photography continued its steady progress through 1956 with important refinements in products and processes. There were no basic innovations, but many improvements and production of the basic products kept the industry and photographers active.

All the major manufacturers reported increased 1956 sales over the previous year, ranging from about 3% to 12%. The Eastman Kodak company's sales total of \$325,110,431 during the first half of 1956 represented a 2.9% increase over the same period in 1955. The Polaroid corporation reported a 12% gain in sales for 1955 over 1954, with a sales figure of \$26,420,723. The photographic sales increase during the first half of 1956 averaged close to a 7% gain over the same 1955 period in the United States.

Germany and Japan were the principal producers of photographic products outside the United States. Japan produced 1,071,600 still picture cameras in 1955, an increase of 9.2% over 1954. Approximately 40% of all Japanese photographic production was exported; 57.5% of this was sold to the U.S. military forces and foreign travellers in Japan; 21.1%, valued at \$2,090,015 in 1955, went directly to the United States, 2.8% to Canada and the balance scattered to other countries. During the first nine months of 1955 west Germany produced 2,425,886 still cameras, about 10% more than during the comparable period of the previous year, and exported 1,861,109 still picture cameras during the first 11 months of 1955, or an increase of 8.2% over the same 1954 period.

The west German photographic industry accounted for 69% of the U.S. photographic imports in dollar volume during 1955. A total of 1,274,591 still cameras valued at more than \$37,337,000 were imported into the U.S. from all sources during 1955.

Still picture photographic goods amounted to \$41,831,922 in exports from the United States during 1955, more than 15% higher than 1954. A survey showed that the 35-mm. camera was far ahead as the best seller in retail stores in the U.S.; approximately 60% of all colour film sales were for 35-mm. cameras.

Sensitized Products.—Films continued to appear in various forms and sensitivities. Eastman Kodak company produced improved emulsions for their Panatomic-X and Plus-X films that were claimed to be faster and finer-grained. There was a better dispersion of silver in the emulsions, and as a result less scattering of light by the silver grains to give more sharply defined shadow and high-light areas. The new Panatomic-X emulsion with an ASA daylight rating of 25 gives extremely fine grain and greater exposure latitude. The 35-mm. Plus-X film has an ASA daylight rating of 80.

Film manufacturers in 1956 made special efforts to cater to the users of miniature cameras. There was a continued demand for the finest-grained films, such as Adox and Panatomic-X, to the ultra-speed emulsions such as Tri-X. In line with the demand for high speeds, du Pont SX Pan roll film was available in 35-mm. and 70-mm. and other professional roll sizes. It had an exposure index of 320 daylight, relatively fine grain and a panchromatic emulsion with high red sensitivity. Effective exposure indexes of 1,000 and greater were possible with extended development to make this film ideal for existing-light photography.

Toward the end of the year du Pont Superior 4 Panchromatic motion-picture film was available in 16 mm. and 35 mm. with an exposure index of 320 daylight and 250 artificial light. This film was recommended for use in situations calling for a minimum of illumination, as in recording data from instrument dials in jet and rocket propulsion testing. This new film has good resolution and minimum grain for a fast emulsion.

Du Pont 834 TV recording film for 16-mm. and 35-mm. kinescope recording and also for economical reversal duplicating uses was available in Sept. 1956. Its speed permitted sharper TV recordings through a reduction of kinescope tube intensity. An orthochromatic Kodak Gravure Copy film was introduced for making continuous-tone copy negatives.

Kodak Royal Ortho film was an important introduction for the fields of industrial, portrait and commercial photography. With a daylight exposure index of 200, this film was intended to widen the possibilities of an orthochromatic film with high speed. Kodak Verichrome Pan was another new film, replacing the well-

known orthochromatic Verichrome film that was first introduced in 1931. The new Verichrome Pan has the advantage of being panchromatic and faster, thus extending the range of picture-taking possibilities for the former users of Verichrome. Verichrome Pan has a daylight exposure index of 80.

Polaroid Land Projection film, with an exposure index rating of 1,000, opened the way for many new photographic uses. With the Land 60-second camera, finished pictures on transparent film could be made ready for projection in one minute. The extremely fast emulsion permits exposures in poorly illuminated places without additional booster lights. Still another advantage was the possibility of using the smallest apertures in the camera shutter to get a maximum depth of field and sharpness in the picture. This is of special importance when projected onto a large screen.

Eastman Television Recording Safety film, available in 16 mm. and 35 mm., has greater definition and speed, improved gray scale and a spectral characteristic suitable for improved TV recording purposes.

Colour Photography.—Few really new products for colour photography appeared in 1956; most of the new materials which became available were additional types of basic processes which first appeared in 1955.

The new Ektachrome process E-2 film which was introduced in 1955 later became available in a variety of sizes and colour balance characteristics. Originally offered in 35-mm. size and daylight balance only, this film was recently offered in a new tungsten balance, type F, adjusted for a light quality of 3,800° K. corresponding to flash lamp illumination. Also made available were several roll film sizes in both daylight and type F sensitivity.

As a result of a consent decree signed by the Eastman Kodak company, the firm ceased to offer Kodachrome film with the cost of processing included in the purchase price. In addition, Kodak made available processing information and equipment so that independent firms could undertake to process Kodachrome film. The user was given the option of specifying either Kodak or independent processing when sending film to a dealer for processing.

Coincident with this change in processing, Kodachrome film was offered in 35-mm. miniature camera rolls in three types of sensitizing—daylight, type A (for 3,400° K. illumination) and type F (for 3,800° K. illumination). As 16-mm. and 8-mm. motion-picture films, it was available in daylight and type A sensitizing only.

A new Kodachrome Duplicating film for 16-mm. motion pictures was introduced in 1956. This type of film has unusual construction in that it carries a reversal colour image and a negative-positive sound track. Thus, unlike previous 16-mm. colour print films, in which the original image to be copied must be a positive both for picture and sound track, this film requires a positive picture and a negative sound track for printing. The final film contains a dye image in the picture area and a silver image sound track for optimum quality in each.

Anso, having made the first Anscochrome high-speed colour film available in 1955, added a variety of sizes and sensitivity types during 1956. This high-speed colour film was available in 35-mm. miniature film in daylight and flash type (for light of 3,800° K. quality). Both types were also offered in standard roll film sizes. Professional sheet films were available in daylight and tungsten (3,200° K.) balance, and 16-mm. motion-picture films in daylight and tungsten (3,400° K.) emulsions.

Colour Negative Films.—Several new colour negative films were introduced by Kodak during 1956. The new Kodacolor type CU appeared to be the first colour film available that was not specifically balanced for a single light source. The emulsion of this film has sufficient latitude to allow exposure by either day-

SHELL X-RAY PHOTOGRAPH of the chambered nautilus showing the detail of the inner structures, one of a series prepared by a student technician at the University of North Carolina Memorial hospital. The photographs were awarded first prize at a 1956 radiological conference

light or clear flash (3,800° K.) illumination without compensating filters. By control of printing conditions, the resulting negatives can be printed on Kodak Color Print Material type C, and results in correctly balanced images regardless of the original light source used.

Late in 1956 a sheet film colour negative was offered to supplement the former Ektacolor Professional Film type B. The new film, known as Ektacolor type S and balanced for daylight, was specifically intended for short exposure work ($\frac{1}{25}$ second and shorter), thus making it useful for electronic flash exposures as well. It has a fairly high emulsion speed, daylight exposure index 25 and built-in colour correction masks, similar to those in all Eastman colour negative films.

Another Eastman negative colour film introduced in 1956 was the Eastman Color Internegative film in motion-picture sizes of 16 mm. and 35 mm. It was specifically intended for making colour negatives from positive colour originals, especially those made on Kodachrome Commercial film. The resulting "dupe" negative can then be printed on Eastman Colour Print film in either the 16-mm. or 35-mm. size.

Eastman Kodak company announced to the television industry information about an embossed or lenticular film suitable for colour TV recording. By means of either colour filter separation or electrical and geometrical separation, light representing red, green and blue is passed through small embossings or lenticles on the base side. The subject is recorded as adjacent, but separate, images on a black-and-white film emulsion. Conventional black-and-white film processing is used, and by additive projection a composite colour image can be created on a screen or on the TV system. Equipment for using this lenticular film was made by the Radio Corporation of America and installed in the new National Broadcasting company plant in Burbank, Calif., during the fall of 1956.

Lighting.—An improved peanut-size flash lamp, the Power-Mite M2, with a light output of 7,000 lumen seconds, was developed by General Electric; a new blue bulb of the same size was also available with 5,500 lumen seconds output.

Sylvania Electric Products Inc. developed a new light source, the RF lamp, powered by radio high-frequency energy. Originally developed to meet film printing problems, the new light also found applications in colour television, medical research and other uses where a concentrated light source is required.

General Electric introduced its new Low-Contour projection lamp to operate on its side for low-contour projectors. It operates at cooler temperatures and ensures a long projection life.

Motion-Picture Photography.—The Bell and Howell company introduced the first fully automatic movie camera, the model 200-EE 16-mm. magazine-loading camera. An electric eye automatically adjusts the lens iris to varying indoor or outdoor light conditions to maintain perfect exposure, even for pictures of an object moving from light into shadow. A warning flag in the view finder signals when the light is not sufficient for good movies. Current for the photoelectric cell and the motor that moves the iris is supplied by six tiny mercury cell batteries that have a life of one year or more. The 200-EE has a 20-mm. f/1.9 lens in a focusing mount, accessory telephoto and wide-angle lens attachments. All the photographer must do is focus and press the shutter release to start the camera operation.

Bell and Howell also produced the 16-mm. model 70-DR with a coupled view finder and lens turret. When rotating the lens turret each corresponding view finder objective is automatically repositioned, eliminating the possibility of a user's forgetting to rotate the view finder when changing lenses. This firm also introduced the 16-mm. model 200-S Auto Load camera with Sunomatic lens. The lens is set according to a written plate on the camera indicating the outdoor lighting such as: bright sun, hazy

MANHATTAN ISLAND seen from three miles up, a photograph taken from a U.S. military reconnaissance plane in 1956

sun, light shade, cloudy dull or very dull.

The Cine-Kodak K-100 Turret camera was introduced, featuring three Kodak Ektar lenses together with matching view finder lenses on the same turret. As each lens is turned into position the appropriate view finder lens automatically moves into place. The camera can be loaded with 50- or 100-ft. rolls of 16-mm. film. A new line of Kodak 8-mm. Brownie movie cameras was available with various combinations of lenses.

A new model 16-mm. motion-picture projector, the Kodascope Analyst II, permits detailed study of films at speeds ranging from 5 to 24 frames per second. This projector facilitates specialized analysis of athletic films and enables industry to carry on more detailed motion and methods studies. Kodak also introduced a new Brownie 8-mm. movie projector with 500-watt lamp and improved 16-mm. Kodascope Pageant sound projectors.

Bell and Howell also had a number of new 8-mm. and 16-mm. motion-picture projectors. The Filmosound Specialist gave increased sound volume and distribution for large audiences. A 1,000-watt concentrated filament lamp is used. There was also the new 18-mm. Filmosound 385 with increased volume and a 1,000-watt projection lamp. The Filmosound 302 16-mm. optical-magnetic recording projector was of interest to amateur movie

makers, business, industry and schools for making low-cost sound movies by recording voice and music directly on the striped film as it is projected on the screen.

Bell and Howell developed a new fully automatic 2-by-2-inch slide projector known as the TDC-Robomatic. The projector, operated by remote control or manually either in forward or reverse, would show 30 slides at intervals ranging from 5 seconds to $1\frac{1}{2}$ minutes according to the setting.

(See also ELECTRONICS; MOTION PICTURES.) (W. D. MN.)

Physics. Further information was gained during 1956 about the antiproton, and confirmatory studies established the existence of the neutrino. There was continued effort and interest in the construction of the large accelerators with which particles may be carried to high energies.

The barrier between Soviet physicists and those of the western countries showed signs of disappearing. A conference on nuclear physics was held in Moscow in May, with many physicists from the United States and western Europe in attendance, and there was praise from western scientists for the high level of Soviet scientific work and equipment. A group of physicists from the U.S.S.R. participated in an international conference on high-energy accelerators at the University of Geneva, Switz., in June, and in April three Soviet nuclear physicists took part in the annual high-energy physics conference of the University of Rochester, N.Y.

Discussions continued on the effects on mankind of radioactive debris from nuclear explosions. A report issued in June by the National Academy of Sciences of the United States emphasized the damaging genetic effects of accumulated exposure to radiation, but stated that nuclear weapons tests had not yet created any world-wide radioactivity hazard. There were differences of opinion on the effects of nuclear explosions, since geneticists pointed out that any increase in radiation levels is genetically undesirable. The Federation of American Scientists, in June, urged the United States government "to declare publicly its support for a world-wide ban on further tests of nuclear weapons."

In the United States and in Great Britain there were insufficient physicists for the available openings in research and teaching. The number of secondary school teachers of physics was notably inadequate, and also in the United States many small liberal arts and teachers' colleges were not able to appoint adequately trained physics instructors to their staffs.

Antiproton and Neutrino.—Artificial production of antiprotons (particles of the same mass as the proton, but with a negative charge equal in magnitude to the positive charge of the proton) had been achieved in the previous year at the University of California, Berkeley. The California group consisting of O. Chamberlain, E. Segre, C. Wiegand and T. Ypsilantis produced antiprotons on interaction of a proton beam from the Berkeley bevatron with the atomic nuclei of a copper target. A minimum beam energy of 4,200,000,000 ev was required for production; antiprotons appeared in increased number as the bevatron beam energy was increased to 6,200,000,000 ev.

During the year the California workers extended their antiproton work, and succeeded in making a quantitative measurement of the interaction cross section of antiprotons with matter. Roughly, the cross section is the effective geometric area which the particle presents to other particles in an interaction. Antiprotons, passing through a target, may interact either by being annihilated or by being scattered by atomic nuclei of the target. Measurements of interaction were made with an antiproton beam and targets of copper and beryllium. For both materials the antiproton interaction cross section was found to be twice that of the interaction cross section of protons, with an estimated experimental error of about 15% in the measurements. This result

could mean either that the antiproton presents a radius twice as large as that of the proton, or that the forces involved are such that atomic nuclei are effectively twice as large for antiprotons as for protons.

In 1953 C. L. Cowan, Jr., and F. Reines of the Los Alamos Scientific laboratory, N.M., had found evidence for the existence of the neutrino by studying the presumed neutrino flux coming from the Hanford, Wash., nuclear reactor. Their results were not, however, as free from experimental uncertainties as would be desired, and during 1956 they successfully carried out a new series of observations. The existence of the neutrino, which is a particle that carries energy and momentum but is without charge and virtually without mass, had been indirectly inferred from several lines of physical evidence.

Reines and Cowan, joined by F. B. Harrison, H. W. Kruse and A. D. McGuire, carried out their new experiments at the reactor of the Savannah River plant of the U.S. Atomic Energy commission. As before, they detected the neutrino by observing the positrons and neutrons produced by the interaction of neutrinos with protons. Their results clearly indicated that neutrinos were produced in the nuclear processes of the reactor, and all attempts to show the neutrino effects to be spurious tended to confirm the presence of neutrinos. The measurements indicated that the cross section of a neutrino for the interaction with a proton is of the order of 6×10^{-44} cm². Since most nuclear reactions have cross sections which are about 10^{20} times larger, it is apparent why the neutrino is so relatively difficult to observe by means of an interaction.

Accelerators.—Work in high-energy physics continued to be perhaps the central theme of contemporary physics.

There was strong interest in pushing upward the energies of accelerators, so as to give greater possibilities for exploring the production and interaction properties of elementary particles. In the United States, plans were announced for a 3,000,000,000-v. proton accelerator at the Forrestal Research centre of Princeton university, and for a 6,000,000,000-v. electron accelerator to be constructed jointly by Harvard university and the Massachusetts Institute of Technology. These accelerators would compare in energy with the bevatron accelerator at the University of California and the cosmotron of the Brookhaven National laboratory, Upton, N.Y. An accelerator that would carry particles to 25,000,000,000 v. was under design at the Brookhaven laboratory. The Argonne National laboratory, Lemont, Ill., initiated planning for a 15,000,000,000-v. accelerator, and the Mid-West Universities Research association (M.U.R.A.) worked on problems associated with constructing an accelerator that would give particles of at least 25,000,000,000 ev of energy. In the U.S.S.R. a 10,000,000,000-v. accelerator was nearing completion, at a laboratory near Moscow, and plans were being made for an accelerator in the 50,000,000,000- to 60,000,000,000-v. range. The European Organization for Nuclear Research (C.E.R.N.) began construction of a 25,000,000,000-v. accelerator at Geneva, Switz.

The M.U.R.A. design group considered an interesting new possibility in their accelerator plans. Customarily, bombarding particles from an accelerator strike target material which is at rest in the laboratory. If, however, both the target nuclei and the bombarding nuclei could be accelerated and then be brought to collision from opposite directions, there would be a large gain in the interaction energy effective for the creation of new particles. Such a "head-on" collision of two beams of particles would require high beam intensities, and the number of interactions per unit of time would in any event be far less than when the bombarding beam strikes the dense concentration of nuclei in a target block of solid matter. The two beams might be produced in two distinct accelerators. But the novel proposal was also made that particles after being accelerated to their ter-

minal energy be "stored" momentarily by being placed in a magnetic field where they would move in a closed orbit without loss of energy; pulses of particles from a single accelerator could be stored in two magnetic fields, with motions in opposite senses in the two fields, and then be deflected into collision paths.

Controlled Fusion Reactions.—The hydrogen bomb involves the bringing together of nuclei of light atoms, as hydrogen, helium or lithium, with resultant formation of heavier atoms and immense energy release. Such a fusion reaction will occur only at extremely high temperatures, of many millions of degrees; in the hydrogen bomb an "ordinary" uranium fission bomb is used as a trigger that raises the hydrogen bomb temperature to the point where fusion ("thermonuclear") processes will begin.

The problem of setting up a controlled thermonuclear reaction which will give usable power is clearly a difficult one, since a reaction must be maintained at temperatures at which any ordinary chemical material will be completely destroyed. Two statements made during the year, and reported in the Sept. 1956 issue of the *Bulletin of Atomic Scientists*, described an approach to the problem that was being followed in the United States and in the Soviet Union. These statements were made by the U.S. physicist Edward Teller, at a Physical society meeting in Chicago in June, and by the Soviet physicist Igor Kurchatov, at Harwell, Eng., in May. The essential idea in the approach is to confine the very hot gas, in which fusion should occur, within a "magnetic bottle." At the temperature of fusion processes the atomic nuclei have been stripped of their electrons, and are therefore positively charged particles, moving very rapidly. Any charged particle moving through a magnetic field is deflected in a curved path, the degree of curvature being proportional to the strength of the field for a given particle velocity.

With an immensely strong field it might therefore be possible to confine the hot plasma, as the gas of charged particles is called, within a prescribed spatial region, with fusion reactions and energy releases occurring in that region.

Negative Temperatures.—During the past few years the concept of negative temperature had been developed. N. F. Ramsey of Harvard university, who took a leading part in the introduction of this concept, published a summary paper on it in the *Physical Review* for July 1, 1956.

The ordinary temperature scale of physics runs from absolute zero, at which temperature all molecular and atomic motion effectively ceases, to temperatures of unlimited magnitude. Roughly speaking, the more energy that is given to the atoms of a system the higher is the temperature of the system. There are some specialized systems, however, in which there is an upper limit to the energy which can be given to the elements of the system, and for these systems states of negative temperature may occur.

Physicists have long referred to the degree of order among the elements of a system in terms of the "entropy" of the system; high degree of order means low entropy, increasing disorder means increasing entropy. (Checkers in regular array on a board have relatively low entropy, checkers scattered at random on a board have relatively high entropy.) Increased energy put into a system usually increases the disorder, and hence the entropy, of the system.

Quantitatively, the energy increment multiplied by the temperature at which the energy is given to the system is the entropy increase.

Suppose now that a system has a maximum degree of order (and zero entropy) at a base temperature. With increase in energy, disorder and entropy would increase for most systems; but for those unusual systems for which there is an upper energy limit energy increase may eventually bring entropy decrease, until

at the upper energy limit the system again has maximum order and zero entropy. Since entropy change is temperature multiplied by energy increment, the system must be at a negative temperature when it is in a state such that addition of energy gives a decrease of entropy.

The atomic nuclei of a crystal may form a system which can go into negative temperature states. These nuclei interact among themselves, and they may take up various spatial positions with respect to an external magnetic field. If all the nuclei have the orientation which corresponds to minimum energy, with respect to an external magnetic field, the system of interacting nuclei is completely ordered and at zero entropy; if energy is then given to the system until all the nuclei take up the orientation which corresponds to maximum energy, there again is complete ordering and zero entropy. At some intermediate state of disorder the system had maximum entropy, and it proceeded from that state to the one of maximum energy and zero entropy by being in states of negative temperature.

Some novel properties were predicted for systems when physical equations were applied, with negative values for the temperature. Ramsey and his colleagues, R. V. Pound and E. M. Purcell, as well as workers at a few other laboratories, experimentally studied systems of interacting nuclei in crystals at negative temperatures, and observed the expected properties. If a system is at a negative temperature of, for example, -100° , heat will flow from it to a system at -200° . That is, the lower the negative temperature, the colder the body, since heat flows from hot to cold. But also, heat will flow from a system at negative temperatures to a system at any positive temperature. Negative temperatures therefore must be taken to be hotter than positive temperatures.

States of negative temperature are clearly impossible for most physical systems, but the existence of special systems for which such states do exist gives a significant addition to the temperature concept.

Physiology. Serotonin.—Certain biological effects that were later attributed to serotonin were first recognized in 1884. Subsequent work resulting in isolation of the material, its chemical identification and some suggestions as to its possible physiological role was completed in 1949. Following this period, intensive research, reaching a high level in 1956, demonstrated that this substance has an important physiological role, and disturbances in its metabolism (the manner in which the material is used or handled by the body) can result in serious disease.

Serotonin is normally found in many animal tissues, and is present in greatest amounts in intestinal mucosa, blood platelets and the brain. The substance is formed by the action of an enzyme, present in almost all cells, on a precursor (hydroxytryptophan). The cells of different tissues have the ability, to different degrees, of either binding free serotonin or releasing serotonin from its precursor.

The effects of serotonin, as observed on isolated organs and tissues and on the intact animal, are multiple. A rise or fall in blood pressure may be produced depending on the experimental circumstances; the smooth muscle of the intestine is strongly contracted; respiration is at first depressed and later increased. The effects are so numerous that the basic mode of action is not completely understood.

The physiological significance of this substance is likewise

not completely understood. Because of its action on the smooth muscle of blood vessels and of the intestine, the suggestion was that it is active in stopping haemorrhage from a wound or may play some part in the regulation of blood pressure. Likewise, the control or regulation of intestinal muscular activity may be another possible function. The common occurrence of serotonin in glands indicates a possible role in relation to glandular secretion. However, investigations carried out in 1954-56 suggested that one of serotonin's more important functions is that of a neuro-hormone; *i.e.*, a substance that is concerned in the functional activities of nerve cells.

This concept arose from the observations that a definite antagonism exists between serotonin and lysergic acid, that serotonin can block transmission of the nerve impulse across a ganglion and that it inhibits the activity of peripheral nerves.

The antagonism between lysergic acid and serotonin was a recent demonstration and was important because of its possible relationship to mental disease.

Lysergic acid is a material which is obtained from ergot; it may also be produced, possibly, at some sites in the living organism. When administered in extremely small doses to human beings it produces the symptoms of a psychosis that almost exactly resembles the common mental disease schizophrenia. The interest in this observation lies in the fact that lysergic acid and serotonin have similarities in their chemical structure and also that lysergic acid in small amounts will antagonize the effects of serotonin on a test tissue such as the rat uterus. Since serotonin is normally present in brain cells, it is assumed that it has some normal role in the metabolism of the brain cell. Since lysergic acid has some chemical similarities to serotonin, it was suggested, as a working theory, that it is taken into the cell by some part of an intracellular enzyme system. Then, because it is not exactly the same chemically as serotonin, it blocks the normal utilization of serotonin by the cell. Thus the normal function of the cell is disturbed. In the case of the brain this results in a psychosis. This theory may assume that in these psychotic states lysergic acid or a similar substance is produced somewhere in the body as the result of some abnormal metabolic process. As Gaddum stated, "It is possible that serotonin in our brains plays an essential part in keeping us sane and that the effect of lysergic acid is due to its inhibitory action on serotonin in the brain."

This point of view was strengthened by the current idea as to the mechanism of action of some of the tranquillizing drugs such as Reserpine. This new drug had had excellent success in the treatment of several mental diseases including schizophrenia. It was shown that Reserpine, when given to an animal, brings about a release of "bound" serotonin in all tissues. Such "bound" serotonin is not free to exert its normal physiological effect. It was postulated that lysergic acid or a similar chemical substance may act to bind serotonin and that Reserpine acts to free or liberate it and relieve the psychotic state.

It was stated above that serotonin might have a role in the regulation of blood pressure. Some investigators suggested that some forms of hypertension may be the result of an increased serotonin activity. They therefore prepared several compounds similar in chemical structure to serotonin but differing from it in some slight fashion. They hoped to find a compound which would compete with serotonin in the cells of the smooth muscle of the arteries as lysergic acid competes with serotonin in the brain. Several compounds were prepared. Some of these produced mental symptoms as did lysergic acid. However, one (1 benzyl-2,5 dimethylserotonin) prevented the blood pressure rise produced by serotonin but did not produce mental symptoms. A clinical trial of this substance in patients with high blood pressure was reported to have brought about a reduction in blood pressure.

Thus, another possible role of serotonin was suggested.

Regulation of Blood Cholesterol.—Cholesterol, although a normal constituent of the diet and of human tissues, is on occasion deposited in the inner lining of small blood vessels and thus slows or occludes the flow of blood through them. It is, therefore, concerned in high blood pressure, heart disease and probably some forms of kidney disease.

The nature of the diet has a definite influence on the metabolism of cholesterol. Thus in countries with high standards of living, where the diet includes much animal fats, butter, eggs, etc., the incidence of diseases involving the heart, blood vessels and kidneys is high. In population groups in which these more expensive dietary items have been absent, these diseases are relatively rare.

Since it is impossible to change the dietary habits of large groups of people, research was directed toward obtaining an understanding of cholesterol metabolism. Previous attempts to reduce high levels were low fat diets, thyroid hormone, vegetable sterols and large doses of female sex hormone. For various reasons these methods were not completely successful.

Recent human dietary experiments showed that the nature of the fat in the diet rather than total amount is the important factor resulting in high blood cholesterol levels and eventual deposition in vital tissues. Thus, a diet high in cholesterol and also in animal fat (containing mainly saturated fatty acids) caused elevation in blood cholesterol levels, whereas the same diet containing vegetable oils (mainly unsaturated fatty acids) did not cause such a rise.

This fact may also explain why those populations such as the Italians and Greeks, whose fat intake is largely of vegetable origin (olive oil), and the Japanese (fish oils) have low blood cholesterol and little cardiovascular disease.

Another recent observation pointed to a possible means of controlling the blood cholesterol in persons with elevated levels and thus preventing future artery disease. In a group of investigations an emulsion of fat was injected into veins of patients with high blood cholesterol levels (600 mg. %; normal 250 mg. %). The cholesterol fell during a seven-day period to a normal level. These results were unexpected and were being investigated further.

Another group of investigators was able to reduce significantly the blood cholesterol level in patients with elevated levels by giving large doses of nicotinic acid over a period of 12 weeks. Nicotinic acid is one of the B-complex vitamins normally needed to prevent pellagra. The amounts used in this investigation, however, were much in excess of the normal nutritional needs.

Synthesis of a Pituitary Hormone.—An important phase of physiology is the nature of regulation of bodily function by the secretion of the endocrine glands.

This area of knowledge is always greatly broadened when the secretion of an endocrine gland is precisely identified chemically and especially when it becomes possible to synthesize it.

Extracts of the posterior pituitary gland have yielded two active hormonal fractions. One, oxytocin, caused contraction of the smooth muscle of the uterus. The other, vasopressin, caused contraction of the smooth muscle of the small blood vessels. This fraction also has the ability to regulate, by reducing the volume, the output of urine by the kidney. The latter effect is the only established physiological function of the posterior pituitary hormones.

Oxytocin had been synthesized some time previously. Vasopressin was recently synthesized. Vasopressin, like oxytocin, consists of eight amino acids linked together in a series of ring structures. Six of the amino acids in oxytocin were identical with those in vasopressin. Vasopressin contained two different amino acids.

The synthetic hormone was found to be identical in its physiological effects to the natural hormone. (R. C. I.)

Pickersgill, John Whitney (1905–), Canadian politician and federal cabinet minister, was born on June 23 at Wyecombe, Ont. He was educated at the University of Manitoba and at Oxford and Paris universities. He was a lecturer in history at Wesley college, Manitoba, 1929–37. In 1937 he became third secretary in the department of external affairs, Ottawa, but was almost immediately attached to the office of Prime Minister William Lyon Mackenzie King. He was appointed private secretary to the secretary of state for external affairs, 1942, special assistant to the prime minister, 1945, clerk of the privy council and secretary to the cabinet, 1952. He was appointed secretary of state in June 1953 and in August that year was elected member of parliament for Bonavista-Twillingate, Nfd. In 1954 he was appointed minister of citizenship and immigration.

In March 1956 Pickersgill delivered an important policy speech in Ottawa on the future of the Canadian Indians, pointing out that "today the Indian population of Canada without any immigration is increasing faster than the rest of the population with the very considerable addition resulting from immigration." "I do not believe that any Canadian should be fully satisfied with our Indian policy until the day comes when all the Indians . . . have been integrated with the rest of the population," he said, adding that Indians had been encouraged to seek enfranchisement.

Among important immigration activities he directed during 1956 were the liberalization of selection criteria applicable to immigrants, placing emphasis on suitability and adaptability of applicants rather than occupational skill; and the extension of the assisted passage loan scheme to dependents of immigrants, to foster movement of family units and to facilitate reunion of families with heads of families already in Canada.

Pittsburgh. Pittsburgh, Pa., voters approved the city's physical redevelopment program in 1956 by authorizing a \$30,000,000 bond issue as part of a \$43,000,000 program to assure rehabilitation of the city's water system, extensive street repaving and sewer reconstruction, extension of parks and recreation and other projects.

The eastern section of the Penn-Lincoln parkway was completed to within two miles of the Golden Triangle. With piers in place for a double-decked bridge over the Monongahela river, construction of a toll-free tunnel to carry Penn-Lincoln parkway traffic under Mt. Washington to the completed western section of the route was due to start early in 1957.

In Gateway Center, the Bell Telephone company began construction of an administration building, a state office building neared completion, construction of a \$15,000,000 Hilton hotel was assured and plans for a 750-car underground parking garage were projected by Equitable Life Assurance society.

Redevelopment of the populous Hill district, east of the central business district, was begun. The Urban Redevelopment authority began acquisition of 92 ac. and razing of 1,300 buildings to permit major street relocations and erection of a \$14,000,000

municipal auditorium, scheduled for completion in 1959. Construction advanced on an \$80,000,000 sewage disposal system.

The University of Pittsburgh purchased the contiguous 200-room Schenley Park hotel and the 238-family Schenley apartments for use as dormitories and as a student centre.

Manufacturing employment in the Pittsburgh district averaged less than 1% lower during the first eight months of 1956 than in the same period a year earlier and 2% lower than in the same period of 1954. Estimated total employment in the district was less than 1% above 1955 and 2% below 1954.

The Bureau of Business Research of the University of Pittsburgh estimated the value added by manufacturing in 1956 in the four-county Pittsburgh area to be about \$2,100,000,000 and the total value of products manufactured in the area to be about \$4,800,000,000.

Population (1950 census) was 676,806; area, 55.49 sq.mi. Local government total budgets: city, \$48,417,564; Pittsburgh school district, \$26,236,158; Allegheny county, \$39,499,983. City real estate tax rates were: land, 34 mills; buildings, 17 mills. The school tax rate was 13½ mills on all real estate; county, 9½. Assessed taxable real estate valuation in the city was \$1,115,996,148 and in Allegheny county, \$2,733,532,972. Bonded indebtedness as of Jan. 1, 1956, was: city, \$47,292,300; school district, \$12,106,000; Allegheny county, \$100,390,000. Enrolment in public schools was 75,624; in Catholic parochial schools, 47,388. David L. Lawrence served his 11th successive year as mayor of Pittsburgh.

(C. F. Ls.)

Pius XII (1876–), the 262nd successor of St. Peter in the see of Rome, was elected by the cardinals in conclave on his 63rd birthday, March 2, 1939, and was crowned as pope on March 12. (See ENCYCLOPEDIA BRITANNICA.)

Happily recovered from the grave illness he had suffered during 1954, Pope Pius XII broadcast his Christmas message from the Vatican on Dec. 24, 1955. In recent years, the pope had repeatedly warned humanity of the dangers to which the armaments race could lead. In his Christmas message, the pope went further and indicated three measures that should be taken to avoid disaster. The three points, avowedly parallel to proposals made in the United Nations, were: cessation of atomic weapon experimentations, renunciation of the use of atomic weapons and general inspection and control of atomic energy. The "sum total" of these measures, said the pope, is "an obligation in conscience of nations and of their leaders."

On March 2, 1956, Pius XII celebrated his 80th birthday and the 17th anniversary of his election to the papacy. When the erect and vigorous figure of the pope appeared at a window of the Vatican palace to impart his blessing, he received the respectful and affectionate homage of the faithful kneeling by the thousands on the cobbles of St. Peter square. Two days later, in the course of an audience for the diplomats of the 45 nations accredited to the Holy See, the pope said that the real hope for peace lies in the recognition that "man is first of all a spirit created in the image of God" with the right of self-rule and the right of family, property, a livelihood and local and national security. He added that a spirit of self-sacrifice rather than of selfishness and a willingness to accept arbitration and compromise rather than to stand on unreasonably obstinate positions, are also necessary for men and nations if peace is to be achieved.

On April 1 in his Easter message given before the tens of thousands again massed in St. Peter square, Pius XII once more warned of the dangers toward which mankind is hurtling. He asked for light and strength from the risen Saviour of mankind "for those who control the destinies of nations."

The deep concern felt by the pope for the tragic events in eastern Europe and the dangerous situation prevailing in the

middle east found expression in three encyclicals issued within ten days. On Oct. 28 he called on the Catholic world to pray for peace "based on justice," to end "so much shedding of blood" in eastern Europe and especially in Hungary. On Nov. 1 he repeated his call to the nations to be cautious of venturing "onto the steep slope of violence." Then four days later Pope Pius XII, moved by the cruel repression taking place in Hungary, declared: "We who look in a fatherly spirit on all peoples, must solemnly state that every violence, every unjust bloodshed, from wherever it comes, is always illicit."

Plastics. Unrevised totals for 1954 and 1955 production of plastics and synthetic resins in the U.S. are given in the table.

Production of Plastics and Synthetic Resins in the U.S.

(in pounds)

	1955	1954
Cellulose plastics (all)*†	144,750,000	123,200,000
Phenolic and other tar acid resins * ‡	505,560,000	396,000,000
Urea and melamine‡	312,900,000	253,350,000
Styrene and styrene-derivative polymer and copolymer resins*	610,230,000	501,000,000
Vinyl resins	701,660,000	516,800,000
Polyester resins	55,040,000	
Miscellaneous§	816,730,000	539,150,000

*Includes fillers, plasticizers and extenders.

†Includes sheets, rods, tubes and moulding and extrusion materials.

‡All dry resin except moulding material which includes filler.

§Includes polyethylene, acrylic, nylon, silicone and other resinous moulding materials (including fillers, plasticizers and extenders), as well as petroleum and coumarone-indene resins, miscellaneous protective-coating resins and resins for all other uses.

||Not reported for 1954.

Source: U.S. Tariff Commission.

New, improved plastics materials, especially those in the polyethylene field, continued to dominate developments in plastics in 1956, particularly in the research work done on "stereospecific" plastics. In contrast with conventional methods for producing plastics, the stereospecific method uses organochemical catalysts as the principal tools more or less to replace high pressure in the polymerizing process. With this technique, it was claimed that polymers could be arranged in a predetermined geometric form rather than in random fashion, and consequently plastics could be made to develop properties needed for a specific application. The low-pressure polyethylenes introduced in 1955 were examples of this type of plastic. In 1956 the introduction of polypropylene, which was claimed to have properties similar to those of polyethylene but with greater stiffness and heat-resistant properties (melting point was reported to be 320° F.), was the immediate result of the year's research into the stereospecifics.

Considerable potential was predicted for nylon-6, a new material based on caprolactam monomer and introduced into the U.S. from Europe in 1956. Nylon-6 is a softer material than the conventional nylon-6/6, and since it has a lower melting point and a broader working temperature range it was claimed to be more adaptable to the production of parts with large surface area and thick cross section. In Europe it had already been successfully moulded into large carrying cans, gears, helmets, etc., and extruded into pipe, tubing and film.

Polyester film continued to broaden its market areas in both industrial and consumer use. One particularly successful application in 1956 was a polyester film-polyethylene film lamination used for packaging frozen precooked foods. To prepare the food, the entire package is simply dropped into a pot of boiling water.

Foamed plastics advanced considerably in 1956. It was estimated that during the year, about 1,500,000 lb. of urethane foam was being used monthly for such applications as rug underlay, crash padding, furniture padding, deep cushioning, shoulder pads,

PLASTIC GROUND COVER, a gardening development of 1956. After ground has been spaded and prepared the plastic sheet is rolled as shown in large photograph. Slits are cut for individual plants (inset), the balance of the sheet serving to eliminate the growth of weeds and to conserve moisture in the soil

hospital padding and sponges. Foamed vinyl also was used more widely as foam upholstery, sponges, automobile sun visors, seating and fashion accessories. Styrene foam found its principal use as insulation in building and refrigerator design. One of the newer foamed plastics introduced in 1956 was an expandable polyethylene for electrical insulation, soundproofing and various other applications.

Activities also centred on composite plastics sandwich materials—a multilayered laminate formed by bonding reinforced plastics or styrene sheet facing to a thick, lightweight, foamed plastics core. One large outlet for the sandwich materials was in the fabrication of lightweight, insulating truck bodies; another was in the design of a new type of refrigerator formed by notching a plank of the sandwich material and then folding the plank like a cardboard carton at the notched V-joints around previously subassembled interior partitions.

Poland. A people's republic of eastern Europe, Poland is bounded east by the U.S.S.R., south by Czechoslovakia, west by Germany and north by the Baltic sea. Area:

120,442 sq.mi. Pop.: (1950 census) 24,976,926; (1956 est.) 27,680,000; national minorities (Germans, Jews, Byelorussians, Ukrainians, Lithuanians, Slovaks and Czechs) about 500,000. Language: Polish. Religion: Roman Catholic. Chief towns (pop., 1955 est.): Warsaw 965,000; Lodz 670,000; Wroclaw 490,000; Cracow 430,000; Poznan 370,000; Szczecin 300,000; Gdansk 280,000; Katowice 200,000; Bydgoszcz (1954 est.) 177,000; and 10 other towns with a population of more than 100,000. First secretaries of the Polish United Workers' (Communist) party in 1956: Boleslaw Bierut, Edward Ochab (from March 20) and Wladyslaw Gomulka (from Oct. 21). Chairman of the council of state, Aleksander Zawadzki. Chairman of the council of ministers, Jozef Cyrankiewicz.

History.—The year 1956 was one of great upheaval which some described as a victorious, bloodless revolution. What really happened could be summarized thus: Poland remained a people's democracy with the Communist party in control and was still an ally of the U.S.S.R., but the new rulers were Poles first and Communists second while the Russians or their Polish instruments were no longer in command in the administration, armed forces or national economy. The so-called democratization in the countries of the "camp of Socialism" had originally consisted in replacing one-man rule by that of a collective leadership by men willing to comply with orders from the Soviet Union. The failure of this process in Poland was explained first by the indomitable character of the Polish people and, second, by the fact that the "secret" speech delivered by N. S. Khrushchev to the 20th congress of the Communist party of the Soviet Union (Feb. 25, 1956) preceded by only two weeks the death of Bierut, the chief Polish Stalinist.

Bierut's death left the party leadership deeply divided. On March 20 the party's plenary session of the central committee unanimously elected Edward Ochab as its first secretary. It was believed that he was the candidate of Khrushchev, who arrived in Warsaw as head of a Soviet delegation to attend Bierut's funeral. Nevertheless, Ochab refused to be a Muscovite pawn and began carefully to prepare the return of Gomulka to the party leadership. On May 6 it was announced that Jakub Berman, a member of the Politburo and deputy premier, had resigned from both posts. With Bierut dead and Berman dismissed, of the original Communist triumvirate only Hilary Minc remained in the Politburo. But the influence of Cyrankiewicz, the premier, was growing and so was his closer partnership with Ochab.

The Poznan Revolt.—On June 28, 1956, an event of historic significance broke down the pretense of popular support for the Communist regime. Industrial workers of Poznan staged a general strike and a procession of 50,000 persons demanded bread, freedom, free elections and the departure of the Russians. Riots followed, a security police officer was lynched and order was restored the following day only by the army's use of tanks. According to official reports, 53 people were killed and 200 wounded.

Addressing the seventh plenary session of the central committee (July 18), Ochab admitted that the "soullessness of authorities" rather than the machinations of "imperialist agents" was a chief cause of the revolt. But N. A. Bulganin, the Soviet premier, alleged in Warsaw on July 21 that "foreign imperialist circles" were still trying to weaken the Socialist countries and detach them one from another, making use of certain political and economic difficulties in Poland. Such difficulties, he claimed, were only growing pains. It would be an error, nevertheless, not to see that the struggle against the personality cult was being exploited not only by "hostile and opportunist elements" but also by "wavering people in the Socialist ranks."

Three Groups in the Central Committee.—This lecturing was badly received by both the Polish public and the party rank

and file. The July plenary session of the central committee became a contest during which three trends became apparent, led by the Natolin group, the Realists and the Young Secretaries. The Natolin group, deriving its name from a country house near Warsaw where the Polish Communist élite offered hospitality to prominent foreign comrades, was represented by Zenon Nowak, Franciszek Mazur and Franciszek Jozwiak. They recommended strict censorship of the press and the curtailment of "democratization." The Natolin group was opposed by the younger generation of Communist leaders headed by Jerzy Albrect, Wladyslaw Matwin and Jerzy Morawski. They wanted "democratization" to continue. Between these two groups there were the Realists, led by Cyrankiewicz, Ochab and Zawadzki. They too were supporters of change, but desired to achieve it more slowly. But the only man who could restore party unity and authority and count on wider support was Gomulka. All three groups desired his return to the Politburo although it was clear that the Natolin group wanted him only as a figurehead. Such a role, however, did not appeal to Gomulka. He wanted to assume the party leadership, but he insisted on the dismissal of all Stalinists from key positions. Ochab continued to negotiate with Gomulka who on Aug. 5 was officially rehabilitated and restored as a party member. On Oct. 9 it was announced that Minc had resigned from the Politburo and his office of deputy premier. Agreement was reached between Gomulka, Ochab and Cyrankiewicz as to the composition of the new Politburo.

Three Critical Days.—On Oct. 19 when the party's central committee had assembled to elect a new Politburo, quite unexpectedly Khrushchev, V. M. Molotov, L. M. Kaganovich and A. I. Mikoyan arrived in Warsaw. At the same time Marshal Ivan S. Koniev, commander in chief of the unified armed forces of the Warsaw treaty powers, arrived in the capital, accompanied by other Soviet generals. It was learned that Soviet divisions stationed in southwestern Poland with headquarters at Legnica were moving toward Warsaw, while a Soviet naval squadron appeared before Danzig.

The meeting of the central committee, after co-opting Gomulka as its new member, decided that the old Politburo including Gomulka would discuss Polish-Soviet relations with the Soviet guests. This meeting, which took place in the Belweder palace, was stormy. The original intention of Khrushchev and his colleagues was to oppose the election of the proposed new Polish Politburo, agreeing only to the co-option of Gomulka and one or two of his supporters. Brave words were pronounced at this meeting by Ochab and Gomulka and, on the night of Oct. 19–20, the Polish leaders succeeded in explaining to the Soviet visitors that the Polish people's democracy must be an equal, independent and sovereign state bringing its own creative contribution to the development of the "camp of Socialism."

Meanwhile, Polish workers and university students, aroused by the Soviet intervention, demonstrated vociferously, through meetings and processions, their protest against foreign pressure and their support for Gomulka. Khrushchev and his colleagues understood that by supporting the Natolin group they were risking bloodshed. They accordingly retreated and on Oct. 20 returned to Moscow. When the Polish central committee reassembled angry questions were asked about the movements of Soviet troops in Poland. Marshal K. K. Rokossovsky, minister of national defense and commander in chief, explained that they were no more than "autumn manoeuvres."

Immediately after this declaration Gomulka presented his program and the next day his speech was broadcast to the nation. Without belittling the achievements of the six-year plan (1950–55), Gomulka criticized many of its results. He said that to represent the Poznan tragedy as the work of "imperialist agents" was politically naïve. Without the confidence of the working

POLISH SOLDIERS AND A TANK guarding bank at Poznan, Pol., during anti-communist riots in June 1956

class no government was possible. To produce more, cheaper and better goods it was imperative to tell the workers the whole truth about the country's difficult position and to ask them to be patient in their just demands. Structural changes in planning and in the management of industry were necessary; so was the development of handicrafts. Agricultural policy also called for serious correction. The basically sound co-operative farms should be assisted in the form of repayable credits and all state grants should be abolished; unsound co-operatives should be left free to dissolve themselves. Gomulka reiterated his belief that there were many roads to Socialism. The constant essential element in Socialism, he said, was the abolition of the exploitation of man by man. Polish-Soviet relations based on the principles of equality and independence would create among the people such a profound feeling of friendship for the Soviet Union that no attempt to sow distrust of the U.S.S.R. would find a response.

On Oct. 21 the plenary session elected the new nine-member Politburo. In a secret ballot, Gomulka obtained 74 votes, the maximum possible being 75, while Rokossovsky secured only 23 votes. No member of the Natolin group remained in the new key body of the party. On the evening of Oct. 22 Khrushchev informed Gomulka by telephone that, having read his speech, he agreed with it except for a few details. He also undertook that the Soviet military units would stop their "autumn manoeuvres" and would be ordered back to their regular bases.

In quick succession a series of army changes was announced. The most important was the replacement on Nov. 13 of Marshal Rokossovsky as minister of defense by Gen. Marian Spychalski, a friend of Gomulka. Rokossovsky returned to Moscow and on Nov. 15 was appointed deputy minister of defense of the U.S.S.R. During the first week of November, 32 Russian officers in the high command of the Polish armed forces were dismissed and replaced by Poles.

Return of Cardinal Wyszyński.—On Oct. 28 Stefan Cardinal Wyszyński, primate of Poland and archbishop of Warsaw and Gniezno, released from three years' internment, returned to Warsaw as head of the Polish hierarchy. Five other bishops and all imprisoned priests were released from confinement.

Gomulka's Visit to Moscow.—Between Nov. 15 and 18 Gomulka, Cyrankiewicz, Zawadzki and Stefan Jedrychowski discussed the future of Polish-Soviet relations with Khrushchev, K. E. Voroshilov, Bulganin, Mikoyan and M. Z. Saburov. Both

sides agreed that the Soviet-Polish alliance was a reliable guarantee of their mutual security and that the alliance was the cardinal factor in strengthening the independence of the Polish people's republic and "the inviolability of its frontier on the Oder and the Neisse." The temporary presence of Soviet army units on the territory of Poland was still "desirable" but they should in no way infringe the sovereignty of Poland or interfere in its domestic affairs. In pursuance of this statement, D. T. Shepilov and Marshal G. K. Zhukov, respectively the Soviet foreign and defense ministers, and Adam Rapacki and Gen. Spychalski, respectively the Polish foreign and defense ministers, signed a treaty on Dec. 17, in Warsaw, on legal status of Soviet troops stationed in Poland. The location, strength and movements of Soviet army units in Poland were to be determined by special agreements between the two governments. As certain financial problems between Poland and the U.S.S.R. had been unadjusted for years, the two parties agreed to consider as settled, as from Nov. 1, 1956, Poland's indebtedness for the credits granted to it by the Soviet Union between 1949 and 1956 and amounting to 2,300,000,000 roubles or \$575,000,000. Poland on the other hand had delivered to the Soviet Union during 1946-53 about 50,000,000 metric tons of coal at a nominal price of \$1.25 per ton. Assuming that the average world market price of coal during the 1946-56 period had been \$16 per ton, the loss to Poland's economy was about \$737,500,000. The Soviet government was ready to supply Poland, on a credit basis, with 1,400,000 tons of grain in 1957 and also agreed to grant Poland a long-term credit of 700,000,000 roubles. Finally the Soviet government agreed to facilitate the further repatriation of Poles still detained in Soviet forced labour camps. Their numbers were estimated in Poland at about 600,000, but it was not known how many of them were still alive. (See also COMMUNISM.)

(K. SM.)

Education.—Schools (1954-55): primary 23,103, pupils 3,202,700, teachers about 100,000; special 288, pupils 30,100; secondary 792, pupils 195,100, teachers about 5,000; vocational 2,236, pupils 455,000; teachers' training colleges 149, pupils 44,000; adult education courses 1,944, pupils 69,000; workers' high schools 150, pupils 41,900; institutions of higher education 84 (including 7 state universities and 1 Catholic university), students 143,300 (including 1,815 at the Catholic university). National minorities schools: primary 242, pupils 15,340; secondary 7, pupils 805.

Finance.—Monetary unit: zloty with official exchange rate, high and fictitious, of 4 zlotys to the U.S. \$1. Budget (1955 est.; 1956 est. in parentheses): revenue 122,000,000,000 (141,300,000,000) zlotys; expenditure 114,900,000,000 (137,700,000,000) zlotys, including 60,800,000,000 (73,400,000,000) zlotys invested in the national economy.

Foreign Trade.—(U.N. Economic Commission for Europe's estimates, in U.S. dollars, 1954.) Trade turnover with all countries \$1,770,000,000 including \$1,220,000,000 with the countries of the Communist group. Polish official figures (1954): imports 3,615,200,000 zlotys, exports 3,475,200,000 zlotys.

Transport and Communications.—Highways (1954): 264,525 km., including 97,886 km. hard surfaced. Licensed motor vehicles (1955 est.): cars 30,000, commercial 57,000. Railways (1954): 26,999 km., including 3,909 km. of narrow-gauge track; passenger traffic 39,491,100,000 passenger-km.; freight traffic 62,460,900,000 ton-km.; freight carried 296,215,000 metric tons. Shipping (1954, ships of 100 tons and over): vessels 142, total tonnage 291,000 gross tons. Freight traffic in Polish ports (external trade, 1954): loaded and unloaded 15,873,000 metric tons, including Szczecin 6,280,000 tons, Gdynia 4,798,000 tons and Gdansk (Danzig) 4,795,000 tons. Air transport (1954): passengers carried 136,700 (53,300,000 passenger-km.). Telephones (1954) 301,000. Radio licences (April 1954) about 1,500,000.

Agriculture.—Main crops (metric tons, 1934-38 average within post-1945 boundaries; 1954 in parentheses): wheat 1,965,000 (2,001,900); rye 6,854,000 (5,843,700); barley 1,632,000 (1,085,500); oats 2,833,000 (2,073,300); potatoes 38,014,000 (35,661,700); sugar beets 5,962,000 (6,950,000). Livestock (1938, prewar territory; 1954 in parentheses): cattle 10,554,000 (7,686,500); pigs 7,525,000 (9,788,200); sheep 3,411,000 (4,170,400); horses 3,916,000 (2,649,500).

Industry.—Employment outside agriculture (1938; 1955 in parentheses): 2,730,000 (5,860,000). Production (metric tons, 1938, prewar territory; 1955 in parentheses): coal 38,104,000 (94,476,000); lignite 10,000 (6,000,000); coke 2,328,000 (10,036,000); crude petroleum 507,000 (180,000); electricity 3,977,000,000 (17,751,000,000) kw.hr.; pig iron 880,000 (3,112,000); steel 1,441,000 (4,426,000); zinc, metal 108,000 (156,200); aluminum (1955) 20,400; cement 1,719,000 (3,813,000); sulphuric acid 181,000 (450,000); sugar 562,100 (980,500); cotton fabrics 51,500 (114,000); woollen fabrics 20,900 (51,400); leather shoes, excluding handmade shoes 2,800,000 (24,600,000) pairs; motor cars (1955), passenger 4,016, commercial 12,480; merchant vessels, launched (1955) 110,300 dead weight tons.

Police. United States police administrators in 1956 made determined efforts to increase the efficiency and effectiveness of their operations in order to reverse the rising crime trend. The year 1955 was the first since 1947 to experience a decrease in major crime (Part I offenses), although the decrease was slight (0.2%) and was followed by an appreciable upsurge in crime during the first half of 1956.

The 1955 decrease in major crime was enjoyed by only one population group of cities—those having more than 250,000 inhabitants. The decrease for this group of cities was 4.3%. The increase for all other cities, as a group, amounted to 2.9%. The upsurge of crime during the first half of 1956 brought an increase in major criminal offenses of 18.6% over the comparable 1955 figures for communities with populations of less than 250,000 as a group, in contrast to an increase of only 11.1% for the group of cities in the more than 250,000 population category.

In order to appraise the preventive effect of police operations on these large cities, consideration was restricted to three categories of crimes that were more reliably reported and recorded than the other classes as a group, and that were also more susceptible to prevention by effective patrol. These categories were robbery, burglary and auto theft. The crime record of one community was not complete and this city of approximately 800,000 inhabitants was excluded from consideration.

Analysis revealed that not all of the remaining 40 cities in the large city population group reduced their crime frequency; in some crime increased substantially. A selected group of 14 of these large cities enjoyed decreases in these three classes of crimes in contrast to the substantial increases experienced by the remaining 26 cities as a group.

In 1955 the 14 cities reduced their 1954 over-all crime figures in robbery, burglary and auto theft by 12.7% while the remaining 26 cities experienced an over-all increase in these crimes of 6.1%. During the first six months of 1956, as compared with the same period in 1955, the 26 cities suffered an increase in the frequency of each of these three classes of crimes while the 14 cities enjoyed a decrease in the number of robberies and burglaries. While auto thefts, during this time, increased in the 14 cities by 17.3%, they increased 44.9% in the remaining 26 cities. A detailed comparison of increases and decreases in the frequency of these three classes of crimes on these two groups of cities is shown in the following tabulation.

Percentage Increase or Decrease
1954-1955

First six months
1955 vs. 1956

	Robbery	Burglary	Auto theft	Robbery	Burglary	Auto theft
14 cities*, population 23,053,000	-22.3	-14.4	-1.9	-5.7	-3.2	+17.3
26 cities†, population 11,266,000	-1.0	+3.2	+12.9	+13.5	+4.0	+44.9

*New York city, Chicago (Ill.), Los Angeles (Calif.), Philadelphia (Pa.), Detroit (Mich.), Cleveland (O.), St. Louis (Mo.), Washington (D.C.), Milwaukee (Wis.), Minneapolis (Minn.), Cincinnati (O.), Kansas City (Mo.), Dallas (Tex.), and Oakland (Calif.).
†All other cities having a greater population than 250,000 in 1950 except one of 800,000 population whose crime statistics were not complete.

The leadership of the 14 police departments, on the whole, was recognized as aggressive and superior. This did not mean that all 14 departments followed a uniform pattern in their organizations and operating procedures. The superiority was apparent from the experiments and other efforts made by these police leaders, as a group, to reduce their crime rates, in contrast to the apparent willingness of the remaining 26, on the whole, to continue operations as they had in the past, on the assumption that their procedures could not be improved.

Nearly all police departments in the cities of more than 250,000 population group that had created formal planning and research units, had instituted continuing programs of internal inspections and had undertaken to increase the preventive-effectiveness of their patrols were found among the superior 14. For example, 57.0% of the 14 used one-man patrol cars on each shift as compared with 23.1% of the remaining 26. On the other hand, 38.5% of the 26 used no one-man patrol cars at any time as compared with 28.6% of the 14.

The 63rd annual conference of the International Association of Chiefs of Police was held in Chicago, Ill., in Sept. 1956. Its international character was established by representatives from Brazil, Canada, Ceylon, Cuba, Indonesia, Iran, Japan, Laos, Nicaragua, Philippines, Republic of China and Thailand. The program gave more than usual attention to staff activities in police departments; one session was devoted exclusively to police administrative matters.

Poliomyelitis. In 1956 the value of the Salk poliomyelitis vaccine for the prevention of paralytic poliomyelitis was clearly demonstrated throughout the world.

In the United States alone the incidence of paralytic polio was cut by one-half, the result of what was undoubtedly the largest voluntary immunization program on record. By the fall of 1955 about 7,000,000 U.S. school children had received one or more injections of Salk vaccine. Before the end of the polio season of 1956 more than 40,000,000 persons—mostly under 15 years of age but including a great number of pregnant women—had received one injection; 20,000,000, two injections; and 7,000,000, three injections.

Vaccination Progress in the U.S.—The most serious unanswered question about polio vaccination programs at the beginning of 1956 was whether the six U.S. manufacturers licensed to produce Salk poliomyelitis vaccine could produce it in large enough quantity fast enough to meet the demand and need for the product and thus assure the vaccination of a large proportion of susceptible children and young adults before the 1956 polio season.

Serious technical problems of manufacture were involved, plus the fact that the safety-testing program for the vaccine, established by the U.S. public health service in 1955, was probably the most rigid and time-consuming ever put into effect. The time required for manufacture and testing of each lot of polio vaccine is 120 days. The safety of the Salk polio vaccine was reconfirmed in 1956. After more than 50,000,000 injections had been given before the end of the polio season, there was not

a single case of polio that could be attributed to the use of the vaccine.

A poliomyelitis surveillance unit had been established in 1955 as part of the communicable disease control centre of the U.S. public health service especially to watch out for such a possibility. It found no cases of polio caused by vaccine. However, the surveillance unit helped uncover a considerable number of "poliolike" diseases, notably aseptic meningitis, that might formerly have been diagnosed as polio. The laboratory diagnosis of polio, from blood and faecal samples in tissue culture, greatly improved the positive diagnosis of polio when it actually occurred.

Between April 1955, when polio vaccine was first licensed, and Sept. 1956 the U.S. pharmaceutical industry produced and the U.S. public health service released 100,000,000 c.c. of polio vaccine. The vaccine supply became adequate in July 1956, and strictly enforced priorities on its use were soon lifted. Vaccine became available through normal drug distribution channels to anyone in the U.S. who wished to take it. It was recommended that this protection be given to everyone up to about age 40. While the incidence of paralytic polio in the higher age groups is comparatively low, the severity of the disease, should it strike, is often great and damaging.

Approximately 25% of cases of paralytic polio in the U.S. occur after age 20, but the number after age 40 is almost negligible.

Effectiveness of Polio Vaccine Program.—In Oct. 1956 the U.S. public health service reviewed polio season reports from 14 states where the disease was most prevalent in 1956. This review showed: (1) Among children who received one or more injections of Salk vaccine, only 1 in 12,500 contracted polio. The rate among the unvaccinated was five times as high. In other words, even one injection was 80% effective. (2) Among 1,500,000 children fully immunized against paralytic polio, with three injections properly spaced only seven cases of paralytic polio occurred. Their risk was therefore only one-fortieth that of the unvaccinated children. (3) In some states more than 90% of the cases of polio reported were among unvaccinated children.

The year 1956 was the lightest "polio year" experienced in the U.S. since 1947. Approximately half of all reported cases of polio are paralytic. Somewhat more than 15,000 cases of polio were reported in 1956.

In June the most serious outbreak of paralytic poliomyelitis of 1956 occurred in Chicago, centred largely in tenement sections. An emergency mass immunization program was promptly put into operation. Vaccine centres were set up in physicians' offices, in schools and even on street corners. By the first week in August the threatening epidemic was halted. Of slightly more than 1,000 cases occurring up to the end of September, not one case of paralytic polio was reported in a person who had received full immunization with vaccine.

The vaccine dosage schedule recommended (by Jonas Salk) and used in 1956 was two 1-c.c. injections, spaced two (preferably four) to six weeks apart, followed by a 1-c.c. booster injection at least seven months later.

Studies on the duration of immunity achieved by the vaccine continued in 1956. It became clear that immunity was reasonably long-lasting following full immunization and that annual booster shots are not needed.

Salk vaccine, with slight modifications of the U.S. and Canadian manufacturing formulas, was used throughout the world during 1956. Among the countries that actively developed vaccination programs were Denmark, Sweden, Norway, western Germany, England, Australia, the Union of South Africa, France, Argentina (which was struck by a serious polio epidemic in 1956)

and Brazil.

Virus Research.—Research on polio and other viruses was vigorously prosecuted in 1956, much of it under grants from the National Foundation for Infantile Paralysis. Attention was given to the possibility of finding or cultivating harmless, modified strains of polio virus, types 1, 2 and 3, so that a safe "live virus" vaccine might eventually be made. Considerable research proceeded in the attempt to find stable strains of normal cells on which virus could be made to grow under test-tube conditions (tissue culture).

The inner nature and spacing of the virus particle itself was more fully explored and its chemistry more completely worked out. The difficulty of such research is apparent when it is realized that these particles may be no more than a millionth of an inch in diameter.

Much research in 1956 focused on nucleic acid, which is at the heart of a virus and apparently has most to do with its ability to multiply and cause damage in the host cell. This research raised hopes of solving problems still posed by other major diseases, notably cancer, and of developing vaccines against other virus diseases, such as measles and infectious hepatitis.

Political Parties, U.S. During 1956, in an election in which ticket splitting seemed to be the rule, Republicans gained another four-year term in the White House and Democrats retained numerical control of both houses of congress. The country had grown accustomed in two previous years to divided party responsibility for government, but it was the first year since 1848 that a president had swept to election without carrying his party along to control at least one of the houses.

In his landslide victory over Democrat Adlai E. Stevenson, Pres. Dwight D. Eisenhower rolled up a record of about 35,500,000 votes, which was about 9,500,000 more than Stevenson's total. But these 35,500,000 votes reached far beyond the normal strength of the Republican party, as such. Stevenson's total failed to measure up to the strength of the Democratic party displayed in holding its 49-to-47 edge over the Republicans in the senate, increasing its margin to 234 to 201¹ Republicans in the house and gaining a net of two governorships.

On the basis of the November election returns, Republicans could claim that they had gained followers in the large industrial states of the east and midwest, where once the Democrats were strong. Those areas made a major contribution to Eisenhower's vote increase over 1952.

Democrats made most of their gains in congressional seats and governors' races in the farm areas west of the Mississippi and in the far west. Despite the fact that Eisenhower carried each of them, Arizona, Colorado, Oregon and Washington all elected Democratic governors and Democratic senators. The same thing happened in Florida, as Eisenhower made fresh inroads in the south beyond his 1952 victories in that area. Eisenhower took Kansas, Iowa, Minnesota and Michigan, but Democratic governors were elected in each of those states. In Kansas and Iowa the election of G.O.P. governors had been almost traditional.

In the farm states Eisenhower's margin over Stevenson was

¹One Republican seat from Maine contested.

less than that of 1952. In Iowa, for example, the president's share of the two-party vote dropped off 5% from 1952 to 1956. But he still got nearly 58% in 1956, which was accepted by politicians as indicating that while there might have been a farm revolt against his flexible price support policies, it was not sufficient to endanger his general popularity.

Farther west, the Republicans felt some increased opposition to the Eisenhower administration's "partnership" power policies and its handling of the nation's natural resources. Democrats evidently made some headway with their charges that the administration was engaged in a "give-away" of resources. Eisenhower's margin over Stevenson declined in the Pacific coast states, although the president still won them handily.

The presidential campaign tended to reveal the differences in philosophy between the two major parties. In a reversal of the 1952 campaign, the Democrats were on the offensive and the Republicans on the defensive. This led Stevenson into a series of attacks on the Eisenhower administration, Vice-Pres. Richard M. Nixon and, in the final phases of the electioneering, on the president himself. Stevenson began by saying that he would not make an issue of Eisenhower's health, despite the president's heart attack on Sept. 24, 1955, and his abdominal operation on June 9, 1956. Stevenson wound up by saying that in his opinion Eisenhower "never had the inclination and now lacks the energy for full-time work at the world's toughest job." In the same speech the Democratic candidate predicted that Nixon would be president before four years had elapsed.

The Democratic attack on Nixon seemed gauged to meet the possibility that the vice-president might succeed to the presidency and thus become the certain 1960 G.O.P. presidential nominee. Stevenson called Nixon a "man of many masks" who was "shifty" as well as "rash and inexperienced." Nixon's principal criticism of Stevenson was that all the Democratic nominee had offered to the people in the campaign was "an appallingly naïve suggestion for stopping our H-bomb tests when the Russians are stepping up theirs and what appears to be a politically inspired suggestion for ending the draft." Eisenhower said that there had been "many futile and foolish attempts to belittle the character" of Nixon, attempts which the president said ought to be squashed.

Eisenhower's defense of Nixon fitted in with the president's expressed determination to make over the Republican party into an organization that would be "modern" in its philosophy and appeal to the younger voters. The president said after the election that he would work incessantly and industriously to give his party such a modern look. What he had in mind, the president said, was "a type of political philosophy which recognizes clearly the responsibility of the federal government to take the lead in making certain that the productivity of our great economic machine is distributed so that no one will suffer disaster, privation, through no fault of his own."

With Stevenson a defeated candidate, none spoke up after the election to outline the future Democratic philosophy. But Sen. Estes Kefauver of Tennessee, the Democratic vice-presidential candidate, seemed to have put it most simply of all in the campaign cacophony. He said that the Democrats were more interested in individuals and their problems than the Republicans ever would be.

The election results indicated passage of the Democratic leadership to the congressional branch of the party. This meant that Sen. Lyndon B. Johnson of Texas, the senate Democratic leader, and Speaker of the House Sam Rayburn (also of Texas) would be in a commanding position to write the record on which party members would run in the 1958 midterm elections and to lay the groundwork for the Democratic campaign for the presidency in 1960. Johnson's explanation of the November results

"THE TERM IS 'UNINSTRUCTED,' DEAR! . . . Stop telling everyone that I'm going to the national convention as an 'uninformed' delegate! . . ." a cartoon of 1956 by Lichty of the Chicago Sun-Times Syndicate

was that the people had rallied around the president, in a time of crisis in the middle east, but had preferred a Democratic congress because of the record the party had made in the 84th, which it controlled.

Stevenson's struggle toward the presidential nomination was a rough one. Kefauver won the early primaries, and that brought on some tough exchanges between them before Stevenson defeated his rival in the Oregon, Florida and California primaries to get a firm hold on the nomination. At the party convention, former Pres. Harry S. Truman tried unsuccessfully to advance the candidacy of Gov. Averell Harriman of New York, but Stevenson won on the first ballot. In the "open convention" choice of a vice-presidential nominee, Sen. John F. Kennedy of Massachusetts came close to the nomination, but Kefauver finally won it.

Primarily, Stevenson's drive was aimed toward winning back Democrats who had voted for Eisenhower in 1952, an objective Democrats would seem likely to place first on their agenda for 1958 and 1960.

Stevenson bid for the farm vote, for the support of those who were social-security minded, for labour backing and for the votes of those who felt the Eisenhower administration was not keeping abreast of world developments. He spent a great deal of time talking about Eisenhower as a part-time president and implying that Nixon was in a position to take over domination of the Republican party.

On the Republican side, Eisenhower said he would not barnstorm or make whistle-stop speeches. Republican National Chairman Leonard W. Hall called on Nixon for the strongest efforts in the campaign, resigned to the idea that Eisenhower would make only a half-dozen appearances for nationally televised addresses.

Hall's slogan for the campaign, which was promptly adopted by Eisenhower and Nixon as well as most of the local G.O.P. candidates, was "peace, prosperity and progress." There were few to deny that prosperity marched on the Republican side,

despite some isolated areas of unemployment and some economic distress among the farmers and small businessmen. Until the last few days of the campaign, when Great Britain, France and Israel struck at Egypt, the Republican cry of "Everything's booming but the guns" had few challengers. When war broke out in the middle east, the voters rallied to Eisenhower rather than to Stevenson, who had been at pains to make a case that the Republicans had bungled their way into a situation that invited such a result.

In retrospect, the campaign for the Republican nomination consisted primarily of party members' interpretations of medical bulletins and Eisenhower's statements on the state of his health. There was never any doubt that if he himself chose to run, Eisenhower could have the nomination again. The indecision began in January when the president left some doubts at his first news conference in five months that he felt well enough to run again. Eisenhower's continued indecision in subsequent conferences convinced Sen. William Knowland of California, the senate Republican leader, that he ought to enter some primaries. Knowland did, but when the president let his name stay on the ballot, was said to be in good health by his doctors, and then announced on Feb. 29 that he was running again, the contest was all over.

From Jan. 25 until April 26 Eisenhower left open the question of his running mate. But after a conference on the latter day, Nixon came out of the White House to say he would be honoured to run with Eisenhower. The press secretary to the president, James C. Hagerty, said that Eisenhower was delighted with Nixon's decision.

This seemed to have settled matters until Harold E. Stassen, special assistant to the president, on July 23 started a campaign to replace Nixon with Gov. Christian Herter of Massachusetts. Hall and Sherman Adams, assistant to the president, then got Herter to agree to nominate Nixon for second place on the ticket at the G.O.P. convention in San Francisco. Stassen gave up his campaign only after he had conferred with Eisenhower at San Francisco and had finally become convinced that the president wanted Nixon. About the only result of Stassen's drive was the "Joe Smith" incident at the G.O.P. convention, where Terry Carpenter, a delegate from Nebraska, a former Democrat, tried to offer in nomination "Joe Smith," a nonexistent person, for vice-president as a gesture toward an open convention.

As the campaign got under way, Eisenhower's concern with success for other G.O.P. candidates led him to expand his speaking plans. Before he finished his campaign in Philadelphia a few days before the election, Eisenhower had travelled 13,614 mi., mostly by air, to visit 13 states. They were Pennsylvania, Iowa, Illinois, Ohio, Kentucky, Minnesota, Washington, Oregon, California, Colorado, New York, Florida and Virginia. He won all of them, along with 28 other states he did not visit, but he was not so successful in electing other Republicans.

Eisenhower carried the Republican banner farther into the south than he had in 1952. In addition to Texas, Florida, Tennessee and Virginia, which he had won four years previously, he won Louisiana. In the border states, he added Kentucky and West Virginia to his previous conquest of Oklahoma. But he suffered a reverse in Missouri, which Stevenson could not carry in 1952 but did in 1956.

Part of Eisenhower's new-found strength in the south was attributed to a movement of Negro voters toward the Republican party. Negro voters were credited with putting in Eisenhower's column Montgomery, Ala., where 10,000 persons turned out in February for a rally put on by the segregationist Citizens' council, opposing the supreme court's school desegregation ruling. Similarly, Negroes gave Eisenhower support a Republican candidate was unaccustomed to in New York city and in many

industrial big cities. Stevenson and Eisenhower took about the same position on the court's decision—that it was the law of the land and eventually would become reality. But a southern manifesto signed by 19 southern senators and more than 80 southern house members, plus the actions of southern Democratic-controlled state legislatures in moving to offset the court's opinion, seemed to have influenced Negro voters toward support of Eisenhower.

After the election the Democrats faced the necessity of raising about \$1,000,000 to meet their campaign deficit. The amount spent in the campaign by the major party organizations, subsidiary committees, individual candidates and citizens who contributed independently was a matter of conjecture. About the only solid figures were reported by the senate subcommittee on privileges and elections. This group said that between Sept. 1 and Oct. 21 Republicans got \$10,531,000 in campaign contributions, Democrats \$3,872,000, plus \$577,000 that went to organized labour groups. With expenditures of about \$2,000,000 on television for each party, Republicans were reported to have ended the campaign with money in the bank and Democrats with their \$1,000,000 deficit.

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Congress* (1954); *Political Parties* (1952); *Presidential Elections* (1952).

Political Science. During 1956 the main focus in the field of political science appeared to have been on methodology and theory, particularly in those nations where political science was newest and had advanced most rapidly since World War II. Great intellectual vigour had developed in some countries where a few years earlier political science was virtually unknown, and national differences with reference to assumptions, methods and emphases were being replaced by a subject with common classifications and methods. In India, for example, a new journal, the *Indian Journal of Political Science*, had been started and a large percentage of the articles dealt with scope and method. India, like many other countries, was taking the best from several scholarly traditions and combining them with its own. One author, writing on "Aristotle's Methodology of Political Science," observed, with obvious reference to certain tendencies in the west, that when "scientism," or scientific method, becomes equated with the desire to create a value-free social science, there is danger that political science will become a mere science of means and techniques for the preservation of power—a new Machiavellianism—whereas what is needed is a study of means for the realization of the good of all living things. Another Indian political scientist, on the other hand, writing in the same journal, concluded that a scientific methodology is possible, not because there are inherently unbiased ideas, theories and evaluation, but because these can be made bias-free through the purification of the scientist's subjectivism. Next to their preoccupation with methodology and theory, the main concentration of Indian political scientists during 1956 was on public administration, planning, intergovernmental relations and the relation between government and the economy. This generalization may be safely applied to most countries which are in the midst of a rapid economic development.

British political scientists had also started a professional journal after the conclusion of World War II, called *Political Studies*. An analysis of its content indicated that there was a tendency for political science in Britain and the United States to find a common ground. This was not true a few years earlier because the British approach was almost entirely historical, the American analytical. During 1956, however, British political scientists gave much attention to "behavioral" studies centring

around the political process; voting behaviour is one of these, public opinion polling another. Also, pushing the parallel further, British studies had begun to use psychology and quantitative methods associated with it, whereas a short time before there was almost none of this.

There were new stirrings in German political science, with the main concentration being on international relations and the internal problems of the German Federal Republic. This was significant because, for 75 years prior to the advent of Hitler, German political science had occupied a high reputation, and no country had devoted so much attention to systematic theory. It was still too early to predict what form the recrudescence would take; the indications were that less attention would be given to the abstract qualities of the state and relatively more to international relations, comparative government and public administration.

In the U.S.S.R. and its satellites, the main concentration seemed to have been on international law and relations, accompanied by certain practical problems that grew out of this complex, such as the treatment of minorities, the concept of sovereignty and comparative legal systems. Political scientists from these countries attended the Stockholm congress of the International Political Science association in the fall of 1955.

Political scientists in the United States continued to emphasize the "newer research technology," which is empirical, "realistic" and scientific in the sense of attempting to verify hypotheses and predict future behaviour. A characteristic of this approach was that it had been consciously nonlegal, non-historical and nonphilosophical, which was the direct opposite of traditional emphases in many other countries, and especially on the continent. Where U.S. political scientists had formerly turned their attention chiefly to the domestic scene to study purely American institutions and processes, by 1955 a main focus had shifted to the study of comparative governments, where the method had heretofore been purely descriptive. This represented

a significant development, not only for the United States but on a wider stage. At the same time, the field of international law and international relations showed signs of becoming the next major area where the newer research technologies were likely to be applied.

In short, to return to a world view, the year 1956 was characterized by a new vigour in new quarters, plus a tendency to find new and common grounds for professional advance.

(M. E. Dk.)

Polo. The Brandywine club of Kennett Square, Pa., carried off the national open title by defeating the Aurora quartet of Buffalo, N.Y., 11-10, in the final of the United States Polo association's 1956 tournament. Riding for the victors were R. Williams, R. Harrington, Jr., Clarence C. Combs and William A. Mayer. The Oak Brook Polo club at Hinsdale, Ill., played host to the open competitors and also was host for the national intercircuit, 12-goal and Butler handicap title events, giving the club a crowded calendar from Sept. 2 to Sept. 30. The Midland riders of Lamesa, Tex., Barry Beal, Carlton Beal, Gus White, Jr. and Carlton Beal, Jr., won the intercircuit prize by downing the Tulsa (Okla.) Polo and Hunt club, 9-8. The Oak Brook-Solo cup (Chicago, Ill.) quartet of Jack Murphy, Hugo Dalmar, Stanley Taylor and Leo J. Hulseman routed Healy Farms, 9-1, for national 12-goal honours. The Butler handicap competition was won by the Selma (Ala.) side of A. D. Beveridge, Robert Beveridge, George Oliver and Harold Barry when it halted the Circle F quartet of Dallas, Tex., 11-8. The United States 20-goal championship was played at the Milwaukee (Wis.) Polo club, Aug. 14-26, and honours went to Solo cup-Brandywine with a 12-8 victory over the Boca Raton four of Delray Beach, Fla. James Kraml, Jr., Harrington, Mayer and Taylor rode for the champions.

Squadron A armory in New York city was the scene of the major championship tourneys during the indoor season. The team of P. H. Brady, A. G. Pennell and Vincent Rizzo won senior honours by downing the New York Athletic club, 14-13. A penalty shot by Pennell after 10 seconds of sudden-death overtime play decided the contest. The Huntington (L.I.) club representatives H. F. Rice, Jr., Vincent Rizzo and Zenas C. Colt, topped Joy Farms of Milwaukee, 9-8, for the 12-goal crown. Another Huntington trio of Abe Wagner, Raymond Koch and Rizzo won the Sherman memorial prize by routing the Long Island Hurricanes, 16-6, in the ultimate round. Cornell turned back Yale, 20-6, in the last-round battle for the national collegiate championship.

Camilo Saenz, H. F. Rice, Jr., and Alberto Santa Maria comprised the winning team.

Portugal. A republic of southeastern Europe, forming part of the Iberian peninsula. Portugal is bounded east and north by Spain. Area: 35,529 sq.mi., including Azores (890 sq.mi.) and Madeira (308 sq.mi.). Pop.: (1950 census) 8,510,240, including Azores (318,558) and Madeira (269,769); (1956 est.) 8,843,000. Language: Portuguese. Religion: Roman Catholic. Chief towns (pop., 1950 census): Lisbon (cap.) 783,226; Oporto 281,406; Setubal 44,235; Coimbra 41,977; Funchal (Madeira) 37,035. President of the republic in 1956, Gen. Fran-

"DON'T LAUGH, I'M SERIOUS!" a 1956 cartoon by Dobbins of the Boston Post (Mass.)

cisco Higino Craveiro Lopes; prime minister, Antonio de Oliveira Salazar.

History.—The precision of the country's budgetary system was illustrated by the accounts for the financial year 1955 (in escudos): revenue 7,334,500,000; expenditure 7,303,700,000; surplus 30,800,000. Presenting the accounts in June 1956, the finance minister, Pinto Barbosa, said that the expansionist tendency of the national economy had persisted throughout the year despite a decline in prices for both home agricultural production and the raw materials of the overseas territories. In certain cases, insufficiencies of raw materials threatened the rhythm of the country's economic activities. The financial steps taken by the government to avert this resulted in some reduction in the favourable balance of payments and an increase in the volume of credit. Investments in 1955 under the first six-year development plan (1953–58), which totalled 1,086,000,000 escudos, included 537,000,000 escudos for hydroelectric undertakings, 205,000,000 escudos for port facilities and 175,000,000 escudos for railways.

The second six-year plan (1959–64), according to Marcelo Caetano, minister of the presidency, visualized the establishment of a national development bank which it was considered would be of great assistance in the financing of industrial schemes at home and in the overseas territories. Development of nuclear energy, it was stated, would become a factor of great importance in the future of the economy. In October in New York, Portugal was one of the signatories of the statute of the International Atomic Energy agency. The Portuguese representative, Vasco Vieira Garin, declared that under the terms of a bilateral agreement with the United States the first nuclear reactor would shortly be installed in Lisbon, where the building of an appropriate laboratory was about to begin.

A law for the general organization of the nation in time of war was approved by the national assembly in June. Gen. Julio Carlos Botelho Moniz, the chief of staff of the armed forces, on a visit to Washington, D.C., declared that Portugal could be counted upon with complete confidence to meet its obligations as a member of NATO (North Atlantic Treaty organization). In a reference to Spain's defensive agreements with the United States and Portugal, which, he declared, assured Spain's inclusion in the western system of defense, he characterized as "nonsense" that country's absence from NATO. A military mission visited Madrid in July for conversations with similar missions representing Spain and the United States, and there were reciprocal meetings in Lisbon later in the year "for the study of high problems of defense of the Iberian peninsula." Also in July it was announced by the minister of national defense, Fernando Costa, that the Portuguese airfields at Espinho and Montijo were to be rapidly expanded and placed at the disposal of the United States and other members of NATO.

In August Portugal, represented by Paulo Cunha, the foreign minister, took part in the Suez canal conference in London and subsequently joined the resulting Suez Canal Users' association. In November it was among the countries that abstained from voting in the UN general assembly on the U.S. motion calling for the withdrawal of Anglo-French forces engaged against Egypt in the Suez canal zone. (F. B. H.)

Education.—Schools (1953–54): primary 14,943, pupils 1,075,707, teachers (state only) 19,032; secondary 354, pupils 58,721, teachers (state only) 1,293; vocational 196, pupils 42,216, teachers (state only) 2,247; teacher training 15, students 2,462. Universities 3, students 14,563, teaching staff 777.

Finance and Banking.—Monetary unit: escudo, with an official selling rate of 28.75 escudos to the U.S. dollar. Budget: (1955 actual) revenue 7,361,000,000 escudos, expenditure 7,330,000,000 escudos; (1956 est.) revenue 7,679,500,000 escudos, expenditure 7,671,000,000 escudos. Internal debt (Dec. 1954) 10,958,700,000 escudos; external debt 692,800,000 escudos. Currency circulation: (Dec. 1954) 9,870,000,000 escudos, (Dec. 1955) 10,400,000,000 escudos. Deposit money: (Dec. 1954) 11,330,000,000 escudos, (Dec. 1955) 12,020,000,000 escudos. Gold and foreign ex-

change, central bank: (Dec. 1954) U.S.\$656,000,000, (Dec. 1955) U.S.\$672,000,000.

Foreign Trade.—(1955) Imports 11,445,000,000 escudos; exports 8,144,000,000 escudos. Main sources of imports: dependencies 16%; continental E.P.U. (European Payments Union) countries 43%; U.K. 14%; U.S. and Canada 10%. Main destinations of exports: continental E.P.U. dependencies 25%; continental E.P.U. 29%; U.K. 16%; U.S. and Canada 11%. Main exports: cork 21%; fish 11%; wine 8%.

Transport and Communications.—Roads (1954): continent 29,440 km.; islands 1,709 km. Motor vehicles in use (1954): passenger 89,766, commercial (incl. buses) 37,792. Railways (1954): 3,614 km.; 1,628,000,000 passenger-km.; freight (1955) 723,600,000 ton-km. Shipping: merchant vessels of 100 gross tons and over (July 1955) 323; total tonnage 563,417. Telephones (Jan. 1955) 231,373. Radio receiving sets (1954) 443,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 394,000 (748,000); barley 69,000 (104,000); oats 71,000 (126,000); maize 342,000 (386,000); rye 131,000 (190,000); rice 180,000 (154,000); potatoes 1,034,000 (1,073,000); broad beans 43,000 (49,000); meat 84,000 (90,000); wine 9,820,000 hectolitres. Livestock (Dec. 1952): cattle 973,000; sheep 3,948,000; pigs 1,253,000; horses 85,000; mules 123,000; asses 245,000; goats 1,244,000. Timber production (1954, metric tons) 4,922; raw cork (1952) 150,000. Fish landed (including Azores and Madeira, 1954) 307,300 metric tons.

Industry.—Fuel and power (1955): coal 412,800 metric tons; lignite 89,160 metric tons; electricity 1,884,000,000 kw.hr.; manufactured gas 57,600,000 cu.m. Production (metric tons, 1955): tin concentrates (metal content) 1,400; cement 781,200; cotton yarn 41,160; woven cotton fabrics 31,440; superphosphates (1954) 387,000. Ore production (metric tons, metal content, 1954): tungsten 2,508; manganese 4,000; pyrites 583,000; gold (1953) 462 kg.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Iberian Peninsula* (1948); *Portugal* (1955).

Portuguese Overseas Territories. Under this heading are grouped the Portuguese possessions in Africa and Asia. Their total area is approximately 803,835 sq.mi. and the total population (1950 census) 11,863,548; (1955 est.) 12,446,000. Areas, populations, capital towns and governors of the territories are given in the table.

History.—Gen. Francisco Higino Craveiro Lopes, the president of the republic, paid an extended visit to the province of Mozambique between Aug. 2 and Sept. 9, 1956, spending a short time, on the return journey, in Angola and São Tomé. Later, he extended his tour to pay official visits to Salisbury, capital of the Federation of Rhodesia and Nyasaland, and to Johannesburg and Pretoria in the Union of South Africa.

Nothing more was heard of Communist China's ominous claim to Macao in Oct. 1955. In the Indian enclaves, too, there was relative calm. Aug. 15, Indian independence day, passed without repetition of the so-called "peaceful demonstrations" on the borders of Gôa and the other territories. Following the bloodshed of Aug. 1955, the Indian government had announced that Satyagraha (passive resistance) was no longer desirable as a means of "liberating" Gôa. That declaration might have influenced the situation. Another factor, however, was probably Portugal's recourse, in Feb. 1956, to the International Court of Justice. An action was filed in that court by the Portuguese government alleging India's refusal to allow right of passage through Indian territory to the two small enclaves of Dadrá and Nagar Aveli which had been isolated from Portuguese Damão and occupied since July 1954 by what was described as "armed and irresponsible bands." It was further alleged that while India had never invoked, and was in no way entitled to invoke, any rights of sovereignty over the enclaves concerned, it had nevertheless repeatedly and emphatically asserted its firm purpose not to allow the passage of officials and private citizens of Portugal to those territories. (See also INDIA.)

In response to a United Nations inquiry, a memorandum was sent to the secretary-general on the subject of labour conditions in the overseas territories. The document declared that the Portuguese penal code, in force in all territories and embracing all peoples under Portuguese sovereignty, did not impose forced labour as a penalty, not even in the form of re-educational or corrective measures. It further stated that all penalties imposed by Portuguese tribunals were in harmony with the law, that every person accused of crime had the right to defense

counsel and that all trials were absolutely public. It added that in the overseas provinces the system of legal processes was simpler than that normally adopted for the trial of Europeans, that justice must be subordinated to the mentality and the social state of the native and that it must be recognized that the judge had authority to require that an accused should speak only the truth.

On Sept. 7, in the presence of the president of the republic, the first consignment of Angolan oil (4,300 tons) was shipped from Luanda for the Lisbon refinery. Developments in the Angolan oil industry included the initiation of construction work on two storage tanks in Luanda, each of 15,000 cu.m. capacity, and the placing of a contract for a 12-in. pipeline from the Benfica storage depot to the quayside. (F. B. H.)

Angola.—Schools (1954): primary (including rudimentary) 1,165, pupils 50,320, teachers (1953) 1,598; secondary 22, pupils 2,830, teachers (1953) 189; vocational 144, pupils 5,115, teachers (1953) 1,185; teacher training 2, students 166. Principal products (metric tons, 1954): sugar (tel quel) 52,000; coffee 60,000; broad beans (exports, 1953) 20,159; sisal (exports, 1953) 30,579; palm kernels (exports) 9,200; cottonseed (1955) 13,000; cotton lint (1955) 6,000; palm oil (1955) 30,000; diamonds (1954) 721,600 metric carats; maize (1951) 135,000 metric tons. Foreign trade (1955): imports 2,687,000,000 escudos; exports 2,805,000,000 escudos. Roads (1954): 35,489 km.; motor vehicles in use 23,802. Railways (1954): 2,470 km. Shipping (metric tons, 1954): cargo loaded 113,465, unloaded 836,263. Budget (1955 est.): ordinary revenue 1,324,530,626 escudos, extraordinary revenue, 397,500 escudos; ordinary expenditure 1,125,750,626 escudos, extraordinary expenditure 596,380,000 escudos. Monetary unit: angolar, at par with the escudo. (Escudo valued at 3.5 cents U.S.)

Cape Verde Islands.—Schools (1954): primary 157, pupils 7,535, teachers (1953) 149; secondary 1, pupils 629, teachers (1953) 20; vocational 27, pupils 493. Principal products: castor oil, coffee, mustard, brandy, oranges and hides. Foreign trade (1954): imports 427,550,000 escudos, exports 426,486,000 escudos. Shipping (metric tons, 1954): cargo loaded 95,088, unloaded 718,330. Roads (1954) 545 km. Budget (1955 est.): balanced at 40,692,290 escudos (ordinary), and 21,600,000 escudos (extraordinary).

Guinea.—Schools (1954): primary including rural 122, pupils 6,811; secondary 1, pupils 148; vocational 4, pupils 118. Principal products (metric tons, 1953): palm kernels 13,000; peanuts (exports) 2,600. Foreign trade (1952): imports 217,295,000 escudos, exports 188,122,000 escudos. Shipping (1953): vessels entered 83; gross tonnage 186,483. Budget (1955 est.): balanced at 97,004,310 escudos (ordinary) and 7,350,000 escudos (extraordinary).

São Tomé and Príncipe Islands.—Schools (1954): primary 18, pupils 171; secondary 1, pupils 46; vocational 1, pupils 93. Principal products (exports, metric tons, 1954): palm kernels 4,200; cocoa beans 7,700; copra 4,932. Foreign trade (1954): imports 125,255,000 escudos, exports 48,291,000 escudos. Shipping (1952): vessels entered 2,098; net tonnage 8,734. Budget (1955 est.): balanced at 50,308,671 escudos (ordinary) and 35,500,000 escudos (extraordinary).

Mozambique.—Schools (1954): primary (including rudimentary) 1,782, pupils 231,998, teachers (1953) 2,008; secondary 14, pupils 2,096, teachers (1953) 100; vocational 63, pupils 5,179, teachers (1952) 185; teachers' training colleges 4, students 398. Principal products (metric tons, 1954): copra and coconut oil equivalent (exports) 43,100; sugar (tel quel) 113,000; cotton, lint (1955) 30,000; cottonseed (1955) 60,000; bananas (1954) 19,000. Budget (1954): revenue 2,449,844,000 escudos; expenditure 2,227,280,000 escudos. Foreign trade (1955): imports 2,623,449,000 escudos, exports 1,527,952,000 escudos. Shipping (metric tons, 1954): cargo loaded 3,057,186, unloaded 2,429,664. Roads (1954) 37,168 km. Motor vehicles in use (1954) 22,229. Railways (1954) 2,210 km.

India.—Schools (1954): primary 446, pupils 33,333, teachers (in the 46 state schools) 264; secondary 69, pupils 13,296; vocational 14, pupils 23; teachers' training college 1, students 36. University college (1954) students 157. Copra production (1953) 2,000 metric tons. Foreign trade (1952): imports 545,188,000 escudos, exports 241,471,000 escudos. Shipping (metric tons, 1954): cargo loaded 1,435,597, unloaded 204,961.

Roads (1954) 728 km. Motor vehicles in use (1954) 4,133. Budget (1955 est.): ordinary revenue 149,075,222 escudos, extraordinary revenue 76,345,250 escudos; extraordinary expenditure 76,345,250 escudos. Monetary unit: rupee=5.97 escudos.

Macao.—Schools (1954): rudimentary 96, pupils 20,553; primary 11, pupils 2,469; secondary 5, pupils 499; vocational 2, pupils 248. Foreign trade (1950): imports 171,900,000 patacas, exports 13,100,000 patacas; imports (1951) 344,300,000 patacas. Roads (1954) 26,268 km. Shipping (1950): vessels entered 13,679; net tonnage 4,922,437. Budget (1955 est.): balanced at 93,191,354 escudos (ordinary) and 22,000,000 escudos (extraordinary). Monetary unit: pataca=5.70 escudos.

Timor.—Schools (1954): primary 75, pupils 6,441, teachers (1953) 208; secondary 3, pupils 180, teachers (1953) 10. Foreign trade (1954): imports 63,187,000 escudos; exports 39,008,000 escudos. Budget (1952) revenue 7,813,000 patacas, expenditure 9,871,400 patacas. Roads (1954) 2,134 km. Shipping (metric tons, 1954): cargo loaded 9,358; unloaded 4,779. Principal products (exports, metric tons, 1953): copra 1,191; coffee 1,381.

Post Office. **United States.**—Revenues of the post office department for the fiscal year ended June 30, 1956, amounted to \$2,419,354,000 and expenditures to \$2,883,305,000, resulting in a gross operating deficit of \$463,951,000. Efforts of the postmaster general to obtain from congress postal rate increases on first-, second- and third-class mail died in the senate committee when the 84th congress adjourned. In asking for these increases Pres. Dwight D. Eisenhower pointed out that he had signed into law the postal field service, which represented the greatest forward step for the country's postal employees in more than a century. This act raised by an average of 8.1% the salaries of the 500,000 postal employees, including 15,000 in the Washington area. The annual increases provided in the law averaged about \$320.

On June 30, 1956, U.S. Treasury savings stamps were on sale at approximately 17,000 post offices. Sales from July 1, 1955, to June 30, 1956, amounted to \$19,179,914. During the year U.S. savings bonds with an estimated sale value of \$47,818,400 were sold in behalf of the treasury department. At the close of the fiscal year 1956, bonds were on sale at 2,914 post offices.

Through the 37,515 post offices, the 4,439 postal stations conducted under contract agreement and the 2,652 classified stations and branches, 56,441,200,000 pieces of mail matter were received for domestic mails and foreign destinations, transported and delivered during the fiscal year ended June 30, 1956. This mail had a total weight of 10,928,900,000 lb., representing an increase of 1,207,600,000 pieces and 84,500,000 lb. from the preceding year.

On June 30, 1956, there were 236,560 mi. of domestic air-mail routes in the United States. Following intensive traffic and cost studies, the post office department initiated in 1953 air service on a space available basis for three-cent first-class mail between New York, Washington and Chicago. This proved so successful that the experimental program by 1956 provided direct service through 24 major and local service air lines to about 205 U.S. cities in 31 states.

During the 1956 fiscal year rural route service was available to more patrons than ever before. Approximately 34,900,000 persons were served each weekday by 31,888 rural free delivery routes covering approximately 1,582,000 mi. These figures represented a reduction of 188 in the number of rural routes from the preceding year but an increase of about 38,000 in route mileage.

At the close of the fiscal year ended June 30, 1956, there were 2,482,426 depositors in the postal savings system, as compared with 2,711,110 on June 30, 1955, a decrease of 228,684

or 8.4%. The outstanding principal to the credit of depositors at the close of the year was \$1,765,469.846, a decrease of \$242,546.612 or 12.1%. In addition there were accrued interest obligations amounting to \$92,837,509.99, making a total liability to depositors of \$1,858,307.355.99.

On June 30, 1956, 15 regional headquarters offices had been established at Cincinnati, O.; Chicago, Ill.; Dallas, Tex.; Portland, Ore.; Minneapolis, Minn.; St. Louis, Mo.; Washington, D.C.; Philadelphia, Pa.; San Francisco, Calif.; Boston, Mass.; New York, N.Y.; Atlanta, Ga.; Denver, Colo.; Memphis, Tenn.; and Wichita, Kan.

The post office department transported 1,173,249,000 lb. of parcel post packages during the fiscal year 1956, with postal revenues amounting to \$589,921,000. For the previous fiscal year there were 1,135,550,000 lb. of parcel post carried with revenues of \$586,248,000. Only zone rate parcels were embraced in these figures. They do not include books, catalogues, etc.

The post office department operated 3,175 buildings during the 1956 fiscal year. (I. Gc.)

Canada.—The gross postal revenue from 11,996 post offices reached an all-time high of \$158,286,321 for the fiscal year ending March 31, 1956, an increase of \$6,603,900 over the previous fiscal year. Total expenditures were \$148,293,474.12, an increase of \$4,280,195.07 for the period.

The number of post office money orders sold reached a total of 49,081,082 for a value of \$725,930,732. This represented a 4.6% gain in the number of money orders and a 5.1% increase in their monetary value. The post office savings bank handled 296,424 accounts and had deposits for a total of \$36,164,460.

Air service for parcel post and articles other than letters and post cards was extended to 19 additional countries of the western hemisphere and to six additional countries in Europe. Parcel post

agreements were signed with Japan and Switzerland.

The expenditure for mail transportation was as follows: air mail service \$11,052,000, land mail service \$11,219,545, railway mail service \$14,255,304, for a total of \$36,526,849.

Letter carrier service was inaugurated at four additional centres during the year and 184 new letter carrier walks were established serving 112,239 families. At the end of the fiscal year 2,349,975 homes and business places were receiving letter carrier delivery service.

During the year 25 new postal buildings were completed, 53 were under construction and more than 300 were in the planning stage. (See also PHILATELY.) (W. TL.)

Potash: see MINERAL AND METAL PRODUCTION AND PRICES.

Potatoes. Total U.S. 1956 production was 244,150,000 cwt., 11% more than the 227,046,000 cwt. of 1955 or the average for 1949-54. The crop for the earlier part of the season was not only smaller than that of 1955 but also delayed in coming to market. Total acreage for harvest was 1,401,500 ac., less than 1% below 1955 but moderately below the 1949-54 average of 1,525,000 ac. A wet, late spring delayed planting and growth, but abundant precipitation in most important late producing areas resulted in an average yield for the late crop of 189.8 cwt. per acre, as compared with 168.8 cwt. in 1955 and an average for 1949-54 of 162.6 cwt.

U.S. Potato Production by Leading States
(In thousand hundredweight)

State	Indicated 1956	1955	Average, 1949-54
Fall crop			
Maine	40,600	35,814	33,856
Idaho	33,115	33,043	26,598
New York	14,420	14,675	14,113
North Dakota	12,150	7,830	10,284
Minnesota	10,400	7,600	8,219
Colorado	7,438	7,095	8,334
Pennsylvania	7,425	7,569	9,051
Michigan	7,200	4,896	7,066
Oregon	6,240	5,500	5,562
Wisconsin	4,960	4,297	5,043
Washington	4,131	4,845	2,804
Summer Crop:			
Washington	6,125	4,788	3,984
New York (L.I.)	4,100	3,780	4,649
Virginia	3,724	4,048	3,958
New Jersey	3,528	3,718	4,481
California	3,300	3,575	3,428
Wisconsin	2,465	2,255	2,514
Colorado	2,415	2,025	2,218
Oregon	2,220	2,145	1,895
Idaho	1,890	1,843	1,914
Spring crop			
California	22,762	22,536	18,238
Florida	5,539	6,080	4,483
Alabama	2,095	891	2,598
North Carolina	1,845	2,194	2,828
Arizona	1,032	1,352	994
South Carolina	605	585	978
Arkansas	576	660	788

Early season prices were favourable to producers, reaching \$5.19 per hundredweight in July and more than ten cents per pound at retail, a record high level. By October prices to producers had declined to \$1.34 per hundredweight as compared with a distress level of \$1.10 per hundredweight a year earlier. Distress calls were again in evidence, and wives of potato producers from the Long Island area picketed the White House in September.

As with the 1955 crop, of which about 12,000,000 bu. of low-grade potatoes and nearly 7,000,000 bu. of culls were diverted, the U.S. department of agriculture activated a diversion program for the 1956 crop, under which growers in areas with marketing plans might receive supplementary payments for potatoes diverted to starch, flour or feed, the payment declining from 50 cents per hundredweight through December to 30 cents after March.

About 1,000 tons of California potatoes exported under re-

THE "STAMPMASTER," an automatic stamp dispenser introduced by the U.S. post office in 1956 which, in addition to making change and delivering stamps, was equipped with a speaker to thank the purchaser. Two of the six replies made by the machine were: "Thank you. Thank the purchaser"; "Thank you. Now buy some more and save a trip"

FARMERS' WIVES picketing outside of the U.S. department of agriculture, Washington, D.C., in Sept. 1956. They were seeking higher support for potato prices.

irrigation to New Zealand in July were reported as arriving in good condition and well received by consumers. Exports of 50,610,000 lb. to Spain under public law 480 retailed at 2.9 to 3.5 cents per pound and were well received. Curbs on imports from Canada were reimposed in October on nonseed stock.

Trading in potato futures reached an all time high in 1956; new limits were set on maximum individual holdings and some demand was heard for a ban on trading unless practices were reorganized to better serve growers and dealers. A bladeless, rotating-rod potato digging machine was reported as demonstrating superior efficiency.

Europe experienced a potato shortage in the spring of 1956 as old supplies were reduced and new crop potatoes were delayed by the late winter freeze in the Mediterranean area. The important European potato crop for 1956 was indicated as a bumper one, as much as one-fifth larger than that of 1955 and above average. Higher yields on approximately the same planted acreage in 1955 accounted for most of the increase. Quality was reduced in some areas by the uncommonly cool, damp summer with associated blight damage, water logged soils, etc.

Sweet Potatoes.—The 1956 crop of 16,634,000 cwt. was 22% less than the 20,946,000 cwt. of 1955 and 19% below the 1949–54 average. About two-thirds of the decrease was accounted for by a cut in 1956 acreage, a result of low prices received for the 1955 crop. The 287,000 ac. for harvest was only 84% of the 1955 acreage and far below the 1949–54 average of 378,000 ac. Yields of 58.0 cwt. per acre were down from 61.4 cwt. in 1955 but above the 1949–54 average of 52.8 cwt. Louisiana with 4,350,000 cwt., was the leading producer, followed by North Carolina (2,640,000 cwt.), Virginia (1,384,000 cwt.) and New Jersey (1,350,000 cwt.). Average price to producers in October was \$3.52 per hundredweight against \$2.74 a year earlier. Some increase in plantings was anticipated for 1957. (J. K. R.)

Presbyterian Church. The year 1956 marked the 250th anniversary of the organization of American Presbyterianism on the North American continent.

The general assembly of the Presbyterian Church in the United States of America, meeting in May 1956 in Philadelphia, Pa., represented 256 presbyteries (the organizational unit above the congregation) with 8,603 churches, 10,131 ministers and 2,736,241 communicant members, contributing \$180,802,586 to the work of the Presbyterian Church in the U.S.A.

Of other branches of the Presbyterian Church, the largest is the United Presbyterian Church of North America. Division brought into being another contemporary branch in the Presbyterian Church in the United States (the southern branch of the Civil War period). A threefold union movement of these branches was defeated in 1954–55 by the vote of the presbyteries of the Presbyterian Church, U.S. A twofold union movement between the United Presbyterian Church of North America and the Presbyterian Church, U.S.A., was approved by the assemblies of these churches in 1956. The culmination of this union awaited the vote of the presbyteries of each group.

A larger federated union had developed in the World Presbyterian alliance of which there is a North American area consisting of the Associate Reformed Presbyterian Church, the Evangelical and Reformed Church, Free Magyar Reformed Church, Presbyterian Church in Canada, Presbyterian Church in the United States, Presbyterian Church in the United States of America, Presbyterian Church of Jamaica, Reformed (Dutch) Church in America, United Church of Canada and the United Presbyterian Church. Their combined communicant membership was approximately 6,000,000. Seven other Presbyterian bodies that had not joined the alliance were: Associate Presbyterian Church of North America, Bible Presbyterian Church, Colored Cumberland Presbyterian Church, Cumberland Presbyterian Church, Orthodox Presbyterian Church, Reformed Presbyterian Church in North America (General Synod) and Reformed Presbyterian Church of North America (Old School).

The decision of the U.S. supreme court on Negro segregation brought the problem into the area of the Presbyterian Church's responsibility. Although names of Negroes had appeared on the membership rolls of white congregations, no uniformity of practice existed. The ruling particularly affected the Presbyterian Church, U.S., located in the heart of the area involved. The general assembly of that church affirmed "that enforced segregation of the races is discrimination which is out of harmony with Christian theology" and urged that in higher education the doors be opened to all races and that sessions of local churches admit persons "on the Scriptural basis of faith in the Lord Jesus Christ without reference to race." Other branches of the Presbyterian Church recommended to their congregations and members to work for desegregation in all walks of life.

(See also CHRISTIAN UNITY; CHURCH MEMBERSHIP.)

(G. S. K.)

Presidents, Sovereigns and Rulers. The following is a list of the names of those holding chief positions in their countries as of Dec. 31, 1956:

Country	Name and Office	Accession
Afghanistan . . .	Mohammed Zahir Shah, King	1933
	Mohammed Daud Khan, Prime Minister	1953
Albania	Haxhi Leshi, Chairman of the Presidium of the People's Assembly	1953
	Col.-Gen. Mehmet Shehu, Chairman of the Council of Ministers	1954
Argentina	Gen. Pedro Eugenio Aramburu, President	1955
Australia	Field Marshal Sir William Slim, Governor General	1953
	Robert Gordon Menzies, Prime Minister	1949
Austria	Theodor Körner, President	1951
	Julius Raab, Chancellor	1953
Belgium	Baudouin I, King	1951
	Achille van Acker, Prime Minister	1954
Bolivia	Hernán Siles Zuazo, President	1956
Brazil	Juscelino Kubitschek, President	1956
Bulgaria	Georgi Damjanov, Chairman of the Presidium	1950
	Anton Yugov, Chairman of the Council of Ministers	1956
Burma	Ba U, President	1952
	Ba Swe, Prime Minister	1956

Country	Name and Office	Accession	Country	Name and Office	Accession	
Cambodia	Norodom Suramarit, King	1955	Rhodesia and Nyasaland, Federation of	Lord Llewellyn, Governor General	1953	
Canada	Vincent Massey, Governor General	1952		Sir Roy Welensky, Prime Minister	1956	
	Louis Stephen St. Laurent, Prime Minister	1948	Rumania	Petru Groza, Chairman of the Presidium of the Grand National Assembly	1952	
Ceylon	Sir Oliver Goonetilleke, Governor General	1954		Chivu Stoica, Chairman of the Council of Ministers	1955	
	S. W. R. D. Bandaranaike, Prime Minister	1956	Salvador, El	Lieut. Col. José María Lemus, President	1956	
Chile	Carlos Ibáñez del Campo, President	1952	Saudi Arabia	Saud ibn Abdul Aziz al Saud, King	1953	
China	Chiang Kai-shek, President of the National Government	1943		Amir Faisal, Prime Minister	1934	
	O. K. Yui, Prime Minister	1954	South Africa	Ernest George Jansen, Governor General	1951	
China, People's Republic of	Mao Tse-tung, Chairman of the Central People's Government Council	1949		J. G. Strijdom, Prime Minister	1954	
	Chou En-lai, Chairman of the State Administrative Council	1949	Spain	Gen. Francisco Franco Bahamonde, Chief of State (President of the Council of Ministers)	1939	
Colombia	Lieut. Gen. Gustavo Rojas Pinilla, President	1953		Abdullah Khalil, Prime Minister	1956

	Josef Cyrankiewicz, Chairman of the Council of Ministers	1954				
Portugal	Gen. Francisco Hignino Craveiro Lopes, President	1951				
	Antonio de Oliveira Salazar, President, Council of Ministers (Prime Minister)	1932				

Prices.

In 1956 the stability of prices which had characterized the economy of the United States since late 1952 appeared to have come to an end. In the course of the second and third quarter of 1956 both the consumer price index and the wholesale price index rose almost continually, and by Sept. 1956 the highest recorded price levels since the beginning of the Korean war were registered in the United States. The rise in prices, although affecting almost all commodities traded in the wholesale and retail field, remained, however, within relatively modest limits. Nevertheless, compared with the third quarter of 1955, consumer prices in the third quarter of 1956 were 2.1% higher and wholesale prices were 3.2% higher. Rises of such magnitude within the span of one year had not occurred in the United States economy since 1952.

These percentage differentials are larger than the annual data presented in Table I, since the averages for the first 10 months of 1956 include also the relatively unchanged prices of the first four months of the year.

The rising prices were associated with a booming economy in which the growth of national income continued at an unabated rate. As in 1955, during which national income stood higher by more than \$25,000,000,000 or approximately 8% as compared with the preceding year, the national income of 1956 was expected to exceed the 1955 level by at least 6% and possibly by as much as 8%. However, whereas the excess in 1955 over 1954 occurred under a system of stable prices, the real increase in income in 1956 would be less since prices also had advanced.

Prices. In 1956 the stability of prices which had characterized the economy of the United States since late 1952 appeared to have come to an end. In the course of the second and third quarter of 1956 both the consumer price index and the wholesale price index rose almost continually, and by Sept. 1956 the highest recorded price levels since the beginning of the Korean war were registered in the United States. The rise in prices, although affecting almost all commodities traded in the wholesale and retail field, remained, however, within relatively modest limits. Nevertheless, compared with the third quarter of 1955, consumer prices in the third quarter of 1956 were 2.1% higher and wholesale prices were 3.2% higher. Rises of such magnitude within the span of one year had not occurred in the United States economy since 1952.

These percentage differentials are larger than the annual data presented in Table I, since the averages for the first 10 months of 1956 include also the relatively unchanged prices of the first four months of the year.

The impetus to the rising price level in 1956 probably was given by the early advance of wholesale prices. The wholesale price index had already shown a rising tendency in the summer and early autumn of 1955, but during the late autumn and winter of 1955 wholesale prices had levelled off. By Feb. 1956 they again began to advance and, with the exception of a short break during June and July, continued to advance steadily throughout the year. Retail prices, which had shown a remarkable stability during all of 1954, 1955 and early 1956, began to rise in April 1956.

There were two principal reasons for the price rise in the wholesale field. One was the recovery of agricultural prices, in contrast to their decline in the previous year; the other was the rise of nonagricultural prices, especially of the prices of nonagricultural materials, which began in mid-1955 and continued throughout 1956. The rise of agricultural prices produced first an increase in prices of processed foods, and later in the retail price of food. The main immediate causes for the rise in consumer prices appeared to be the increase in food prices and in the price of services.

The rise in agricultural prices was to some extent related to governmental policies in support of agriculture, but was also in part caused by limited farm marketings of crops and livestock. Thus, since farmers supplied less, and since the Commodity Credit corporation (CCC) did not release sufficient complementary quantities of the principal crops which were subject to price support, total actual supplies outside the CCC were small and hence prices of these commodities firmed up.

While agricultural prices rose by approximately 6% between the winter of 1955-56 and the midsummer of 1956, prices of nonagricultural raw materials rose commensurately, but their primary period of price increase preceded that of agriculture. The United States department of commerce published in July 1956 a comparison of wholesale price differentials between May 1955 and May 1956. During this one-year period wholesale prices of all nonagricultural products had increased by 6%. But the price of steel and iron scrap had risen in the same period by 39.1%, the price of copper by 27.8%, the price of antimony by 15.8%, the price of ferromanganese by 13.1% and the price of aluminum by 11.6%. Next in importance to the price rise of raw metals was a rise in the price of forest products, which resulted in a price increase of paper by 5.7% and of paperboard products by 10.3%.

The net result of the price rise of these agricultural raw materials was an advance in the prices of those commodities which contain considerable amounts of metal or paper. This is shown in Table II. The most important increases in wholesale prices occurred in the following industry groups: metals and

metal products, machinery and motive products, lumber and wood products and paper and allied products. Compared with these industries, others such as textiles and apparel, chemicals, rubber and rubber products, tobacco manufactures and bottled beverages experienced a relatively high degree of price stability, or even a slight price decline. Industries which are intermediate between these two extremes are hides, skins and leather products, fuel power and lighting materials, nonmetallic mineral products and processed foods. It is important to bear in mind that the comparisons in raw material prices cited earlier were made in May 1956. But as can be seen from Table II, wholesale prices advanced even further after May, though at a decelerated rate.

The continued gradual increase of wholesale prices was reflected in rising consumer prices. As already pointed out, the two main consumer goods fields in which prices increased most steeply were food and services, particularly medical care and personal care. (See Table III.) There was also a rise in rents and in the costs of operating a household, notably in the cost

"THOSE HOTROD RACERS AGAIN," a cartoon of 1956 by Shanks of the Buffalo Evening News (N.Y.)

of fuel and utilities. The increase in the cost of living, and especially the differential price rise of food and services, had the effect of shifting somewhat the over-all pattern of consumer expenditures. For example, there was an absolute decline in retail sales in the durable goods class by approximately \$350,000,000 per month between the second half of 1955 and the first half of 1956, which was counteracted by an approximate increase of retail sales of nondurable consumers goods. In particular, the total sales of grocery stores and restaurants increased, and their sales in the first half of 1956 were approximately \$240,000,000 per month above the monthly average of the second half of 1955. Another item on which more was spent by consumers in 1956 was services. Whereas total personal consumption expenditures on services in 1955 amounted to \$92,100,000,000, by March 1956 this item of consumption was running at an annual rate of \$96,400,000,000, and later developments indicated that the 1956 total would be nearly \$100,000,000,000.

The increases in expenditures for food and services were due not only to their rising prices but also to the growth of population. Therefore, the increase in 1956 expenditures over 1955 expenditures in these fields could have been expected even if prices had remained stable. The significant fact was the decline in expenditures in durable goods during 1956. In the face of rising prices of automobiles, for example, the people of the United States curtailed their total expenditures on automobiles, and one of the chief reasons for the rather drastic changes in external appearances of most 1957 automobiles may have been this elasticity of demand in the face of higher prices. The same elasticity of demand did not appear in connection with sales of other durable commodities, and household appliances, furniture and lumber and hardware sales not only maintained their 1955 level but even exceeded it.

The main danger of a rising cost of living is its effect upon wages and through them upon a further rise in prices. One of the consequences of the rise in consumer prices in 1956 was the settling of the steel strike under conditions providing for a rise in wages, which would have repercussions on steel prices

by early 1957. Steel is a commodity of such wide use, and steel-making capacity is so fully employed, that any rise in steel prices is bound to lead to further price increases of commodities made from steel. Some estimates of the over-all effect of the prospective rise in steel prices suggested that it might lead during 1957 to an increase in the cost of living by 2% to 3%.

(See also CONSUMER CREDIT; FEDERAL RESERVE SYSTEM.)
(B. F. H.)

Great Britain.—The price situation in Britain was by no means unfavourable during 1956, at least until toward the close of the year. Industry was required to absorb, not only higher freight and labour costs following a round of wage increases early in the year, but also increases of 5% in steel prices in May

and of 8% in pit-head prices of coal in June. That it did so with no more than modest increases in prices of manufactured products was the result of increased productivity, aided by a relative stability in prices of materials (except fuels) used in industry. By August the prices of basic industrial materials were little, if any, higher than a year before, and the same was true of the prices of imported materials and manufactures.

As in the two previous years, ex-factory prices of manufactures generally rose quite slowly in 1956. Such products as clothing and household textiles remained at much the same price level as in 1954–55 and, even when prices were rising rather faster (e.g., chemicals), the increase over 1954 was generally under 10%. Exports showed the same continued but moderate increase in prices. Against this, imports first increased and then (in midyear) declined in price. Consequently, the terms of trade, never much worse than the constant level of 1953–55, actually improved in the middle months of 1956.

Even so, the critical situation as regards the gold and dollar reserves and the balance of payments of the sterling area persisted into 1956. Toward the end of the year there was a loss of confidence in sterling following military action at Port Said. Most prices were then rising, not only those of imports but also of domestic manufactures. There remained doubts about the continued ability of British industry to absorb increased

costs with real possibility of further wage increases to come and to compete successfully with other industrial countries in export markets. Moreover the costs, direct and indirect, of the Suez crisis had not been fully counted by the end of the year.

Other Countries.—In 1954 and 1955 the movements of prices and costs had been less in countries such as the United States, Belgium, Switzerland

and the German Federal Republic than elsewhere. The feature of 1956 was that the price increases were much more nearly uniform in the main industrial countries. The upturn in prices, for manufactured goods entering into international trade, is seen in the following index numbers calculated by the United Nations Statistical office:

	Export prices, 1953=100				1956	
	1955				1st	2nd
Quarter of year	1st	2nd	3rd	4th	1st	2nd
Manufactured exports: world . . .	98	98	99	101	102	000
All exports: U.S. and Canada . . .	99	100	100	101	103	000
Western Europe:						
U.K. and Ireland	99	100	101	102	103	000
Continental	97	98	98	100	101	000

No important industrial countries avoided a mildly inflationary movement (Table VI); everywhere there was pressure for higher wages under full-employment conditions. There was, perhaps, a rather more rapid rise in prices in Scandinavia than in the German Federal Republic, but scarcely more than can be explained by particular circumstances or by the varying construction of available index numbers.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Big Enterprise and the Competitive System* (1954); *Competition and Big Business* (1953); *Inflation* (1953).

Prince Edward Island. Canada's smallest province (2,184 sq.mi.), Prince Edward Island lies in the Gulf of St. Lawrence. It was established as a colony in 1769 and it joined confederation in 1873. Population: (1951 census) 98,429, (1956 est.) 108,000. Capital and only city, Charlottetown, pop. (1951 census) 15,887, (1956 est.) 16,446. There is one town, Summerside, pop. (1951 census) 6,547, (1956 est.) 7,115, and the following incorporated municipalities: Souris, pop. 1,183, Montague 1,068, Tignish 926, Kensington 811, Georgetown 762, Borden 690, Alberton 674, O'Leary 657.

History.—The outstanding events of 1955 were the provincial general election on May 25 which returned the Liberal government of Premier A. W. Matheson with the support of 27 of the 30 seats in the legislature, and the 100th anniversary of the incorporation of the city of Charlottetown. The latter event was marked by numerous ceremonies, celebrations, conventions and competitions, and attracted the largest influx of tourists in the history of the province. Production was normal during 1956 and no major economic changes occurred. Rural electrification was extended into many districts. The construction industry was very active: the new trans-Canada highway was completed from Borden to Charlottetown and a beginning was made on the second stage, from Charlottetown to Wood Islands. A large new federal building in Charlottetown and other new construction gave the building trades an unusually busy year.

Education.—There were 250 university students, 894 high school students and 19,716 elementary school pupils enrolled in all public and private institutions for the school year 1954-55. There were 800 teachers, and the total provincial government expenditure on education was \$2,306,006.39.

Public Health and Welfare.—For the year ending March 31, 1956, the federal government paid out \$2,616,640 in family allowances on behalf of 36,166 children in 13,276 families; and \$3,305,879 in old-age security pensions to 6,909 pensioners. The provincial government in the year ending March 31, 1956, paid out \$202,170 in old-age assistance payments to 601 recipients; \$43,039 in pensions to 102 blind persons; and \$115,992 in assistance to 310 disabled persons. In the same period mothers' allowances and assistance for 774 children under 16 years of age in 273 families totalled \$78,613. Total benefits for the year were \$6,362,333.

Transportation and Communications.—In 1956 there were 13,436 passenger cars and 6,142 trucks using the 3,194 mi. of provincial roads, of which 363 mi. were paved, 1,406 mi. were improved, 1,410 mi. were unpaved, and 15 mi. were national park roads. There were two airports, one at Charlottetown and one at Summerside. Two ferry systems connect the province with the mainland. The Canadian National railway serves the island with 286 mi. of track. The Maritime Central airways runs regular passenger and freight service. The Sydney Motor Transport company runs a regular bus service to the mainland. As of Sept. 30, 1956, there were 14,554 telephones in use.

Banking and Finance.—On March 1, 1956, there were 23 branches of chartered banks doing business in the province. Gross fund of debt of the province was \$19,300,000, less sinking funds of \$4,163,924. The net fund of debt was \$15,136,076; the unfund of debt \$5,124,935. Total liabilities amounted to \$20,251,011. At March 31, 1954, there were 57 credit unions with assets of \$1,187,656.

Agriculture.—During 1955 the farm cash income was \$25,489,000. The wheat crop was valued at \$128,700; oat crop \$2,826,250; barley \$75,600; potatoes \$5,912,500; hay \$4,940,500. In 1955 there were 125,000 cattle; 61,000 swine; 39,700 sheep and lambs; and 930,000 domestic fowl. The value of mixed grains was \$2,516,150; dairy products \$4,354,000.

Fisheries, Furs and Forestry.—During 1955 fisheries statistics indicated that 47,314,800 lb. of fish were landed at a value to the fisherman of \$3,278,952 and a market value of \$4,700,000. There were 11,382,400 lb. of Irish moss gathered with a value of \$142,404. Trapping resulted in \$72,000 worth of fur pelts. The value of forest products was \$367,000.

Manufacturing.—Latest available statistics were for 1954, when there were 1,798 employees in 224 plants earning \$22,954 in salaries and wages. Finished products were: butter and cheese \$3,793,000; fish processing \$3,220,589; prepared livestock and poultry feed \$1,238,344.

Printing. Perhaps the most startling development in the graphic arts industry during 1956 was the actual entering into business of two companies¹ with equipment for

¹The Merrywell Systems, New York, N.Y.; Arrow Graphic Co., New York, N.Y.

producing telephone directories, price lists, other listings and certain types of catalogues by what is called "cold typesetting," photomechanical platemaking methods and offset printing. The evenly justified lines of type are composed on an electric typewriter,² called the recorder, in punched tape form. The tape is transferred to a reproducer machine in which the evenly justified lines are typed automatically on a strip of cardboard—one, two or three lines of type to the card. The strip is then passed through a die-cutting machine³ which automatically dies out the cards at 100 per minute to a size of $7\frac{3}{8}$ in. wide by $3\frac{1}{4}$ in. high by 0.007 in. thick, with the upper right-hand corner cut off diagonally. The one, two or three lines of typed copy or even some part of a design are contained on each card. The cards are passed through a coding machine⁴ where small slots are punched into them. These slots act as detectives for the sorting or collating machine so that they will be in proper order, not only for filing purposes for future use, but also for reproduction in an ultra-rapid automatic Listomatic camera. The oblong slots on the right side of the card indicate data for the job, alphabetical listing, etc. The slot or slots more nearly in the centre of each card "tell" the Listomatic camera how many lines of type are to be photographed in the film. The camera will photograph cards automatically on the sensitized film at the rate of 230 per minute. The camera can be adjusted to photograph type lines from the same size (12 point) down to 50% reduction. The resulting exposed film is developed and stripped into page form for offset or photoengraved printing plates.

Development of an impressionless printing press called an electronic reproducer, or "smoke printer," was announced.⁵ Its initial application was for producing business forms. The image of the copy to be reproduced is projected to a sheet of glass coated with a series of metals which have the ability to change light energy to electrical energy. This vertically positioned glass plate, in front of which the paper is continuously fed, contains a facsimile of the copy (either line or continuous tone) in the form of electrical charges rather than a visual light image. In a chamber facing the charged image, finely atomized pigment particles are sprayed through a high-voltage field where each particle is charged opposite in polarity to the electrical image on the glass plate. The difference in polarity causes the plate to attract the charged pigment particles. Because the paper web travels between plate and pigment particles, the flight of the particles is interrupted. The pigment particles become embedded in the paper to a depth dependent upon the amount of electrical charge. The rate of production of $8\frac{1}{2}$ in. by 11 in. printed sheets was 3,600 per. hour.

There was a definite trend toward the installation of small-size offset production presses⁶ as distinguished from the offset duplicating type of equipment. These are furnished in 14 in. by 20 in. size. The presses are built like larger offset production presses.

Expanding the versatility of the Scan-A-Graver, Fairchild Graphic Equipment, Inc., Jamaica, N.Y., developed an electronic device called the Variable Response unit for almost infinite control over the tonal qualities in the photographic copy from which halftone plastic printing plates are made. That is, by using the new unit, the operator can adjust it for partially correcting poor density values in original copy, type of ink and paper to be used and condition of the printing press, and in case the engravings are to be stereotyped great improvement in printing can be obtained. In the Variable Response unit, the electrical scanning information is converted to lighting information and

then reconverted to electrical information. This is done by means of a flying spot scanning tube very similar to a television tube. It was pointed out that local correction work in a photograph cannot be obtained with the unit. The same change in tonal value applies across the entire piece of copy. Thus the modification of tonal values in one section of the copy applies to equivalent densities in the remaining part of the copy.

One of the important improvements in ink drying was that of a quartz tube heating element.⁷ The elements resemble tubes, and the effective heating width is 25 in. These drying elements may be assembled in a conveyor, printing press or other machine to cover any width sheet or web speed. Besides the ink drying function, the elements can be used for treating and conditioning coatings on paper, fibre and textiles. The drier is especially effective with synthetic resins which react favourably under high flash heat, as well as with impregnating processes using lattices or impregnating compounds. The quartz drier elements come up to temperature quickly when the electricity is turned on. The quartz-enclosed elements cool off quickly when the machine is stopped, thus greatly reducing any fire hazard. One of the properties of the element is that the heat is permitted to pass through the quartz wall without the latter's getting hot.

Refinements in offset platemaking processes worthy of mention were as follows: Lithographic Technical foundation, Chicago, Ill., reported that the foundation had spread the difference between the water receptivity of the image area so far that it was now able to make plates without any grain at all. While not many plants were using ungrained plates, the general trend was toward finer and finer grains. A method for making a fourth or black plate for the short-run three-colour offset process was developed by Eastman Kodak Co., Rochester, N.Y. The black plate is made by a simple method from the three colour separations. (M. St.)

Prisons. The year 1956 was one of comparative quiet and some notable progress in prisons of the United States. The destructive riots and group uprisings which first broke out in many of the state prisons across the country in 1952 subsided during 1956 with only a few sporadic incidents. In the Maine state prison, a group of prisoners set fire to several of the institution's shops in an attempt to fight their way to freedom, and in the Connecticut state prison a sit-down strike was staged by several hundred prisoners in protest against poor food, lack of recreation and harsh disciplinary treatment. Some prisoners of the Georgia prison system broke their legs with sledge hammers to avoid working in the prison rock quarry.

Many states, especially those which experienced serious prison riots in the past few years, undertook substantial improvements in their prison systems. Massachusetts, Ohio, Missouri, Minnesota, Florida and several others reorganized and strengthened their state prison systems under centralized state control. Connecticut had a new state prison in the blueprint stage and Delaware established for the first time a state correctional system. There were also the beginnings of an encouraging interest in the potential values of prison camps and similar "open-type" institutions for the younger and more reformable type of prisoner. This interest in the open-type institution was influenced to a large extent by the success of the California program and its institution at Chino, Calif., and by that of the Federal Correctional institution at Seagoville, Tex.

The prison population generally throughout the country continued its upward trend in 1956, but at a slower rate. At the end of 1955, there were 185,069 persons in state and federal

Sentenced Prisoners in U.S. Prisons and Reformatories

(Dec. 31 of each year)

Year	Federal Institutions	State Institutions	Total	Rate per 100,000 Population
1955	20,088	164,981	185,069	114.0
1954	20,003	162,048	182,051	114.4
1953	19,363	153,366	172,729	110.6
1952	18,014	149,360	167,374	109.2
1951	17,395	147,501	164,896	109.1
1950	17,134	148,662	165,796	110.4
1949	16,868	146,474	163,342	110.7
1948	16,328	138,764	155,092	106.8
1947	17,146	133,719	150,865	105.8
1946	17,622	121,813	139,435	100.8
1945	18,638	114,581	133,219	104.4

prisons and reformatories, an increase of slightly more than 3,000 over the previous year. However, the rate of increase during 1955 was only 1.7% as compared with a rate of 3.2% increase in 1953 and 5.4% in 1954. It was believed that this might represent the beginning of a levelling-off in the rapid increase in prison population during the past 10 years. For the first time since 1951, court commitments to state and federal institutions decreased; there were 77,503 new commitments during 1955 as compared with 79,946 in 1954, or a reduction of more than 3%.

While the federal prison system was free of any group disturbances or uprisings which had plagued so many of the state institutions, it was seriously affected by the growth in prison population. The federal prison system comprised 29 institutions located in 19 states and the District of Columbia. The total capacity of these institutions was about 19,000 prisoners, but the population of the federal institutions at the close of 1955 was 20,088. Nevertheless, the institutions were closely integrated and classified to provide appropriate custody, care and treatment for many types of offenders. The federal system included 6 penitentiaries, 5 reformatories, 7 correctional institutions, 6 camps, a medical centre, a detention or jail facility, a youth centre for adolescent offenders, a training school and a forestry

camp for juvenile delinquents.

For the fiscal year 1955-56, the federal bureau of prisons administered a total appropriation of \$30,092,000 for salaries, maintenance of plant and equipment, care of prisoners and for the operation of an extensive rehabilitation program. On a per capita basis, this amounted to \$4.07 per prisoner per day. The rehabilitation program included classification, casework services, medical and psychiatric treatment, religious counseling, education and vocational training and a wide program of employment and industrial production.

The latter program was operated by Federal Prison Industries, Inc., organized as a government corporation but administered as an integral part of the federal prison system. During the fiscal year, this industrial production program employed about 18% of the total prison population and produced goods for sale only to other government agencies, valued at \$20,810,656. Out of the earnings, the corporation paid to inmates employed in the shops \$1,247,842 in wages, which were sent to dependents or kept for the inmates in anticipation of their release, and also financed entirely the costs of the vocational training program. In addition, the corporation returned to the U.S. treasury \$4,000,000 for fiscal 1955-56, which brought to \$32,500,000 the total for the past 10 years. (See also CRIME.) (J. V. BE.)

Protestant Episcopal Church. Statistics given by the *Episcopal Church Annual* at the beginning of 1956 showed moderate gains under all headings except ordinations and postulancy. The total number of baptized persons was 3,013,570, an increase of 106,249 over the previous year. The number of communicants, 1,865,915, represented an increase of 49,304. The decline in the number of parishes reported the previous year was reversed, the total number, 8,053, being an increase of 141. There were 7,573 ordained clergy at the beginning of 1956, an increase of 206 over the preceding year. The number of lay readers was 9,545, an increase of 919. The church schools had 696,028 pupils, an increase of 17,093, and 80,819 teachers, an increase of 4,958. Total receipts came to \$131,354,945.37, an increase of \$5,822,423.70.

The gain in infant baptisms was slight, the total of 98,595 being only 340 more than the previous year, but the record of adult baptisms was somewhat better, increasing by 1,344 to a total of 20,388. The number of confirmations was 113,443, an increase of 9,429. The ratio of clergy to communicants had risen slightly from 1 to 246.7 to 1 to 246.4, but the decline in ordinations and postulancy created the fear that this improvement might not continue in the future. A total of 415 persons were ordained to the diaconate, a decrease of 3, and 354 to the priesthood, a decrease of 34. There were 677 candidates for the ministry, a gain of 11, while the number of postulants (those preparing to become candidates) was 1,182, a decrease of 13.

Discussions of reunion were carried on with representatives of the Methodist Episcopal Church, but the proposals were still in the tentative stage. A delegation was sent to study the interesting experiment in Christian unity being made by the Church of South India. Reports from China indicated that the church there had survived the revolution in better shape than had been supposed.

"PRE-RELEASE" CENTRE installed at Missouri State penitentiary in Dec. 1955. Two weeks before being paroled, prisoners are permitted to spend their leisure hours watching television or playing games, a program designed to prepare them for normal life outside of prison

Liturgical developments included an increased use of the "westward position" (the priest facing the people) in the celebration of the Holy Communion, and the development of a family service, usually held between the early and late Sunday morning services, as a part of the program of religious education. This service might take the form of Holy Communion, morning prayer or a special service might be used.

Psychiatry. Psychiatry in 1956 commemorated the 50th anniversary of the birth of Sigmund Freud by reviewing and assaying the contributions of the founder of psychoanalysis. Although controversy among psychiatrists concerning the significance of Freudian theoretical concepts continued, integration of the left wings of both camps appeared to be taking place, particularly in the United States, under the compromise term "dynamic psychiatry." Some right-wing traditionalists still denied the existence of unconscious mental processes, and some right-wing psychoanalysts still quoted the hypotheses of Freud as if they were facts, but they were gradually becoming outnumbered by their younger colleagues who challenged many of Freud's formulations in the same spirit of free inquiry that made possible Freud's greatness.

Dynamic psychiatrists, however, continued to look beyond Freud in their exploration of the many facets of human behaviour. Isolated in past years to state hospitals or institutes of psychoanalysis, by 1956 psychiatric research was pursued extensively in medical schools and comprehensive training centres.

In 1956 a research team of psychiatrists, sociologists, anthropologists, psychiatric social workers and statisticians began to report the results of four years' exploration of the extent of mental health problems in a section of a large U.S. city. They found a higher degree of emotional distress than had been anticipated, differentially distributed among socioeconomic segments of the population in such a way that the groups needing the most psychiatric treatment were receiving the least.

A major problem was the shortage of psychiatrists in all fields—research, teaching and practice—in spite of efforts of governmental and private philanthropic organizations to assist and encourage physicians to enter the specialty of psychiatry. There were many reasons for the lag in recruitment; one major deterrent was the high cost and lengthy duration of a program which included psychoanalytic training. No short cuts in the training program had demonstrated their practicality.

The years since World War II had witnessed a struggle by psychiatrists to gain recognition for their specialty in undergraduate medical curriculums. For the most part, in the United States, this struggle had been successful, and departments of psychiatry were receiving recognition, budgetary support, teaching opportunities and departmental autonomy in most of the major medical schools. As the departments became securely established, many of them shared leadership in the development of plans for integrated teaching of comprehensive medicine, based on the realization of the importance to all physicians of comprehending the patient's total adaptation in all of its social and emotional as well as physical relationships. Such comprehensive medical programs were being developed and extended in many areas in 1956.

The search for chemical short cuts to treatment in psychiatry continued in 1956. The so-called tranquillizing drugs received enthusiastic support from some psychiatrists and equally strong condemnation from others. They appeared to have a definite place in the treatment of some agitated hospitalized psychotic patients, but their role in outpatient treatment of psychoneu-

rotic patients remained in question. The indiscriminate use of tranquillizing drugs, often without prescription, began to be a major public health problem. Educational measures had been invoked in an attempt to bring the sale and use of the tranquillizing drugs under safe control, but their efficacy was still in question.

Newer concepts of legal responsibility in criminal cases were supported by the United States court of appeals for the District of Columbia in the case of *Durham v. United States*. For more than a century the responsibility of a criminal had been determined primarily by the McNaghten rule—the test of the defendant's awareness of right and wrong—or in some areas by the irresistible impulse standard. Neither of these criteria remained satisfactory in the light of the development of psychiatry and of co-operation between psychiatry and the law. In *Durham's* case the court stated that "an accused is not criminally responsible if his unlawful action was the product of mental disease or mental defect." Psychiatrists generally welcomed this decision as a major step forward in facilitating their contribution to the understanding and disposition of defendants in criminal cases.

(C. K. A.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Alcoholism* (1952); *Drug Addiction* (1952).

Psychology. Psychology in 1956 extended its international character with experimental and theoretical papers, monographs, and discussion conferences representing the work of United States, Australian, European, Indian, Japanese and South African scientists, with a few contributions from staff members of educational institutions of the near east. Techniques and points of view varied with the breadth of this field of science and not with national or continental boundaries, except for some differences in the relative influence of outstanding theoreticians and in facilities for specific kinds of experimentation. The majority of publications were in English, but there was a growing need in psychology for experts in other European and Asian languages.

General Experimental Psychology.—Psychologists generally, but especially those in Europe, were showing concern over the development of more comprehensive theoretical formulations to guide research. Jan Smedslund of Norway, in a monograph on *Multiple-Probability Learning*, parted company with both S-R learning theory and Gestalt theory without discarding the experimental data previously obtained in these contexts. The experiments which Smedslund reported were designed to provide data with sufficiently broad implications to permit generalization to real-life situations. The method required a more refined quantification of the frequency with which cues appeared in the environment and how they correlated with each other and with specific consequences of behaviour. The applicability of this theory substantiated the promise of E. Brunswik's formulation of perceptual learning. A person's knowledge of the physical world and the development of social behaviour were regarded as being dependent upon a multiple-probability learning process. Older theories of learning and cognition had been based on an oversimplified conception of stimulus. J. S. Bruner, J. J. Goodnow and G. A. Austin used a closely parallel approach to even more complex material in *A Study of Thinking*.

Comparative Psychology.—New strength appeared in a pure science area of psychology, the study of animal behaviour. Many more papers on the genetics of behaviour were being published and were being presented at meetings or research conferences. From England came a book by W. H. Thorpe, *Learning and Instinct in Animals*, in which the author co-ordinated his theories of innate factors and learning processes into the most comprehensive survey of the capacities of various animals for behav-

journal modification to appear in the last 20 years. Work of Thorpe and his collaborators, and of E. H. Hess in the United States, revealed that imprinting in animals shared more properties of other forms of behavioural modification than was originally thought. The early stages of imprinting showed generalization and a degree of reversibility. The earlier alleged all-or-none character of imprinting needed qualification in the light of new data.

Developmental Psychology.—Some research on children was oriented toward theory-testing, some toward fact finding, and much toward practical problems of education and adjustment. F. L. Goodenough and L. M. Rynkiewicz' *Exceptional Children* reported facts and practical procedures related to gifted children as well as the handicapped. In *Three Determinants of Attention-Seeking in Young Children*, a monograph of the Society for Research in Child Development, J. L. Gewirtz presented data from an experimental study which tested several hypotheses about the development of social motivation in children of pre-school age. This study was representative of a trend which had gained momentum gradually during the past decade, favouring studies of individual and group differences which were predicted from certain assumptions about the effects of growth and of child-rearing practices.

Personality and Social Psychology.—Problems in motivation, social and self perception, personality measurement and political behaviour were of primary concern to many research workers in 1956. One study demonstrated a direct relationship between perceptual sensitivity for faces (as opposed to familiar inanimate objects) and the affiliation motive. Quantitative methods were finding increasing acceptance and application in experiments where intuitive appraisals were formerly considered the only approach possible. Personal and social needs of individual members of university athletic teams or of representative members of certain interest groups were being specified in precise mathematical terms. A new quarterly, *Behavioral Science*, was founded in Jan. 1956 for the publication of articles on behaviour theory having implications for mental health.

Physiological Psychology.—In recent years psychologists had become increasingly active in clarifying concepts and discovering new facts about innate drives and the development of derived forms of motivation. Behavioural studies used both persons and animals for measuring the parameters of selective and energizing factors in activity. Physiological investigations contributed new information during 1956 on "centres" in the nervous system; techniques for implanting electrodes or small hypodermic tubes through the skulls of experimental animals were proving valuable. These methods made it possible to stimulate electrically or chemically and to record from discrete brain loci, to determine behavioural correlates of such stimulation and to then make accurate microscopic determinations of the region involved. One study published in May 1956 reported that local chemical stimulation of the "medial preoptic area" produced in male rats complete maternal behaviour sequences. Other work on "rewarding" effects of electrical brain stimulation showed that activation of certain midbrain, hypothalamic or primitive forebrain centres would induce animals to repeat whatever actions they had made just at the time the current was turned on. One effective technique led rats, cats or monkeys to press a bar that momentarily turned on the stimulus hundreds of times in an hour. Other locations were found whose stimulation caused animals to avoid repeating such acts.

Applications.—Industry, government, schools, hospitals and the armed services were employing increasing numbers of specialists, some of them occupied in research that was several steps removed from the solution of an immediate practical problem. Two 1956 books of particular interest to students of personnel

problems were Anne Roe's *The Psychology of Occupations* and Ross Stagner's *The Psychology of Industrial Conflict*.

Specialists in human engineering were being sought by industrial houses and by various technical branches of the armed services. The typical request was for men trained in basic sciences, experimental design and statistics, and the psychology of sensation, perception and motor skills.

Many workers were engaged in the improvement of educational, clinical and specialized aptitude tests whose practical usefulness was well recognized. An important research contribution to the field of psychological measurement appeared in *A Study of Adoptive Children* by J. R. Wittenborn and eight collaborators (Psychological Monographs, 1956). The attempt was made to evaluate both the children and their homes and to uncover the basic factors contributing to the child's development.

(A. H. R.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Emergence of Personality Series* (series of five films) (1948); *Mental Health* (keeping mentally fit) (1952); *Personality and Emotions* (1955); *Why Vandalism?* (1955); *Yale Clinic Child Development* (series of 11 films) (1934); *Your Children's Sleep* (1950).

Psychosomatic Medicine. In 1956 the field of psychosomatic medicine turned its attention to a study of basic concepts and methodology. The previous pattern of reporting specialized aspects of psychosomatic phenomena continued, but the significant trend was a re-examination of the basic methods of conducting a psychosomatic study.

Viewed historically, such a trend was much to have been expected. References to mind-body relationships appear in the literature of ancient Greek medicine, but psychosomatic medicine as a field for scientific investigation began only about the time of World War I. The work of Sigmund Freud in psychoanalysis and Walter B. Cannon in physiology gave rise to the initial investigations. In the ensuing four decades a considerable mass of material was accumulated demonstrating the role of psychological factors in various illnesses—high blood pressure, peptic ulcer, arthritis, etc. Physiology was likewise making significant advances. The psychological work was very often detailed in its field, the physiological in its field, but all too often there was not sufficient collaboration. There seemed to be a tacit assumption that psychosomatic was essentially equal to psychogenic—i.e., originating in a mental process. At one time it was thought that a specific psychological constellation (a personality type) would be discovered for specific psychosomatic illnesses; for example, it was thought that repressed rage was specific for high blood pressure, dependency for peptic ulcer, etc. These observations had validity in their own right but were not sufficiently broad to explain a psychosomatic occurrence.

Now the increased emphasis is on the role multiple factors play in producing a psychosomatic illness. The psychological and physiological aspects have been mentioned, but heredity and socioeconomic factors are also known to be important. These four factors—the psychological, the physiological, the hereditary and the social (or cultural)—were the main lines along which the major endeavour of psychosomatic research was proceeding during 1956. This means not that the points of vantage were limited to these four as a specific and irrevocable number but that they represented a convenient way for organizing thought.

This more comprehensive approach was often spoken of as the "field theory." This term was borrowed from physics to describe part-whole relationships. The essential components of this approach are the focusing on a "field" with observation of the various component parts. In order to derive adequate data, the observers usually must be trained in various scientific dis-

ciplines. A comparison might be drawn with the process of analyzing a photograph of a person in an outdoor setting. One observer, focusing on the person, can draw certain conclusions about that person from his facial expression, mode of dress, etc. Another observer, trained in another discipline, can say something about the geographical area in which the photograph was taken from observing the vegetation. Still another observer may be able to describe weather conditions at the time the picture was taken from observing clouds in the background, and so on. The conclusions are limited principally by the number, skill and variety of orientations of the observers.

There is yet another aspect of this picture which must be included if this is going to describe adequately a psychosomatic situation. This is the transaction of one part with another. For this type of observation a still photograph is not sufficient; a motion picture is necessary. For example, a transaction takes place if the clouds in the background bring rain and the person in the picture must adapt to this new circumstance. This idea of motion and transaction naturally makes the situation infinitely more complex, but this is true of life and psychosomatic situations.

Peptic ulcer may be selected as a specific illustration of the application of the "field" concept in psychosomatic medicine. (These premises had not been conclusively proved, but they were suggested by current work, particularly that of I. A. Mirsky.) It was found that there is a circulating hormone, pepsinogen, which tends to be present in greater than average quantities in patients with peptic ulcer. Pepsinogen levels vary considerably from person to person, and at different times in the life of a given person. Furthermore, infants shortly after birth vary in the quantity of circulating pepsinogen, presumably because of hereditary factors. The pepsinogen level is related directly to the secretory activity of the stomach, particularly the acid secretion, which is an important predisposition to peptic ulcer. Consider a particular infant who at birth has a higher than average level of pepsinogen, and assume that this means greater than average stomach activity and more complexity in his early feeding. The hereditary, or genetic, factor can be seen to be the predominant one at this point. Suppose that this infant is reared by a mother who is sufficiently adaptive and flexible to satisfy the feeding demands of an "ordinary" baby but who cannot adapt herself to this special child. Her activity, of course, is determined in this regard by past and present cultural factors of her own life, her own psychological make-up and the specific environmental situation (the presence of other children, etc.). As a result of his unsatisfied tensions the child, in turn, may react against the mother, creating further tension in her and thus in the long run creating a more than usually complex mother-child relationship. This, then, becomes important to the psychological development of the child as he grows into adulthood. Even this degree of complexity of factors is not sufficiently complex to lead to the development of a peptic ulcer. Assume, then, that a significant event takes place in the life of this person. It might, for example, be induction into the military services, where additional demands, changes in diet and feeding routine, etc., finally create sufficient stress to produce a clinical illness, a peptic ulcer. No one factor—heredity, early environment, cultural expectations, psychological make-up or current life situation—can be said to be the single cause of the peptic ulcer. Each has a validity and an importance in its own right.

Viewed in this manner, psychosomatic medicine emerges as a broad field, encompassing many disturbances of health, not just a few specific illnesses. It is impossible, of course, for any single investigator to be skilled in all fields of observation. Because of this there was considerable interest and emphasis on the

"team" approach. This means a collaboration of skills from varied areas—physiologist, biochemist, psychiatrist, social scientist—to study and understand not only particular points of view but the more important whole. A special area of development is the correlation of psychological processes and structural changes with the "in-between" processes which transmit this interaction. These researches lead particularly into the fields of endocrinology and neurophysiology. Paul MacLean was studying that part of the brain between the oldest part, the spinal cord, and the newest part, the cortex (the highest thinking centre). This area is called the "visceral brain" because it has an important regulatory function over the organs of the body (viscera) where psychosomatic disturbances take place. Basic research was seeking to determine the importance of the hormone epinephrine (adrenalin) in anxiety states. A hormone of more recent discovery, nor-epinephrine, was being studied for its possible role in aggressive feelings and high blood pressure.

These were a few of the advances in neurophysiology and endocrinology. Their importance was not in terms of isolated phenomena but in their role in the total processes. In 1956 the emphasis in psychosomatic medicine was the study of multiple factors in causation, by a team of experts, using the field approach. (See also PSYCHIATRY.)

Public Assistance: see CHILD WELFARE; SOCIAL SECURITY.

Public Health Engineering. Growing interest in atmospheric pollution problems in the United States in 1956 was signified by further development of federal, state, municipal and industrial programs in pollution control. Increased attention was directed to public health problems associated with the peacetime use of nuclear energy. However, practicable means for disposal of high-level radioactive wastes, suitable for use by private industry, had not been developed. A basis for permanent, strengthened federal activity in water pollution control was provided in public law 660 enacted by the 84th congress.

Community Air Pollution.—The broadened national program in air pollution control was characterized by expanded epidemiological and toxicological studies of specific pollutants; and by establishment of a central research facility in Cincinnati, O., at the public health service's Robert A. Taft Sanitary Engineering centre. Legislative action was initiated in many additional states to provide for the definition and control of atmospheric pollution. Interest in automobile exhaust fumes as an important component of irritating smogs led the automobile industry to undertake intensified research for the control of these emissions. The Los Angeles (Calif.) Air Pollution Control district enlarged its study of the role of household refuse incinerators in that area's air pollution problem. A smog occurrence in southern England, suggestive of the 1952 episode which was believed to have killed 4,000 people, emphasized the need for the Clean Air bill recently enacted by the British government.

Radiological Health.—The need for developing practicable control measures for radiation hazards became increasingly urgent with expansion of interest in the peaceful uses of atomic energy. Methods for protection against such hazards represented an important part of the program of the first Nuclear Energy and Science congress, held in Cleveland, O. An important guide to understanding and evaluating radiological health problems was provided by the National Academy of Sciences in its report,

"The Biological Effects of Atomic Radiation." Continued research was devoted to the disposal of high-level radioactive wastes by permanent fixation of fission products on silicious materials before burial, and by disposal in the ocean.

Sewage and Waste Disposal.—Enactment of public law 660 gave the public health service responsibility for development of a permanent federal program in water-pollution control. New features of general interest included simplified procedures for enforcement of pollution abatement in interstate waters, and stimulation of sewage treatment works construction by grants to municipalities. Interest in waste stabilization ponds for inexpensive, complete sewage treatment increased as additional information on design criteria and performance was reported. Research on plastics as bio-oxidation surfaces drew attention to the possible advantages, over conventional biological treatment devices, of lightweight materials with large surface area to volume ratios and high porosities. Interest in the use of wet combustion processes to treat a variety of liquid wastes followed reports on the successful application of this method in treating waste sulphite liquor. Modification of sewage treatment process design to permit handling of industrial wastes indicated a growing trend toward industrial use of municipal facilities as an economical method of industrial waste disposal.

Water Supply.—Recommendations on federal policy in development of U.S. water resources were contained in the report of the President's Advisory Committee on Water Resources Policy. The committee recognized the need for integrating municipal and industrial water-supply planning and water-pollution control into the over-all water resources development plan. Emphasis was placed on the need for strengthening programs of collection and evaluation of basic data, with special attention directed to deficiencies in knowledge of the chemical and biological quality of the nation's waters. Increasing concern with the need to conserve surface and ground waters for essential uses became evident in expanded research in spreading of flood waters to charge underground reservoirs, in the use of recharge wells, in desalination and in evaporation control. The feasibility of reduction of evaporation from reservoirs by use of monomolecular films was under investigation by the Southwest Research institute in Texas and by the bureau of reclamation in Denver, Colo., and in Oklahoma City, Okla. Interest in the use of synthetic organic flocculating agents, polyelectrolytes, in municipal water treatment increased as their effectiveness was demonstrated in the precipitation of finely divided suspended solids in industrial wastes. An outbreak of 7,000 cases of infectious hepatitis in New Delhi, India, reported to have been water-borne, drew attention to the need for evaluating the reliability of conventional water treatment processes in removing viruses. A program of controlled shalldarking of plastic pipe was initiated by the National Sanitation foundation, school of public health, University of Michigan, Ann Arbor, following tests on the suitability of such pipe in plumbing systems.

Milk and Food.—Interest in the problem of wholesomeness of poultry led to the development of standards for use by states and municipalities, and to congressional hearings on several bills calling for mandatory federal poultry inspection. Application of ionizing radiation for food preservation was brought closer to commercial realization by progress toward pilot plant studies. The development of a new colorimetric assay for paralytic shellfish poisoning and the use of a new reference standard increased the reliability of public health control of clams and mussels. Increased use of dry milk solids pointed to the need for revised standards for the control of the sanitary quality of this milk product.

Industrial Hygiene.—The physiological effect of environmental heat exposures was the subject of intensive study by sev-

eral agencies. Interest in occupational health hazards of the agriculture industry led to pilot field studies conducted co-operatively by federal and state agencies and university departments. Research in control of industrial noise continued with progress being made in correlating hearing loss with noise exposures. The public health service's occupational health program initiated a series of training courses in evaluation and control of industrial noise exposures for supervisory and health personnel of industry.

Vector Control.—Goals of malaria control programs throughout the world were elevated as a result of awareness of the necessity for and feasibility of malaria eradication using DDT and dieldrin residual sprays. A large scale nation-wide malaria eradication program was initiated in Mexico with joint financing by the Mexican national government, the World Health organization and the United Nations Children's fund. The role of mosquitoes in virus propagation was emphasized by the isolation in a single year of 31 previously unknown viruses from seven different genera of mosquitoes by the Trinidad Regional Virus laboratory. Earlier laboratory indications that houseflies developed resistance to organophosphate insecticides were substantiated for the first time in the field in reports from Denmark.

Refuse Disposal.—An increasing number of U.S. communities were using improved methods of refuse disposal. Incineration and sanitary landfill remained the commonest practices in municipal refuse disposal, with more than 70% of the urban population of the U.S. being served by these methods. However, installation of garbage grinders became increasingly popular, leading to predictions that, within ten years, 50% of the urban population would be using this method of disposal. By Oct. 1956, regulations controlling the feeding of food wastes to swine had been adopted by 46 states containing 90% of the U.S. population.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Cities—How They Grow*, 2nd ed. (1953); *City Water Supply* (1941); *The Baltimore Plan* (1953); *Defending the City's Health* (1941).

Public Health Service, U.S. The principal federal health agency, the public health service of the U.S. department of health, education and welfare, continued during 1956 its program of research, medical care for specially designated groups and technical assistance to state and local health agencies.

During the year, responsibility for several new programs or for the expansion of existing programs was vested in the public health service. Among the most important of these were the National Library of Medicine, a continuing national survey of sickness and disability in the United States, a three-year, \$90,000,000 research construction grant program, and a program of federal assistance for graduate training of more professional nurses and public health personnel and for vocational training of practical nurses.

The year saw a great increase in the use of the Salk poliomyelitis vaccine, in whose testing and release the public health service played a major role. Studies of the effectiveness of the vaccine were conducted in co-operation with the states and territories, and findings indicated that it would reduce the risk of polio by about 75%. There were about half as many cases of polio in 1956 as in 1955; totals at the end of the third quarter for the U.S. were 11,503 cases for 1956, compared with 21,751 cases for 1955. (See POLIOMYELITIS.)

The Nation's Health Record.—The general death rate in the United States in 1955 was 9.3 per 1,000 population. This was the eighth consecutive year that the death rate had been below 10 per 1,000.

The infant death rate was estimated at 26.5 per 1,000 live births, and the maternal death rate was estimated at 4.8 per 10,000. The tuberculosis death rate dropped from 10.2 per 100,000 population in 1954 to 9.1 in 1955. The principal diseases of childhood, scarlet fever and streptococcal sore throat, diphtheria, whooping cough and measles, which caused about 10 deaths per 100,000 population under 15 years of age in 1945, were responsible for about 2 deaths per 100,000 population in 1955.

Major heart and blood vessel diseases accounted for 54% of deaths in 1955, and cancer for 16%.

Decreases were reported in the number of cases of infectious hepatitis, infectious encephalitis, measles, poliomyelitis, scarlet fever and streptococcal sore throat, psittacosis, diphtheria and typhoid fever. Malaria continued to decline. Small increases were reported in the number of cases of whooping cough, bacillary dysentery and salmonella infections.

There were an estimated 4,041,000 births and 1,524,000 marriages in 1955. (See also BIRTH STATISTICS; DEATH STATISTICS; INFANT MORTALITY.)

Research.—Important among research events during the year was an 80% increase by congress in the appropriation for the National Institutes of Health, main research arm of the public health service, to \$184,400,000.

Research activities during the year included the expansion of the cancer chemotherapy program, the beginning of a new program of research in cerebral palsy and the co-ordination of several research programs in aging.

In 1956 final data were obtained on the pilot project in Memphis, Tenn., to determine the usefulness of a cell examination test for cancer of the uterine cervix (neck of the womb). The test, which was made on most of the female population of Memphis, identified this cancer at an early stage at 40 times the previous rate of identification. The test was being tried in eight other cities.

Among some of the specific research accomplishments associated with the National Institutes of Health or with institute-supported work were an improved safety test, using monkeys, for the poliomyelitis vaccine; a means of preventing galactosemia (a deadly disease of infancy); new drugs for rheumatoid arthritis; a vaccine for two strains of APC virus; new surgical techniques for the treatment of congenital heart disease; a technique to determine the nutritional needs of cancer cells; and the finding of chemical means to break down the components of a virus and then reconstitute it.

Medical Services.—The public health service continued to provide medical services for merchant seamen and other federal beneficiaries, and to assist other federal agencies in providing needed medical care. The service maintained 16 hospitals, including 2 for treatment of narcotic addiction, 1 for tuberculosis and 1 for the treatment of leprosy; 23 outpatient clinics and 100 outpatient offices.

August 1956 marked the tenth anniversary of the Hospital Survey and Construction act. More than 2,300 hospital and medical facilities had been constructed during the past 10 years, including 600 new health centres, and 800 additional facilities were being built or were approved for construction. Congress extended this program for a 2-year period.

To carry out its new responsibilities for the health needs of the American Indians, the service employed 100 additional medical and dental officers, and 500 other health workers. The service operated 52 general hospitals and 4 tuberculosis hospitals for American Indians in 13 states and Alaska.

Services to the States.—Federal appropriations for grants-in-aid for state and local health services totalled \$22,438,000 in 1956, a slight increase over the 1955 appropriation. Special grants were authorized to develop new methods of care for the men-

tally ill, to help improve the administration and services in mental hospitals, to help improve mental health care in Alaska and to assist the states in purchasing polio vaccine.

A program was established to help states develop migratory labour and rural health services.

Thirty-three radiation monitoring stations were set up and equipped to record the effect of nuclear weapons testing, as a safeguard to the public. Civil defense training programs for sanitary engineers and other public health officials were conducted in all parts of the country. Air pollution research was greatly expanded.

New legislation authorized grants to state and interstate water pollution control agencies and also grants to municipalities for construction of sewage treatment works.

In its international health activities, the service staffed health programs in 42 foreign countries and aided 886 people from 22 countries who came to the U.S. for training in 51 fields of health study.

Public Utilities. **Legislation.**—In the United States a dearth of important federal legislation affecting public utilities characterized the year 1956. Several important issues were embodied in legislative proposals but all were vetoed by Pres. Dwight D. Eisenhower.

After the decision (1954) of the United States supreme court in the Phillips Petroleum case declaring that producers of natural gas for transportation and sale in interstate commerce were subject to regulation by the Federal Power commission, the Harris-Fulbright bills were introduced in the 84th congress. These bills exempted independent natural gas producers from the direct jurisdiction of the Federal Power commission. The Harris bill passed the house during the first session. The senate, in the second session, also passed the Fulbright bill by a 53-38 vote, despite the disclosure by Sen. Francis P. Case (S.D.) that an undisclosed party had made what looked like an improper attempt to influence his vote. The president, while expressing sympathy for the merits of the bill, vetoed it on moral grounds.

The Democratic majority of congress also passed legislation which would have frozen wholesale rates charged for electric energy by the Southwestern Power administration in the department of the interior. This was done in order to forestall a 40% increase in these rates by the executive branch of the government, an event much feared by the municipalities and co-operatives of the region distributing such wholesale energy at retail. An earlier report by the Southwestern Power administration had suggested that these rates were too low to be compensatory. President Eisenhower vetoed the bill on the ground that sound management required that rates for electric power from federal projects be adequate to repay the taxpayers' investment with interest and within a reasonable time. The veto message also indicated that the congressional proposal offended the president's conception of the division of powers between congress and the executive.

In an unprecedented election year act, the president also withheld his approval, after congress had adjourned, of the annual rivers and harbours bill. This bill authorized the expenditure of \$1,600,000,000 and covered 99 projects and 14 river basins, the improvements being scattered throughout the United States. The basis for the rejection was that congress had acted on incomplete information. He regretted vetoing the bill because it contained many worthwhile projects, but it also contained projects upon which congress had acted without getting complete

reports from the corps of engineers in contravention of the policy as laid down by congress in the River and Harbor and Flood Control act of 1954 to the effect that reports should be previously submitted by the chief of engineers. He also objected that some projects involved too little local participation in meeting expenditures, which participation he felt was the "best test yet devised" of their economic soundness.

The legislature of Maine repealed the widely known Fernald law of 1909 which had embargoed the export of hydroelectric power. The law was designed to keep the hydraulic power for home consumption in the hope of attracting new industry. Since Maine, as contrasted with other New England states, has an abundance of surplus water power, the prohibition of its interstate transmission and sale had hindered the economical integration of the region's electric power supply sources. Through exports Maine utilities would then be able to combine their surplus hydroelectric power, especially during good water years, with the steam-electric power of surrounding states and to supplement their own deficiency during poor water years by importing the more economical steam-generated energy from their out-of-state neighbours.

Court Decisions.—On Oct. 9, 1956, the federal circuit court of appeals of Washington, D.C., refused to reverse the decision of the Federal Power commission granting a licence to the Idaho Power company (*National Hell's Canyon Association, Inc., et al. v. Federal Power Commission*, no. 12,988 and 13,160). The licence authorized the construction of a multipurpose project in the Hell's canyon reach of the Snake river according to a three-dam plan proposed by the company. The association and certain public utility districts operating in the watershed opposed the grant on the ground that it was the duty of the commission under the Federal Power act to decide that the United States undertake the development by recommending to congress that it authorize the construction of a single high dam in Hell's canyon. This single-dam plan had been recommended by the corps of engineers of the department of the army and by the reclamation bureau of the department of the interior. The complainants also contended that the company's proposal was not "best adapted to a comprehensive plan" for developing the water resources of the site for public purposes, as the Federal Power act also required.

The court replied that the Federal Power act left this determination to "the judgment of the commission." Citing the Roanoke Rapids decision of the United States supreme court, the lower court held that the act vested the commission with a broad discretion in deciding questions where there was conflicting engineering and economic evidence. The commission had concluded that public purposes inhering in flood control, navigation and recreation could be effectuated to about the same extent under either plan of development. As to power production, the commission had compared the economics of the two proposals and had chosen the private company's plan for which private capital amounting to \$175,000,000 was immediately available so that construction could begin at once. The public proposal involving a \$400,000,000 expenditure, though promising somewhat greater public benefits, had not been authorized by congress. Since the commission in deciding the issue had not violated constitutional or statutory provisions, the court decided that its action must stand.

Reports.—A most significant report was issued by the President's Advisory Committee on Water Resources Policy under the chairmanship of the undersecretary of interior, Clarence A. Davis. The committee consisted of cabinet members of the interior, defense and agriculture departments, together with certain ad hoc members, the secretaries of health, education and welfare and of commerce and the director of the budget. The

attorney general's department and the Federal Power commission were likewise consulted.

The committee's first recommendation was that adequate funds should be provided for a continuing program to gather basic data having to do with the meteorology, hydrology, geology and topography of the United States. The second recommendation was that since there could be no uniform national blueprint for water resource conservation, the planning therefore should flow as a result of collective judgment by regional resource committees with the president appointing a permanent nonvoting chairman. Other members would be representatives of federal agencies having existing responsibilities and individuals appointed by the governors of participating states. Also, that there should be established in the executive office of the president a permanent office of co-ordinator of water resources. It should be his duty to co-operate with all relevant agencies in working out long-range programs. The report further recommended the setting up of an independent board of review consisting of economic and engineering specialists, who would evaluate the program in the light of congressional policies, but that no projects be undertaken without congressional authorization.

Other recommendations related to studies of the complex subject of water rights, systems of priorities of use, ways of evaluating projects, the determination of costs and the sharing of such costs by beneficiaries.

(M. G. G.)

Canada.—Toward the close of 1956, the largest current project in Canada, the building of a 2,500-mi. (\$400,000,000) natural gas pipeline from the oil fields of Alberta to the consumer markets of Ontario and Quebec, still lacked over-all financing. This was despite the fact that the federal government and that of the province of Ontario were to assume the cost of building and temporary ownership of the long and unproductive link through the sparsely inhabited regions of Manitoba and western Ontario, against later repayment and assumption of ownership by Trans-Canada Pipe Lines. Moreover, in order to allow a start on the project the federal government, in the spring of 1956, advanced \$80,000,000 to the company for building the first section from Edmonton, Alta., to Winnipeg, Man. This section was not expected to be completed before late summer 1957. For lack of finance no work had been undertaken on the 335-mi. line from Toronto to Montreal, Que., which, pending the arrival of gas from western Canada, was supposed to serve this territory with natural gas from Louisiana. Doubt was expressed as to whether the pipeline could be profitably operated as a private enterprise until such time as the U.S. Federal Power commission would permit the import of Trans-Canada gas into the United States. Government policies regarding the pipeline became the object of sharp attack by the opposition parties, which made the 1956 session of the Canadian parliament the stormiest in decades.

In 1955, 423 mi. were added to the 5,000-mi. network of oil pipelines, and 285,000,000 bbl. were shipped through the trunk lines as against 209,000,000 bbl. in 1954. In the first eight months of 1956 shipments were again 24% ahead of the previous year.

Canada's railways carried 15.3% more revenue freight in 1955. Operating revenues of the Canadian Pacific railway amounted to \$488,300,000 against \$461,000,000; those of Canadian National railways to \$683,000,000 against \$641,000,000. In the first ten months of 1956 freight car loadings were 11% greater than the year before. Freight transported through all Canadian canals at 34,900,000 tons accorded a 16% increase over 1954. Civil air carriers flew 48,600,000 revenue miles as compared with 40,900,000 in 1954, and a similar rate of gain was registered in the early part of 1956.

The power production of central electric stations rose from an average monthly rate of 5,761,000,000 kw.hr. in 1954 to 6,358,000,000 kw.hr.

The largest telephone utility, Bell Telephone Company of Canada, added 229,000 telephones to its system during 1955 bringing the total to 2,523,000. The operating revenues of the telegraph and cable systems increased by \$1,100,000 to a record \$34,900,000 in 1955.

All public utilities invested \$1,041,000,000 in new facilities as against \$1,124,000,000 in 1954. They were planning to spend a record \$1,582,000,000 during 1956. (R. Rr.)

Puerto Rico. A self-governing commonwealth in the West Indies voluntarily associated with the United States, Puerto Rico is the smallest and easternmost island of the four Greater Antilles, which together with the Lesser Antilles form a chain of about 200 islands beginning south of the tip of Florida and extending to the northeastern coast of Venezuela. Puerto Rico has an area of 3,435 sq.mi. Pop. (1950 census) 2,210,703; (1956 estimate) 2,276,000. Chief cities (1950 census): San Juan, the capital, 224,767; Ponce, 99,492; Mayagüez, 58,944; Caguas, 33,759; and Arecibo, 28,659. Language: Spanish; English also taught in the schools.

History.—Among the important legislative actions of 1956 were the passages of the Excise act, providing for drastic revisions of excise taxes charged by the government on various commodities, from automobiles to refrigerators; and the Minimum Wage act, which, after careful study of a number of industries, provided for a general upward revision of wages.

The fiscal year 1955-56 was marked by the formal dedication of the 400th new factory established in Puerto Rico since 1948, with help from the government, and by Development week, to celebrate the fact that, during the year, the total income from manufacturing for the first time surpassed that from agriculture.

A total of 878 official observers, visitors and trainees from 80 different countries went to Puerto Rico during the year for varying periods of time, to study details of the commonwealth's economic, social and political development.

Hurricane "Betsy" struck Puerto Rico Aug. 12, 1956, destroy-

ing many homes and doing damage to agricultural crops estimated at more than \$25,000,000, and to industrial plants at about \$1,000,000.

The chief commonwealth officers for 1955-56 were: governor, Luis Muñoz Marín; president of the senate, Samuel R. Quiñones; speaker of the house of representatives, Ernesto Ramos Antonini; chief justice of the supreme court, A. Cecil Snyder; secretary of state, Roberto Sánchez Vilella; secretary of justice, José Trias Monge; secretary of the treasury, Rafael Picó; secretary of education, Mariano Villaronga; secretary of labour, Fernando Sierra Berdecia; secretary of public works, Roberto Sánchez Vilella; secretary of health, Juan A. Pons; secretary of agriculture and commerce, Luis Rivera Santos; comptroller, Rafael de J. Cordero; director of the Economic Development administration, Teodoro Moscoso; president of the planning board, Cándido Oliveras; director of the bureau of the budget, José R. Noguera; head of the Office of Cooperative Development, Ramón Colón Torres; superintendent of police, Ramón Torres Braschi.

Education.—Enrolment for the school year 1955-56 in public and private, day and night schools totalled 694,619, made up as follows: elementary, 486,120; secondary, 167,084; and special classes for adults, 41,415. Of the total population 6-18 years of age, 81% was enrolled. Public and private day schools enrolled 591,061, while 103,558 were enrolled in night and vocational schools. The number of public school teachers was 12,336.

Resources available for public elementary and secondary schools, vocational education and rehabilitation and related services during 1955-56 were estimated as follows: from commonwealth sources, \$49,045,000, from federal sources, \$9,545,000; total, \$58,590,000.

The University of Puerto Rico enrolled more than 14,000 students. Other institutions of higher learning were: Polytechnic institute at San Germán; College of the Sacred Heart at Santurce; Catholic university at Ponce; and Puerto Rico Junior college at Río Piedras.

Banking and Finance.—On June 30, 1956, the 13 banks and the various branches reported assets of \$474,544,000; total deposits, \$344,189,653; total bank loans, \$266,424,722; and bank debits, \$427,063,975.

The commonwealth government revenues concerning central government purposes during the fiscal year 1955-56 totalled \$181,132,833, of which \$146,866,725 was received into the general fund; the balance represented special funds. Total appropriations for central government purposes, from all funds, amounted to \$195,810,278, of which \$160,733,796 was general fund appropriations.

The commonwealth government net debt as of June 30, 1956, was estimated at \$43,300,000. The net income of the Puerto Rican economy during fiscal year 1955-56 was estimated at \$1,003,500,000. The assessed valuation of all taxable property on June 30, 1956, totalled \$1,044,400,000.

Trade.—During the fiscal year ended June 30, 1956, the value of all merchandise exported amounted to \$406,282,010, of which \$389,961,587, or 96%, comprised shipments to the United States.

The value of inbound merchandise totalled \$629,980,737, of which \$567,935,382, or 92%, represented shipments from the United States.

Communications.—As of June 30, 1956, a total of 116,346 motor vehicles was registered. The total length of all highways and roads in use throughout the commonwealth was 6,403 km. Arrivals to and departures from the commonwealth totalled 700,253, with 380,950 passengers coming and 319,303 leaving the island. There were 58,202 telephones in service. A total of 4,576 vessels with a net registered tonnage of 15,516,395 entered the 11 ports of the island.

Agriculture.—Yields of the major agricultural crops during 1955-56 were: sugar cane, 10,306,432 short tons; tobacco, 300,000 cwt.; coffee, 309,000 cwt.; the estimates of the pineapple crop were 30,369 short tons. Total farm value of the agricultural production was estimated at \$217,326,000.

Manufacturing.—Output of the most important industrial products during fiscal year 1955-56 was: raw sugar, 1,143,986 short tons; refined sugar, 217,656 short tons; blackstrap molasses, 56,900,385 gal.; distilled spirits, 5,044,334 proof gal.; beer, 13,308,779 gal.; rum, 4,346,723 wine gal.; portland cement, 4,093,759 bbl. of 376 lb. each. The total value of building permits granted was \$74,417,322. Electric power generated totalled 1,135,992,473 kw.hr., of which 21% was hydroelectric power.

(J. R. N.)

Mineral Production.—The accompanying table shows the tonnage and value of those minerals produced in Puerto Rico in 1953 and 1954 whose

Mineral Production of Puerto Rico

(In short tons, except as noted)

Mineral	1953		1954*	
	Quantity	Value	Quantity	Value
Total		\$11,156,000		\$11,463,000†
Cement (bbl.)	3,641,000	9,335,000	3,682,000	9,663,000
Lime	7,000	157,000	8,000	198,000
Salt	13,000	131,000	9,000	98,000
Sand and gravel	227,000	250,000	375,000	834,000
Stone	648,000	1,237,000	835,000	1,575,000
Other Minerals	...	46,000	...	155,000

HURRICANE WRECKAGE in a street of Yabucoa, P.R., after the second major hurricane of 1956 swept through the town Aug. 12, leaving more than 20,000 persons homeless

value exceeded \$100,000, with the exception of salt, which in 1954 almost reached it.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Puerto Rico* (1955).

Pulitzer Prizes. The annual Pulitzer prizes in journalism, letters and music, first awarded in 1917, were established at Columbia university by the will of Joseph Pulitzer. The five prizes in letters, of \$500 each, were awarded in 1956 as follows: fiction, to MacKinlay Kantor for *Andersonville*; biography, to Talbot Hamlin for *Benjamin Henry Latrobe*; history, to Richard Hofstadter for *The Age of Reform*; poetry, to Elizabeth Bishop for *Poems: North and South—A Cold Spring*; and drama, to Frances Goodrich and Albert Hackett for *The Diary of Anne Frank*.

Journalism prizes (\$1,000 each except for the award for meritorious public service, which is a gold medal) were awarded as follows: for meritorious public service rendered by a U.S. newspaper, to the *Watsonville Register-Pajaronian* (Calif.) for its courageous exposure of corruption in public office; for distinguished editorial writing, to Lauren K. Soth of the *Des Moines Register and Tribune* (Ia.) for an editorial inviting a farm delegation from the Soviet Union to visit Iowa "which led directly to the Russian farm visit to the United States"; for a distinguished example of local reporting under pressure of deadline time, to Lee Hills of the *Detroit Free Press* (Mich.) for his coverage of the United Automobile Workers' negotiations with the Ford Motor company and General Motors corporation for a guaranteed annual wage; for a distinguished example of local reporting not under pressure of a deadline, to Arthur Daley, sports columnist of the *New York Times*, for his outstanding coverage and commentary on sports in his daily column. The award for a distinguished example of reporting on national affairs went to Charles L. Bartlett, Washington correspondent of the *Chattanooga Times* (Tenn.), for the original disclosures that led to the resignation of Harold E. Talbott as secretary of the air force; for a distinguished example of reporting on international affairs to a team of three men, William Randolph Hearst, Jr., editor in chief of the Hearst newspapers, Kingsbury Smith, vice-president and general manager of the International News Service, and Frank Coniff, editorial assistant to Hearst, for a series of exclusive interviews with leaders of the Soviet Union described as "the most remarkable mission in postwar journalistic history"; for a distinguished cartoon, to Robert York of the *Louisville Times* (Ky.) for his cartoon "Achilles," showing a bulging figure of American prosperity tapering to a weak heel labelled "Farm Prices."

The prize for the outstanding example of news photography went not to an individual photographer but to the *New York Daily News* for its "consistently excellent" news picture coverage in 1955, with its photograph "Bomber Crashes in Street" cited as an outstanding example.

The \$500 prize in music was awarded to Ernst Toch, composer and teacher of composition at the University of California, for *Symphony Number 3*. The \$1,500 travelling art scholarship was awarded to Carol Maringer Benson of Cleveland, O.

Quarles, Donald A(ubrey) (1894-), U.S. secretary of the air force, was born at Van Buren, Ark., on July 30, and took his bachelor's degree at Yale university in 1916, specializing in mathematics. He served as an artillery officer in France during World War I. In 1919 he joined the engineering division of Western Electric company—later the Bell Telephone laboratories—of which he became vice-president in 1948. In 1952, he was named vice-president of West-

ern Electric and president of Sandia corporation, a subsidiary of Western Electric. In 1946-47 he was the Republican mayor of Englewood, N.J. On July 28, 1953, he was appointed U.S. assistant secretary of defense for research and development, in which office he supervised the development of new weapons, especially intercontinental and other types of guided missiles. He also was a key figure in the plans for the earth-circling artificial satellite scheduled for launching in 1957-58.

Quarles was named by Pres. Dwight D. Eisenhower on Aug. 11, 1955, as secretary of the air force. He declared before the senate's armed services subcommittee on June 26, 1956, that proposed extra appropriations of about \$500,000,000 for the air force were not necessary in his opinion, because the U.S.A.F. was already the world's "most powerful striking force."

Quebec. Largest province in Canada, Quebec has an area of 594,860 sq.mi. and extends westward from the Gulf of St. Lawrence, along the lower St. Lawrence river. Pop.: (official est., 1955) 4,521,000; French language 82%, British origin 12.1%, other 5.9%. Capital: Quebec city, pop. (official est., 1955) 283,420. Largest city: Montreal, pop. (metropolitan area, official est., 1956) 1,630,000.

History.—The government of Premier Maurice Duplessis, an alliance of Conservatives and dissident Liberals, was re-elected for five years in a general election on June 20, 1956, winning 72 out of 90 legislative assembly seats, the Liberal opposition retaining only 20. Duplessis continued his vigorous defense of provincial autonomy against the federal government at Ottawa. Quebec continued to collect an income tax on personal and corporation incomes, and late in 1956 refused an offer of federal grants to Quebec universities on grounds that education is a provincial matter.

Economic progress was, however, more prominent than political affairs. The year 1956 marked both commencement and substantial headway in the construction of that portion of the St. Lawrence seaway that lies in Quebec. The start was made at Montreal port with cofferdams forming a sea wall to permit dredging and excavating of a deepwater ship channel so that larger seagoing ships would be able to pass through Lachine rapids to Lake St. Louis and the upper St. Lawrence. These works were being extended beyond the Beauharnois power dam to join with the international section of the seaway at Cornwall, Ont. Other economic developments included work on the construction of a new Canadian National railways line east through the virgin bushland from Beattyville, on the transcontinental line, into the important copper-zinc mining field of Chibougamau.

In the Lac St. Jean industrial area, Eastern Mining & Smelting Co. was building a large copper smelting plant, which would process copper and zinc ore from the mines in the Chibougamau field. In the St. Lawrence lowlands, an area lying between Montreal and Quebec city on both sides of the St. Lawrence, major oil companies were actively exploring with drill rigs as well as geophysical survey teams.

Aluminium Company of Canada, already established with a large plant at Arvida, planned to build a \$200,000,000 extension of facilities at Île Maligne. British Aluminium Co. planned an installation costing \$130,000,000 at Baie Comeau. Steel Corporation of Canada was going to spend \$15,000,000 in Pontiac county plant, and Thurso Pulp and Paper Co. was to build a \$17,000,000 plant at Thurso. Hydroelectric power installations during 1956 totalled 193,000 h.p., with work in progress on further installations totalling 2,555,000 h.p.

The value of construction work carried out in Quebec in 1955 totalled \$1,183,706,000, eight times that of 1945. Estimated total of construction for 1956 was \$1,240,000,000.

Education.—Primary school figures for 1952 (latest available in 1956)

showed 734,102 pupils and 31,785 teachers. There were 6,431 students in normal schools, 16,124 students in secondary classical colleges and 40,228 students in universities. The government budgeted \$60,000,000 for educational purposes in 1955-56.

Finance.—Wages and salaries paid in 1955 totalled \$3,100,000,000. Net debt of the province was \$270,000,000 as of March 31, 1956. The budget in 1956 showed a surplus of \$83,081,000 on ordinary account. Revenues for 1955-56 reached \$389,468,000, and the surplus was sufficient to meet all fixed capital charges, which amounted to \$83,006,000.

Estimated expenditures for 1956-57 included: \$65,251,000 for health, \$65,760,000 for roads, \$57,881,867 for education, \$36,581,500 for youth and social welfare, \$24,325,600 for public works, \$22,058,000 for agriculture, including grants, education and loans; \$13,690 for colonization, \$6,695,000 for lands and forests and \$6,119,000 for government hydroelectric power.

Agriculture.—Field crops produced in 1955 had a total value of \$144,700,000 compared with \$139,100,000 in 1945. Fruits and vegetables totalled \$26,800,000 compared with \$17,000,000 in 1945. Other farm products brought \$11,700,000 against \$6,400,000 in 1945. The total for milk and dairy products reached \$170,000,000 against \$90,500,000 in 1945; livestock \$126,500,000 against \$85,900,000, poultry and eggs \$63,200,000 against \$29,300,000.

Industrial Production.—Mining production was a record \$385,000,000 in 1955, while estimates for 1956 mining production were \$500,000,000 or more. Forest products in 1955 totalled \$292,000,000, hydroelectric power sold from central stations reached \$164,400,000, fish production was \$5,000,000 and fur production was \$2,000,000. The value of all manufactured products in 1955 totalled \$5,950,000,000, exclusive of construction and construction products. The total value of all products was \$8,524,000,000. (W. Wb.)

Radford, Arthur William (1896—), U.S. naval officer. was born at Chicago, Ill., on Feb. 27; graduating from the U.S. Naval academy at Annapolis, Md., in 1916, he was commissioned ensign that year and subsequently advanced through the ranks to full admiral in 1949. An early navy flier, he was trained at Pensacola, Fla., air station in 1920 and was assigned to the naval bureau of aeronautics in Washington, D.C. (1921-23). Later he was assigned to air units of various ships at sea and was commander of the naval air station at Seattle, Wash. (1937-40). During the early part of World War II, Radford was in charge of aviation training at the naval bureau of aeronautics; in Jan. 1943 he was ordered to duty in the Pacific as commander of a task force preparing the way for and supporting U.S. landings on Tarawa, Baker and Makin islands. In Nov. 1944 he became commander of an aircraft carrier division in the Pacific participating in the Iwo Jima and Okinawa campaigns and in air strikes against the Japanese homeland. After the war he was assistant deputy chief of naval air operations in Washington, then commander of an Atlantic task fleet. He became vice-chief of naval operations in Jan. 1948 and the following year was appointed commander in chief of the U.S. Pacific fleet and high commissioner of U.S. trust territories in the Pacific.

On May 12, 1953, Radford was nominated by Pres. Dwight D. Eisenhower to succeed Gen. Omar N. Bradley as chairman of the U.S. joint chiefs of staff—first navy man to hold that post. He was appointed to his second term on May 25, 1955.

In July 1956 Radford was reported to have under consideration a plan to reduce U.S. armed forces personnel from about 2,800,000 to 2,000,000 by 1960.

Radio and Television. Radio stations in operation or under construction throughout the world numbered approximately 8,450 in Oct. 1956. This total represented a gain of about 250 during the preceding 12 months. The figures included amplitude modulation (AM) and frequency modulation (FM) broadcasting stations, plus the boosters or relay stations which are used for broadcasting in some areas. The number of television stations on the air or being built throughout

the world, based on information compiled by *Broadcasting-Telecasting* magazine for its 1956-57 *Telecasting Yearbook*, totalled 750 to 800, a gain of about 50 over the figure for Oct. 1955.

The number of radio receiving sets in use throughout the world was estimated at 230,000,000 to 255,000,000. This reflected a gain of about 5,000,000 during the year. In television, approximately 37,000,000 receivers were in use in the U.S., and to this total *Broadcasting-Telecasting's* compilations added another 10,000,000 sets in use in other parts of the world. The 1956 estimated world total of 47,000,000 television sets may be compared with an estimate of 40,500,000 to 43,500,000 in Oct. 1955.

U.S. Manufacturing.—Production of both radio and television sets in the U.S. in the first eight months of 1956 was running slightly behind the totals for the comparable period of 1955. Radio receiver output totalled 8,216,707 units through Aug. 1956 as against 8,707,477 in the same 1955 period, according to records kept by the Radio-Electronics-Television Manufacturers association. Television set production in the same span came to 4,365,060 as compared with 4,820,991 during the first eight months of 1955.

While set production dropped somewhat behind the 1955 pace during the Jan.-Aug. 1956 period, actual sales of radio receivers increased slightly. The trade association reported that eight-month radio set sales through retail outlets (excluding automobile radio sets) totalled 4,694,454 through Aug. 1956, compared with 3,189,608 in the same period in 1955. In addition, 2,710,303 automobile radios were produced during the first eight months of 1956. Eight-month television sales in 1956 totalled 3,839,718 receivers, as against 4,171,139 in the first eight months of 1955.

During 1955, last full year for which figures were available in Oct. 1956, radio set production in the U.S. reached its highest point since 1948, totalling 14,894,695 receivers as against 10,400,530 in 1954, according to the manufacturers' trade association. Output in 1948 was an all-time high of 16,500,000 radio sets. The 1955 total was broken down as follows: 3,393,882 home radios; 2,027,545 portables; 7,229,594 automobile radios and 2,243,674 clock radios.

Television set production reached an all-time record of 7,756,721 receivers in 1955. This figure may be compared with 7,346,715 in 1954 and 7,463,800, the previous record, in 1950.

Sets in Use.—The Radio Advertising bureau, a trade organization, estimated the total number of radio sets in working order in the U.S. at 124,000,000 in early 1956. Of this total, 82,000,000 were located in homes, 32,000,000 were in automobiles and 10,000,000 were in public places. Including those temporarily not in working order—that is, needing or undergoing repairs—the U.S. total was placed at 142,000,000. In Sept. 1955 there were 121,000,000 radio receivers in working order.

Television sets in working order in the U.S. numbered approximately 37,000,000 in Oct. 1956, according to unofficial estimates. This number represented a gain of about 3,500,000 during the preceding 12 months. Official figures released by the Advertising Research foundation, based on data gathered by the U.S. census bureau and the A. C. Nielsen Co., research organization, showed 35,495,330 U.S. households with television sets as of March 1956 (this study, dealing in households, did not attempt to estimate the total number of sets, but it was known that the number of homes with two or more television receivers was gradually increasing). The number of households with television represented 73% of the 48,784,600 households in the U.S. at the time of the study.

U.S. Stations and Networks.—The number of AM, FM and television (TV) commercial stations authorized or operating in the U.S. in Oct. 1956 totalled 4,230, a gain of 174 in 12 months, according to records compiled by *Broadcasting-Telecasting* from official data of the Federal Communications commission. The

number of these stations actually in operation in Oct. 1956 was 3,923, compared with 3,739 a year earlier. These totals did not include 43 television and a half-dozen FM stations which had been authorized to operate noncommercially in the educational field.

Commercial AM stations numbered 3,064 in Oct. 1956, compared with 2,917 a year earlier. Of these, 2,936 were in operation, an increase of 172 in 12 months. Once again, the number of FM commercial stations dropped, falling from 559 in Oct. 1955 to 546 in Oct. 1956. Of the 546 authorized, 522 were actually on the air, as against 540 in Oct. 1955 and 561 in Oct. 1954.

The number of authorized commercial TV stations stood at 620 in Oct. 1956, a gain of 40 since Oct. 1955. But 20 other authorized TV stations had voluntarily given up their permits during the year, so that the net gain in stations was 20. Of the 620 authorized stations, 465 were on the air as compared with 435 in Oct. 1955. Among the operating stations, 374 were assigned to operate in the established very-high-frequency (VHF) band of the spectrum and 91 were in the newer ultrahigh-frequency (UHF) band.

Aside from the commercial TV stations, 10 new noncommercial educational television authorizations during the year brought the total in this category to 43. A total of 22 of these—17 in VHF, 5 in UHF—were actually on the air in Oct. 1956, as against 16 in Oct. 1955 and 7 in Oct. 1954.

U.S. Networks.—A newcomer to the TV network ranks in 1956 was the NTA Film network, operated by National Telefilm Associates, a TV film distributing organization. It differed from the existing networks in that it delivered its programs to its affiliated stations on film rather than by the cable and radio relay systems which linked the established networks' stations and enabled them to transmit their programs simultaneously, or "live," to their various affiliates across the country. Moreover, whereas the established networks fed programs to their stations extensively both day and night, the NTA Film network supplied its programs for only two hours a week, although it planned to increase this programming eventually. The NTA network commenced operation in mid-Oct. 1956 with slightly more than 100 stations taking its programs.

The established networks remained unchanged. In television there were three which functioned on a nation-wide scope; they were operated by the American Broadcasting company, the Columbia Broadcasting system and the National Broadcasting company. In radio there were four national networks, three of them operated respectively by the three TV network companies and the fourth by the Mutual Broadcasting system.

Legislation.—The broadcasting industry in 1956 was enmeshed in almost one round of investigations after another. The senate commerce committee, the house judiciary committee's antitrust subcommittee and the house small business subcommittee all had investigations going at one time or another during the year. All three were directed primarily against the networks, although few aspects of broadcast operation were left unprobed by one or another of the groups. In addition, the Federal Communications commission had a special staff of its own assigned to investigate network operations.

One of the chief targets of the congressional investigators was network-affiliate contract provisions giving the networks the right to use, for their own programs, certain hours of desirable time in their affiliated stations' schedules. Critics claimed this right gave the networks too much control over important time that belonged to the stations, while the networks argued that they must have this right of access in order to assure their advertisers—their principal sources of revenue—that their programs would be seen by audiences large enough to justify the high cost of sponsorship. Similarly, the networks argued that the practice of requiring advertisers to put their programs on a certain num-

SCENES FROM TWO 1956 TELEVISION PRODUCTIONS based on literary classics: top, Maurice Evans and Lilli Palmer in a scene from Shakespeare's play *The Taming of the Shrew*; bottom, Fredric March and Claire Trevor in *Dodsworth*, an adaptation of the novel by Sinclair Lewis

ber of stations—another major target of the investigations—was also necessary if the networks were to survive economically. These issues were still pending in Oct. 1956.

U.S. Commercial Broadcasting.—Total revenues of the broadcasting industry (AM, FM and TV; networks and stations) passed the \$1,000,000,000 mark for the first time in the calendar year 1954, latest for which official figures were available in Oct. 1956. Reports compiled by the Federal Communications commission from data supplied by networks and stations showed the 1954 total was \$1,042,500,000, a gain of 14.8% over the \$908,000,000 reported in 1953. These figures, which represent reve-

nues from the sale of time, talent and program materials to advertisers, did not, however, include an estimated \$193,000,000 paid by advertisers for talent and program production costs to organizations which did not operate networks or stations. Nor did they include \$133,000,000 in commissions paid to advertising agencies and station sales representatives in connection with the sale of time and programming. Thus, FCC pointed out, when all these factors were counted, total advertising expenditures for radio and television came to an estimated \$1,400,000,000 in 1954.

Of the \$1,042,500,000 received by radio and TV broadcasters, \$910,400,000 was paid out for expenses, leaving \$132,100,000 in broadcast income (before federal income tax) for the year. (See Table I.)

Radio.—Total broadcast revenues of AM and FM stations and networks dipped slightly in 1954 for the first time in 16 years. FCC placed the total at \$449,500,000, or 5.4% less than in the preceding year. Revenues of the four nation-wide and three regional networks and their 21 owned and operated stations dropped 9% to \$88,500,000, continuing a decline in network business that had started several years earlier. The 2,577 independently owned AM and FM stations, whose revenues had increased 2.4% in 1953, dropped to \$361,000,000 for a 4.5% fall in 1954.

The networks kept their expenses to \$80,400,000, or 7.4% less than in 1953, while the other stations trimmed their expenditures 1.9%, to a total of \$327,300,000. Their combined expenses thus came to \$407,700,000, or 3.1% under the figure for 1953. Despite these economies, however, total broadcast income (before federal income tax) for the year dropped 24% to a total of \$41,800,000. Of this amount, the broadcast income of networks and their owned stations was \$8,100,000, off 21.7% from the year before, while that of other AM and FM stations was \$33,700,000, down 24.5% from 1953. (See Table II.)

Radio revenues from time sales—the principal income source for both radio and television—aggregated \$451,330,000 in 1954. This was a drop of 5.4% from the approximately \$477,000,000 recorded in 1953, when time sales ran slightly (0.9%) ahead of the preceding year. Network time sales, which had been falling for several years, continued the downward trend with a 14.7% drop to \$83,684,000 in 1954. Nonnetwork time sales to national and regional advertisers, on the climb in the preceding year, also fell behind in 1954 with a 7.3% decline to \$120,168,000. Making it unanimous in all three sales classifications, time sales to local advertisers dropped 0.8% in recording \$247,478,000 for the year. These time-sales figures did not include data for FM stations, whose share of the combined AM-FM revenues was known to be minor.

Estimated Radio Time Sales for 1955.—*Broadcasting-Television* estimated, on the basis of an annual survey, that radio time sales in 1955 recovered from their 1954 dip and reached a total of \$455,649,000. Although short of the record \$477,000,000 reported in 1953, this was more than \$4,300,000 above the 1954 total. The 1955 time sales to network advertisers were estimated at \$60,570,000; nonnetwork sales to national and regional advertisers at \$117,070,000 and sales to local advertisers at \$278,009,000.

Television.—Although compilation of radio data after 1954 was still incomplete in Oct. 1956, FCC reported that total broadcast revenues of television networks and stations in 1955 rose to \$744,700,000, compared with \$593,000,000 in 1954 and \$432,700,000 in 1953. Broadcast expenses went up from \$364,700,000 to \$502,700,000 to \$594,500,000 in the same three-year span, leaving television broadcast income (before federal income tax) of \$150,200,000 in 1955 as against \$90,300,000 in 1954 and \$68,000,000 in 1953.

Television time sales in 1955 totalled \$681,100,000, a gain of

Table I.—Broadcast Revenues, Expenses and Income of Networks and Stations of AM, FM and Television Broadcast Services

Service	1954 (in 000,000)	1953	Per cent increase or decrease in 1954
Broadcast revenues

\$143,100,000 from 1954 and \$296,408,000 more than in 1953. Network time sales rose to \$308,900,000 from \$241,000,000 in 1954; nonnetwork time sales to regional and national advertisers reached \$222,400,000 as compared with \$177,000,000 the year before, and local sales climbed to \$149,800,000 as against \$120,000,000 in 1954. Sales of talent, program and other "incidental" material to advertisers added \$172,300,000 or \$31,300,000 more than in 1954.

U.S. Programs.—The trend toward big shows, such as the 90-minute "colour spectaculars," continued in 1956, but at a slightly slower pace. NBC-TV, which originated the "spectaculars," ac-

tually cut back somewhat on the number of these elaborate productions for the 1956-57 fall and winter season. But it retained a substantial schedule of "spectacular" and other special productions, including "Wide Wide World" with its live camera pickups from all over the U.S.—and sometimes Cuba, Canada and Mexico—in the course of an hour and a half. CBS-TV scheduled, among other major productions, the first weekly series of 90-minute dramatic programs, called "Playhouse 90." ABC-TV, although it remained the only one of the three established television networks not yet engaged in colourcasting, launched a number of major series covering virtually all fields—music, drama and comedy.

The Democratic and Republican presidential nominating conventions in August and the elections in November were the big "news" for both television and radio in 1956. The networks gave virtually gavel-to-gavel coverage of the conventions—whose planners, aware of the magnitude of the audiences to be gained through TV, had arranged their sessions to accommodate television as completely as possible and thereby get the fullest benefit from the reach of the new medium. Although all radio and television networks had sponsors who paid an estimated total of \$14,500,000 for convention and election coverage, the networks reported afterward that they had lost \$4,000,000 to \$5,000,000 in presenting the conventions to their audiences.

Programming was also affected widely by electioneering. Between the nominating conventions and the elections, both radio and television schedules were increasingly filled with political broadcasts as the parties at all levels—national, state and local—relied upon TV and radio more heavily than ever before to reach the voting public. Often entire programs were pre-empted for political broadcasts. More often—and this was a development that became widespread in 1956—the office seekers sought to capitalize on the popularity of existing programs (and also to save money) by buying five-minute segments instead of the customary 15-minute or half-hour programs. Thus countless popular programs were shortened by five minutes in order to make way for these brief political appearances, usually presented on radio.

Aside from politics, colour telecasting was a growing factor in television programming in 1956. A special study made by *Broadcasting-Telecasting* in mid-Oct. 1956 showed 29 advertisers sponsoring colour TV programs on NBC-TV and eight on CBS-TV on a regular basis and elicited from advertising executives the view that colour TV would become a major factor in television advertising by 1958. Both NBC-TV and CBS-TV, meanwhile, boosted their colour production activity as part of an effort to acquaint their advertisers with the techniques of using colour and to help boost the sale of colour sets, which, according to best available estimates, were expected to reach 500,000 to 1,000,000 during 1957. NBC-TV, increasing its colour programming 500% for the 1956-57 fall-winter season, planned to present 120 to 130 hours of colour in the final quarter of 1956 as against 22.5 hours in the same period of 1955. CBS-TV expected to carry nearly four hours of colour programs each week. ABC-TV still had not entered the colour field.

In the area of local station programming—as distinguished from network programming—a 1956 development that had an almost immediate effect was the release of major motion-picture companies' libraries of pre-1949 films for use on television. Until 1956 television had been limited in the motion-picture field largely to older movies, old westerns and motion pictures produced abroad, notably those made by British producers. But in 1956 most of the major U.S. producers negotiated multimillion-dollar contracts under which they agreed to make available to TV vast libraries of theatrical films made before 1949. For instance, RKO Teleradio Pictures sold 740 RKO feature films and

1,000 short subjects to C & C Super Corporation for \$15,200,000; Warner Brothers sold a library of 850 feature movies and 1,500 short subjects to PRM, an investment firm, for \$21,000,000; Metro-Goldwyn-Mayer started releasing, directly to stations and sometimes with a partial interest in station ownership as part of the lease price, 725 of its pre-1949 films; and 20th Century-Fox Film corporation signed with NTA Film network for the release of a potential 390 features for \$30,000,000, at the same time acquiring a one-half interest in the film network itself.

Radio programming, which underwent far-reaching changes in 1955, remained a subject of experimentation in 1956. CBS radio, which alone among the networks had stuck close to radio's pretelevision practice of presenting standard-length (15-minute, half-hour and full-hour) programs at the same time each week, retained and even solidified that format, adding an hour-long variety show featuring Robert Q. Lewis to its weekday evening schedule and bringing comedian Jack Benny, one of radio's brightest pre-TV stars, back in his old Sunday evening half-hour spot, effective in the fall of 1956. NBC radio, however, which in 1955 had instituted a daytime schedule of special features, interviews, music, news and other miscellaneous material, abandoned this format except on week ends and, in its place, installed a two-hour daily series of live music by name bands, followed by dramatic programs. ABC radio to a great extent continued its pattern of drama, news and music, while Mutual was preparing, in Oct. 1956, to bolster its programming with story material, actors and actresses made available to it by RKO Radio Pictures, a major motion-picture production firm which, like Mutual, was owned by RKO Teleradio Pictures.

Among entertainment programs, top-rated network shows are listed—radio and television separately—in Tables IV-IX as they ranked at two different periods of 1956 (August and January).

Awards.—The 13th annual Alfred I. du Pont awards, in recognition of "meritorious service to the American people," were presented in March 1956 to Howard K. Smith, chief European correspondent for CBS, for his "exceptional insight" into European events and for "his ability to communicate that meaning with clarity, liveliness and warmth"; and to WTIC, Hartford, Conn., and WICC, Bridgeport, Conn., for "meritorious service to the American people" during 1955. The du Pont awards, ad-

ministered by Washington and Lee university, Lexington, Va., consist of a plaque and \$1,000 for each winner, the money to be used in establishing scholarships or fellowships in the communications field at institutions of the recipient's choice.

The 16th annual George Foster Peabody awards for "the most distinguished and meritorious public service," administered by the Henry W. Grady school of journalism of the University of Georgia, Athens, in conjunction with the Peabody board, were presented in April to Douglas Edwards, CBS newsmen, in the field of television news; comic Jackie Gleason (CBS) and singer Perry Como (NBC) in the area of TV entertainment; "Production Showcase" (NBC) in television dramatic entertainment; the "Lassie" series (CBS) in TV youth and children's programs; Frank Baxter of KNXT (TV), Los Angeles, and CBS in TV education (with citation to the "Omnibus" program, then on CBS, in this field); "Voice of Firestone" series (ABC) in radio-television music; Sylvester L. ("Pat") Weaver, Jr., then NBC board chairman, for pioneering programming concepts, in the field of radio-TV public service; Quincy Howe, ABC newsmen,

for radio-TV promotion of international understanding (with citation to the "Assignment India" program on NBC in this field); "Biographies in Sound" series (NBC), in the field of radio education; KIRO, Seattle, Wash., for local public service by a radio station (citation to KFYO, Lubbock, Tex.); and citations to WMT-TV, Cedar Rapids, Iowa, and KQED-TV, San Francisco-Berkeley, Calif., the latter an educational station, for local public service by TV stations.

(See also ADVERTISING; EDUCATION; FEDERAL COMMUNICATIONS COMMISSION; HUMOUR OF 1956; MEDICINE; MOTION PICTURES.) (S. TF.; R. W. CR.)

Technical Developments.—Miniaturization was a dominating theme of 1956 radio and television technical advancement. Portable size television sets, opening a new market area, brought experimentation by manufacturers to determine the smallest size screen to which viewers would be receptive, indicating a marked reverse of the early trend toward larger screens.

Industry news early in the summer of 1956 centred largely upon the development of miniature television cameras which later were used in television coverage of the national political conventions. The Radio Corporation of America developed a transistorized 4-lb. camera and portable 15-lb. back-pack transmitter which subsequently were used in National Broadcasting company convention coverage. The Columbia Broadcasting system used two cameras—one, developed by Lockheed Aircraft corporation's research laboratory, a one-half pound Vidicon pickup device which was connected by cable to a control room, and the other, a portable INTEC camera-transmitter made by the *French Compagnie Générale de TSF*. The American Broadcasting company-TV used a Philco four-pound Vidicon camera mounted on a gunstock.

Other developments of the year included a midjet power supply unit for TV studio equipment, reducing tube and space requirements by more than 70%, and predictions of imminent availability of smaller, 110° deflection angle picture tubes which might shorten the depth dimension of television sets.

Further advances in miniaturization brought the tiniest transistor to date—so small that 20 can be placed on a dime—and the smallest loud-speaker ever built for commercial radio receivers. A Japanese pocket radio appearing on the U.S. market weighed 290 g., used 5 transistors, 1 diode and a 2½-in. dynamic loud-speaker and operated from a 22.5-v. battery.

Television.—Colour television was introduced in Great Britain in 1956. In the United States there was constant improvement in colour television equipment and programming, including a substantial increase in the number of colour programs on the air, both through the major networks and by local stations.

Broadcasting field tests continued on RCA's magnetic tape colour recording system for station use. Television on magnetic tape was brought closer to the home with the development at RCA laboratories of a home "hear-see" player which can reproduce prerecorded black and white programs from magnetic tape onto standard home TV receivers.

A lenticular film system, fast-action film recording method in which film can be made and developed within three hours, was developed by RCA, NBC and the Eastman Kodak company, and introduced in broadcast service by NBC. With this system, a TV program can be transmitted at the most opportune hour in each time belt rather than simultaneously across the country in the usual manner of network broadcasting.

New equipment for television receivers in 1956 included a new "disk type" tuner for portables, said to be 20% smaller, yet more sensitive, than the conventional turret type. A completely mechanical TV remote-control unit powered by flashlight batteries was introduced. Other developments of 1956 included a commercial "creepy-peepy" camera-transmitter system, a spe-

cial image orthicon camera which "sees" in the dark and a new high-voltage rectifier tube to cut set manufacturing costs.

Closed-Circuit Television.—The first public-school closed-circuit TV "network," including 11 schools in Pocatello, Ida., with a local community antenna system and studios at Idaho State college, was opened in February. The Ford foundation, electronics industry and educators sponsored a showcase project of an entire county school system to be hooked up gradually by closed-circuit television in Washington county, Md.

A novel technique of light amplification, with possible future application to television, was an electroluminescent panel developed by RCA. As an amplifier of projected light, the device was capable of increasing visible brightness by 1,000 times. In an experimental application, the panel was combined with industrial X-ray equipment to provide an amplifying fluoroscope capable of achieving a hundredfold increase in the brightness of an X-ray image.

Bell laboratories disclosed that a recognizable TV signal of a telephone caller had been transmitted across the nation over ordinary telephone lines. Still in the developmental stage, the system's Vidicon camera transmitted a new still picture every two seconds, giving a 2-by-3 in. picture with 60-line, 2,400-dot resolution.

The nation's first closed-circuit community TV station went into operation in Cedar City, Utah. Drawing financial support from a subscription cable arrangement and local advertising, the station employed no outside signals, originating all programs locally. Meanwhile, plans were generating in the west for the opening of 50 more such "Comprovision" (community program television) stations within the next 12 months. The year also saw continued experimentation in shopping via closed-circuit TV equipped with special telephone.

New applications of industrial closed-circuit television systems included observation of the performance of aircraft models in a supersonic wind tunnel, watching processing operations inside steel mill reheating furnaces, observing steel plates on a conveyor and following complex freight movements in the Chattanooga, Tenn., railroad yards.

MASTER CONTROL CONSOLE of the Chicago, Ill., studios of the Columbia Broadcasting system opened in 1956. The equipment was capable of accommodating 18 audio and video program sources and switching them to 5 outgoing program circuits and 2 test channels

Radio.—Radio manufacturers continued to explore improvements and applications of their miniaturized products. Transistors were employed in two-way radios and in a novel solar-powered radio receiver placed on the market by Admiral corporation. Pocket-sized transistor radios also were used for the first time in exploring trouble sources in electrical equipment.

RCA announced development of a new two-way radio which cut frequency band width requirements by one-half. Employing the already known single-side band technology, the new equipment applied it for the first time without the earlier hindrances of increased cost and complexity.

Military Radio and Television.—An aircraft instrument panel simplification program, tied to the United States air force's interest in the "flat" picture tube, had as one of its goals the replacement of instrument panel meters by one or two picture tubes. Undertaking a similar simplification program, the navy announced plans to fly a Lockheed T2V jet trainer with the new instrumentation by the end of the year. The army signal corps unveiled a new portable TV camera-transmitter as a tactical military device. An air-borne TV system which can give clear pictures from planes flying at supersonic speeds in stratosphere was designed by Philco corporation for the Aerial Reconnaissance laboratory at Wright Air Development centre, Dayton, O.

Also designated for air force application was the "cat eye," an electronic light intensifier capable of viewing objects in the dark to produce sharp and clear television pictures. Developed under air force contract by RCA with co-operative research at Wright Air Development centre, the "cat eye" operates on principles similar to those of television, sensing and amplifying the ever-present photons unseen by the human eye. The air force indicated interest in this type of device as a highly effective means of reconnaissance.

Possible military intelligence application was foreseen for two TV cameras designed in England for underwater diving use. One, a small hand-held device, can be dropped to a depth of 250 ft. and operated by a control unit above the water as the diver positions it. A larger version, charted for use at depths as great as 3,000 ft., can be suspended by a cable from a moving ship, propelled by an electronically operated cradle or held by the diver since, like the smaller camera, it is weightless in water. The United States navy ordered a U.S. version of the smaller camera for marine research and deep-sea salvage, and the United States fish and wildlife service was conducting experiments with

PORTABLE PICKUP, a 4-lb. television camera and 15-lb. transmitter unit developed by the Radio Corporation of America and tested at the 1956 national political conventions. A feature of the equipment was an electronic view finder permitting the cameraman to observe the scene being picked up by the camera (as shown in the photograph)

similar equipment off the Florida coast.

Other military developments of the year included the army's disclosure of a wide-spaced image orthicon light intensifier and the navy's plans to locate in Maine the world's most powerful radio communication station radiating two megawatts. Also noteworthy was the revelation that FPIS (forward propagation by ionospheric scatter), permitting reception of directional signals over distances between about 500 and 1,500 mi., had solved problems of erratic radio signals in the arctic. (C. B. J.)

Radio Amateur Stations.—Early in 1956, it became apparent that the sunspot cycle was emerging from the ebb of its 11-yr. period. The resultant increase in long-distance communications possibilities was enthusiastically greeted by the 150,000 amateurs licensed by the Federal Communications commission. A wide-spread interest in contacting foreign stations was reawakened when Russian amateurs again began exchanging reports and other information with "hams" in democratic countries. Previously confined to satellite countries, these contacts, though brief, were a welcome addition to the variety of world-wide contacts.

As a morale stimulus and public service, the U.S. navy established amateur stations for the convenience of the wintering-over parties at Little America and other Antarctic bases. These stations were pressed into service to provide contacts with home through the courtesy of amateur relay stations which, in many instances, permitted the men to talk directly with their families.

Robert W. Gunderson (W2JIO), himself blind, was awarded the 1955 Edison Radio Amateur award in recognition of his outstanding contributions in helping blind persons achieve security through employment in the electronics field.

Hundreds of amateurs in California and Oregon, aided by others from nearby areas, hastily set up emergency communications in midwinter of 1955-56 when floods devastated and paralyzed normal facilities. The annual June field day test sent approximately 10,000 operators into remote locations to set up communications under simulated emergency conditions. With power supplied by auxiliary generators, many stations were active for the entire 24-hr. period.

The American Radio Relay league, national nonprofit association of amateur operators, co-operating with the U.S. air force, undertook a program designed to gather radio propagation information supplied by amateurs during the International Geophysical Year, 1957-58. Observations of variations of radio conditions and other phenomena would be correlated and analyzed by a special league staff. Indicative of the assistance that amateurs could perform, clubs and groups were encouraged to set up special receiving installations to help track, by radio, the man-made satellites which would be launched during this period.

Railroad Accidents: see DISASTERS.

Railroads. Railroads of the United States had a trying year in 1956. Despite efforts toward greater efficiency and economy of operation, the net earnings of railroads fell below those of 1955, though they were appreciably better than in 1954. A strike in the steel industry, which caused suspension for about five weeks in this important source of railway traffic, was an added handicap.

From operations in 1956 the railroads¹ derived total revenues of \$10,600,000,000, about \$500,000,000 in excess of 1955 and

\$1,200,000,000 more than in 1954. However, operating expense increased more than revenues, as the result of higher wage and material costs. The result was a decline in the net amount left from revenues after paying operating expenses, taxes and interest charges on borrowed money (but before dividends), to \$875,000,000 in 1956, compared with \$927,000,000 in 1955 and \$682,000,000 in 1954.

Notwithstanding effects of the steel strike, 38,000,000 cars of freight were loaded on railroads in 1956, compared with 37,900,000 in 1955 and 33,900,000 in 1954. Freight volume amounted to 1,500,000,000 tons, hauled for an average of 433 mi., making a total transportation performance of 650,000,000,000 ton-mi. (1 ton hauled 1 mi.). The average revenue received from this service was 1.4 cents per ton-mile. Passengers travelled a total of 28,500,000,000 passenger-mi. (1 person moved 1 mi.), with an average journey per passenger of 65 mi., at an average revenue to the railroads of 2.63 cents per mile.

Railroad mileage continued in 1956 to decline, reflecting the modern trend toward more intensive utilization of less trackage. At the end of the year there were 211,000 mi. of first main track and 139,700 mi. of second and other main tracks, yard tracks and sidings, for a total of 350,700 mi. of all tracks. Rolling stock included 1,800,000 freight cars of railroad ownership and 191,000 privately owned cars, plus 21,000 caboose cars and 85,000 cars used by railroads for their own work. Passenger train cars included 4,700 cars of the Pullman company (itself owned by the railroads) plus 31,700 cars owned by railroads directly. Of these latter, 17,100 were passenger-carrying cars and 14,600 units were for mail, baggage and express. Motive power comprised 30,500 locomotives, consisting of 26,200 diesel-electric, 3,700 steam and 600 electric and other types. During 1956 the railroads installed in service 1,400 new diesel-electric locomotives and 10 all-electric locomotives, 55,000 freight cars and 400 passenger train cars (including some self-propelled units).

Approximately 1,044,000 persons were employed on the railroads in 1956, with a total payroll of \$5,300,000,000, averaging \$5,100 per employee. This average compared with \$2,700 in 1945, which marked the end of World War II. Increased wage demands from large groups of employees in 1955 were embodied in new wage agreements effective Oct. 1 and Dec. 1, 1955, and March 1, 1956, at a total annual cost to the railroads of \$413,000,000. In addition, 73 classes of nonoperating employees sought and received a wage settlement granting an increase of 12.5 cents per hour, effective Nov. 1, 1956, with additional increases of 7 cents per hour effective Nov. 1, 1957 and Nov. 1, 1958, plus a semiannual cost-of-living adjustment. The settlement was for a three-year period. The 12.5 cents increase (if applied to all other employees) meant an annual increase of \$316,000,000 in the railroad payroll, and the 7 cents per hour increases in 1957 and 1958, if similarly applied, would raise this to \$670,000,000 annually.

As in other industries, the upward spiral in wages brought imperative need for increased revenues to meet the cost. In March 1956 the Interstate Commerce commission authorized a general increase of 5½% in freight rates. In April the commission authorized increases of 5% in passenger fares and 7½% in Pullman accommodations. However, returns from these increases proved inadequate to meet higher wage and material costs. Railroads in the east and west in September filed a petition with the Interstate Commerce commission asking for a general investigation of the level of freight rates and a further general increase of 15% in freight rates, subject to specified exceptions and maxima. On Nov. 6, 1956, following the nonoperating employee wage settlement, the eastern and western railroads filed a motion for a 7% emergency freight rate increase. The southern roads later joined in a similar request. The Interstate Commerce com-

¹Railroads herein are those of class I, with revenues exceeding \$3,000,000 annually. These account for approximately 95% of total railway figures.

mission on Dec. 17 authorized increases of 7% in the east and 5% in the west, effective Dec. 28.

Passenger service also was the subject of further important moves. In recent years this service had shown deficits for the railroads as a whole ranging between \$650,000,000 and \$700,000,000 annually, according to methods of cost allocation prescribed by the Interstate Commerce commission. The commission in March scheduled an investigation into all phases of this deficit, including its own rules for cost allocation. Meanwhile, several large eastern railroads took drastic action in August by petitioning the commission for an increase of 45% in first-class railroad fares. They were granted on Dec. 31 an interim increase of 5%, with western railroads receiving the same increase. The same railroads, joined by others in the east and west (but not the south), also sought authorization for an increase of 5% in coach fares, which was granted on Dec. 31. At the same time, a nationwide increase of 7% in charges for Pullman accommodations was authorized. Several railroads were offering large numbers of passenger station properties for sale or lease. One of the railroads (the Pennsylvania), meanwhile, was spending \$2,000,000 to modernize its New York station ticket office, including use of television to speed up ticket sales.

A great disappointment to the railroads was failure of the congress to take any effective action in 1956 toward carrying out recommendations of the Presidential Advisory Committee on Transport Policy and Organization. This committee, appointed by the president in 1954, with the secretary of commerce as chairman and composed of cabinet officers and senior government officers, recommended 11 basic changes in transportation legislation and regulation. Hearings on bills to carry these recommendations into effect were held in 1956 in the house of representatives, but no further legislative action was taken.

Continuing a marked trend in recent years, 1956 witnessed additional changes in ownership and control of important railway properties. A new management was installed on the Chicago and North Western railway by interests which earlier had been in control of the Minneapolis & St. Louis railway. New ownership gained a majority of seats on the board of directors of the Monon (which in January became the formal name, instead of the nickname, of the Chicago, Indianapolis and Louisville railway). The Union Pacific railroad took steps to acquire by exchange of stock the ownership of the 180-mi. Spokane International.

Merger possibilities announced as being under study during the year included unification of the Great Northern, the Northern Pacific, the Spokane, Portland and Seattle and the Chicago, Burlington & Quincy (including its subsidiaries, the Colorado and Southern and the Fort Worth and Denver). This would be the largest merger in many years, involving 27,000 mi. of railroad in 19 states and 2 Canadian provinces. Studies were also continuing on possible consolidation of the Chicago, Milwaukee, St. Paul and Pacific and the Chicago and North Western, although the new management of the latter road indicated a disposition to defer decision while carrying out improvement policies. Another merger possibility under study concerned the Erie, the Delaware, Lackawanna and Western and the Delaware and Hudson railroads. Considerable progress already had been made in joint terminal operations of the two latter roads in New Jersey.

Of great potential importance was the proposal for a 1958 census of transportation recommended to the secretary of commerce by his transportation staff. The census would include the distribution of freight and passenger transportation by each type of land, air and water carrier, and much other valuable information. The estimated cost of \$1,200,000 would have to be provided by congressional appropriation. The congress authorized a similar census in 1948 but failed to appropriate money for it.

"XPLORER," a lightweight, low-slung train introduced to service on the New York Central railroad in June 1956. The train carried 392 coach passengers and was capable of a speed of 120 m.p.h.

An important milestone was the announcement by the Great Northern railway in August of the end of approximately half a century of electrified operation of 73 mi. of railroad across the Cascade mountains, including the 7.79-mi. Cascade tunnel. Aided by a new tunnel ventilation system, diesel-electric locomotives took over this mileage. A similar event was replacement by diesel-electric operation of the former electrified operation between St. Louis, Mo., and Peoria, Ill., by the Illinois-Missouri Terminal railway (formerly the Illinois Terminal Railroad company, recently sold to a group of large railroads).

Progress continued at a rapid rate during the year on technical advancement in the railway industry. Notable was the inauguration in regular service of a Talgo-type train on the Chicago, Rock Island and Pacific railroad and of a new lightweight train of tubular design on the Pennsylvania railroad. Two lightweight Aerotrains, owned by the builder, were operated experimentally in regular service on various roads. Several other types of lightweight trains were scheduled for early delivery and operation, principally in the east. The Santa Fe placed in operation a new train made up entirely of high-level cars.

After several years of pioneer operation of oil-burning gas-turbine locomotives in heavy freight service, the Union Pacific railroad ordered 15 new and larger units to supplement the existing 25, and announced intention to buy 30 more such locomotives. A coal-burning gas-turbine locomotive, under design for several years by a group of railroads and coal interests, was to be constructed in 1957. Work on design of an atomic-powered locomotive was under way, either gas or steam propulsion being considered theoretically feasible; however, grave problems of biological shielding and other safety measures remained to be solved.

Yards and terminals continued to receive major attention. Radar and electronics were combined to provide automatic braking of cars moving into classification tracks, with television and photography teamed for automatic identification of cars entering yards. High-speed electronic machines convert punched cards into telegraphic records, and vice versa, for automatically and speedily receiving, assembling and forwarding reports on car movements.

Railroads in 1956 spent more than \$1,300,000,000 for these and other improvements to get more capacity, efficiency and economy from their plant and facilities.

(See also INTERSTATE COMMERCE COMMISSION.) (L. J. K.)

MONORAIL TEST TRAIN operating at Houston, Tex., in 1956

Other Countries.—The year 1956 was notable for the decision by three of the world's most important railway administrations to turn over to diesel or straight electric traction. These countries were the U.S.S.R., the German Federal Republic and Great Britain; they followed the example set more than 20 years before by the United States.

The causes for this change were the poor quality and high price of coal, the difficulty of obtaining labour to maintain steam locomotives and the fact that the diesel yielded greater availability in any given period, as did the straight electric.

A major event in Europe was the adoption of a two-class system for passengers from June 1956.

Canada.—In Canada dieselization continued. On the Canadian National the Newfoundland district had been entirely dieselized. The famous International Limited had been turned over to diesel traction, and orders for new diesel units in 1956 exceeded \$30,000,000. Double-deck automobile cars had been placed in service, as well as boxcars with aluminum roofs; in passenger service "dinette"-type refreshment cars proved popular.

Canadian Pacific developments included rapidly extending use of diesel traction, embracing the very successful Dayliner type of rail car, admirably suited to Canadian conditions; 29 such units operated in all provinces served by the Canadian Pacific. The Manitowadge branch in Ontario was opened late in 1955 to assist mining developments. The Pacific Great Eastern railway's southerly extension to north Vancouver was opened in 1956.

Great Britain and Ireland.—The £1,200,000,000 modernization plan of British railways gained impetus in 1956 with diesel rail car units coming into operation in many areas. Meantime the fleet of diesel shunters in service had passed the 500 mark, and 400 more had been ordered, in addition to 1,750 vehicles for diesel multiple-unit sets. Tests were made with a Deltic 3,300-h.p. single-unit diesel electric of English Electric design.

Financial results of British railways for 1955 were disappointing, receipts not greatly exceeding expenses, this being mainly because of the 1955 strike of locomotive men which cost the railways £12,000,000. Early in 1956 the British government announced its intention of meeting capital requirements of national-

ized industries.

In Northern Ireland, Ulster Transport railways incurred heavy deficits; the Great Northern closed its Banbridge line and in view of severe financial losses was examining major closure schemes. In the Irish republic, *Córas Iompair Éireann* (the Irish railway system) concentrated on the turnover to diesel traction, both locomotives and rail cars, thereby offering major accelerations in comparison with 1939.

Continental Europe.—French National railways concentrated on electrification of heavy traffic lines in eastern France, leading to Strasbourg and Basle, together with routes into Switzerland via Vallorbe and Pontarlier; there were destined to be three different systems of electric traction between Paris and Berne. About 3,200 route-mi. in France were

electrified. The 1955 financial deficit was very heavy.

West German railway developments included major resignalling at Frankfurt, the reconstruction of the Rhine bridge at Mainz, the growing use of long welded rails and the rapid extension of rail buses and electric-battery cars on branch lines. Many yard locomotives had been fitted with ultra-short-wave radio sets. East German railways reinstalled electric traction, dismantled in 1945-46. Belgian National railways continued conversion to electric traction, notably on the routes via Arlon and Virton to Luxembourg, where links would be made with French and German systems. Netherlands railways completed reconstruction of the Moerdijk bridge near Dordrecht, the longest railway bridge in the country. To provide greater flexibility and additional accommodation, locomotive-hauled trains superseded some multiple-unit ones.

Swiss Federal railways completed doubling the Lausanne-Berne artery, and progress was made with the doubling of the Zürich-Chur line in Glarus, also the Olten-Biel section, carrying 100 trains daily. Swiss railways remained among the most profitable in Europe. Italian State railways, by electrifying to Palermo, provided an all-electric 1,466-mi. route with through cars from Paris except for the train ferry at Messina. Expenses considerably exceeded revenues in Italy, mainly because of the heavy cost of war damage reconstruction.

Spanish National railway progress was outstanding; notable events were electrification from León to Busdongo, doubling of the Miranda-Alsasua international route, new railway construction from Burgos toward Madrid and additional sections opened on the important new Zamora-Orense-LaCoruña line. Hungarian railways constructed a new station at Szolnok, and dual-gauge sleeping-car services were increased between Moscow and Vienna, Prague and Belgrade.

In Norway the last and westernmost section of the Sorland line, Oslo-Stavanger, was converted to electric traction, and the Nordland line toward Bodo opened to Saltdal. Danish railways received additional diesel locomotives and installed a new design of passenger car. Sweden celebrated its railway centenary. In Finland diesel expresses were inaugurated between Turku and Helsinki. Russian railways accelerated main passenger services, but

they were still below 1939 speeds, freight taking preference. In European Turkey new B-B type electric locomotives operated on the Sirkeci-Soguksu section of the state railways, electrified on the 50-cycle A.C. system.

Asia.—Soviet railways provided a service over the trans-Siberian route of 5,800 mi. from Moscow to Vladivostok in 8 days 6 hours, and a through service existed from Moscow to Peking via Harbin and Mukden, in spite of change of gauge. The Tsining-Erhlien 215-mi. section of the Ulan-Bator line was opened, using the Russian five-foot gauge, in 1956; break of gauge occurred at Tsining, where the bogies under through sleeping cars were changed. Railway construction continued westward from Lanchow; 900 mi. in all were to be built in 1956. Australian-built diesels were operating on the Kowloon-Canton line.

Indian railways had adopted corridor stock and air conditioning for the third class and were reducing the number of classes. The Eastern railway was divided to form a new southeastern system; thus there existed seven large Indian railways. Pakistan extended diesel traction, as did Ceylon and Malaya, while Turkey had 800 mi. of new line under construction and Saudi Arabia was extending its railway from Riyadh toward Mecca and Medina. Japanese National railways completed electrification from Nagoya to Kyoto, about 1,300 route-mi. out of 12,400 now having been electrified.

Africa.—South African railways continued large-scale programs to cope with ever-increasing traffic; doubling progressed between Durban and Ladysmith and also between Pretoria and Bloemfontein; electrification proceeded on many sections, including that from Witbank to Kroonstad. Orders were placed for 200 diesel locomotives, a new development for South Africa. Rhodesian developments included extensive improvements at Bulawayo and further installations of centralized traffic control. New construction included the Bancroft line, but much more important was the inauguration in July of through working from Bulawayo to Lourenço Marques in Mozambique.

East African railways opened the 208-mi. Western Uganda extension from Kampala to Kasese in August. The Bas-Congo-Katanga railway celebrated its 50th anniversary and the Upper-Congo-Lakes railway was regauged from 1 m. to 3 ft. 6 in.; in August these railways were linked by the opening of the Kamina-Kabalo section, thus forming an important trans-African link of uniform gauge. Gold Coast railways inaugurated a new line from Achiasi to Kotoku on the Accra-Kumasi route.

South America.—Large-scale improvement of the Brazilian railways had been undertaken thanks to a loan from the Export-Import Bank of Washington to finance new equipment. Financial deficits of many operating companies continued grievous. The Central Brazil railway received new electric and diesel units as well as 2,000 steel freight cars. Argentina was steadily replacing steam traction by diesel units, some imported from Hungary and the Netherlands; Japanese-built coaches entered service on the Sarmiento railway. Financial results and physical equipment were described in a ministry report as being in a parlous condition, with urgent need for rehabilitation. New oil-fired 2-8-0 steam power was delivered to the Peruvian corporation for its three-foot gauge Trujillo section with very heavy grades. New mileage was being completed in Ecuador from Quito to San Lorenzo, near the Colombian frontier (232 mi.).

In Colombia the 70-mi. Dorada railway had been sold to the government, and in Chile the Taltal railway was sold to local Santiago interests.

Australasia.—Victorian railways inaugurated main-line electrification of the Gippsland section to Traralgon, 97½ mi. from Melbourne, in March 1956, marking a major phase in the £80,000,000 modernization scheme known as Operation "Phoenix." The major level-crossing elimination program continued, and new

Daylight accelerated express service between the state capitals of Sydney and Melbourne also commenced in March. New South Wales railways suffered from disastrous floods, causing serious financial losses.

Western Australian railways installed a centralized traffic control system near Perth and received 24 new 2-8-2 British-built steam locomotives (3 ft. 6 in. gauge). (C. E. R. S.)

Red Cross. **United States.**—The year 1956 was the 75th anniversary of the American Red Cross. From its founding in 1881, the American Red Cross had served in approximately 6,000 disasters and expended more than \$230,000,000 contributed by the people of the U.S. to aid those in distress.

In 1955, when heavy hurricane rains caused great destruction in six eastern states, tens of thousands of volunteer workers began to help, guided and aided by 850 disaster workers from all over the nation. Since the cost of assistance from the Red Cross needed by individuals, families and small businesses could not be met by funds on hand, a special disaster appeal for \$10,000,000 was made, which was oversubscribed in two weeks with a great outpouring of aid not only from within the country but from other countries—from governments, Red Cross societies and citizens. The contributions reached \$16,000,000 and the cost was \$18,000,000. Fifteen thousand families were helped to become again self-supporting.

At Christmas 1955, thousands of families were driven from their homes by violent floods in the far west. Expenditures totalled more than \$8,000,000. During 1955, Red Cross assistance was also given in nearly 300 other disasters, and the more than \$30,000,000 spent in assisting disaster victims made the year the costliest in Red Cross history.

Assistance to men and women in active military service, the veterans of several wars and their families cost more than 40% of the organization's annual budget. Each month during the year, home service in local chapters served 109,000 servicemen and their dependents and 38,000 veterans and their dependents. Each month, 12,200 members of the armed forces in 224 military hospitals in the U.S. and overseas were served by paid staff and 17,000 volunteers. On military installations in the U.S. and abroad, paid staff and 6,600 volunteers served 90,000 members of the armed forces monthly. Five clubmobile units in Korea and five community centres in the European area provided recreational activities for 112,400 military personnel each month.

Red Cross staff members serving in 70 Veterans administration offices each month assisted 14,000 families of veterans and surviving dependents with their applications for government benefits. In 176 Veterans administration hospitals 17,000 volunteers gave a total of nearly 2,000,000 hours serving patients.

The Red Cross blood program, collecting annually 2,000,000 bottles of blood through its 49 regional programs, was the largest single co-ordinated blood-collecting program in the world. A total of 3,900 hospitals throughout the nation were provided with blood during 1955.

From July 1955 through June 1956, 852,100 certificates were issued in first aid, 1,348,300 in water safety and 216,800 in

home nursing. About 2,500,000 additional persons were reached through group instruction meetings on health and safety, and first-aid facilities were provided for 8,200 public events. A network of 19,000 emergency highway first-aid stations, mobile units and detachments was in operation. Approximately 24,000 volunteers took special training for their work in chapters, hospitals, institutions and other agencies; 48,500 nurses were enrolled for work in disaster and in other Red Cross and community programs; and trained volunteers served in 6,850 hospitals, including 150 civilian mental hospitals, and nearly 3,000 agencies and organizations. A total of more than 500,000 volunteers were actively engaged each month in Red Cross work as leaders, instructors, fund campaign solicitors and in the ten service programs.

The American Red Cross assisted 16 other countries following disasters. Red Cross and government officials from 39 countries had an opportunity to visit with the American Red Cross and study methods and sources.

Students enrolled in the Junior Red Cross in 74,000 elementary and secondary schools aided child disaster victims in other countries. They also filled more than 400,000 gift boxes for shipment to children of other lands, made and filled 350 school chests (including educational, health and recreational supplies) and exchanged art work, correspondence and music albums as part of their program of building good will. (C. L. B.)

International.—Of the approximately \$35,000,000 expended by or through the Red Cross during 1956 for assistance to victims of calamities caused by nature and for aid to refugees, international relief amounted to \$8,000,000. Of this \$3,500,000 represented agricultural products donated by the United States government through the League of Red Cross societies for flood sufferers in Hungary. The balance, gifts from national Red Cross societies, went to victims of floods in India, Pakistan, Yugoslavia, Lebanon, Turkey, Korea, Iran, Burma and the United States; earthquakes in Afghanistan and Greece; an explosion in Colombia; to Arab refugees in the near east; refugees in Germany and sufferers from the exceptional winter cold in Italy and France.

During May 1956, the International Committee of the Red Cross held a meeting in Geneva, Switz., of jurists, military experts and specialists on civil defense of 13 national Red Cross societies to draft a code of rules reaffirming the principle of re-

spect due civilian populations in the event of armed conflict. This proposed code was to be submitted to the 19th International Red Cross conference, which would include delegates from all Red Cross and Red Crescent societies and all governments signatory to the Geneva conventions; it was scheduled to meet in New Delhi, India, Jan. 21–Feb. 5, 1957.

In July 1956, the International Red Cross announced that through its good offices 100,000 persons had been reunited with their families since the end of World War II. Because of relaxed controls, these reunions were being speeded up.

During the year the League of Red Cross societies enrolled its 75th member, the Red Cross society of the Democratic People's Republic of Korea. In process of formation were Red Cross or Red Crescent societies in Vietnam, Laos, Cambodia, Sudan, Libya, Liberia, Tunisia and Morocco.

Junior Red Cross training centres, attended by more than 300 members and leaders from 30 countries, were held in Great Britain, the Netherlands, Italy and the United States. Technical assistance missions in Junior Red Cross organization were sent by the League of Red Cross societies to Lebanon, Thailand, Burma, Vietnam, Laos, Cambodia, the Philippines, Australia and New Zealand. Refugees. The influx of Hungarian refugees into Austria in Nov. and Dec. 1956, consequent upon the political upheaval and military repressions in Hungary which began on Oct. 23, constituted one of the largest refugee movements in Europe since World War II. By Dec. 9, 1956, more than 130,000 refugees had entered Austria. The flow was continuing at the rate of approximately 2,500 a day. While some effort on the part of the Hungarian and Soviet military to prevent the refugees from leaving Hungary was apparent, the controls at the border were obviously ineffective and at times appeared to be either half-hearted or poorly organized.

Austria was ill-prepared to receive, house and feed such large numbers suddenly seeking asylum with little more than the clothes on their backs. Already the host for approximately 30,000 refugees from eastern European countries and 150,000 Volksdeutsche who had arrived at the end of the war and had not acquired Austrian citizenship, Austria had earlier in the year granted asylum to increasing numbers of refugees from Yugo-

ROSETTE OF CANOES formed during a canoeing class at an aquatic school at Brevard, N.C., operated in 1956 by the American Red Cross

slavia. The flow of refugees from Yugoslavia in earlier years had been in manageable proportions. From the spring of 1956 to December the numbers increased from 400 to 1,000 monthly. Another 1,000 refugees from Yugoslavia were entering Italy monthly by way of Trieste in the fall of the year. All available camp facilities in both countries were overcrowded before the flight of Hungarian refugees into Austria began in November.

On Nov. 5, 1956, Austria appealed to the governments of the western world for assistance through the Office of the United Nations High Commissioner for Refugees and the Intergovernmental Committee for European Migration. These governmental bodies, the United States Escapee program and the voluntary agencies had previously been assisting to secure the emigration of refugees from Austria and to integrate those who could not qualify for emigration in the Austrian economy. Appeals were immediately sent to the governments of western Europe and of overseas immigration countries to receive the refugees either permanently or in temporary asylum. Former army barracks and other installations, hastily opened to house the refugees, were soon overcrowded and more than one-third of the refugees had to be placed in small hotels and private homes. The response of the governments and of the people in the various countries was spontaneous and generous, although never quite adequate to meet the needs of the numbers involved.

The offers of secondary asylum, made by individual European governments in terms of a few thousands initially, were soon raised to tens of thousands and totalled more than 80,000 by early December. Some neighbouring governments sent trains and buses into Austria to collect the refugees as they came over the border. Food, clothing and medicines were contributed along with cots, mess kits, soap and sanitary supplies. The International Committee of the Red Cross and the League of Red Cross societies shared the task of receiving and distributing the supplies furnished; the International Committee of the Red Cross assumed responsibility for distribution inside Hungary and the League of Red Cross societies for distribution to the refugees in Austria.

The Intergovernmental Committee for European Migration assisted by the United States Escapee program and the voluntary agencies registered the refugees on arrival, assembled them for departure to other countries and organized trains and air flights. By the first week in December the number of refugees leaving Austria daily about matched the influx. More than 50,000 had been moved to other countries: 3,000 to Belgium, 2,000 to Canada, 1,000 to Denmark, 6,500 to France, 7,600 to Germany, 2,000 to the Netherlands, 2,700 to Italy, 3,000 to Sweden, 9,300 to Switzerland, 9,600 to the United Kingdom and 3,000 to the United States.

As the capacities for absorbing refugees in the European asylum countries were nearing exhaustion, the movement of refugees overseas began in early December. The United States offered to receive 21,500, Australia 5,000 and Canada planned to accept approximately 6,500 by Dec. 31, 1956, although no quota of admissions was established.

The Latin-American countries also offered to receive approximately 10,000. Helpful as those offers were, more than 70,000 refugees remained in Austria in mid-December as a heavy burden on the Austrian economy.

During the year the governments of Spain and of the Union of South Africa joined the Intergovernmental Committee for European Migration, thus raising its membership to 27 governments. The organization was engaged in moving migrants and refugees out of the overcrowded countries of Europe who would not otherwise be moved. The committee moved more than 135,000 migrants and refugees out of Europe during the year to overseas countries. Apart from the unusual movement of refugees

REFUGEES FROM NORTH VIETNAM being carried by native boat along a canal near Cai-San, South Vietnam. On the banks may be seen new straw-thatched houses built, largely with U.S. funds, as part of a refugee resettlement project in 1956

from Austria, Italy proved to be the largest country of emigration and Australia the country which received the largest number of migrants, more than 40% of the total moved under the auspices of the migration committee.

The Office of the High Commissioner for Refugees, organized in 1950 by the United Nations, has the responsibility for providing legal protection for refugees and for seeking permanent solutions of refugee problems by assisting governments and voluntary agencies to facilitate the voluntary repatriation of refugees or their assimilation in countries of asylum. During 1956 the office continued to administer the United Nations Refugee fund established by actions of the assembly in 1953 and applied more than \$2,500,000 contributed by governments in 1956 to projects aimed at the establishment of refugees in agriculture and in small trades, businesses and professions. Housing projects were initiated in Austria, Germany and Greece and vocational training was supplied. Refugee students were assisted to complete their studies.

The United States Escapee program, initiated in 1952, was concerned primarily with the more recent arrivals among the refugees from the eastern European countries and Yugoslavia. The numbers of such refugees increased substantially during the year. They were provided with food, clothing and medical care in supplement to the basic care provided by the countries of asylum. Emphasis was placed on securing the emigration of the refugees to overseas countries of resettlement in order to relieve the countries of first asylum of the burden of continuing care for the refugees. About 24,500 refugees remained under assistance by the escapee program on Oct. 31 and more than 33,500 had been resettled overseas by that date.

German refugees from the east zone of Germany continued to enter west Berlin at the rate of 2,000 weekly during the year. After examination and the grant of refugee status they were flown to western Germany. The high level of economic activity in the German Federal Republic greatly facilitated their absorption in the German communities, although the problem of housing persisted. In spite of increased building programs more than 300,000 remained in camps in west Germany.

Toward the end of the year there were reports of the departure under pressure from Egypt of British and French nationals and of Jews whose nationality status appeared to be uncertain. The large majority were reported to be stateless. No dependable figures of the numbers involved became available, although estimates of 50,000 to 100,000 were made. This development was an aftermath of the Suez canal crisis. Practically all the persons affected had been permanently resident in Egypt.

Religion. An outstanding event of the year 1956 was the culmination of the sixth Buddhist world council, which began in May 1954. The crowning episode was the celebration, in May 1956, of the 2,500th anniversary of the Buddha's attainment of nirvana. The council continued with plans for the revision of the texts of the sacred Buddhist books. Its centre was a man-made cave, seating 500 monks and 10,000 others on the outskirts of Rangoon, Burma, modelled after the cave in Bihar, India, where the first Buddhist council was said to have convened 2,499 years earlier. The plans, promotion and program were in the hands of the clergy of the Hinayana branch of the faith with the cordial support of the Burmese government, in Burma, Ceylon, Thailand, Cambodia and Laos, but there were as well friendly visitors from China and Japan. The (Communist) People's Republic of China went to special pains to express its sympathetic interest. The program consisted chiefly of the recitation by monks from memory of the entire and voluminous body of Buddhist scriptures. Part of the revival of Buddhism was seen in sending missionaries, some to the nearby hill tribes of Burma and others to as distant a country as Germany. Buddhist monks were active in the elections in Ceylon and were responsible for one of the policies of the new government which came into power in 1956, to curb what Buddhists deemed the special privileges to Christians long granted by the British regime.

A Hindu revival continued in India, but was promoted only by a vigorous minority. Officially the government of India was neutral religiously and was frankly secular.

The resurgence of Islam mounted, particularly in Indonesia, where it took political aspects, and it marked a phase of mounting Arab nationalism in the middle east. Pakistan was officially declared to be a Moslem state, in view of the overwhelming majority of Moslems in its population.

The Eastern Christian churches presented a varied picture. In Egypt the Coptic Church displayed an awakening, a movement which had been in progress for several years; and the sister church in Ethiopia continued the revival which had marked its course since the end of the Italian occupation and the re-establishment of the native dynasty. Repercussions of the destruction of Greek Orthodox churches in Istanbul by Turkish rioters in Sept. 1955 continued. The agitation for *enosis*, or union with Greece, which rendered Cyprus a centre of turmoil, had a leader in Makarios, the archbishop of the Orthodox Church of Cyprus. Since in the middle east nationality and religion tended to coalesce, the Greek majority in Cyprus and its aspirations were closely identified with the Orthodox Church, and spokesmen for that church in Greece were emphatic in their censure of British measures in Cyprus. Makarios, as the head of the Greek community, was so pronounced in his insistence on *enosis* that the British rulers exiled him to the island of Seychelles in the Indian ocean.

Communist regimes took an ambivalent attitude toward religion, especially toward Christianity. On the one hand, the Polish government intensified its efforts to bring the Catholic Church to heel and to encourage what it adjudged to be the "progressive" elements in the clergy. In China the People's Republic stepped

CITED FOR ARCHITECTURAL EXCELLENCE, the Christ Evangelical Lutheran church, Minneapolis, Minn., was first choice among 18 in the U.S. named by the National Council of Churches in 1956. It was designed by Eliel Saarinen and built in 1949

up its measures to constrain the Catholics to break with Rome and form an independent church, and persecuted some of the clergy who declined to conform. On the other hand, the U.S.S.R. permitted the building of Orthodox churches, facilitated the visits of western churchmen to the Soviet Union, allowed Russian Christians to pay return visits to the churches of the west and gave consent to the Armenians to elect a head of their communion. Especially notable were deputations to the U.S.S.R. from U.S. Protestants, visits of Anglicans from England, a deputation of Russian Baptists to the Baptists of the United States and a delegation representing the major Russian confessions to the National Council of the Churches of Christ in the U.S.A. The People's Republic of China not only took a friendly attitude toward the sixth Buddhist world council but also permitted a small number of Protestant churchmen to attend meetings of their fellow Christians in western Europe in the summer of 1956.

The Hungarian government gave every facility to the meeting of the central committee of the World Council of Churches near Budapest, and the Czechoslovak government permitted the World Alliance of the Reformed Churches to convene in Prague. The Hungarian government cleared the Lutheran Bishop Lajos Ordass of the charges under which he was imprisoned in 1948.

A revival continued in the influence of the Catholic Church in parts of western Europe. In Argentina the Catholic Church was beginning to recover from the blows dealt it by Juan Perón, and in Brazil it was registering gains among the intelligentsia and was active in rural aid and reconstruction in drought-stricken districts and among migrants from the affected areas. In his Christmas message of 1955, Pope Pius XII made a plea for peace in which he urged nations to agree not to employ atomic or nuclear weapons in mass destruction or to explode them in tests or as threats.

The "Tell Scotland Mission," a Protestant effort to win the

unchurched, was making progress. It had been projected for two years or more and enrolled laity as well as clergy in an effort to reach individuals one by one or in families, without spectacular meetings.

The *Kirchentag*, an assembly of German Protestants, met in Frankfurt and attracted tens of thousands, not only from west Germany, but also from east Germany; there were also non-German visitors.

The United States witnessed steps toward church union. Decisive measures were taken by the Evangelical and Reformed Church and the General Council of the Congregational and Christian Churches to bring to consummation the long-negotiated merger of the two bodies into the United Church of Christ. It seemed likely that the union of the Presbyterian Church in the U.S.A. and the United Presbyterian Church would be effected; however, the (southern) Presbyterian Church in the U.S. had so far held aloof. Actions were also taken which seemed to make certain the union of the American Lutheran church and the Evangelical Lutheran Church, with the probability that the United Evangelical Lutheran Church would accede.

In the United States the Eastern Orthodox Church continued its growth, erected new buildings, advanced in its training of clergy and obtained formal recognition from several state legislatures as a distinct branch of Christianity.

Membership in religious bodies in the United States and attendance at religious services were still on the upward curve which had characterized them for a number of years. Voluntary giving to religious enterprises reached new heights, and there was increased construction of churches and organization of new congregations, especially in the suburbs of rapidly growing cities.

Religious Education. Protestant and Orthodox.—The spirit of self-determination which accompanied the process by which colonies with at least one quarter of the world's population became self-governing nations after World War II hastened the development of indigenous Christian education programs in the lands of the so-called "younger" churches. During 1955 and 1956, in addition to the development of indigenous Sunday school curriculum materials which had already taken place in Japan, the Philippines and Latin America, a similar process was taking place in several parts of Asia and Africa.

In India, 11 of the major Protestant and Orthodox churches sent official delegates to an All India Curriculum conference in Nov. 1955 at Jabalpur, and again in Nov. 1956, to share in the co-operative planning of curriculum materials for the churches of India. The delegates decided that two kinds of curriculum materials were necessary, one for the larger Sunday schools and one for the villages. The lesson outlines were put into the hands of writers, and it was hoped that the first books would be published by the end of 1957.

In Africa, following four general conferences on Christian education, to which 17 national Christian bodies in Africa sent delegates early in 1956, it was agreed by 13 of the countries involved south of the Sahara to work together in planning an indigenous Sunday school curriculum for Africa. The planning conference for this curriculum was held Aug. 7-31, 1956, in the Belgian Congo.

In the near east, following preliminary conferences in Cairo,

Egy., and Beirut, Lebanon, in the autumn of 1955, the Protestant and Orthodox churches in that area made plans to develop indigenous Sunday school curriculum materials. Alice L. Goddard, director of children's work for the National Council of the Churches of Christ in the U.S.A., was invited to spend several months in the near east, starting Nov. 1, 1956, to make a survey of the Christian education program of the churches in that area and to serve as a consultant at the Near East Curriculum conference which was to be held near Alexandria, Egy., early in 1957.

More than 50 key leaders in the field of Christian education in Europe met June 9-13, 1956, at Amsterdam, Neth., at a study conference sponsored by the World Council of Christian Education. A conference of German-speaking workers was held near Munich, Ger., in Feb. 1956, and a similar conference for workers from the Latin countries of Europe was planned for early in 1957.

Ten countries in Latin America sent delegates to the 3rd assembly of the Latin American Youth organizations, which was held in Colombia in Dec. 1956. A Pan American consultation was held in the same city immediately following the conference. Under the auspices of the youth departments of the World Council of Churches and the World Council of Christian Education, a team of youth leaders, representing five continents, was to travel through several countries in Latin America to hold institutes for youth workers in the early part of 1957. (N. CL.)

Roman Catholic.—In 1956 the full-time teaching staffs of all Roman Catholic educational institutions in the United States increased by 4,142 members or 3.1% to a record total of 135,406, comprising 8,995 priests, 4,168 brothers, 906 scholastics, 93,518 sisters and 27,819 lay teachers. There were 2,912 more lay teachers, an increase of 11.7% over 1955.

The 12,710 separate Roman Catholic educational institutions included 98 diocesan seminaries, 407 religious community seminaries or novitiates and scholasticates, 254 colleges and universities, 1,546 diocesan and parish high schools, 837 private high schools, 9,051 parish elementary schools and 517 private elementary schools. There were also 143 protective institutions caring for 15,275 youths.

New educational institutions included 20 diocesan and 22 religious community seminaries.

Enrolments in 1956 in the 254 Catholic colleges and universities totalled 241,709, an increase of 10% or 22,003 over the preceding year.

The number of full-time pupils in Catholic elementary and high schools increased by 227,977 during the year. The 1,546 parish and diocesan high schools reported 413,780 pupils, an increase of 15,588 over 1955. The 837 private high schools with 258,519 pupils reported an increase of 17,104 over the 1955 total. Pupils in 9,051 parish elementary schools numbered 3,451,785 or 198,177 more than a year before, while students in the 517 private elementary schools totalled 92,183.

The further progress of religious instruction to children under released time was evident in the 1956 reports of 2,295,902 public-school children attending 46,084 special religious classes or schools, representing respectively a year's increase of 191,272 pupils and 5,941 classes.

Approximately 11,000 delegates and visitors attended the sessions of the 53rd annual convention of the National Catholic Educational association which took place in St. Louis, Mo., April 3-6, 1956. (J. LaF.)

Jewish.—The Jewish world focused its attention during 1956 upon Russian Jewry which was contacted directly for the first time since the Bolshevik Revolution. Following the new Soviet policy of encouraging visitors from other countries, the American rabbinate was invited by the chief rabbi of Moscow to visit

Jewish communities in the U.S.S.R.

The reports of two rabbinic delegations as well as other visitors agreed that Jewish religious life in the Soviet Union was at its lowest ebb and was in danger of fading out altogether. After 40 years of neglect of religious education, there were hardly any young people equipped to practise Judaism even if they were so inclined.

The same reports indicated that while all religious denominations had suffered since the Revolution, the Jewish community fared the worst. In addition to the prohibition of teaching religion to children, the Stalinist era was marked, in its later stages, by outright hostility to Jewry and to Hebrew culture. Indeed, following World War II, the Stalin regime pursued a policy of anti-Semitism which led to the banishment and elimination of outstanding Jewish writers and scholars, some of them faithful Communists.

After the 20th Communist party congress and the denunciation of Joseph Stalin, there were signs of changes for the better. A number of Jewish writers and intellectuals, both living and dead, were rehabilitated and the tight "iron curtain" over Jewish life was lifted. Promises also were made to renew some Jewish cultural activities, including the publication of prayer books and the opening of a rabbinical seminary.

The year also witnessed considerable stirrings and developments in religious education in Jewish communities of Europe, North Africa and Latin America, through the co-operation of the department of education and culture of the Jewish agency and the Joint Distribution committee.

In the United States, a number of studies were conducted by national and local organizations to find ways and means for improving the curriculum of Jewish schools which had made progress in recent years in enrolment but not in content and achievement. Jewish educational circles were also grappling with the problem of teacher shortages. The American Association for Jewish Education convened a national conference in the fall to consider the problem, which had become critical in some communities.

Respiratory Diseases.

Influenza.—No major or widespread outbreaks of influenza occurred during the winter season of 1955–56. However, some reports of 1955 epidemics appeared during 1956. P. J. Wormald and coworkers reported the results of tests of the blood of 504 patients with X-ray evidence of pneumonia during 1954 and 1955 in Cambridge, in Luton and in Dunstable, Eng. Diagnostic rises in titre of antibodies for influenza B were found in 7%, and for influenza A in 2% of these patients. In another study by B. E. Andrews and others, similar tests were done on bloods collected from 1,001 volunteers in ten royal air force stations in England during Dec. 1954 and again from 711 of the same volunteers in March 1955. Evidence of influenza B infection was found in 19%.

Sir Macfarlane Burnet, Melbourne, Austr., considers the influenza virus particle to be a loosely organized unit in which there is a surface membrane that is derived largely from the host cell but which owes its specific qualities to a regular reinforcement with virus protein. This membrane encloses a variable number of genetic determinants which, he feels, must be ribose nucleic acid-protein structures, and a proportion of adventitious material from host cytoplasm. This indeterminate

structure he considers to be consistent with the known properties of the influenza virus, in contrast with those of the poliomyelitis or tobacco mosaic viruses which have organized aggregates of genetic determinants of standard size.

A study of active immunization with influenza A and B viruses in 614 infants and children was reported by M. M. Glazier and coworkers. They observed systemic reactions from one or more injections of the vaccines in 22.8% of the children; these were severe in 9.2%. The reactions were not related to allergy, sex or body type, but they were more frequent and more severe in the young, even when the same dose per kilogram of body weight was given. Also, the reactions varied with the size of the dose at all ages. The antibody response was the same in those who did and in those who did not have reactions. Even the smallest dose produced a good antibody response. They concluded that primary vaccination is fairly effective with a single injection of 0.1 c.c. given into the skin or 0.2 c.c. given under the skin. The antibody response was greater and more rapid when two doses were given a week apart. A booster dose, either of 0.1 c.c. or 1.0 c.c., given three to seven months later, resulted in a similar favourable rise in antibody titre. The elevated titres in the vaccinated children persisted for 12 to 18 months. No tests were done, however, to determine whether the antibodies engendered were active against recent strains.

"Adenovirus Group" and Upper Respiratory Infections.—

Most of the specific types of adenoidal, pharyngeal, conjunctival and respiratory infection viruses were definitely shown to be implicated in certain types of infections, including the acute undifferentiated respiratory infections, ARD, of military recruits; certain nonbacterial types of exudative pharyngitis and tonsillitis; certain types of nonbacterial conjunctivitis and other illnesses in which conjunctivitis is part of a respiratory or more generalized infection. Herpangina, a form of sore throat commonly found in young children, and pleurodynia, or "devil's gripe," had already been identified as caused by various Coxsackie viruses.

These viruses have the following known characteristics: (1) They produce acute infection of respiratory and ocular mucous membranes with associated involvement of the regional lymph glands. Virus has frequently been isolated from adenoid or tonsillar tissues from persons without clinical signs of acute illness. (2) The viruses multiply readily in tissue cultures of certain types of human and simian cells with the production of increased acid and with the production of distinctive changes in the structure and appearance of the cells. As shown by electron micrographs, the nuclei of virus-infected cells may contain symmetrical arrays of viruslike particles. (3) All viruses of this group share a common antigen which can be demonstrated by a specific serological (complement-fixation) test. (4) The individual types are demonstrated by neutralizing the cell-degenerating (cytopathic) effect of the viruses by means of type-specific antiserums in tissue cultures. (5) No strain of this group had, as yet, produced manifest illness in any of the commonly used laboratory animals.

The same type of adenovirus was also identified as the cause of an epidemic of keratoconjunctivitis (formerly known as shipyard conjunctivitis) that had previously been reported in Ontario, Can., in 1951 and was again seen in the area of Toronto in the winter of 1954–55. Strains of this virus were isolated from seven of the patients during the latter outbreak; this was done in tissue cultures of HeLa cells or of monkey-kidney cells. H. L. Ormsby and coworkers also were able to reproduce the disease in a human volunteer after the virus had been passaged four times in tissue culture. Convalescent serums from four patients with epidemic keratoconjunctivitis taken during the 1951 epidemic in Windsor, Ont., had antibodies for another type of

adenovirus that had been isolated by E. Jawetz and his coworkers in California in 1955 from a seaman with a similar disease that had come from the orient. The latter workers presented evidence indicating that one of the viruses which they isolated was associated with typical cases of epidemic keratoconjunctivitis during 1951-55 in several localities in North America. This strain was distinct from types 1 to 7 and was subsequently classified as type 8. However, the same workers also were able to isolate type 6 adenoviruses from two patients with conjunctivitis, associated with mild systemic and respiratory symptoms. They also described five cases illustrating infections with viruses of types 2, 3, 6, 7 and 8. These illnesses ranged from simple conjunctivitis, involving only one eye and without fever or respiratory symptoms, to a severe influenzalike systemic disease necessitating prolonged hospitalization. They emphasized the role of the eye as a probable portal of entry of adenovirus infections. Types 3 and 4 adenoviruses, obtained from tissue cultures, were inoculated by the conjunctival and pharyngeal routes in human volunteers by T. G. Ward of the Johns Hopkins school of hygiene and R. J. Huebner and coworkers of the National Institutes of Health. These volunteers were first shown to have little or no antibodies in their blood. An illness, indistinguishable from pharyngoconjunctival fever, was produced in these volunteers.

Workers in these institutions prepared formaldehyde-inactivated and heat-inactivated type 3 adenovirus vaccines and were able to induce the production of antibodies for this virus by inoculating the vaccines in adult human volunteers. After challenge with live type 3 adenovirus swabbed on the conjunctivas, the volunteers with the vaccine-induced antibodies experienced much greater protection against infection and illness than did vaccinated or unvaccinated persons who did not have demonstrable antibodies. This vaccine-induced protection was nearly equal to that of unvaccinated volunteers with naturally acquired antibodies.

A formaldehyde-inactivated adenovirus vaccine containing types 3, 4 and 7 was commercially prepared and was administered intramuscularly in a single dose of 2 c.c. to nearly 4,000 naval recruits. This produced no untoward local or general reactions. The vaccine induced a substantial antibody response in the blood to each of the 3 types of virus contained in the vaccine. All evidence indicated that the vaccine induced a substantial reduction in the rate of occurrence of acute febrile respiratory illness associated with type 4 adenovirus—the disease commonly encountered in new recruits and known as ARD. The workers from the navy, National Institutes of Health and The University of Chicago who conducted this immunization study felt that the usual interference with military training routine resulting from acute febrile respiratory illnesses may be substantially reduced by adenovirus vaccines.

Virus Pneumonias.—Few cases of primary atypical pneumonia had been shown to be caused by any of the groups of viruses already discussed. A few had been associated with adenovirus, but none of these were cases in which there was a rise in the serum titre of "cold haemagglutinins" or of agglutinins shown to be specific for the MG strain of *Streptococcus*, which are properties of characteristic cases of so-called viral pneumonia of a special type that was prominent during World War II and had been frequently identified since then.

An unusual complication of primary atypical pneumonia is involvement of the central nervous system. An acute encephalitis-like syndrome was reported in one patient by L. Yesnick. A review of the literature indicated 19 cases of such involvement, most of them during World War II but none since 1951. It probably occurs in less than 0.1% of cases and is probably due to the same (as yet unknown) virus that causes the pneumonia.

Psittacosis.—This disease continued to be an important problem since the lifting of the law on importation and interstate transport of parakeets and similar birds. R. H. Seibert and his coworkers in Cleveland, O., reported the finding of serological evidence of psittacosis infection in 17 of 24 Railway Express messengers intimately exposed to parakeets. They also found serological evidence of infection in 4 of 29 family associates of the Railway Express workers who had elevated titres, these 4 having no known contacts with birds. When the blood of patients admitted to hospitals with illness resembling psittacosis or primary atypical pneumonia was studied for evidence of psittacosis infection, 46% of 26 patients with a previous contact with birds had elevated titres as compared with only 4% of 52 patients with no previous history of such exposures.

Pneumonia in Chicken Pox.—In a review of 453 cases of chicken pox, L. Weinstein reported pneumonia occurring in 43, or 9.5%; 20 of these were in children under 7 years old and 21 were in patients over the age of 19 years. In adults with chicken pox, pulmonary disease due to bacteria was not encountered; in them all instances of respiratory infection was of viral origin; conversely, primary chicken pox pneumonia occurred only in adults and was usually associated with severe infection. There were 4 deaths in this group of 43 patients.

In another study, however, 12 cases of severe and fatal generalized chicken pox of the kind that is usually associated with viral involvement of the lungs were collected by R. J. Haggerty and R. C. Eley from among children in a number of hospitals. All of these children acquired their chicken pox in the hospital while they were under treatment with cortisone or similar hormones for various other conditions.

Réunion. This French overseas island *département* in the Indian ocean has an area of 969 sq.mi. Pop.: (1946 census) 241,708; (1954 census) 274,370 (French creoles, Negroes, mulattoes, Indians and Chinese). Language: French and creole French. Religion: mainly Roman Catholic. Capital, St. Denis, pop. (1954 census) 41,863. Prefect in 1956, Perreau Pradier.

History.—In the elections to the French national assembly held on Jan. 2, 1956, two Communists and a number of the Union Démocratique et Socialiste de la Résistance retained their seats.

Work was begun on the new coastal road from St. Denis to the port. (HU. DE.)

Foreign Trade.—(1955) Monetary unit: 1 franc C. F. A. (Colonies Françaises d'Afrique)=2 metropolitan francs. U.S. \$1=350 metropolitan French francs. Imports 7,000,000,000 fr. C. F. A., including 4,600,000,000 fr. C. F. A. from France, 1,000,000,000 fr. C. F. A. from Madagascar. Exports 5,800,000,000 fr. C. F. A., including 4,400,000,000 fr. C. F. A. to France, 1,000,000,000 fr. C. F. A. to Morocco. Principal exports: sugar 5,000,000,000 fr. C. F. A.

Rheumatic Diseases. **Bacterial Infections of Joints.**—Bacterial diseases of joints had been partially, though incompletely, conquered during recent years through discoveries of potent new anti-infectious agents such as the sulfa drugs, penicillin, para-aminosalicylic acid and isonicotinic acid derivatives. New reports appearing during 1956 emphasized that a great variety of these bacterial infections remain to be conquered, and illustrated the great number of sources from which these instances of arthritis may have an origin—rat infection, spores of the fungus *Coccidioides immitis*, a yeastlike organism known as *Histoplasma capsulatum* resulting in histoplasmosis of joints, and blastomycosis of joints.

Other bacterial infections which attracted attention during the year included actinomycosis, infections of joints with an organism producing blueish coloured pus, namely the *Bacillus pyocyaneus*, and infections with the organism of leprosy.

Rheumatic Fever.—As a cause of death, rheumatic fever ranked second to tuberculosis, among persons under the age of 40, in spite of the declining incidence of acute attacks.

Among the possible causes of rheumatic fever, a strong hereditary taint had been suspected for many years. Studies of this aspect of the disease were pursued diligently and during 1956 new reports showed the occurrence in offspring of rheumatic fever sufferers to follow the pattern of inheritance controlled by a recessive Mendelian gene. Virus studies and the continuing search for a living organism failed to show anything of importance. More and more, research as to the cause of rheumatic fever turned to investigations of a possible chemical disorder.

Most intensely studied during 1956 were the new cortisone derivatives, prednisone and prednisolone. In general, patients responded well to these agents, side effects were slight and disturbances of water metabolism, previously troublesome with cortisone, hydrocortisone and ACTH, were relatively unimportant. Although the number of patients treated was relatively small and the period of observation brief, results of these preliminary tests indicated a notable forward step had been made with prednisone and prednisolone.

In the field of preventing recurrences special attention was devoted during the year to studies with a long-acting preparation of penicillin known as benzathine-penicillin. This substance was administered once every 28 days. Among 50 children treated by this method, not a single recurrence of rheumatic fever was observed and it was concluded from these tests that results in regard to prevention of recurrences were even better with this method than with drugs previously in favour, namely, sulfa drugs and orally administered penicillin.

Rheumatoid Arthritis.—In 1956 there were approximately 700,000 persons in the United States affected by this disease. The

peak incidence occurs among younger persons between the ages of 20 and 30 but the disease is being found increasingly among older persons as well. The cause remained unknown, and information was not available as to the method of transmission from person to person, or the manner of spread from one area to another.

Studies disclosed that rheumatoid arthritis is a significant cause for poor vision and even complete blindness in some individuals. Severe inflammatory changes were found in practically every portion of the eye among a series of cases under investigation. One observation reported among patients with rheumatoid arthritis was anaemia, responsible to a considerable degree for weakness, fatigue and general poor health among these patients. Newly discovered techniques directed toward discovering a cause for this anaemia showed that blood cells of rheumatoid arthritis patients were short-lived and tended to disappear so rapidly that blood-forming organs were unable to maintain adequate replacements.

An increased urinary excretion of certain amino acids was detected in patients with rheumatoid arthritis. This suggested a basic defect concerned with metabolism of proteins. Persons thus affected might possess abnormal connective tissues, perhaps more readily damaged by a specific causative factor of rheumatoid arthritis. Further studies pursued the possible role of adrenal and pituitary glands as causative agents, and still others sought the explanation through studies of chemical constituents of the spleen. A possible role for the subconscious nervous mechanism of the body, the so-called sympathetic nervous system, in causing rheumatoid arthritis was under study. Drugs which alter the function of the nervous system were tested searching for aid in overcoming this disease. Neither the inciting agent nor the mechanism of development for rheumatoid arthritis was discovered through these studies.

A remarkable form of rheumatoid arthritis affecting children attracted special attention during 1956. This condition accounted for approximately 4% of all rheumatoid patients although the age of greatest incidence was found to be the third year of life. Girls were affected twice as often as boys and the disease appeared with special frequency among children with arthritic parents. In some instances a high fever, swelling of the lymph nodes, severe anaemia, enlargement of the spleen and wasting of muscles accompanied the painful swelling of joints. Growth of the body was frequently disturbed. Some patients showed short stubby fingers, receding jaws, shortened, unequal and deformed extremities and even dwarfism. Although the outcome was poor among untreated patients, with the aid of cortisone derivatives notable improvement was the rule. The cause was not determined but the ailment appeared to be identical to rheumatoid arthritis in adults.

Osteoarthritis.—The cause of osteoarthritis continued to remain unknown. Progress of this disease appeared to be related not only to wear and tear but also to unknown metabolic factors which distinguish one individual from another as regards reaction to stress. Genetic studies were being pursued vigorously and appeared to provide at least a partial explanation for occurrence of osteoarthritis. At least one variety appeared in accordance with a definite inheritance pattern which is dominant in women and recessive in men.

Gout and Gouty Arthritis.—For the treatment of patients affected by this extraordinary disease, many new remedies were under investigation. Colchicine, a substance known for more than 2,000 years, was still considered an effective agent. Probenicid and phenylbutazone were found effective in bringing about an increased excretion of uric acid and lowering of the level of uric acid in the blood.

(See also HEART AND CIRCULATORY DISEASES.) (E. F. RG.)

Rhode Island. A north Atlantic state of the United States, in New England, Rhode Island was one of the 13 original states; it is popularly known as "Little Rhody." Area: 1,214 sq.mi. (smallest of the United States), including 157 sq.mi. of water, 67% woodland. Pop.: (1950 census) 791,896; (July 1, 1956, provisional est.) 828,000. The population of the principal cities (1950 census) was: Providence (cap.) 248,674; Pawtucket 81,436; Woonsocket 50,211; Cranston 55,060; Warwick 43,028; Newport 37,564; Central Falls 23,550.

History.—The most important measures enacted at the 1956 session of the state legislature were as follows: four major appropriation acts including \$62,748,372.09 for the conduct of the general government during the fiscal period ending June 30, 1957, \$565,000 for construction in support of changes in the penal system, \$541,000 as partial reimbursement to private general hospitals for facilities made available to the public, and \$2,003,130.07 to offset an anticipated deficiency for the fiscal period ending June 30, 1956; an act continuing for another year the temporary tax increases initially imposed in 1951; an act establishing the state minimum wage standard at 90 cents per hour; an act creating a board of tax equalization for the expressed purpose of providing an equitable basis for distributing state aid to education; an act reorganizing the state's penal system and placing its administrative objectives primarily upon rehabilitation; two acts strengthening the tax laws applicable to motor vehicles, the first denying registration of the vehicle until the sales or use tax has been paid, and the second equally denying registration if the owner has not paid prior year local taxes on a vehicle; an act permitting local governments to acquire slum, blighted and substandard areas, by eminent domain if necessary, for the purpose of redevelopment through clearance, rehabilitation and improvement thereof; an act granting local governments full authority to acquire property as an integral part of carrying out flood control projects; a series of bond proposals totalling \$5,350,000 requiring electorate approval, including \$1,750,000 for additional facilities at the state school for the severely retarded, \$1,500,000 for development of the state's largest airport, and an additional \$1,650,000 for the relocation of the state college of education—these proposals were in addition to the referenda for \$15,000,000 enacted in 1955 for approval at the 1956 general elections: following the now common annual pattern, a series of acts authorized the local governments to issue bonds for school construction purposes totalling \$12,759,000, providing local public approval thereof was secured.

In the 1956 general election, Pres. Dwight D. Eisenhower was given a plurality of more than 60,000 of Rhode Island's votes compared with the plurality of about 7,600 that he received in 1952. The state's two congressmen, John E. Fogarty and Jaime J. Forand, both Democrats, were re-elected.

The contest for the governorship was the closest election in Rhode Island history. The count of all ballots, including those of absentee civilians, shut-ins and the armed services, gave Republican Christopher Del Sesto a plurality of 427 votes. On a case initiated by the incumbent governor, Dennis J. Roberts (Dem.), the state's supreme court in a 3-to-1 decision handed down on inauguration day, Jan. 1, 1957, ruled, in effect, that the provision of law allowing absentee civilians and shut-ins to vote before election day was unconstitutional. Upon all such ballots being invalidated, a total of 4,954 out of 5,602, Roberts was re-elected to office with an unofficial plurality of 66 votes out of a total vote of 384,562.

The other executive officers, whose election was unaffected by absentee voting, were Armand H. Coté, lieutenant governor; John A. Notte, Jr., secretary of state; William E. Powers, attorney general; and Raymond H. Hawksley, general treasurer. All were Democrats.

Education.—During 1955-56, there were enrolled in the public elementary and pre-elementary schools 77,788 pupils and 2,816 teachers; in junior high schools 20,686 pupils and 991 teachers; in senior high schools and vocational schools 18,333 pupils and 996 teachers. Pupils attending private schools numbered: elementary and pre-elementary 31,358; junior high 6,696; senior high 6,594. The total number of teachers in private day schools was 1,468. Current expenditures for day schools in 1955-56 were \$33,533,870 and for evening schools \$85,427. The commissioner of education in 1956 was Michael F. Walsh, working under the state board of education of seven members whose chairman was C. B. Collins.

Social Insurance and Assistance, Public Welfare and Related Programs.—There were 29,721 persons receiving some type of direct monetary public assistance as of Aug. 31, 1956, a reduction of 890 from the preceding year. During the year Sept. 1, 1955, through Aug. 31, 1956, the total amounts paid out in the different categories of aid were as follows: old-age assistance \$5,335,023; aid to dependent children \$4,322,540; aid to the disabled \$1,207,224; aid to the blind \$127,767; general public assistance \$3,470,365; soldiers' welfare \$253,053; in addition, the first four categories were receiving medical services at an estimated annual cost of \$1,300,000. In June 1956 there were 58,094 persons receiving old-age and survivors insurance benefits at a total monthly rate of \$3,240,953. During the year ending June 30, 1956, 536,424 benefit payments amounting to \$12,810,316 were made from the unemployment compensation fund, receipts into which totalled \$17,265,661. In the same period 262,998 payments totalling \$6,489,999 were drawn from the temporary disability insurance fund, i.e., for those unemployed because of illness; receipts amounted to \$6,982,658. On July 31, 1956, there were 659 inmates in corrective institutions and 5,639 patients in state-operated institutions including 4,284 in institutions for the mentally ill or defective.

Communications.—In Oct. 1956, the total miles of highway in the state were 4,074, of which 1,414 mi. were in the state highway system with 883 mi. thereof having been built by the state. In Oct. 1956 railroads were operating 185.2 mi. of track in the state.

Water-borne commerce of the state for 1954 totalled 7,933,091 tons, of which 1,027,320 tons were foreign commerce (imports 978,008 tons, exports 49,312 tons); 6,207,835 tons were coastwise (receipts 5,788,375 tons, shipments 419,460 tons).

As of Oct. 1956 there were four publicly owned (state) airports and three privately owned and active airports. There were also two naval air stations owned by the United States.

Banking and Finance.—There were 22 banking institutions in 1956. Resources of 16 banks under state supervision totalled \$820,131,173; those of 6 banks under federal supervision totalled \$508,509,033. Savings deposits (exclusive of club accounts) in savings banks and trust companies (the 16 state banks) amounted to \$479,807,320 on June 30, 1956. In addition, 6 loan and investment companies had resources of \$7,167,632; 7 building and loan associations \$158,729,819; 69 credit unions \$42,382,243. This state closed its fiscal year on June 30, 1956, with receipts totalling \$75,127,894.04 (including federal grants of \$12,603,248.71); expenditures and encumbrances \$74,212,365.01; operational surplus \$915,529.03; free surplus \$5,243,327.62. The state gross debt was \$54,757,659.57; net debt after deducting sinking fund assets \$43,732,659.57.

Agriculture.—The estimated total acreage of principal crops harvested in 1956 was 34,880. Cash income from crops in 1955 was \$5,988,000; from livestock and livestock products \$15,744,000; from governmental payments \$54,000; total gross farm income \$21,786,000. The estimated value of livestock on Jan. 1, 1956, was \$5,875,000, excluding commercial broilers.

On Jan. 1, 1956, the livestock population of the state included 1,000 horses and mules; 19,000 milk cows; 6,000 other cattle; 12,000 hogs and pigs; 2,000 sheep and lambs; 472,000 chickens; and 4,000 turkeys. Livestock products in 1955 included 133,000,000 lb. of milk valued at \$9,246,000; 3,310,000 lb. of chickens, \$734,000; 4,812,000 lb. of commercial broilers, \$1,241,000; 920,000 lb. of turkeys, \$341,000; 6,667,000 dozen eggs, \$3,486,000.

Industry and Manufacturing.—As reported by the state department of labour, the estimated number employed in Rhode Island in Aug. 1956 was 298,600, an increase of 2,500 over Aug. 1955. Employment was distributed as follows: manufacturing 131,800; contract construction 19,000; government (federal, state and local) 35,600; retail and wholesale trade 54,900; transportation and public utilities 15,800; finance, insurance, real estate 13,000; service (medical, legal, etc.) 27,700; miscellaneous 800. (Farmers,

self-employed, domestics and armed service personnel are excluded.)

Manufacturing employment in Aug. 1956 totalled 131,800 which was 700 (rev.) more than a year earlier; average hourly earnings were \$1.68 and the average weekly earnings for all manufacturing employees was \$65.53. Wage earners were distributed among the manufacturing industries as follows: textiles 38,100; metals and machinery 33,500; jewelry-silverware 24,800; rubber products 5,500; apparel 3,700; instruments-optical 4,000; food-beverage 5,000; miscellaneous 17,200. (Jo. C. M.)

Mineral Production.—Rhode Island's mineral production ranked 47th among the states in the value of output in 1954, and included principally building materials. Table III shows the tonnage and value of those mineral commodities produced in Rhode Island in 1953 and 1954 whose value exceeded \$100,000.

ENCYCLOPEDIA BRITANNICA FILMS.—*Northeastern States*, 2nd ed. (1955); *Rhode Island* (1955).

Rhodesia and Nyasaland, Federation of.

This is a federation of three British central African countries: Northern Rhodesia, protectorate (north of the Zambezi river); Nyasaland, protectorate (east of Northern Rhodesia); and Southern Rhodesia, self-governing colony (south of the Zambezi). The federation is bounded north by Tanganyika and the Belgian Congo, south by Bechuanaland and the Union of South Africa, west by Angola and east by Mozambique. Area: 489,854 sq.mi.; pop. (1956 est.): 7,257,000 (including 18,950 Asians and 10,750 coloured). Language: English, tribal dialects and (in southern Rhodesia) Afrikaans. Religion: Moslem, Christian, pagan. Federal capital, Salisbury, Southern Rhodesia. Governor general, Lord Llewellyn; federal prime ministers in 1956: Viscount Malvern and (from Nov. 2) Sir Roy Welensky.

Northern Rhodesia.—Area: 290,323 sq.mi., including 3,000 sq.mi. of lakes. European pop.: (1951 census) 40,842; (1956 preliminary census) 64,000. African pop. (1956 est.): 2,110,000. Total pop. (1955 est.): 2,130,000. Chief towns (pop., 1954 est.: European pop., 1956 preliminary census in parentheses): Lusaka (cap.) 64,500 (7,800); Kitwe 78,802 (9,700); Ndola 60,500 (6,800); Luanshya 58,500 (6,000); Broken Hill 45,000 (4,200); Mufulira 42,421 (5,600); Chingola 36,100 (4,600). Governor in 1956, Sir Arthur Benson.

Nyasaland.—Area: 49,177 sq.mi., including 11,600 sq.mi. of lakes. European pop.: (1951 census) 1,948; (1956 preliminary census) 7,500. African pop. (1956 est.): 2,580,000. Total pop. (1955 est.): 2,540,000. Chief towns: Zomba (cap.), pop. (1953 est.) 5,000; Blantyre, 17,000. Governor in 1956, Sir Robert Armitage.

Southern Rhodesia.—Area: 150,354 sq.mi. European pop.: (1951 census) 135,596; (1956 preliminary census) 175,800. African pop. (1956 est.): 2,290,000. Total pop. (1955 est.): 2,399,000. Chief towns: Salisbury (cap.), pop. (1953 est.) 90,024, European pop. (1956 preliminary census) 34,740; Bulawayo, European pop. only (1956 preliminary census) 33,200. Governor in 1956, Vice-Adm. Sir Peveril William-Powlett; prime minister, Reginald Stephen Garfield Todd.

History.—The International Bank for Reconstruction and Development approved a loan for the Kariba hydroelectric scheme on the Zambezi river in April 1956, and £28,000,000 was provided, which, together with £38,000,000 from Rhodesian sources (copper mining companies, banks and the federal government) and £18,000,000 from Great Britain (Colonial Development corporation and Commonwealth Development Finance company), amounted to more than the £80,600,000 necessary for the first stage. Main contracts were awarded in July. Completion of

the diversion tunnel and other initial works was on time. Movement of Africans from the inundation area started. A barrage was constructed across the Shiré river, Nyasaland, at Liwonde, as part of the Shiré valley project for stabilization of Lake Nyasa and provision of power.

Lord Malvern retired as prime minister on Oct. 31 and was succeeded by Sir Roy Welensky. Welensky, formerly leader of the unofficial members of the Northern Rhodesia legislature, became a member of the first federal cabinet and deputy prime minister under Lord Malvern. Winston Field, a Marandellas farmer, was elected leader of the Dominion party, composed of most antigovernment elements. Welensky was elected leader of the Federal party. The campaign for the declaration of the federation's independence within the commonwealth gathered momentum during the year.

The national income rose from £236,000,000 in 1954 to £309,000,000 in 1955. Revenue spending estimated for 1956–57 was nearly £54,000,000 and loan expenditure was £27,700,000. There was a favourable trade balance of £40,000,000. A Federal Central bank was established in April.

The importance of the federation as a source of minerals, particularly base metals, was shown by the figures published for 1955. The total value of all minerals produced was approximately £141,000,000. Copper from Northern Rhodesia contributed £113,000,000; asbestos and gold from Southern Rhodesia £7,000,000 and £6,500,000 respectively.

Immigration was restricted to 20,000 persons during 1956 following an initial intake at the rate of 30,000 a year. A higher proportion of immigrants from Great Britain was sought by restricting those from elsewhere. Strikes occurred in the copper mines of Northern Rhodesia; a state of emergency was declared, and a commission of inquiry set up. A short state of emergency was also proclaimed in Southern Rhodesia when African railway workers struck in October. Conditions announced for the federal public service showed no discrimination. Plans were made for private enterprise to take over the Rhodesian Iron and Steel commission which had been operating under the Southern Rhodesian government since its inception. Central African Airways introduced Viscount aircraft on main routes, including the London service. Applications for the new university (scheduled to open in March 1957) showed a majority of Europeans for the 180 available residential places. (M. Nn.)

Education.—*Northern Rhodesia* (schools, 1953): European primary 38, pupils 9,336 (of which 7 with secondary department, pupils 1,430); coloured and Asiatic primary and secondary 8, pupils 492; African primary pupils 167,129 (of which 15,742 middle school) and secondary 430; African teachers in training 807; African vocational 41, pupils about 2,090. *Southern Rhodesia* (schools, 1952): European primary 147, pupils 22,328, teachers 561 (incl. 52 aided and recognized private, all levels); secondary 18, pupils 6,497, teachers 360; aided farm 17, pupils 119; coloured and Asian 21, pupils 3,769; African primary 2,154, pupils 231,551, teachers 6,598; postprimary 18, pupils 1,575, teachers 99; vocational courses: teacher-training colleges 22, students 961; institutes of higher (technical) education 2. *Nyasaland* (schools, 1954): government European primary 3, government coloured primary 1; African primary 4,688 (including 3 government), pupils 237,000; African secondary 4 (including 1 government and 1 multilateral with vocational departments), pupils 311; Asian primary pupils 790; African teachers in training 554 at 11 centres (incl. 1 government); African vocational pupils 730.

Finance and Banking.—Monetary unit: Rhodesian pound (£R1=£1 sterling). Currency circulation: (April 1955) £15,359,365, (April 1956) £16,336,695. Deposit money: (Dec. 1953) £45,900,000, (March 1956) £89,942,553. Budgets: *federal state* (1955–56 est.), revenue £39,065,000, expenditure £61,078,115; (1956–57 est.) revenue £50,000,000, expenditure £53,900,000.

Foreign Trade.—(1955) Imports £R138,576,000, exports £R177,919,000. Principal exports: metals and metal manufactures £R120,110,417, tobacco £R26,096,066, minerals, foodstuffs.

Transport and Communications.—Railways (1954): *Rhodesia* (Northern and Southern) 4,018 km.; *Nyasaland* 505 km. Roads (1954) 78,963 km. Motor vehicles in use (1954): passenger 70,700, commercial 36,800. Air transport (1953): 130,968,000 passenger-km.; freight, 1,596,000 ton-km. Telephones (Jan. 1955) 53,245. Radio receiving sets (*N. Rhodesia* and *Nyasaland*, 1954) 28,000, (*S. Rhodesia*, 1951) 24,000.

Agriculture.—Main crops (metric tons): *Southern Rhodesia*, millet and sorghum (1953) 205,000; peanuts (1953) 75,000; maize (1954, farms and estates only) 246,000. *Nyasaland*, peanuts (1953) 7,000; tea (1954 exports) 7,600; tung oil (1954) 928; maize (1954) 52,000; cottonseed

(1955) 5,000; cotton, lint (1955) 3,000. *Northern and Southern Rhodesia*, flue-cured tobacco (1954-55) 128,200,000 lb.; (1955-56 est.) 157,500,000 lb. Livestock: *Southern Rhodesia* (Sept. 1955) cattle 3,077,000, sheep 2,271,000, pigs 111,000. *Northern Rhodesia* (Sept. 1954) cattle 985,000, sheep 79,000, pigs 43,000. *Nyasaland* (Sept. 1954) cattle 292,000, sheep 53,000, pigs 83,000.

Industry.—Production (metric tons, 1955): *Southern Rhodesia*, coal 3,312,000; chrome ore 459,000; tungsten 231; asbestos 107,400; iron ore (metal content, 1954) 35,400. *Northern Rhodesia*, copper, smelter 348,000; zinc, smelter 28,320; lead, refined 16,320; copper ore (metal content, 1954) 384,700. *Federation* (1955) gold 525,000 fine ounces. *Northern and Southern Rhodesia* (1954) electricity 2,231,000,000 kw.hr.; *Nyasaland* (1953) 3,700,000 kw.hr.

Rice. The U.S. 1956 rice crop of 46,225,000 bags (of 100 lb. each) was 14% less than the 53,532,000 bags of 1955 and the smallest crop since 1950, but exceeded by 8% the 42,756,000 bag average for 1945-54. In close accord with reduced official acreage allotments, an estimated 1,618,500 ac. were seeded, the smallest acreage seeded to rice since 1946 and 12% below 1955. The yield, indicated at 2,885 lb. per acre, was below the record 3,292 lb. of 1955 but far above the 1945-54 average of 2,254 lb. per acre. The leading states were Louisiana with 11,575,000 bags; Arkansas, 11,339,000 bags; Texas, 11,048,000 bags; and California, 10,868,000 bags. Rice, as one of the basic crops, participated in the 1956 acreage reserve of the soil bank, with payments at a base unit rate of \$2.25 per hundredweight for normal yields on allotted acreage diverted to the reserve.

The national average support price for the 1956-crop rice was \$4.57 per hundredweight, adjusted to class or variety, grade and location. The price of rough rice to producers in Oct. 1956 of \$4.71 per hundredweight was slightly higher than the \$4.60 of a year earlier. Exports of rice in 1955-56 were 11,346,000 bags, substantially above the 9,848,000 bags of 1954-55, but far below the 17,159,000 bags of 1952-53.

World rice production in 1956-57 was estimated at a record 431,776,000,000 lb. (rough), 2% above the preceding year, also a record.

Rice Production of the Principal Producing Countries

(In millions of pounds: rough)

Country	Preliminary 1956-57	1955-56	Average 1945-46 to 1949-50
China	148,000	145,500	126,000
India	90,000	88,000	76,000
Pakistan	30,200	26,500	26,889
Japan	29,000	32,505	24,735
Indonesia	24,750	19,300
Thailand	17,300	16,200	11,976
Burma	15,000	14,400	10,500
Brazil	7,600	6,106
Philippine Republic	7,519	7,135	4,872
Korea	7,000	7,000	5,916
Formosa	5,266	2,997
United States	4,522	5,353	3,548

The important Japanese crop of 1956 was somewhat damaged by an August typhoon.

World exports of rice in 1955 were 11,320,000,000 lb. (milled basis), 8% more than the preceding year, and a new post-World War II record. The far east exported 8,500,000,000 lb., as compared with an average of 4,600,000,000 lb. in the 1946-50 period. Burma exported about 4,250,000,000 lb. in 1955-56, mostly to India. Western Europe imported 1,286,000,000 lb., 39% more than the year before, but only 44% of the prewar average.

(J. K. R.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Story of Rice* (1952).

Richards, Dickinson Woodruff (1895-), U.S. physician and co-winner of the 1956 Nobel prize in medicine and physiology with André F. Cournand and Werner Forssmann (qq.v.). The three were honoured for their joint research that led to new methods of diagnosing and treating heart disease.

Born at Orange, N.J., on Oct. 30, 1895, Richards graduated from Yale university in 1917, took a master's degree at Columbia university in 1922 and received his medical degree from Columbia the next year. After study in England he began his research in heart and lung physiology at Columbia university's college of physicians and surgeons in 1928 and was named Lambert professor of medicine there in 1947. In 1945 he also became director of Columbia's medical division at Bellevue hospital in New York city. During World War II Richards specialized in research on the effects of shock.

Working with Cournand, whom he first met in 1932 at Columbia, Richards adapted the pioneer experiments of Forssmann to measure blood pressure and make-up inside the human heart, later extending these measurements to the lungs and the general circulatory system. The citation accompanying the Nobel award announced Oct. 18, 1956, at Stockholm, Swed., noted that the trio's research meant that "... diagnosis [of heart disease] can now be made earlier and with greater certainty than before."

Riesel, Victor (1915-), U.S. newspaperman who was blinded in an acid-throwing attack thought to have been inspired by New York city labour racketeers in 1956. Riesel had just finished a radio broadcast attacking leaders of a local union and was leaving a restaurant near Times square early in the morning of April 5 when his assailant splashed sulphuric acid in his face. A month later he was permanently blind. Despite the handicap he returned to his desk at the *New York Mirror* and Hall Syndicate to continue his syndicated labour column in more than 275 newspapers. The federal bureau of investigation announced on Aug. 17 that it had identified Riesel's assailant—a minor Brooklyn gangster named Abraham Telvi who had himself been murdered on New York's lower east side July 28. A few days later FBI agents arrested Johnny Dioguardia (Dio), labour racketeer, and four others, and charged Dio with conspiracy to make arrangements for Telvi's attack on Riesel.

Riesel, born in Manhattan on March 26, 1915, attended the City College of New York at night, ultimately receiving a mas-

BLINDED COLUMNIST Victor Riesel returning to his typewriter less than two weeks after being attacked by acid-throwing hoodlum

ter's degree. (His father, a union business agent and antiracketeering crusader, died in March 1947 as the result of permanent injuries sustained in gangster beatings.) The younger Riesel began reporting in 1930 and in 1943 started his labour column. Previously he had been a reporter for a number of labour publications, including Canadian, British and Australian newspapers.

Rio De Oro: see SPANISH COLONIAL EMPIRE.

Rivers and Harbours. The active navigation program of the U.S. army corps of engineers in 1956 included 2,300 congressionally authorized projects, with an estimated cost of \$4,300,000,000. Congressional appropriations through fiscal year 1956 for this program totalled \$1,900,000,000, leaving \$2,400,000,000 as the amount required to complete the projects. If multiple-purpose projects serving navigation purposes were added, the total estimated cost of the program would become \$6,500,000,000, of which \$2,800,000,000 had been appropriated through fiscal year 1956. In addition, about \$1,500,000,000 had been appropriated by the congress through fiscal year 1956 for the maintenance and operation of these improvements.

For the fiscal year 1957 congress appropriated \$635,000,000 for work on the civil works program of the corps of engineers. The navigation segment of the program received approximately \$133,000,000 for construction work, \$68,000,000 for operation and maintenance, and lesser amounts for planning investigations and surveys and miscellaneous items. Multiple-purpose projects, many of which serve navigation purposes, received \$158,000,000 for construction, \$12,000,000 for operation and maintenance, and smaller amounts for other items. Some of the principal amounts for river improvements in fiscal 1957 were as shown in Table I.

Table I.—River Improvements Appropriations, 1956-57

Project	Amount
Warrior lock and dam on the Warrior river, Alabama	\$4,580,000
Emergency bank stabilization on the Arkansas river and tributaries, Arkansas	3,000,000
Buford dam, Chattahoochee river, Georgia	4,553,000
Markland lock and dam, Ohio river, Indiana, Kentucky and Ohio	5,000,000
Missouri river, from the mouth to Sioux City, Ia.	12,800,000
Greenup locks and dam, Ohio river, Kentucky and Ohio	9,900,000
Delaware river, Philadelphia to Trenton, interim 35-ft. project	6,000,000
New Cumberland locks and dam, Ohio river, Ohio and West Virginia	8,000,000
The Dalles dam, Columbia river, Oregon and Washington	42,457,000
Ice Harbor lock and dam, Snake river, Washington	8,000,000

Some of the principal amounts for harbour improvements by the corps of engineers in fiscal year 1957 were as shown in Table II.

Table II.—Harbour Improvements Appropriations, 1956-57

Project	Amount
Mobile harbour, Alabama	\$2,543,000
Redondo Beach harbour, California	1,750,000
Richmond harbour, California	1,850,000
Tampa harbour, Florida	4,000,000
Hawaihae harbour, Hawaii	1,700,000
Boston harbour, anchorage, Massachusetts	1,000,000
Wilmington harbour, North Carolina	1,543,000
Ashtabula harbour, Ohio	1,800,000
Cleveland harbour, Ohio	1,700,000
Norfolk harbour, Craney Island disposal area, Virginia	1,784,000

A survey was initiated in the fiscal year 1957 to determine the advisability of further improvements to the harbours of the Great Lakes in the interest of present and prospective deep-draught commerce, with particular regard to the scheduled completion of the St. Lawrence Seaway and deepening of the connecting channels between the Great Lakes. (E. C. I.)

Canada.—With growing development in Canada's northland, the traffic on the Mackenzie river had increased 282% since 1945. Freight in 1955 amounted to 162,000 tons. Aimed at improving navigation on the 1,600-mi. Athabasca-Great Slave-Mackenzie waterway from northern Alberta to the Arctic ocean, a program was initiated by the federal department of transport

to provide additional and more adequate navigational aids. A new district marine agency, the 11th in Canada, was established at Fort Smith, Northwest Territories, to oversee that department's increasing duties in the Northwest Territories and western arctic.

Traffic handled at the eight harbours of Canada administered by the national harbours board continued to increase. Most of the smaller harbours also showed increased traffic. Total cargo tonnage in the national harbours in 1955 showed an increase of 4% over 1954—42,414,822 tons as compared with 40,890,853 tons.

Some important additions to port facilities were completed and put into operation during 1956, and contracts were let for others. At Churchill, Man., reinforced-concrete storage addition to the grain elevator doubled the grain storage capacity to 5,000,000 bu. At the Pugsley wharf at Saint John, N.B., a new transit shed was built, increasing total shed capacity by 13% and enabling 117,000 tons in transit to be accommodated per month. To provide for adequate facilities at the port of Montreal, Que., to meet changed conditions when the St. Lawrence Seaway was completed, new wharves were built, the level of one of the piers was raised and new sheds and grain galleries were provided. To meet increased traffic at the port of Halifax, N.S., a contract was awarded for a new 1,050-ft. deep-sea pier to provide berths for four ships. In Vancouver, B.C., the depth of the entrance to the channel was being increased from 35 ft. to 40 ft., and additional grain elevator equipment was being installed.

(W. H. V. A.)

ENCYCLOPEDIA BRITANNICA FILMS.—*The Great Lakes—Highway of Commerce* (1951); *The Great Lakes—How They Were Formed* (1951); *The Great Lakes—Their Link With Ocean Shipping* (1951); *Inland Waterways* (1956); *Water Power* (1937).

Roads and Highways. **United States.**—During 1956 highway construction in the United States exceeded all previous levels. Estimates indicated that about 35,000 mi. of principal highways would be completed at a cost of \$3,791,000,000, plus construction of 88,000 mi. of local roads and streets costing \$1,722,000,000. With maintenance, administration and interest added to these capital outlays, highway expenditures were expected to reach \$8,220,000,000. All streets and highways, improved and unimproved, totalled 3,450,000 mi.

The federal-aid highway program accelerated considerably, and projects completed during the fiscal year ended June 30, 1956, totalled 22,918 mi. The Federal-Aid Highway act of 1956 launched the greatest road-building program in U.S. history. The huge 13-year program for a national system of interstate and defense highways made provision for a 41,000-mi. network of modern roads and expressways connecting all 48 states and linking 209 cities of more than 50,000 population.

The 1956 act authorized nearly \$25,000,000,000 of federal funds for the interstate system. All but about 7,000 mi. of this system, in lightly travelled areas, would consist of four- to eight-lane divided highways with urban connections, interchanges and bypasses.

The 1956 act also increased federal aid for other highways apart from the interstate system. Authorizations for the fiscal year 1957 were increased \$125,000,000; and \$850,000,000 and \$875,000,000 were authorized for fiscal years 1958 and 1959, respectively—45% for the federal-aid primary system, 30% for the secondary system and 25% for urban highways.

Africa.—Highway building increased in 1956 throughout the continent, chiefly development roads providing market outlets for hitherto inaccessible areas, with minor attention to cross-continent routes such as the Morocco-Egypt, Cape-to-Cairo and Pan-Arabian International highway. French Equatorial Africa

embarked on a five-year, \$15,000,000 highway program; Liberia completed its first five-year highway program at a cost of \$6,000,000, improving 125 mi. and constructing 50 mi., had \$7,000,000 under contract for 144 mi. of new roads and proposed to spend \$8,000,000 on 150 mi. by 1960. Nigeria added or improved 700 mi. of roads each year after 1948 to bring the total to 32,000 mi. with 1,900 mi. paved. The Belgian Congo completed 84 mi. of new roads in 1956 costing \$11,000,000 and planned a system of 8,694 mi. by 1960. The Union of South Africa completed 1,350 mi. at a cost of \$51,000,000 on a total system of 198,000 mi., half all-weather roads.

Rhodesia and Nyasaland completed 542 mi. of the Great North road (Cape-to-Cairo) at a cost of \$3,000,000. Tanganyika added 125 mi. in 1956 from Dar es Salaam to the Great North road, and 200 mi. on the Great North road costing \$3,800,000; and Egypt completed the four-lane limited-access Cairo-Alexandria road costing \$120,773 per mile as part of a national program to build 8,694 mi. in a \$250,000,000 ten-year program. Allotment of \$8,400,000 was made for the Pan-Arabian highway.

South America.—Colombia built 124 mi. of new road in 1955-56, increasing the network to 15,525 mi. of which 1,180 mi. were paved and 11,178 mi. were all-weather. Ecuador planned to spend \$35,000,000 for highways in three years to complete the Pan-American highway by adding 559 mi. of new road; the 100-mi. Cuenca-to-the-Pacific road, under construction for 20 years, was finished. Bolivia improved 200 mi. in 1956, making 230 mi. paved, 600 mi. macadam and 1,500 mi. all-weather in a total of 13,800 mi. Chile began a five-year program to build 3,937 mi. and improve 3,291 mi. Argentina built 499 mi. of new roads at a cost of \$50,000,000 in 1956, had 6,849 paved and 25,547 all-weather in a total of 93,393 mi., and proposed to spend \$83,300,000 for construction by 1960. Uruguay spent \$8,000,000 to increase its highway system to 5,279 mi. Brazil had 1,242 mi. paved in a 117,990-mi. road network, and Venezuela added 266 mi. of roads in 1956, making a 6,416-mi. system with 484 mi. surfaced.

Asia.—Afghanistan in 1956 built new highways to serve the Kandahar irrigation system and improved the Oxus river-Soviet border road. India concentrated effort on the 800-mi. Delhi-Bombay and 270-mi. Calcutta-Siliguri roads, while 200 mi. of the India-Tibet route neared completion; state construction added 2,339 mi. to swell India's total highways to 268,000 mi. In 1956 a total of 7,200 mi. was completed at a cost of \$138,000,000. In Ceylon a coastal road to serve the \$3,000,000 Kallany bridge was improved at a cost of \$1,100,000. Nepal completed 79 mi. of macadam road from the interior to the Indian border.

Australia.—A ten-year, \$1,100,000,000 highway-building program to improve Australia's 524,478-mi. system, of which 70,383 mi. were main roads, was under way. New Zealand spent \$77,000,000 on 260 mi. of new roads; it had 43,650 mi. of all-weather roads in a 50,650-mi. system.

Canada.—On the Trans-Canada highway 2,583 mi. of the 4,580 mi. between St. John's, Nfld., and Victoria, B.C., were paved by 1956 at a cost of more than \$100,000,000.

England.—Great Britain, half through a four-year improvement program, expended \$132,000,000 during 1956 on 100 projects, bypassing population centres and easing traffic snarls at main intersections.

Europe.—The highway modernization progress was unprecedented, with a 29,078-mi. system of international roads rehabilitated by 1956, including the following: Austria 1,102 mi.; Belgium 668; Denmark 428; Finland 1,453; France 4,095; Federal Republic of Germany 3,706; Greece 1,360; Italy 3,735; Luxembourg 56; Netherlands 714; Norway 1,329; Portugal 534; Spain 1,193; Sweden 2,282; Switzerland 714; Turkey 2,692; United Kingdom 959 and Yugoslavia 1,056. Sweden spent \$80,000,000

in 1956 as part of a \$1,350,000,000 long-range program for construction of 1,056 mi. of four-lane road and 8,073 mi. of new highways to increase the existing 34,776-mi. network. Finland from 1953 through 1956 improved or constructed 3,300 mi. of all types of roads and planned to add 120 mi. of surfaced roads to an existing 1,180 mi. West Germany proposed to spend \$1,400,000,000 in ten years to reconstruct 6,676 mi. of war-damaged roads, build 596 mi. of new roads and improve 863 mi. through cities; of the 544 bridges on main roads destroyed, 506 had been rebuilt. Belgium inaugurated a \$6,000,000,000, 16-year highway improvement program, half to be spent on superhighways. France completed 81 mi. of expressways and inaugurated a five-year, \$1,000,000,000 program to add 592 mi. of superhighways and 99 mi. of bypasses to its 49,680-mi. national network and 347,760 mi. of departmental and local roads. Switzerland planned 186 mi. of new roads by 1960 to increase its 10,350-mi. network, half of which was paved. Spain completed its first and began a second five-year plan to spend \$19,000,000 annually improving 621 mi. each year of its 74,994-mi. highway system. Italy neared completion in 1956 of a 458-mi. highway shortening the Milan to Naples route by 70 mi. at a cost of \$300,000,000; a 2,900-ft. tunnel plus 13 overpasses in 2½ mi., costing \$4,800,000, shortened by 10 mi. the Turin-Po river route. Construction of 7,452 mi. during 1955-56 in southern Italy increased the total highway network to 105,994 mi. Greece expended \$16,100,000 during 1954-56 on 697 mi. of paved roads and to improve 298 mi., including 36 major and 82 small bridges. Yugoslavia committed \$6,300,000 for construction of 135 mi. on six main roads by 1958. Austria constructed 106 mi. of new highway during 1956.

Near East.—Turkey received \$46,000,000 from the United States for highway assistance in the period 1949-56 and had a 15,247-mi. integrated system with 3,807 mi. paved or surfaced and less than 1,366 mi. unimproved. Lebanon completed a 4-mi. section of four-lane paved highway between Beirut and Ma'ameltein, inaugurating its first ten-year construction program of 348 mi. of national roads. Syria completed the 274-mi. Jidda-Medina road in 1956 and continued building on the 1,000 mi. Trans-Arabian route from the Mediterranean to the Persian gulf. Jordan had rebuilt and surfaced about 62 mi. since 1954 on a proposed 332-mi. national system. The government of Iraq began a five-year highway improvement program expected to cost \$150,000,000 and had 1,250 mi. under construction with top priority assigned to the 60 mi. between Samarra and Baiji on the Baghdad-Mosul highway. Iran proposed to spend \$84,000,000 during 1955-61 to improve 621 mi. per year and add 3,105 mi. of new roads to its existing 7,452-mi. primary and 8,694-mi. secondary systems.

Far East.—Thailand spent \$22,000,000 on 39 mi. of new roads between Bangkok and the Burma border and on 101 mi. in the northeast provinces. Malaya completed a 29-mi. east-west cross-country highway begun in 1950 and costing \$31,000,000. Since 1947 China had doubled its road length, with 84,000 mi. travelable and 23 new roads planned. Japan approved a \$2,000,000,000 20-year program for a highway network connecting all major cities with a toll road through the mountains from Nagoya to Tokyo. Korea had rebuilt 42% of the 1,576 war-destroyed bridges, and planned replacement of the remainder under a six-year bridgebuilding program concurrent with construction of 414 mi. of new surfaced roads. The Philippines completed 134 mi. of development roads on Mindanao costing \$6,900,000 during 1953-56 and proposed 327 additional miles. There were 9,911 mi. of first class, 5,486 mi. second class and 3,123 mi. third class in the 18,520-mi. highway system.

Mexico.—The republic spent \$1,000,000 on approximately 1,242 mi. of new roads in 1956. Mexico had 9,259 mi. on the fed-

eral system divided between five longitudinal routes from the United States border south and three transverse Gulf-to-the-Pacific routes, with a fourth planned. There were 60,000 mi. of dry-weather roads in addition to 18,500 mi. all-weather roads, including 11,750 mi. paved.

Central America.—After the first year of a three-year accelerated building program, progress on the 1,574-mi. Mexico-to-Panamá Inter-American highway appeared thus: in Guatemala, 84 mi. had been paved, with a 25-mi. impassable and a 158-mi. substandard section under construction and 50 mi. all-weather road completed for a total of 317 mi.; El Salvador, 195 mi. paved; Honduras, 24 mi. standard all-weather, 21 mi. substandard under construction and 49 mi. substandard all-weather, total 94 mi.; Nicaragua, 132 mi. paved, 19 mi. standard all-weather, 40 mi. substandard under construction, 47 mi. substandard all-weather, total 238 mi.; Costa Rica, 60 mi. paved, 146 mi. substandard under construction, 73 mi. standard all-weather, 56 mi. impassable under construction, 78 mi. impassable, total 413 mi.; Panamá, between the Costa Rica border and the Panama canal, 98 mi. paved, 11 mi. standard all-weather, 62 mi. substandard under construction, 131 mi. substandard all-weather, 14 mi. impassable, total 316 mi. Between the Panama canal and Colombia on the Pan-American highway were 40 mi. of passable road and approximately 200 mi. unsurveyed.

Roman Catholic Church. In 1956 the College of Cardinals, which in its full complement numbers 70 members, was reduced to 60 by the death of two of its members: Bernard Cardinal Griffin, archbishop of Westminster, primate of England (on Aug. 20), and Jules Cardinal Saliège, archbishop of Toulouse in France (on Nov. 5).

Aloysius Cardinal Stepinac, spiritual leader of Yugoslavia's 7,000,000 Catholics, was still deprived of his liberty ten years after his condemnation by Marshal Tito's communist regime.

Joseph Cardinal Mindszenty, primate of Hungary, who had been freed from his prison Oct. 31, 1956, by regular troops of the national Hungarian army, asked and received asylum in the United States legation in Budapest on Nov. 4, 1956. This action was motivated by the Russian repression of the Hungarian people's attempt at liberation from communist tyranny.

Stefan Cardinal Wyszyński, primate of Poland, recovered his liberty of action on Oct. 28, 1956, as a result of a change in the governmental regime. The cardinal's release was followed by important concessions. The Polish government had found it possible to give way on issues that it had fought bitterly during the previous ten years. Some Catholic weeklies were able to resume publication and the minister of education announced that an agreement on religious education had been reached with representatives of the hierarchy.

Ministering to an estimated Roman Catholic world population of 470,100,000 were 360,000 priests.

The Americas had 191,424,000 Catholics, Canada accounting for 6,260,327 and the United States (including Alaska and the Hawaiian Islands) for 33,574,017. This last figure represented an increase of 998,315 over the previous year. The new total represented a ten-year increase of 9,171,893, or 37.5%, over the 24,402,124 Catholics reported in 1946.

There were 26 archdioceses in the United States, with a Catholic population of 15,834,410. The total number of dioceses, including the vicariate of Alaska, was 106, with Catholic populations of 17,739,607.

The 26 archdioceses reported a growth of 554,147 and the 106 dioceses, 444,168. There were seven archdioceses with Catholic populations in excess of 1,000,000. They were Chicago, Ill., 1,899,357; Boston, Mass., 1,490,229; New York N.Y., 1,458,240; Philadelphia, Pa., 1,325,740; Newark, N.J., 1,179,469; Detroit, Mich., 1,125,000; and Los Angeles, Calif., 1,075,000.

Brooklyn, N.Y., with 1,497,598 continued as the largest diocese, while Pittsburgh, Pa., with 757,776, was the second largest. Buffalo, N.Y., was third with 725,201 and Cleveland, O., fourth with 659,275. While 10 sees reported no changes in their Catholic populations and 6 reflected slight decreases, the advances indicated in the remaining 116 showed substantial gains.

The Roman Catholic hierarchy of the United States had 214 members. There were 4 cardinals, 37 archbishops and 173 bishops, the largest number in the history of the Catholic Church in the United States.

An increase of 1,379 in the number of the clergy brought the total of ordained priests to 48,349, the largest ever recorded. There were 29,734 diocesan priests, an increase of 861, and 18,615 religious community priests, an increase of 518.

Professed religious personnel included 8,868 brothers and 159,545 sisters, representing respective increases of 116 brothers and 1,476 sisters.

The annual statement of the Catholic bishops of the United States, convened in Washington, D.C., on Nov. 17, 1956, echoed the thrice repeated pleas for peace made by Pope Pius XII in the course of ten days. The statement, entitled "Peace, Unity—the Hope of Mankind," was issued by the cardinals, archbishops and bishops at the conclusion of their annual meeting. They warned that the world was poised on the "brink of disaster." War in modern times, they said, would be a nightmare of horrors and would solve no problems. Accordingly, they said, every possible means must be tried to "avoid the final arbitrament of nuclear warfare." Against this grave warning, the bishops declared: "It has been the hope of humankind that a means adequate to the necessity might be found in the concert of United Nations. This is neither the time nor the place to review its history or to pass judgment on its achievements . . . The fact remains that it offers the only promise we have for sustained peace in our time; peace with any approximation of justice." The bishops called for a "crusade of prayer" so that "international sanity will triumph over war."

On Nov. 10, 1956, at Trinity college, Washington, D.C., Commissioner Thomas B. Murray, veteran member of the United States Atomic Energy commission, received the 1956 Peace award of the Catholic Association for International Peace.

A resolution, unanimously adopted at the closing session of the National Catholic Educational association in St. Louis, Mo., on April 6, 1956, called upon its members to provide leadership in bringing about integration of white and Negro pupils.

The year also was marked by a strengthening of the church's inner life. For the first time in its 2,000-year history, cardinals, bishops and priests from all the world met in Italy at Assisi, Sept. 18–21, 1956, to study the practical problems of liturgy. About 1,300 delegates, including 100 from the United States, attended the meeting. A recommendation from United States Catholic bishops for more extensive use of English in the revised Holy Week services was made in a report that had been prepared by Archbishop Edwin V. O'Hara, bishop of Kansas City-St. Joseph, Mo. Archbishop O'Hara, head of the United States delegation, died en route to the congress.

Priests and scholars of the old and new worlds met on Sept. 28,

1956, in the Benedictine abbey of St. Procopius, near Chicago, to seek an acceptable path by which millions of separated eastern Christians might re-enter the Roman Catholic Church. They assembled, with the endorsement of the Vatican, in the first unionistic congress to be held in the United States.

On Oct. 28, 1956, the Catholic Interracial council presented its annual James J. Hoey awards for interracial justice to Frank M. Folsom, president of the Radio Corporation of America, and Paul G. King, controller of South Carolina State college, Orangeburg. On Feb. 25, 1956, Francis Cardinal Spellman received the George Washington Carver Memorial institute's gold award for his "outstanding contribution to the betterment of race relations and human welfare." On March 11, 1956, the University of Notre Dame, Ind., awarded the school's Laetare medal to Gen. Alfred M. Gruenther. The medal is bestowed annually on an outstanding Catholic layman. General Gruenther, former supreme allied commander in Europe, was now head of the American Red Cross. He was the fourth military recipient so honoured since the Laetare medal was first presented in 1883.

Rowing. Cornell retained the championship of the Intercollegiate Rowing association on Onondaga lake at Syracuse, N.Y., on June 16, 1956. The Ithacans won the 3-mi. race by $2\frac{1}{2}$ lengths in 16 min. 22.4 sec. Navy was second in the varsity contest. Washington won the junior varsity contest while Syracuse finished first in the freshman event of 2 mi. Cornell, with 16 points, gained the Ten Eyck trophy for team scoring for the third year in succession. Washington tallied 15 points.

A high light of the 1956 U.S. season was the return of Navy's unbeaten Olympic champions of 1952 to competition. The former Middies, who had compiled a record of 30 straight victories, appointed toward representing the United States in the 1956 Olympic games in Australia. After several preliminary regattas, the Admirals, as the squad was named, entered the Olympic trials on Onondaga lake, but had to be content with third place behind Yale and Cornell. In the final on July 1, Yale thrilled a crowd of 20,000 by defeating Cornell by $\frac{3}{4}$ length in a tense duel over the 2,000-m. course. Six other national crowns and places on the U.S. Olympic team were decided in the four-day regatta. Jack Kelly, Jr., of the Vesper Boat club of Philadelphia, Pa., took the national singles for the fourth straight time. In the pairs without coxswain Charley Logg, Jr., and Tom Price of the Rutgers Rowing club, victors in the 1952 Olympics, were beaten by the U.S. Navy pair of Duvall Hecht and Jim Fifer. Others to win titles and Olympic berths were Bernard Costello, Jr., and James Gardiner. Detroit Boat club, doubles; Dan Ayrault, Conn Findlay and coxswain Kurt Seiffert, Stanford Crew association, pairs with coxswain; John Welchli, Arthur McKinlay, John McKinlay, James McIntosh, Detroit Boat club, fours without coxswain; Douglas Turner, James Wynne, Jim McMullen, Ronald Cardwell, coxswain Ed Masterson, West Side Rowing club reserves, fours with coxswain.

Eastern Sprint Championships.—Cornell beat favoured Yale in the 2,000 m. race on May 12 as 15,000 watched from the banks of the Potomac at Washington, D.C. The victors' time was 6 min. 10 sec., fastest of the day. Yale, Penn, Princeton, Harvard and Navy followed, in that order. Cornell won the junior varsity event and Yale's cubs took the freshman contest. Cornell, with 18 points, won the Rowe cup as high scorer.

Blackwell Cup.—Yale led home Penn by four lengths at Philadelphia on April 28, with Columbia third. The Yale junior varsity and Penn's freshmen finished first in their respective divisions.

Goes Trophy.—Cornell won from Navy and Syracuse on Lake Cayuga at

Ithaca, N.Y., April 28. Cornell also won the junior varsity race and Navy took the freshman test, each at 2 mi.

Childs Cup.—Rowing into a stiff wind on the rough Harlem river in New York on April 20, Princeton beat Penn and Columbia. The Tigers also captured the freshman test and varsity, junior varsity and cub lightweight races. In the junior varsity event it was Penn, Princeton and Columbia.

Adams Cup.—Harvard triumphed in one of the year's feature races on the Severn river at Annapolis, Md., May 5, defeating Navy, Penn and Navy's Admirals over the choppy $1\frac{3}{4}$ mi. course. Harvard was timed at 9 min. 49 sec. Navy crews were victors in the junior varsity, freshman and three lightweight events.

Carnegie Cup.—Yale defeated Cornell and Princeton on the Housatonic river at Derby, Conn., May 5. Cornell's junior varsity eight won, as did the Princeton freshmen.

Geiger Cup.—Cornell's varsity lightweights led the Massachusetts Institute of Technology and Columbia on the Harlem river, May 5. It was the first regatta for the prize posted as a memorial to Ivan Geiger, former director of M.I.T. athletics.

Goldthwaite Cup.—Princeton's varsity 150-lb. crew raced over Carnegie lake in 6 min. 33.8 sec. on May 5 to defeat Harvard, Yale and Dartmouth and establish a Carnegie lake record for the Henley distance. Harvard's junior varsity and Princeton's cubs were winners.

Eastern 150-lb. Championships (Wright Cup).—Princeton's varsity broke its own Carnegie record for the Henley distance by winning in 6 min. 37 sec. on May 12. Cornell won the junior varsity race and Princeton took the freshman title.

Dad Vail Trophy.—La Salle college of Philadelphia, Pa., won the varsity race in this fourteenth annual regatta on the Schuylkill river, May 12. Rollins (Winter Park, Fla.) was the junior varsity victor.

Compton Cup.—Princeton's varsity recorded the best time ever made in this $1\frac{3}{4}$ mi. race on Carnegie lake, May 19, when it finished first in 8 min. 42.8 sec. The Tiger 150-lb. crew took the Wood-Hammond cup and Harvard won the freshman heavyweight test.

Yale-Harvard.—Yale swept the river at New London, Conn., June 16, leading their traditional rivals over a 4-mi. course by five lengths. The Elis were timed in 19 min. 26 sec. Yale's freshman and junior varsity crews also won impressively, giving the Blue its second straight sweep in the classic.

Washington-California.—The Huskies swept their annual races with California on May 19, winning varsity, junior varsity and freshman events.

Oxford-Cambridge.—A heavily-favoured Cambridge eight won by $1\frac{1}{4}$ lengths in the 102nd meeting of these old English rivals on March 24. Rowing on the Thames river over a 4-mi., 180-yd. course from Putney to Mortlake, the Light Blues were clocked in 18 min. 36 sec., the fastest time since Cambridge set the regatta record of 17 min. 50 sec. in 1948.

American R.A. Regatta.—Navy's Admirals defeated Penn by two lengths with Wisconsin third at Philadelphia, Pa., May 19. Winning time in the 2,000-m. sprint for the Stewards cup was 6 min. 40 sec. Jack Kelly, Jr., scored in the senior singles by 20 lengths. Stanford's Jim Fifer and Duvall Hecht took the doubles in pairs without coxswain.

United States Championships.—The Detroit (Mich.) B.C. won the Barnes trophy, symbolic of national rowing supremacy, by scoring 114 $\frac{3}{4}$ points on the Schuylkill July 4. The West Side R.C. of Buffalo, N.Y., was second with 90. Detroit led home West Side in both senior fours with and without coxswain. In the senior quad race the New York A.C. defeated the Vesper B.C., stroked by Jack Kelly, Jr., by 6 ft.

American Schoolboy Championships.—George Washington high school of Alexandria, Va., won the feature mile at Poughkeepsie, N.Y., May 26. Belleville (N.J.) high school's entry was second by $\frac{1}{2}$ length.

English Royal Henley.—The United States won the Thames Challenge cup for the third straight year when the Princeton 150-lb. crew beat the Royal Air Force eight by a length in 7 min. 10 sec. in the finals at Henley, Eng., on July 7. A French eight took the Grand Challenge cup when it beat Swedish Three Towns in 7 min. 6 sec. Teodor Kocherka of Poland won the Diamond Sculls trophy for the second year in a row. The Royal Engineers' four triumphed over the Brockville R.C. of Ontario, Can.

Royal Canadian Henley.—Taking four events on closing day, July 28, the West Side R.C. of Buffalo, N.Y., amassed 264 $\frac{1}{2}$ points for team honours at Port Dalhousie, Ont. The Hamilton Leanders were next with 193 points. The West Side senior eight scored a 1-ft. decision over the Detroit B.C. for the Hanlan memorial trophy. Pat Costello of Detroit, Mich., won the championship singles. John Pearce of Hamilton, Ont., was high school champion for the second straight year. Roberto Retolaza, Mexico City, took the junior singles title. The North American high school title was won by St. Joseph's, Buffalo, N.Y. St. Catharines no. 1 heavy crew rowed to a course record of 1 min. 18.4 sec. in beating five rivals in a $\frac{1}{4}$ -mi. dash for eights.

Ruanda-Urundi: see BELGIAN COLONIAL EMPIRE; TRUST TERRITORIES.

Natural Rubber.—World production of natural rubber for 1955 was estimated at 1,912,500 long tons. Production for the first six months of 1956 was estimated at 852,500 long tons, down 22,500 long tons compared with the same period in 1955. World production for 1956 was estimated by the International Rubber Study group meeting in Paris, Fr., in June 1956 at about 1,835,000 long tons.

The New York spot price for no. 1 ribbed smoked sheets fell steadily from 45 cents U.S. per pound in Jan. 1956 to 27 cents in May; it rose to 38 cents in August and stood at about 32 cents

ATOMIC BOUNCE demonstrated in silicone rubber. Ball on the left sticks to ordinary silicon gum when dropped from platform above; the ball on the right, however, bounces after landing on silicon gum which has been vulcanized by a two-second exposure to electron bombardment. The experiment was conducted in 1956 by the laboratories of the Westinghouse Electric corporation, Pittsburgh, Pa.

by the middle of October. The crisis over Egypt's action in nationalization of the Suez canal dominated all other influences on natural rubber prices in the July to September period, and rubber prices rose and fell as this situation seemed to worsen or abate. Prices for ASTM centrifuged latex concentrate paralleled ribbed sheet prices by a premium of about 8 cents U.S. per pound dry rubber basis in tank car quantities. Exports of natural rubber latex from producing countries for the first six-month period of 1956 were estimated at 73,000 long tons (dry rubber basis),

down about 4,500 long tons from the same 1955 period.

Replanting of old rubber-producing areas with modern high yielding clonal stock continued, especially in Malaya, both on estate and on native holdings, although the native group seemed somewhat more reluctant to cut out present stands of old trees during the recent period of high rubber prices.

Imports of natural rubber by commercial grades into the United States for 1955, according to a joint statement by the Rubber Trade Association of New York and the Rubber Manufacturers association, were as follows: all grades of ribbed smoked sheets, 63%; all grades of light crepe, 3.4%; estate brown crepe, 4.1%; all grades of thin brown crepe, 7.4%; amber blankets, 12.7%; smoked blankets, 3.9% and flat bark, 5.5%.

Synthetic Rubber.—World production of all types of synthetic rubber for 1955 excluding the U.S.S.R. and satellite countries (which reported no figures) was 1,085,266 long tons, of which the U.S. produced 970,468 long tons. This was roughly a 50% increase over 1954 output.

World production of all types of synthetic rubber during the first six months of 1956 amounted to 614,312 long tons, up from the 506,090 long tons output during the same 1955 period. In June the International Rubber Study group estimated 1956 total world production would amount to 1,250,000 long tons. Principal world stocks of synthetic rubber at the end of June 1956 were estimated at 200,000 long tons. Production of synthetic rubber latices in the U.S. for 1955 totalled on a dry rubber basis: S-type 68,561 long tons; neoprene 10,432 long tons; N-type 10,798 long tons. The price structure remained much the same as in 1955: S-type 24 cents (freight allowed); N-type 58 cents (freight allowed); butyl 23 cents; neoprene 41 cents—all U.S. currency.

The government-owned synthetic rubber plant at Institute, W. Va., with a rated annual capacity of 122,000 long tons, was sold to Goodrich-Gulf Chemicals, Inc. for \$11,000,000. Plans for the expansion of synthetic rubber producing facilities were announced by all owners in the United States.

Standard Oil Co. (N.J.) licensed Société du Caoutchouc Butyl, a corporation formed by ten French companies, for the production of butyl rubber. The proposed plant was to be built at Port Jerome, near Le Havre, and when completed in 1958 would have a 20,000 long ton capacity. International Synthetic Rubber Co., Ltd., was formed in England in a joint

venture by Dunlop, Firestone, Goodyear and Michelin to build an S-type synthetic rubber plant of 50,000 long tons annual capacity near Southampton.

In the United States, military tires built entirely of Ameripol SN (Goodrich-Gulf Chemicals, Inc.) in one case and of Coral rubber (Firestone Tire and Rubber Co.) in the other case successfully passed the defense department's rigid tests. Invention of these two synthetic *cis*-1, 4-polyisoprene rubbers, so much like Hevea rubber in their uncured and in their vulcanized properties, were announced in 1954 and 1955, respectively. Phillips Chemical Co. announced the preparation of both a virtually all *cis*-1, 4- and a *trans*-1, 4-polybutadiene. The *cis*-form is a rubber said to have unusually high resilience when vulcanized and to exhibit remarkable low temperature resistance, its brittle point being -160° F.

A freeze-agglomeration process for producing high solids, low viscosity latex, starting with ordinary small particle size S-type latex, was announced by the B. F. Goodrich Co. The method resulted in lower manufacturing cost of S-type high solids latex and a higher production capacity for each polymerization reactor than current methods offered.

Reclaimed Rubber.—World production of reclaimed rubber in 1955 was 421,954 long tons. For the first six months of 1956 world production was estimated at 205,240 long tons as compared with 211,518 long tons for the same period in 1955. U.S. consumption through June 1956 was 145,182 long tons, compared with 160,711 long tons for the same period in 1955.

Table IV.—World Consumption of Reclaimed Rubber*

	(In long tons)							
Last half 1955	U.S.A.	U.K.	France	Germany	Australia	Canada	Brazil	Total
July . . .	22,425	2,175	1,659	2,697	780	1,046	520	31,302

June	20,049	2,355

*All figures include both natural and synthetic reclaimed rubbers.

Rubber Manufacturing.—World consumption of new rubber in 1955 was at the all-time high record of 2,930,000 long tons divided 64% natural rubber, 36% synthetic rubber. U.S. consumption of new rubber in 1955 was 1,529,699 long tons divided 41½% natural rubber, 58½% synthetic rubber. World consumption for the first six months of 1956 was estimated at 1,520,000 long tons divided 62½% natural rubber, 37½% synthetic rubber. U.S. consumption for the first six months of 1956 was 741,511 long tons divided 39½% natural rubber, 60½% synthetic rubber. The continued shift toward synthetic rubber resulted primarily from the higher price of the natural commodity.

Total shipments of pneumatic tire casings in the U.S. in 1955 (excluding aeroplane and industrial pneumatics) were 112,221,004 units (passenger 93,729,709; truck and bus 14,769,326; farm tractor and implement 3,722,014). Shipments for the first seven months of 1956 totalled 62,966,493 units (passenger 52,298,612; truck and bus 8,588,858; farm tractor and implement 2,079,023) compared with shipments during the same 1955 period of 69,354,653 units (passenger 58,304,903; truck and bus 8,603,440; farm tractor and implement 2,446,310). Tire inventories in the hands of manufacturers at the end of July 1956 totalled 18,094,224 units compared with 15,337,552 units at the end of July 1955. (E. B. NN.)

Ruiz Cortines, Adolfo (1891—), president of Mexico, was born on Dec. 30 in the state of Veracruz. He first rose to national political prominence when he became governor of Veracruz in 1944. When Miguel Alemán was elected president of Mexico in 1946, Ruiz Cortines became one of his most influential political aides and was later named minister of the interior. On Oct. 13, 1951, he was nominated by the Partido Revolucionario Institucional (P.R.I.) to succeed Alemán as president, and the following July he was elected by a huge majority. He took office on Dec. 1, 1952, for a six-year term. A determined advocate of economy and honesty in government, Ruiz Cortines refused to accept the usual president's special expense account and in 1953 exposed considerable graft among high officials of the Alemán administration, seizing their property and cancelling their government contracts.

In Feb. 1955 he conferred with U.S. Vice-Pres. Richard M. Nixon during the latter's good-will visit to Mexico. In late March 1956 he met with Pres. Dwight D. Eisenhower and Canadian Prime Minister Louis S. St. Laurent at White Sulphur Springs, W.Va., for a "good neighbour" conference.

Rulers: see PRESIDENTS, SOVEREIGNS AND RULERS.

Rumania. This people's republic of southeastern Europe is bounded north and northeast by the U.S.S.R., east by the Black sea, south by Bulgaria and west by Yugoslavia and Hungary. Area: 91,654 sq.mi. Pop.: (1948 census) 15,872,624; (1956 est.) 17,489,794. Language (1948 census): Rumanian 85.7%; Hungarian 9.4%; German 2.2%; Yiddish 0.9%; other 1.8%. Religion (1947 est.): Orthodox 81%; Greek Catholic 9%; Roman Catholic 7%; other 3%. Chief towns (pop., 1948 census, 1956 est. in parentheses): Bucharest (Bucuresti, cap.) 1,041,807 (1,236,900); Cluj 117,915 (154,800); Timisoara 111,987 (142,300); Iasi (Jassy) 94,075 (109,000); Brasov 82,984 (108,000); Ploesti 95,632 (105,000); Braila 95,514 (104,000); Galati 80,411 (103,000); Oradea 82,282 (93,000). First secretary of the Rumanian Workers' (Communist) party in 1956, Gheorghe Gheorghiu-Dej; chairman of the presidium of the grand national assembly, Petru Groza; chairman of the council of ministers, Chivu Stoica.

History.—The repercussions of the 20th congress of the Communist party of the Soviet Union in Feb. 1956 were felt in Rumania as in other countries of eastern Europe. The repudiation of Stalinism and the recognition extended to national forms of Socialism opened the way for the reconciliation of Rumania and Yugoslavia after eight years of political segregation dictated by Yugoslavia's expulsion from the Cominform. Following Marshal Tito's visit to the U.S.S.R. in June, official Rumanian-Yugoslav talks were held at Bucharest, in which the Yugoslav president himself participated. These resulted in trade and travel agreements, trade union and cultural exchanges and practical measures for industrial collaboration, of which the most notable was the projected joint construction of a hydroelectric power plant near the Iron Gates on the Danube. In October a Rumanian party and government delegation headed by Gheorghiu-Dej and Chivu Stoica carried on further discussions with Tito in Belgrade on economic and technical co-operation, and on furthering closer relations between the Rumanian Workers' (Communist) party and the Yugoslav League of Communists.

In its relations with the non-Communist world, the Rumanian government acted strictly within the limitations of the principle of peaceful co-existence commended by the 20th congress of the Communist party of the Soviet Union, which permitted commercial, and to some extent cultural, contacts with the west. After the dissolution of the Cominform in April 1956, these contacts increased. In May Rumania joined the International Labour

organization and took part in the work of the International Labour office at Geneva, Switz. In July the government initiated negotiations with the United States to improve relations and solve outstanding disputes. In August Rumania obtained membership in UNESCO and resumed diplomatic relations with Greece. Foreign trade with the west also increased appreciably during the year.

The year 1956 was the first of the second five-year plan, and the government promulgated measures to stimulate labour productivity in agriculture and industry. Between January and September the number of collective farms and agricultural associations increased from 6,325 to about 10,000. In July the government revised the regulations governing collective farms and permitted certain classes of rich peasants, hitherto debarred from entering these farms, to join them. The government also announced in August that the mechanization of agriculture had progressed so far that there was now a tractor to every 320 ha. of cultivated land, and that Rumania had in operation more than 30,000 tractors, 1,500 self-propelled combine harvesters and 10,000 threshing machines. At the same time, it was recognized that 75% of agricultural, vegetable and animal production was still derived from individual farms, and that it was incumbent upon the government to encourage the independent peasantry to produce more food by offering material incentives in the form of reasonable prices and enough consumer goods.

There was no deviation from the party line of conceding priority to heavy industry, and the budget for 1956 made provision for industrial development schemes representing 52% of the total volume of state capital projects, which was 36.5% higher than 1955.

On Oct. 22, in an agreement signed in Bucharest, the Soviet government transferred to Rumania its 50% ownership of the joint stock company Sovromcuartit, which monopolized the mining of Rumania's uranium deposits. Two joint stock companies continued to function at the end of 1956, namely, Sovromasigurare (insurance) and Sovromfilm. (G. D. ON.)

Education.—Schools (1955): primary about 17,000, pupils 2,400,000; secondary 500, pupils 150,000; vocational 400, pupils 170,000; institutions of higher education 50 (including 4 universities), students 75,000. National minorities schools: primary and secondary, 3,200 in which tuition is given in 15 different languages; there is also a Hungarian university.

Finance.—Monetary unit: leu (pl. lei) with official exchange rate, high and fictitious, of 6 lei to the U.S. dollar. Budget (1956 est.): revenue 45,430,600,000 lei; expenditure 44,430,600,000 lei, including 26,144,100,000 lei invested in the national economy.

Foreign Trade.—Trade turnover with all countries (1954 est.) U.S. \$670,000,000, including \$560,000,000 with the countries of the Communist group.

Transport and Communications.—Highways (1955) 61,794 mi. Licensed motor vehicles (Dec. 1955): cars 6,000; commercial 17,000. Railways (1949) 7,363 mi. Telephones (1954 est.) 140,000. Radio receiving sets (1949) 226,000.

Agriculture.—No reliable data published since 1949. Main crops (metric tons, latest estimates): maize (1948) 5,279,000; wheat (1948) 2,600,000; barley (1948) 360,000; oats (1946) 280,000; rye (1947) 66,000; potatoes (1949) 1,090,000; sugar beets (1954) 1,275,000. Wine production (1953) 4,100,000 hl. Livestock (1953 est.): cattle 4,581,000; pigs 3,634,000; sheep and goats 11,482,000; horses 1,073,000.

Industry.—Production (metric tons if not otherwise stated, 1955): coal 400,000; lignite 6,200,000; crude petroleum 10,575,000; methane gas 3,900,000,000 cu.m.; electricity 4,300,000,000 kw.hr.; pig iron 575,000; steel 765,000; cement 2,000,000; sulphuric acid 92,000; tractors 5,300 units; cotton fabrics 245,000,000 cu.m.; sugar 135,000.

Rural Electrification Administration. The Rural Electrification Administration marked its 21st year in 1956 with expanded programs in financing rural electrification and telephone facilities.

At the end of 1935, only one farm in 10 had central station electric power; by the end of June 1955, power lines carried electricity to 93.4% of the farms. According to the U.S. bureau of the census, farms with telephones increased from 38.2% in 1950

to 48.8% in 1954.

In rural electrification, REA loaned \$189,804,800 in the year ended June 30, 1956. This brought the total of such loans since the agency was established in 1935 to \$3,238,250,759. The number of consumers on REA-financed power lines was about 4,300,000, including more than half of the 4,500,000 electrified farms in the United States.

One new generation and transmission co-operative and two new electric distribution co-operatives received loans during the fiscal year. This brought the number of active REA electrification borrowers to 996, including 934 co-operatives, 41 public power districts, 17 other public bodies and 4 electric companies. Also, REA approved its first loan to finance the conventional generating facilities of a nuclear reactor, to the Rural Cooperative Power Association of Elk River, Minn.

One co-operative paid off its government loan during 1956 with earnings from service, bringing to four the number of co-operatives which had repaid in full their REA loans.

Electricity used on REA-financed lines increased 17% during the 1956 fiscal year, and REA borrowers distributed almost three times the amount of power they did in 1950. Energy sales amounted to about \$1,200,000 per day. Farmers on REA-financed lines used an average of 2,957 kw.hr. in 1955, as compared with 1,752 kw.hr. in 1950.

In the rural telephone program, REA loans in the fiscal year 1956 totalled \$80,980,000. This brought the total of such loans, since the program was established by congress in 1949, to \$312,391,542 to 270 independent telephone companies and 196 co-operatives. When the facilities contemplated in these loans were completed, REA telephone borrowers would be providing modern telephone service to more than 695,000 farm families and other rural subscribers in 43 states and Alaska. As of June 30, 1956, 227 REA-financed telephone organizations had placed in service 846 new dial exchanges.

In both the electrification and telephone programs, REA loans bore 2% interest and had to be repaid over a maximum period of 35 years. As of June 30, 1956, electric borrowers had paid the government approximately \$246,000,000 in interest and had repaid \$493,000,000 of principal on their REA loans.

For the 1957 fiscal year congress authorized \$214,000,000 in new electrification loan funds, including reserve funds of \$25,000,000. Also available for lending was \$24,678,000 carried over from 1956. New telephone loan funds authorized by congress for fiscal 1957 amounted to \$100,000,000, including \$20,000,000 in reserve funds. Funds carried over from fiscal 1956, amounting to \$30,345,000, also were available for telephone loans. (See also CO-OPERATIVES.)

Russian Literature. Soviet writers were severely criticized at the 20th congress of the Communist party of the U.S.S.R., which was held in Feb. 1956 in Moscow. Literature was again not close enough to life and did not satisfy the growing spiritual needs of the Russian people, declared N. S. Khrushchev. Aleksey Surkov, the first secretary of the Writers' union, defended his colleagues, while admitting the justice of many criticisms. The most noteworthy event of the congress was the violent reproach of Surkov by the novelist Mikhail Sholokhov for having evaluated the standard of literature by the quantity of books which had appeared. Sholokhov complained that writers were living too far away from the people,

in a monastic atmosphere. He attacked the former general secretary of the Writers' union Aleksandr Fadeyev, deploring that Fadeyev had lost the 15 best years of his intellectual life without having succeeded in properly directing the Writers' union.

Literary circles were as much troubled as political circles by the campaign against Stalinism. Disorder reigned among the novelists, dramatists and poets who saw works which had won the "Stalin prize" condemned as harmful and as not conforming to "socialist realism." The *Literaturnaya Gazeta* (May 8) announced that since the 20th congress many writers knew no more than what the Communist party demanded from them. It revealed that at certain literary reunions they even dethroned the great poet Vladimir Mayakovsky and claimed the rehabilitation of the novelist Mikhail Zoshchenko, condemned by Andrei Zhdanov.

In reality the Communist party, faithful to Marxism-Leninism, did not renounce its control of intellectual life but became a little more liberal. Many writers who had disappeared during the great scourge of the 1930s were discretely rehabilitated: Isaak Babel, Vladimir Kirshon, Perets Markich, Lev Kvitko and Bruno Jasienski—nearly all of whom had been condemned as Trotskyists. Homage was rendered to the greatest of the Russian *émigré* writers, the Nobel prize winner Ivan Bunin, and a recent edition of his works, comprising novels written after his departure from Russia in 1918, was published in Moscow. Similarly, the editing was commissioned of works by Ivan Kataev, former chief of the literary group "Pereval," who had been missing since 1937, having been condemned as an "enemy of the people."

In 1956 many Soviet writers entered into contact with their English, French and U.S. colleagues and State Editions had undertaken the translation of works of foreign writers, such as Ernest Hemingway, Sinclair Lewis and François Mauriac, who were neither Communists nor "progressives." The review *Inostrannaya Literatura* ("Foreign Literature") helped in this campaign of reconciliation with the western writers.

Another sign of the new liberalism was the impressive celebration of the 75th anniversary of the death of Fyodor Dostoevski. Considered for a long time as a retrograde and antirevolutionary mainly because of his novel *The Possessed*, Dostoevski was covered with praise at the commemorative sitting on Feb. 9. His biographer V. V. Ermilov praised the expression in his novels of the "suffering of men and women humiliated and offended by an exploiting society." Many plays and films based on his novels were shown during the year.

Since 1953 the "Stalin prize" had no longer been awarded to literary men. On Sept. 6 the re-establishment was announced of the "Lenin prizes," which had been awarded between 1925 and 1935. From a total of 50 prizes 8 would be reserved for writers and artists and awarded to the winners each year on the anniversary of the birth of Lenin. (A. PR.)

Rye. The indicated rye crop in the United States for 1956 was 21,961,000 bu., about one-fourth smaller than the 29,678,000 bu. 1955 crop but 2% above average. Only 1,724,000 ac. were harvested, 82.4% of the 2,092,000 ac. harvested in 1955, but approximating the average for 1945-54. The average yield was 12.7 bu. per acre, as compared with 14.2 bu. in 1955 and an average of 12.5 bu. per acre for the previous decade. The leading producing state was North Dakota with 4,560,000 bu. (9,360,000 bu. in 1955), followed by South Dakota with 1,986,000 bu. (4,088,000 bu. in 1955), Nebraska with 1,674,000 bu., Indiana with 1,452,000 bu. and Minnesota with 1,410,000 bu. Carry-over stocks were 16,300,000 bu. (about the same as in 1955), of which the Commodity Credit corporation owned 10,200,000 bu., giving a domestic supply for 1956-57 of 38,300,000 bu., as compared

with 46,100,000 bu. in 1955-56.

Exports of 7,000,000 bu. in 1955-56 were the largest since 1928, with prospects of a still larger export in 1956-57. Imports from Canada in 1955-56 and 1956-57 were limited under a quota to 3,400,000 bu. per year as compared with 13,400,000 bu. imported in 1954-55.

The price in October was \$1.21 per bushel to producers, as compared with 93 cents a year earlier. The support price to producers was \$1.27 per bushel as compared with \$1.18 for the 1955 crop, of which crop farmers placed a record 12,800,000 bu. under the support program.

Rye Production of the Principle Producing Countries

Country	(In thousands of bushels)		Average 1945-49	Average 1935-39
	Preliminary 1956	1955		
U.S.S.R.	147,040	137,800	895,000	885,000
Western Germany	27,050	25,590	98,000	119,000
Turkey	19,680	19,320	13,679	14,301
Spain	19,650	18,300	17,117	18,363
Netherlands	18,000	17,300	15,520	20,394
France	16,450	16,380	20,618	29,993
Austria	390,000	422,000	12,260	20,611
Other Europe*	21,961	22,678	337,000	481,000
United States	21,961	22,678	22,336	44,917
Canada	8,600	14,754	13,182	9,191
Argentina	27,560	25,750	14,944	9,771

*Comprises Albania, Bulgaria, Czechoslovakia, eastern Germany, Hungary, Poland and Rumania.

World rye production estimated at 1,365,000,000 bu. in 1956 was the smallest since 1945 as compared with 1,485,000,000 bu. in 1955, an early postwar average (1945-49) of 1,530,000,000 bu. and a prewar average of 1,732,000,000 bu. (J. K. R.)

Saar. A German state (*Land*) united with France by monetary union. Area: 991 sq.mi. Pop.: (1951 census) 955,413; (1955 est.) 996,000. Language: German. Religion: Roman Catholic 73.4%; Protestant 25.3%. Capital: Saarbrücken, pop. (1951 census) 111,450, (1953 est.) 116,395. Prime minister in 1956, Hubert Ney.

History.—On Jan. 2, 1956, after the election to the Saar *landtag* on Dec. 18, 1955, Hubert Ney, leader of the local Christian Democratic union (C.D.U.), was elected premier while Heinrich Schneider, the leader of the nationalist Democratic party, was elected president of the *landtag*. A cabinet was then formed from the parties of the Heimatbund with three other members of the C.D.U., two followers of Schneider, two Social Democrats and the nonparty expert Adolf Blind as minister of finance. In April a dispute over the election was decided in favour of the Democratic party, which was in consequence represented by 13 members in the *landtag* instead of 12, while J. Hoffmann's Christian People's party (C.V.P.) fell from 13 to 12 seats. On March 18 the Socialist party, which had favoured autonomy, was dissolved and most of its members joined the pro-German Social Democrats of the Heimatbund. On May 13,

SAAR AND NEIGHBOURING NATIONS. In June 1956 France and Germany agreed to honour a Saar plebiscite overwhelmingly in favour of union with Germany

when local elections were held, the Social Democrats therefore increased their representation considerably. On this occasion both C.D.U. and C.V.P., although attempts to bring about their fusion had failed by the middle of April, gained a few votes each, while the strength of the Democratic party slightly diminished. In July the Saar C.D.U. was absorbed into the western German C.D.U.; the C.V.P., however, joined the western German Centre (Zentrum), a Roman Catholic party, smaller and rather more to the left. Schneider, who wished to preserve the alliance of the Saar parties in the Heimatbund, where his influence was paramount, disliked these fusions, and on Sept. 16 his party decided that it would join no party in the German Federal Republic for the time.

Through most of the year Franco-German negotiations were pursued with regard to the future status of the Saar. At Luxembourg on June 5 agreement was reached on essentials: the Saar was to be politically reunited with Germany on Jan. 1, 1957, and economically united three years later; in return France would receive 90,000,000 tons of coal within the next 25 years, and the Germans agreed in principle to the canalization of the Moselle, promising to contribute nearly one-third of the cost. The details were not worked out until a series of agreements, which were signed on Oct. 27, had been made. According to these, the French were to mine 66,000,000 tons of coal from the Warndt mines through the shafts in Lorraine; the remaining 24,000,000 tons from elsewhere in the Saar or Germany would be sold to France by Germany at cost price. The ratio of Franco-Saar commercial exchanges during 1955 was to be preserved duty-free until further notice; arrangements were also made for badly needed capital equipment to be imported from Germany to the Saar, immediately, without payment of duties. The Germans accepted the existing rate of exchange for the currency changeover on Jan. 1, 1960. It had already been settled that from Jan. 1, 1957, ten Saarlanders would attend the *bundestag* and three the *bundesrat* as observers; at the western German election in 1957 the Saarlanders would participate as full German citizens. In June the German social insurance system was adopted in the Saar, and on Aug. 1 German law became valid there. (E. Wl.)

St. Helena. St. Helena is a British colony in the south Atlantic, about 1,200 mi. from the southwest coast of Africa, with dependencies of Ascension (34 sq.mi.; pop. [1954 est.] 173) and the Tristan da Cunha island group (total area 38 sq.mi.; only Edinburgh settlement on Tristan da Cunha [16 sq.mi.] is inhabited; pop. [Dec. 1954 est.] 294). Colony area 47 sq.mi.; pop. (1955 est.) 5,000 (mainly of mixed European and African descent). Language: English. Religion: Christian (90% Anglican). Capital: Jamestown (pop. about 1,600). Governor in 1956, Sir James Harford; administrator, Tristan, P. R. Forsyth Thompson.

History.—The possibilities of starting a fishing and canning industry were actively investigated during 1956. Monthly calls by Union Castle ships were reintroduced. A new hospital and a new parish home, built from funds provided under the United Kingdom Colonial Development and Welfare act, were opened, and a new constitution, involving the enlargement of the executive and advisory councils, was introduced. Toward the end of 1956, which was generally a year of depressed economic conditions, unemployment was somewhat relieved by a number of St. Helenians being employed by U.S. authorities on Ascension Island. (K. B. S.)

Education.—Schools (1953): primary 6, pupils 697, teachers 12; all-range 3, pupils 261, teachers 5; secondary (including 2 middle schools) 3, pupils 316, teachers 16. Pupil-teachers: primary 18, all-range 10, secondary 4.
Finance and Trade.—Currency: sterling. Budget (1955): revenue £162,597; expenditure £170,297. Foreign trade (1955): imports £206,551; exports £56,177. Livestock (1955): cattle 724; sheep 1,218; goats 1,861; pigs 266; poultry 9,200; donkeys 1,161; horses 29. Production (1953): hemp 975 long tons.

St. Kitts-Nevis: see LEEWARD ISLANDS.

St. Laurent, Louis Stephen (1882–), Canadian prime minister, was born on Feb. 1 at Compton, Que., and educated at St. Charles college, Sherbrooke, and Laval university, Quebec, Que. He entered federal politics on Dec. 10, 1941, and was in turn minister of justice and attorney general, later secretary of state for external affairs. On Nov. 15, 1948, he became the 17th prime minister of Canada. As Liberal member for Quebec East, he was elected to parliament in 1942, 1945, 1949 and 1953.

During 1956 St. Laurent led the government in the third session of the 22nd parliament which began on Jan. 10 and concluded on Aug. 14—the second longest session in the history of Canada, with 152 sitting days.

During this session the house approved measures to begin construction on an all-Canadian national gas pipeline to bring Alberta gas to eastern markets; to authorize the government to enter into tax rental agreements with the provinces when the existing agreements expire in 1957; and to permit the government to enter into agreements with the provincial governments for sharing costs of assistance to unemployed persons.

In March St. Laurent travelled to White Sulphur Springs, W.Va., for meetings with Pres. Dwight D. Eisenhower and Pres. Adolfo Ruiz Cortines of Mexico. In late June and early July he attended a meeting of commonwealth prime ministers in London, Eng.

During 1956 St. Laurent welcomed to Canada Pres. and Mme. Giovanni Gronchi of Italy; Pres. Achmed Sukarno of the republic of Indonesia; Sir Anthony Eden, prime minister of the United Kingdom; S. G. Holland, prime minister of New Zealand; R. G. Menzies, prime minister of Australia; and other distinguished visitors. (H. E. K.)

St. Lawrence Seaway: see CANALS AND INLAND WATERWAYS.

St. Louis. St. Louis, Mo., covers an area of 62.4 sq.mi. of land (pop., 1950 census, 856,796) on the west bank of the Mississippi river 15 mi. below its confluence with the Missouri. According to the 1950 census the St. Louis metropolitan area had a total population of 1,681,281 (1956 est., 1,815,500). Mayor of St. Louis in 1956 was Raymond R. Tucker, a Democrat, who was elected in 1952.

The present city charter was written in 1914. After months of debate, the board of aldermen authorized an election for a board of freeholders to write a new charter on May 8, 1956. The 13 freeholders, supported by a city committee, the *Globe-Democrat* and *Post-Dispatch*, the city's metropolitan newspapers, were elected by a majority of more than 21,000 over a slate supported by the Democratic, Republican and labour organizations.

Late in the year the freeholders were drafting a new charter which was to be submitted to the electorate in early 1957.

Congress passed an appropriation of \$2,600,000 for construction of the Jefferson National Expansion memorial on the river front. The city portion of this project had been authorized more than 21 years previously. A historic shrine was to be constructed which would beautify the river front and be the beginning of

rehabilitation of the oldest area in the city.

On March 10, 1956, a large municipal airport building, built at a cost of \$5,880,000, was opened at Lambert field in St. Louis.

Inadequate air-lines service joining St. Louis with the other major cities of the country was the subject of a major campaign by the *Globe-Democrat*. As a result, with the spirited support of civic leaders, Mayor Tucker and the St. Louis delegation in congress, hearings were held by the Civil Aeronautics board in Washington, D.C. A number of new and enlarged services had already been planned, recommended, authorized or established.

During 1956 there was only one major strike in St. Louis, that of the Oil, Chemical, and Atomic Workers' union against the Laclede Gas company. Gov. Phil M. Donnelly seized the company under terms of the state King-Thompson law forbidding strikes on public utilities. After 11 days the workers returned to their jobs with suits totalling more than \$230,000 in fines pending against them in the courts.

St. Lucia: see WINDWARD ISLANDS.

St. Pierre and Miquelon. This French overseas territory consists of eight small islands off the south coast of Newfoundland. Area: 93 sq.mi. Pop. (1951 census) 4,606; (1955 est.) 5,000. Language: French. Religion: Roman Catholic. Chief town: Saint-Pierre, pop. (1951 census) 3,997. Administrator in 1956, Pierre Sicaud.

History.—At the elections to the French national assembly held on Jan. 2, Alain Savary (Socialist) retained his seat.

(Hu. DE.)

Education.—(1955) Schools: state 8, pupils 530, teachers 32; private 9, pupils 771, teachers 35.

Foreign Trade.—(1955) Monetary unit: 1 fr. C. F. A. (Colonies Françaises d'Afrique)=2 metropolitan French francs. Imports 585,000,000 fr. C. F. A., including 310,000,000 fr. C. F. A. from Canada, 229,000,000 fr. C. F. A. from the U.S. Exports 126,000,000 fr. C. F. A., including 8,000,000 fr. C. F. A. to France. Principal export: fish.

United States.—About 35% of the world output of salt is produced and consumed in the U.S. Deposits of salt are widespread. Commercial production by the various types follows: rock salt is chiefly from the eastern half of the country, with some from Louisiana, Kansas and Texas. Evaporated salt is derived from "artificial" brine brought up from the deposits mainly in the middle states. Solar salt is produced in the west, predominantly from sea water in California and from the Great Salt lake in Utah. About 70% of the yearly total is used in making chemicals

and 30% is used for livestock, meat packing, table and other

household uses, dust and ice control, water treatment, canning and food processing and many smaller uses.

(F. E. H.; B. B. M.)

Salvador, El. A republic on the Pacific coast of Central America, the smallest but most densely populated country on the isthmus, El Salvador has an area of 8,260 sq.mi. (of which 8,165 sq.mi. are land) and a population (1950 census) of 1,855,917 (1955 official est., 2,231,000). The capital is San Salvador, pop. (1950 census) 161,951; (1953 est.) 180,713. The 1950 populations of other principal cities are (1953 estimates in parentheses): Ahuachapán 10,294 (11,092), Chalchuapa 9,855 (10,557), Cojutepeque 10,015 (10,942), Mejicanos 9,389 (10,402), San Miguel 26,702 (28,730), Santa Ana 51,702 (56,952), Nueva San Salvador or Santa Tecla 18,313 (20,246), San Vicente 10,950 (11,795), Sonsonate 17,949 (19,070), Usulután 9,481 (10,512), Villa Delgado 13,331 (14,695) and Zacatecoluca 9,190 (10,023). Language: Spanish. Religion: predominantly Roman Catholic. Presidents in 1956: Lieut. Col. Oscar Osorio; from Sept. 14, Lieut. Col. José María Lemus.

History.—On March 4, 1956, Lieut. Col. José María Lemus was elected president of El Salvador by default. Humberto Costa was chosen as vice-president. During the course of the campaign, it had become evident that the official backing of Colonel Lemus by incumbent Pres. Oscar Osorio and the Partido Revolucionario de Unificación Democrática would be decisive. One by one, the opposing candidates were disqualified or withdrew. Col. Alberto Funes, candidate of the Partido Institucional Demócrata, was eliminated when the central election board applied the law which excluded any candidate against whom there was a pending legal action. Maj. Alvaro Díaz was dropped because his Partido Demócrata Nacionalista was not properly registered. On a similar technicality, the election board ruled out Roberto Canessa, former foreign minister and leader of the Partido Acción Nacional. Besides Colonel Lemus, only Col. Rafael Carranza Amaya of the Partido Auténtico Constitucional and Enrique Magaña Menéndez of the Partido Acción Renovadora were left in the race. Coalitions were formed to pool the strength of the opposition parties, but on Feb. 29 all five opposition candidates withdrew, charging government oppression and fraud in favour of Lemus. They ordered their supporters not to vote.

In the absence of opposition, Lemus won the March 4 election by a vote of approximately 678,000 to 45,000. Congressional elections were held on May 14, followed by municipal elections on July 1. In both, the government-supported candidates were virtually unopposed.

The president-elect attended a meeting with President Osorio of El Salvador and Pres. Julio Lozano Díaz of Honduras in June to consider a new commercial treaty with Honduras. In July Lemus was the official representative of El Salvador at the conference of American presidents in Panamá. The presidential inauguration took place on Sept. 14. In October representatives of Guatemala, El Salvador and Costa Rica met in San Salvador to plan an industrial and commercial census of Central America to be started in 1957.

Since the law to promote the development of processing industries went into effect in 1952, private industry had invested

about \$21,000,000 in factories which produce cement, sugar, beer, textiles, building materials and instant coffee. The law grants certain tax and import-duty exemptions. Public works announced in 1956 included a \$5,000,000 port improvement project for Acajutla to be undertaken by a west German firm, and a new \$22,300,000 highway which would parallel the Pacific. In agriculture, coffee continued to dominate all other crops, but cotton had achieved important gains. (R. HN.)

Education.—In 1954 there were 2,032 primary schools with 210,125 pupils, 95 kindergartens with 11,144 pupils, 126 secondary schools with 12,376 pupils and 418 centres for combating illiteracy. Primary teachers totalled 6,286; secondary 1,164. The national university had 1,315 students and 207 professors in eight faculties.

According to the 1950 census, 57.7% of those ten years of age and over were illiterate.

Finance.—The monetary unit is the colón, valued at 40 cents U.S. currency in 1956. The 1956 budget as amended totalled 143,400,000 colones. Revenue in 1955 (preliminary figures) was 165,411,000 colones. On Dec. 31, 1955, the external debt was \$4,246,757 and £352,920; the internal debt was 10,000,000 colones. Currency in circulation (Sept. 30, 1956) totalled 91,400,000 colones; demand deposits, 112,510,000 colones. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$24,000,000, of which public utility investments accounted for \$17,000,000.

The cost-of-living index (San Salvador) stood at 112 in June 1956 (1953=100).

Trade and Communications.—Exports in 1955 totalled 267,327,000 colones; imports, 230,191,000 colones. Leading exports were coffee (86%), cotton (8%), vegetable oils, livestock and cottonseed meal. Leading customers were the U.S. (64%), western Germany (17%), the Netherlands (3%), the U.K. (2%) and Honduras (2%); leading suppliers, the U.S. (56%), western Germany (8%), the Netherlands (5%), Honduras (5%) and the U.K. (3%).

The two principal railroads have 385 mi. of main-line track, all narrow gauge. National highway mileage (1950) was 1,693, of which 934 mi. were all-weather. On Jan. 1, 1954, there were 10,551 automobiles and 4,702 trucks; telephones (Jan. 1, 1955) numbered 9,876, of which 74% were automatic.

Production.—Agricultural production estimates in the 1955-56 crop year included coffee 1,250,000 bags of 132 lb. each; cotton 132,000 bales of 500 lb. gross weight; sugar 45,000 short tons; rice (rough) 72,000,000 lb.; tobacco (1955) 1,832,000 lb. In 1953 there were 827,430 cattle, 261,252 pigs and 20,451 sheep and goats. According to the 1950 industrial census, there were 11,106 industrial establishments, only 117 of which had more than 50 employees.

Installed electric power capacity totalled 55,000 kw. in 1955; production (public use only) was 92,000,000 kw.hr. In 1955, 3,818 troy oz. of gold and 230,054 oz. of silver were produced.

(J. W. Mw.)

ENCYCLOPEDIA BRITANNICA FILMS.—*Central America* (1944).

Salvation Army. This organization was founded in 1865 by the Rev. William Booth, a Methodist minister, in London, Eng. Its primary aim was to lead unchurched people into spiritual adjustment with their Creator. By 1956 the Salvation Army had become a world-wide movement, with chapels and institutions in 85 countries and colonies, preaching the Gospel of Christ in 81 languages and dialects, ministering through 17,630 centres of evangelism and more than 1,500 institutions—hospitals, shelters, schools, farms, etc.

The organization's world-wide activities were directed in 1956 by Gen. Wilfred Kitching from the international headquarters in London. It had 26,765 ordained personnel, of whom more than 5,000 were in the United States. The co-ordinating head in the United States was Commissioner Donald McMillan, national commander, with headquarters in New York city.

The Salvation Army is one of the seven constituent agencies of the United Service organizations (U.S.O.), and in 1956 it operated 34 U.S.O. units. The third annual National Salvation Army week channelled the movement's story of service through 1,800 daily and 7,000 weekly newspapers, hundreds of radio and television stations and church and civic groups. During the year thirty-nine 25-minute dramatic radio programs were produced and were broadcast from 488 stations. The stories were based on actual case histories from Salvation Army files. A first series of 15-minute devotional programs over television was planned for 1957.

Statistical records indicated 66,880 converts in the United States during 1956. Attendances at adult meetings totalled 9,984,896, and at Sunday school services 4,000,000. (Do. McM.)

Samoa, American. The Samoan Islands extend from 13° 26' to 14° 22' S. lat. and from 168° 10' to 172° 48' W. long., and are about 2,700 mi. east of Australia and 2,200 mi. south of the Hawaiian Islands. American Samoa consists of the inhabited islands of Tutuila, Tau, Olosega, Ofu and Aunuu, and the uninhabited coral atoll, Rose Island. Swains Island, 210 mi. northwest of Tutuila and owned by one family, was made a part of American Samoa in 1925. Total area of American Samoa is 76 sq.mi. and total population (1950 census 18,937) was estimated in 1956 at 22,500 with about four-fifths of the population on the main island of Tutuila. Pago Pago (pop. 1950 census, 1,586), on Tutuila, is the capital. About four-fifths of the population are Protestants.

History.—American Samoa is an unorganized United States possession, administered by the department of the interior since July 1, 1951. Richard Barrett Lowe, appointed as governor in Sept. 1953, resigned in Oct. 1956 to become governor of Guam. He was succeeded by Peter T. Coleman, native-born Samoan, and attorney general of American Samoa since July 1955. Secretary of American Samoa in 1956 was Allan Macquarrie.

A constitutional committee, consisting primarily of Samoans, was at work in 1956 developing a territorial constitution.

Education.—It was estimated in 1955 that 99% of all persons 10 years of age or older were literate. As of June 30, 1955, there were 6,057 students enrolled in 61 public and 6 missionary schools. There were 241 public school teachers. Expenditures for education during the fiscal year ended June 30, 1955, represented more than 16% of total expenditures.

Finance and Trade.—Economic conditions continued to improve in 1955 and 1956 as the result of new enterprises and industries which had been established, including fish cannery operations and the cultivation of cocoa and coffee. Copra, however, was still the most important cash crop. Estimated production of principal crops for the twelve months ended June 30, 1955, were copra 1,680 metric tons, citrus fruits 100 tons, bananas 2,500 tons, breadfruit 2,400 tons, and taro 1,500 tons. There were 250 cattle, 2,900 hogs, and 11,950 chickens in American Samoa in 1955. There was also an active native handicraft industry producing floor mats and woodcraft.

Imports in the fiscal year ended June 30, 1955, totalled \$987,968, of which the United States was the major source followed by Australia and New Zealand. Exports totalled \$1,270,548 of which canned tuna accounted for more than 75% and copra 20%. Revenues collected during the 1954-55 fiscal year totalled \$591,317; expenditures \$1,565,101. The difference between revenues and expenditures was made up by U.S. government appropriations. The Bank of American Samoa, a government institution operated by the American Trust Company of San Francisco, is American Samoa's only banking institution. As of June 30, 1955, it had a capital of \$100,000 and assets of \$1,669,159.

Transportation and Communications.—In 1954 Tutuila had 69 mi. of roads, of which 4 mi. were surfaced. Commercial air service was inaugurated in Jan. 1956 with Pan American World Airways making regularly scheduled flights, stopping at Tutuila and connecting with flights between Hawaii and Australia. Cruise ships of the Matson Line were expected to begin calling at Pago Pago in the fall of 1956. One radio broadcasting station, WVUV, operated by the government, was in operation in 1956. (S. Nr.)

Samoa, Western: see NEW ZEALAND; TRUST TERRITORIES.

San Francisco. The population estimate for the city and county of San Francisco, Calif., as of Jan. 1, 1956, was 807,000 persons, compared with 775,357 reported by the U.S. bureau of the census, April 1, 1950. Total area, 93.1 sq.mi.; land area, 44.6 sq.mi. The mayor of San Francisco, George Christopher, was elected for a four-year term, commencing Jan. 8, 1956.

There were 127 public schools in the city in 1955 with an enrolment of 158,861 and a total average daily attendance of 87,235. Several thousand students attended private and technical schools. In 1955 there were 26,491 attending Catholic schools.

Total employment in the city in July 1956 was 476,700. Retail trade based on taxable sales for 1955 amounted to \$1,631,823,000; sales of food for off-premise consumption and of gasoline, which are not included in taxable sales, would increase total sales in 1955 to about \$2,000,000,000. Wholesale trade in San Francisco in 1955 amounted to about \$4,967,000,000. The value added by manufacture in San Francisco in 1955 was \$500,789,000 compared with \$410,000,000 in 1948, according to the U.S. bureau of the census.

The total foreign trade passing through the San Francisco customs district amounted to \$770,149,248 in 1955, of which \$415,134,080 represented exports and \$355,015,168 imports.

San Francisco's tax rate for the fiscal year 1956-57 was \$7.06 per \$100 assessed valuation. The assessment roll for the fiscal year was \$2,165,381,841. Estimated fiscal-year revenue amounted to \$223,903,028 of which \$92,890,241 would be derived from city taxes. The city's bonded debt limit for future bond sales, as of June 30, 1956, based on the 1956-57 assessment, amounted to \$131,046,283. Bonds outstanding not matured on June 30, 1956, amounted to \$174,279,000. Bonds authorized but unsold June 30, 1956, amounted to \$118,460,000.

City officials of San Francisco proposed a capital improvement program for 1956-57 amounting to \$52,793,080 and for the five-year period 1956-62, amounting to \$308,719,750. The program of expenditures included water supply and distribution, traffic way signals and lights, recreation and parks, public health, sewers and disposal plants, municipal railway, police and fire protection and libraries and museums.

Some important events which occurred in San Francisco during the 1955-56 period included: the announcement by the Crown Zellerbach corporation, manufacturer of forest products, of the construction of a 20-story steel and glass ultramodern structure to cost approximately \$10,000,000; opening to traffic of the new 5.5 mi., \$68,000,000 Richmond-San Rafael bridge, spanning the upper reaches of San Francisco bay, Aug. 31, 1956; the opening of the new \$1,000,000 San Francisco flower terminal Sept. 12, 1956, to provide wholesale outlets for the Bay region flower-growing area, the largest in the country; progress toward the ultimate redevelopment of the produce mart area and the establishment of a new produce mart on a different site; and, since Sept. 1955, authorization of nearly \$60,000,000 in building construction, of which \$25,000,000 was for new nonresidential building. (R. B. KR.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*California* (1955).

San Marino. A small republic in central Italy (with which it is united by customs union), San Marino is entirely surrounded by the province of Emilia and is situated on the slopes of Monte Titano, 14 mi. S.W. of Rimini. Area: 38 sq.mi. Pop. (1955 est.) 14,000. Language: Italian. Religion: Roman Catholic. San Marino is governed by two *capitani reggenti* appointed every six months by a grand and general council elected by universal suffrage every four years.

History.—The event of the year 1956 was the establishment of diplomatic relations with the U.S.S.R. This was decided on July 3 by the communist-controlled grand and general council. A delegation of the Sammarinese Communist party was present in Moscow in February at the 20th congress of the Communist party of the Soviet Union.

Education.—Schools (1955): primary 18, pupils 1,492; secondary 3, pupils 208.

Finance.—San Marino uses Italian currency. In 1956 the lira was valued at 625 to U.S. \$1. Budget (1954-55 est.) balanced at 695,055,358 lire; (1955-56 est.) 711,110,638 lire. Subsidy from Italy: 150,000,000 lire per annum.

Santo Domingo: see DOMINICAN REPUBLIC.

Sao Tomé: see PORTUGUESE OVERSEAS TERRITORIES.

Sarawak: see BRITISH BORNEO.

Saskatchewan. Central of the three prairie provinces of Canada. Saskatchewan was created in 1905 by act of the federal parliament. Area: 251,700 sq.mi. Pop. (1951 census) 831,728; (1956 est.) 897,000. Capital: Regina, pop. (1951 census, 1956 est. in parentheses) 71,319 (88,797); Saskatoon, seat of provincial university, 53,268 (70,843).

History.—The provincial legislature passed 77 public bills during the fourth session of the 12th legislature. These were generally of a noncontroversial nature. The legislature approved two resolutions having to do with the grain glut—one urging the federal government to make provision for cash advances on farm-stored grain, the other asking that the movement of box-cars in the transportation of grain be expedited—and a third resolution asking the provincial government to consider the extension of the franchise to treaty Indians. A select special committee of the legislature was set up to study and report on markets, marketing and price policies as these related to the farm income problem in Saskatchewan. The public hearings and the debate on the committee's findings aroused wide interest. Biggest political news of 1956 was the provincial election held on June 20, 1956. The Co-operative Commonwealth Federation (C.C.F., Democratic Socialist Party) under Premier T. C. Douglas was returned to power. Party standings (previous standing in parentheses) were: C.C.F. 36 (42); Liberals 14 (10); Progressive Conservatives nil (1); Social Credit 3 (nil).

Oil and gas exploration and development again made rapid progress. During the summer of 1956 the 2,000th oil well came into production. The Saskatchewan Power corporation served the cities of Moose Jaw and Swift Current with natural gas while extending electrical service to a further 7,500 farms. The Eldorado Mining and Refining Ltd., a federal crown company, increased its output of uranium ore in the Beaverlodge area from 500 to 700 tons daily output. Gunnar Mines went into production with an initial daily output of 1,250 tons.

Education.—During the 1954-55 school year there were 32,495 pupils attending secondary schools and 176,006 attending public schools, making a total of 208,501. There were 7,679 teachers with an average daily pupil enrolment of 155,044. Total school operating revenues for 1954-55 totalled \$34,598,705.

Public Health and Welfare.—During 1955 the Saskatchewan Hospital Services plan, government-sponsored program of hospital care insurance, covered 822,956 persons, about 97% of those eligible to become beneficiaries. A total of 165,006 patients (excluding newborns) were admitted to hospital care under the plan. Total public assistance expenditure by the provincial government, including old-age security supplementary allowances, blind persons' allowances, old-age assistance, mothers' allowances and social aid for fiscal year 1954-55 was \$4,110,832.

Transportation and Communication.—At March 31, 1956, there were 166,367 passenger autos and 625 public service vehicles on 164,121 miles of provincial and municipal road. Of this mileage, 1,333 mi. were bituminous, 21,187 mi. gravelled. There were 8,739 miles of railway, 15% of the Canadian total. During 1955, 174,417 telephones were in service. There were 11 radio and 2 television transmitting stations. Work on the Saskatchewan portion of the Trans-Canada highway neared completion.

Banking and Finance.—The 1956-57 provincial budget estimated revenues of \$87,172,000 and expenditures at \$87,147,080. As of Dec. 31, 1955, net debt less sinking funds and revenue producing loans and advances was \$70,538,000. In 1955 the two largest publicly owned corporations, power and telephones, showed a net surplus of \$4,111,200, while the other eight crown companies together showed a net surplus of \$1,366,280. At Dec. 31, 1955, there were 282 active credit unions, which loaned \$15,621,498 to 80,396 members.

Agriculture.—Main crops, 1955 (1956 Canadian dept. of agriculture est. in parentheses): wheat, 298,000,000 bu. (309,000,000); oats, 135,000,000 bu. (160,000,000); barley, 104,000,000 bu. (100,000,000); rye, 8,200,000 bu. (4,000,000); flax, 11,800,000 bu. (18,000,000). Official preliminary estimate of farm cash income for 1955 was \$425,100,000; valuation of major items: wheat, \$216,632,000; oats, \$15,082,000; barley, \$32,250,000; rye, \$3,698,000; flax, \$23,131,000; cattle, \$57,426,000; hogs, \$21,872,000; poultry, \$10,289,000; dairy products \$23,746,000. On June 1, 1956, there were 1,490,000 cattle and 645,000 hogs.

Fisheries, Furs and Forestry.—Commercial fish production in 1955-56 was 10,153,177 lb. valued at \$1,616,961 (1954-55, 10,525,881 lb. at \$1,644,183). For the same year the timber cut, all types, was 22,860,322 cu.ft. valued at \$7,375,510 (1954-55, 30,117,017 cu.ft. at \$9,064,857). The total value of wild fur in 1955-56 was \$2,837,120 (1954-55, \$3,715,032).

Manufacturing.—Statistics are for 1954 when 11,526 employees, in 1,010 establishments, earned \$33,509,833 in salaries and wages. Raw materials worth \$169,326,000 were converted into finished products with a gross value of \$280,733,784. The four leading classes in terms of value were (number of employees in parentheses): petroleum products, \$76,494,298 (1,109); flour mills, \$43,436,789 (784); slaughtering and meat packing, \$30,664,206 (1,075); butter and cheese, \$27,862,528 (1,283). The total value of industrial products increased by \$14,120,693 over 1953.

Mining.—During 1955 oil production was 11,486,500 bbl. Natural gas production was 11,252,971,000 cu.ft. Preliminary value figures for all mineral production for 1955 was \$83,769,427 as compared with \$68,216,009 actual in 1954. The leading minerals were copper, \$24,226,875; zinc, \$13,465,725; sodium sulphate, \$2,759,034; coal, \$4,171,399; gold, \$2,893,111; petroleum, \$18,491,500. (J. H. AR.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Prairie Provinces of Canada* (1943).

Saudi Arabia. This Arab kingdom covering four-fifths of the Arabian peninsula has an area of about 617,760 sq.mi. and a population (1952 est., no census ever taken) of 7,000,000. Religion: Moslem. Chief towns (pop., 1954 est.): Riyadh (cap.) 80,000; Mecca 150,000; Jidda 100,000; Hufuf 100,000; Buraida 50,000; Medina 50,000. King, Saud ibn Abdul Aziz al Saud. Prime minister and viceroy of Hejaz in 1956, Amir Faisal ibn Abdul Aziz, crown prince and eldest brother to King Saud.

History.—The alliance between Saudi Arabia, Egypt and Syria was formally maintained and strengthened during 1956 by repeated declarations and by two meetings of King Saud with the Egyptian and Syrian presidents, one in Cairo, Egy., in March, and one at Riyadh, Saudi Arab., in September, during the Suez canal crisis. One or two cracks, however, developed in the Saudi-Egyptian partnership. King Saud was said to have become alarmed at the growing number of Egyptians employed in his kingdom, and at the influence they were exercising, and in August a number of Egyptian officers, who had been training Saudi officers, were discharged on the grounds that they were disseminating antimonarchical principles and preparing a coup against the king. Also, during the Suez crisis the king received a visit from King Faisal of Iraq, at which the two monarchs were reported to have discussed their common interest in assuring passage through the Suez canal for the oil produced in their two countries. Together with Egypt and Syria, however, Saudi Arabia promised funds to Jordan to replace the British subsidies if Jordan denounced its treaty with Britain.

A Chinese trade mission visited Saudi Arabia requesting oil supplies and the Chinese consulate at Jidda was reopened.

The Buraimi dispute remained unsettled. The British-officered Arab levies that occupied the oasis in 1955 in defense of the rights of the sultan of Muscat and the sheikh of Dhahi remained in possession. Arrangements were made with Syria and Jordan for rebuilding the Hejaz railway (constructed in the days of the Ottoman empire and destroyed during World War I) which would connect Damascus, Syr., and Amman, Jordan, with Medina.

A military academy was established at Riyadh, and a Saudi Arabian mission visited Czechoslovakia with a view to buying arms. Large sums of money were spent on municipal development, especially at Riyadh, which began to assume the aspect of a modern city with air-conditioned skyscrapers. However, it was said that only one-fifth of the oil royalties was being ploughed back into the country's economy for improving the condition of the people. This was causing discontent among the politically conscious urban population. The Arabian-American Oil company denied reports that it had advanced the king royalties against the oil production for the next two years, affirming that it only paid for oil actually produced. There was a widespread belief, however, that the king had mortgaged two years' royalties in order to raise loans from certain European banks.

(See also MIDDLE EASTERN AFFAIRS.) (E. S. AH.)

Education.—Schools (1949): primary 207, pupils 27,712, teachers 875; secondary 8, pupils 1,116, teachers 181; vocational 5, pupils 311, teachers 47; 1 preuniversity school, pupils 25, teachers 3.

Finance.—Monetary unit: riyal; about 10.35 riyals=£1 sterling and 1 riyal=about 28 U.S. cents. Budget (1954-55 est., U.S. dollar equivalent): revenue \$305,940,000; expenditure \$361,330,000; estimated revenue from oil royalties and income tax \$257,700,000.

Foreign Trade.—Imports (1953 est.) £58,000,000; exports £235,000,000. Main imports: textiles, cereals, tea, coffee, sugar, rice, motor vehicles, building materials. Main exports: oil; also gold concentrates, hides and skins, gum, dates, clarified butter.

Transport and Communications.—Main roads (1954): Jeddah-Mecca 72 km. asphalted; Jeddah-Medina 168 km. completed; motor track Mecca-Persian gulf 1,325 km. Air transport: Saudi Arabian Airlines, five airports. Radio receiving sets (1950) 10,000. Railways (1956) 352 mi. open. Telephones (Jan. 1955) 8,130.

Agriculture.—Production (metric tons): wheat (1954) 965,000; dates (1948-52 average) 182,000.

ENCYCLOPEDIA BRITANNICA FILMS.—*Arabian Bazaar* (1953); *The Middle East* (1955); *Planning Our Foreign Policy* (Problems of the Middle East) (1955); *Wanderers of the Desert* (1953).

Savings and Loan Associations. New peaks were reached during 1956 for the 6,000 operating savings and loan associations in the United States in terms of total assets, total mortgage loans held and total savings capital.

Continued Growth.—During 1956 the net increase in savings capital at all savings and loan associations exceeded \$5,000,000,000, slightly above the previous record high of 1955. The net inflow of savings during the last five months of 1956, however, was below that in the corresponding period of 1955. The increase in total assets of all savings and loan associations in 1956 was about \$5,600,000,000, a gain of 15%, as compared with the record increase of \$6,100,000,000 or 19% in 1955. Total assets of all savings and loan associations at the end of 1956 amounted to \$43,200,000,000.

Though they experienced the most rapid rate of growth, the savings and loan associations still ranked fourth among all financial institutions in volume of individual savings held. On June 30, 1956, first place was still held by life insurance companies, second place by savings bonds of the United States government and third place by commercial banks. Savings and loan associations were fourth, followed by mutual savings banks.

Inflow and Withdrawals.—Although new savings continued to flow into the savings and loan associations at a record rate during 1956, withdrawals rose still more. In the first 11 months of 1956 gross savings receipts were up almost 15% over the corresponding period of 1955, but withdrawals showed an increase of almost 21%. As a result, the net inflow of savings during the 11 months was only 2½% more than in the same period of the previous year. During the first 11 months of 1956, the ratio of total withdrawals to gross savings receipts was 70.1%, as compared with the corresponding withdrawal ratio of 66.6% in the year before. Likewise, the ratio of withdrawals to the amount of savings capital held by the savings and loan associations rose.

Asset Distribution.—At the end of Sept. 1956 total assets of all savings and loan associations amounted to \$41,600,000,000. Mortgage loans held came to \$34,900,000,000, with conventional loans constituting more than three-fourths of the total. United States government obligations were owned in the amount of \$2,700,000,000, and cash holdings were \$1,750,000,000. Savings capital totalled \$35,600,000,000. Federal Home Loan bank advances were \$1,100,000,000. Reserves and undivided profits exceeded \$2,800,000,000.

During 1956 the nation's savings and loan associations acquired fewer mortgage loans than during the preceding year but increased their holdings of United States government obligations and cash and decreased borrowings.

Total mortgage loans made during the first 11 months of 1956 were 8% below the record total for the corresponding months in 1955. Savings and loan associations, however, continued as the leading lender for home financing, recording 35% of total home mortgage financing during 1956, with commercial banks next at 20%. It was estimated that about 365,000 of the 1,100,000 homes built in 1956 were financed by savings associations.

The net increase in mortgage loans held in the 12 months from Oct. 1955 through Sept. 1956 for all savings and loan associations totalled \$4,300,000,000, as compared with a net increase in total assets of \$5,300,000,000 and an increase in total savings capital of a little more than \$5,000,000,000. During this period savings and loan associations increased their holdings of United States government obligations and cash by about \$550,000,000, and made net repayments of borrowings, primarily Federal Home Loan bank advances, amounting to \$150,000,000. These conservative actions built up the net liquidity position of the savings and loan associations.

Relaxation of Restraint.—During the third quarter of 1955 the increase in mortgage holdings of savings and loan associations substantially outran the net inflow of savings. This brought about the imposition of credit restriction policies by the Federal Home Loan Bank board in Sept. 1955. During 1956 the Federal Home Loan Bank board gradually relaxed these credit restriction policies. Successive steps were taken toward relaxation of credit restriction in Dec. 1955, April 1956 and Sept. 1956. The policy of the Federal Home Loan Bank board in effect late in the year regarding Federal Home Loan bank advances to member savings and loan associations provided for regular advances for purposes other than meeting net withdrawals, provided the total amount of such advances outstanding did not exceed $12\frac{1}{2}\%$ of withdrawal accounts, with an additional provision for emergency advances up to $2\frac{1}{2}\%$.

Seaton, Frederick Andrew (1909—), U.S. government official, was appointed secretary of the interior May 28, 1956, by Pres. Dwight D. Eisenhower to succeed Douglas McKay, who had resigned to campaign for election as Republican senator from Oregon. Born in Washington, D.C., on Dec. 11, 1909, Seaton attended Kansas State college, Manhattan, and was a radio sports announcer and then an editor for newspapers in Manhattan, Kan., until 1933, when he founded his own publishing firm, acquiring newspaper, magazine and radio-television properties in several western states.

Seaton's active interest in Republican politics dated from his college days, when he was chairman of the Riley county Young Republican club in Kansas. In 1936 he was secretary to Alfred M. Landon during the latter's unsuccessful campaign for president. From 1945 to 1949 Seaton served two terms in the Nebraska state legislature and in the latter year he was secretary to Harold E. Stassen. In 1951 he was appointed senator from Nebraska to fill the unexpired term of Sen. Kenneth S. Wherry. In 1952 he joined the presidential campaign staff of General Eisenhower, having acquired the reputation of being one of the most effective speakers among the younger Republicans. Eisenhower appointed him assistant secretary of defense for legislative affairs in 1953, and two years later he joined the White House staff as an administrative assistant to the president. The senate confirmed him as secretary of the interior June 6, 1956, and he was sworn into office June 8.

Secondary Metals. Metals that are produced as by-products of other metals—such as silver in mining base metals—and those recovered from old and new scrap are included under secondary metals shown in Table I, based on data from U.S. bureau of mines reports. New methods of recovery were being studied during 1956, and the proportion of metal recovered from scrap to primary metal production was increasing. In 1955 secondary lead recovery exceeded primary output for the tenth year. Secondary tin consumed was 29,000 tons compared with 59,100 tons of primary tin. Although recoveries of both types of secondary metal are shown in the table, only the recovery from old scrap adds to the available supply.

Secret Service, U.S.

The major functions of the United States secret service, a bureau of the treasury department, are protection of the president of the United States and members of his family, of the president-elect and of the vice-president at his request; the detection and arrest of persons committing any offenses against the federal laws relating to obligations and securities of the United States and of foreign governments; and the detection and arrest of persons violating other laws cited in title 18, U.S. code, section 3056. During the year ended June 30, 1956, the secret service received 1,016 cases requiring investigation in connection with the protection of the president.

In the suppression of counterfeiting, agents captured 18 plants for the manufacture of counterfeit paper money and \$511,760 in counterfeit bills. Of that total, \$67,635 was successfully passed on storekeepers and cashiers. The balance of \$444,125 was captured before it could be put into circulation. The representative value of counterfeit coins seized was \$6,326.16, of which \$5,405.84 was successfully passed.

There were 72 new counterfeit note issues and variations dur-

ing fiscal 1956 and 166 persons were arrested for violating the counterfeiting laws.

The secret service received 27,110 forged government checks for investigation, and there were 15,222 on hand as of July 1, 1956. Agents completed investigations of 30,619 forged checks worth \$2,631,177.84 and arrested 2,970 persons for forging government checks and bonds. Agents arrested 176 persons for crimes other than counterfeiting and forgery, making a total of 3,312 arrests. There were 3,050 convictions, representing 98.3% of convictions in all cases prosecuted, some of which were pending from the previous year.

Cases of all types received for investigation aggregated 35,458, and 18,585 cases were pending as of July 1, 1955. Although 39,264 cases were closed during fiscal 1956, 14,779 cases awaited investigation as of June 30, 1956.

The chief of the secret service attended the annual conference of the International Criminal Police organization at Vienna, Aus., in June 1956, to discuss the suppression of counterfeiting with representatives of other nations. He was elected a vice-president of the organization. (U. E. B.)

Securities: *see* BANKING; STOCKS AND BONDS.

Securities and Exchange Commission.

This bipartisan, quasi-judicial agency of the U.S. government administers laws in the general field of securities and finance designed for the protection of investors.

Securities Act of 1933.—This law seeks to protect investors by requiring (with certain exceptions) that securities offered for public sale be registered with the Securities and Exchange commission (SEC); and by prohibiting fraud in the sale of securities.

The purpose of registration is to provide financial and other factual disclosures essential to a realistic appraisal of the merits of such securities by investors, who must be furnished a prospectus containing the salient information. At the end of the 1956 fiscal year, \$116,000,000,000 of securities had been registered, \$13,100,000,000 during the past year.

Registration of securities is no guarantee against loss in their purchase, but disclosures thus provided should enable investors to make informed investment decisions; and although there is no warranty of the accuracy of the disclosures, investors who suffer losses in the purchase of registered securities have important recovery rights if the facts have been misrepresented.

Securities Exchange Act of 1934.—This law contains similar registration and disclosure requirements applicable to outstanding securities listed for public trading on national securities exchanges. Issuers thereof must file periodic reports with the SEC and the exchanges containing data essential to informed investment analyses. Similarly, in the solicitation of proxies (votes) from the holders of such securities, factual disclosures must be made so that stockholders' votes may be cast intelligently. In addition, management officials and large stockholders must report their holdings of, and transactions in, listed equity securities; and their short-term trading profits in such securities are recoverable by the issuer. This was designed to curb misuse of "inside" information. At the end of the fiscal year, 4,134 security issues of 2,594 issuing companies were so listed and registered; and exchange trading volume therein was about \$37,500,000,000 for the year. During the year, also, 2,016 proxy statements and 32,001 insiders' reports were filed.

The law also contains provisions designed to eliminate misrepresentation, manipulation and other fraudulent and deceptive practices in the purchase and sale of securities, both on ex-

changes and in the over-the-counter markets. Exchanges and over-the-counter brokers and dealers must register with the commission; and associations of the latter organized under the law for self-policing purposes also may register. All must conform their rules and trading practices to prescribed standards designed to establish and maintain free and open markets; and the commission exercises a continuing surveillance to the end that the statutory objectives are achieved. At the end of the fiscal year, 14 exchanges, 4,591 brokers and dealers, and one broker-dealer association were registered.

This law also contains important sanctions against violations. In common with the Securities act, it gives the SEC investigatory and enforcement powers and provides for court injunctions against securities violations as well as for criminal prosecution where fraud or other willful violations are indicated. In addition, it provides for revocation of the registration of brokers and dealers, and their suspension or expulsion from membership in exchanges or the broker-dealer association, for any such willful violations.

Public Utility Holding Company Act of 1935.—This law provides for regulation of holding company systems of electric and gas utility companies to protect against certain abuses in their financing and operation which led to its enactment, including improper financial and related practices and the extension of systems without regard to economies of operation, many of which thwarted effective state regulation. It also required a major overhauling of such systems to delimit their operations to integrated groups of utility properties, simplify corporate and capital structures and redistribute voting power equitably among security holders.

The integration and simplification program was virtually completed in 1956. It had resulted in the release from the act's jurisdiction by means of sales, distributions and other divestments, reorganizations, mergers and consolidations, liquidations and other actions, of 2,012 of the 2,314 companies previously subject to the law. A prerequisite to approval of all such actions, involving several billion dollars of securities and properties, was a finding by the commission (and frequently a federal district court) that the proposals were fair to security holders. Important by-products were elimination of absentee control over many utility operating companies and removal of obstacles to effective state regulation. Ultimately, about 18 integrated and simplified holding company systems with aggregate assets of about \$8,000,000,000 were expected to remain subject to continuing SEC regulation under the act.

This regulation has its primary impact upon the purchase and sale of utility securities and properties, mergers and consolidations, intercompany transactions and similar matters. Principal among these is the sale of securities to finance the business of system companies, including their plant expansion programs, with respect to which the commission must apply statutory standards designed to protect investors and consumers.

The commission also administers the Trust Indenture act of 1939, the Investment Company act of 1940 and the Investment Advisers act of 1940, and serves as adviser to federal courts in corporate reorganization proceedings under chapter X of the Bankruptcy act. (O. L. DuB.)

Seismology. The 12-month period ended Oct. 15, 1956, was, as in the preceding year, a period of below-normal seismic activity. This was of interest to seismologists who believe that the annual amount of energy release by earthquakes

should average out near a fixed level over a period of years. On this basis, there was reason to anticipate heightened seismic activity in coming years.

Principal Earthquakes.—In the period ended Oct. 15, 1956, at least three earthquakes received wide attention by reason of high death tolls, each shock causing at least 100 deaths. Of these, the most damaging was the shock of March 16, 1956, when 145 persons were killed in Lebanon, 32 of these in the village of Shehim. Weakly constructed houses fell in a series of recurring shocks, leaving 25,000 homeless and injuring more than 500.

Quake-ravaged Greece, which had suffered numerous destructive shocks in each of several recent years, enjoyed relative quiet during the period. A local disaster was experienced, however, on July 9 when earthquakes and a seismic sea wave killed 48 persons and injured about 100 in a group of islands in the southern Aegean sea. Property damage was high and the earthquakes and waves destroyed homes and business places. Worst hit was the island of Thera, or Santorini, where an erupting volcano added to the devastation.

India, astride one of the great earthquake belts of the world, lost 113 dead, and more than 200 were injured, when a large area in the state of Kutch was severely shaken on July 21. One thousand houses were reported to have collapsed in the town of Anjar. Telegraphic poles were uprooted, disrupting communications, and 17 freight cars were thrown from the tracks at Kandla.

Starting about June 9 Afghanistan experienced a week of recurring shocks believed to be the worst in the history of the country. One hundred persons were reported killed in Kabul, many were buried in the rubble of collapsed houses, and at least 2,000 became casualties. Rivers were diverted, roads were blocked by landslides and communications with isolated villages were cut off.

Minor Earthquakes.—Smaller shocks occurred in many places. The resort city at Acapulco, Mex., sustained heavy property damage on Jan. 8, and at least 107 persons were injured in the collapse of poorly constructed houses in the outskirts. On the following day, numerous buildings were damaged in southern Italy.

On Jan. 12 quakes destroyed 38 houses, killing 2 persons and injuring 36 in Taksony, Hung. Four days later, in distant Ecuador, a bridge was destroyed and a number of houses demolished at Portoviejo. On Feb. 20 in Peru a five-day series of quakes killed two children and caused damage in the mountains 200 mi. N. of Lima. On the same day, four persons died in the collapse of 1,000 houses in Eskisehir, Tur. Property damage was estimated at \$50,000,000.

On April 19 the province of Granada, Sp., experienced five tremors, the worst since 1884. Seven persons died and more than 100 were injured, as public buildings and church structures collapsed.

On July 16 a long series of more than 30 shocks rocked the ancient city of Mandalay in Burma, crumbling pagodas and other structures, and reduced the town of Sagaing to rubble. Thirty persons were killed. On Sept. 29 the normally restless land of Japan experienced its first important earthquake of the year when two shocks, 12 hours apart, gave Tokyo its worst shaking in five years. One person was killed and five were injured, and power installations at the U.S. army Camp Zama, southwest of Tokyo, were put out of operation.

Seismological Studies.—Numerous new stations for the observation of earthquakes were installed in many parts of the world, indicating a continuing wide scientific interest in the subject. In Tokyo, Jap., the Disaster Prevention Research institute continued the study of ground tilts and earth strain in relation to earthquake activity, in the hope of deriving methods of fore-

telling such occurrences. Apparently significant ground motions had been noted previously in close association with damaging Japanese quakes. The exploration of the basic physical structure of the earth continued, largely through the analysis of the vibrational disturbances recorded on modern seismographs.

There was sustained interest in the problems of engineering, or applied, seismology. An international conference, held at Berkeley, Calif., in June, provided a comprehensive review of recent developments in many countries subject to earthquake damage. While the United States was conducting a continuing investigation of earthquake forces, and many engineers consider them in their design work, it was commonly held that intensification of this branch of the work was much needed.

(E. B. R.)

Selective Service, U.S. Selective Service system operations during 1956 were influenced chiefly by three executive orders. Executive orders 10650 and 10651 were issued Jan. 6, 1956, and were designed to provide for the more favourable use of men of military age in relation to the critical needs of the defense-supporting economy and in a mobilization, and to ensure that the ready reserve would be immediately available with the least loss in the event of mobilization. These two orders were described in a White House press release as responsive to the concern of the president and the congress that the manpower needs of the armed forces be met, with due consideration of the urgent needs of the industries and scientific laboratories which were critically necessary for the support of the defense effort. Executive order 10659, dated Feb. 16, 1956, amended Selective Service regulations.

Executive order 10650 prescribed Selective Service regulations which established the procedures by which registrants were to be selected for enlistment in the special reserve program established by the Reserve Forces act of 1955 for persons with critical skills. The act provided that such persons might enlist for three to six months of active duty for training after which they would be transferred to the reserve for the remainder of their eight-year obligation.

Executive order 10651 provided regulations under which the military service would effect a continuous screening of the ready reserve. This would assure that the ready reserve would be immediately callable with minimum losses in the event of mobilization, and with minimum necessary effect on the defense-supporting economy.

Executive order 10659 changed the priority in which registrants would be called for induction; the order also provided that aliens from countries with which the United States had treaties containing provisions for the exemption from military service of their nationals while in the U.S., should be exempt from registration and induction only if they had been admitted to the U.S. temporarily.

Also exempted from induction by the order were aliens who had served at least 18 months since June 24, 1948, in the armed forces of a nation associated with the United States in mutual defense activities, if such nation granted a similar exemption from service in its armed forces to United States citizens who had served at least 18 months in the U.S. armed forces subsequent to June 24, 1948.

The order exempted from registration and liability for induction aliens who were in the United States pursuant to the provisions of certain of the agreements pertaining to the North Atlantic Treaty organization. The order also clarified the exempt status of aliens temporarily admitted to the U.S. for study at an approved institution of learning.

Registrants under the age of 18½ and registrants with critical

skills selected pursuant to executive order 10650 of Jan. 6, 1956, for such enlistment, who enlisted in the new eight-year ready reserve program established by the Reserve Forces act of 1955, would be deferred while they continued to serve satisfactorily in such program and upon completion of their eight-year period of service would be classified as exempt from further peacetime induction.

Registrants who, prior to attaining the age of 18½, enlisted in organized units of the federally recognized national guard or of the ready reserve under the programs established by the Reserve Forces act of 1955 and the Universal Military Training and Service act, as amended, were deferred from induction while they served satisfactorily, and, upon attaining the age of 28, would also be classified as exempt from further peacetime induction. If such registrants satisfactorily completed eight years of such service and during that time performed not less than three consecutive months of active duty for training, they would also be classified as exempt from peacetime induction.

Registrants who enlisted in the above-mentioned programs and who failed to serve satisfactorily therein as determined by the armed force concerned, would be inducted into the armed forces for 24 months of training and service prior to all other registrants.

The amended regulations also implemented provisions of the 1955 amendments to the Universal Military Training and Service act by providing that registrants who since Sept. 16, 1940, had served on active duty in the armed forces for not less than six months and were discharged for the convenience of the government, or who since that date had served in the armed forces on active duty not less than one year, or who had served not less than 24 months as commissioned officers in the public health service or coast and geodetic survey, should be classified as exempt from induction. Unless they met these criteria registrants who had served six months or more on active duty since June 24, 1948, would no longer be classified as exempt from induction.

The executive order also provided, in accordance with the 1955 amendments, that the existence of a shortage or surplus of any agricultural commodity should not be considered in determining whether any individual should be deferred because of the essentiality of his employment in agriculture.

Also, in accordance with a provision of the Reserve Forces act of 1955, any registrant who, after enlisting in a reserve component of an armed force, had been commissioned therein upon graduation from officers' candidate school, and who was not ordered to active duty as a commissioned officer, would be deferred from induction so long as he performed satisfactory service as a commissioned officer in a unit of the ready reserve.

Persons who entered the R.O.T.C. and certain other officer procurement programs of the armed forces were thereafter required, in order to be classified as deferred by reason of membership in such programs, to agree to remain a member of a regular or reserve component for six years after they would be commissioned instead of eight years as previously required.

The order, in accordance with the 1955 amendments, also provided with respect to special registrants who were physicians, dentists and veterinarians, that such persons should be classified as exempt from induction when they attained the age of 46. They would also be classified as exempt from induction if they had attained the age of 35 and had applied for a commission in the armed forces as a physician, dentist or veterinarian and had been rejected solely for physical disqualification. (L. B. H.)

Reserve Forces Act of 1955.—During 1956, the first year of operations under the Reserve Forces act of 1955, significant progress was made in strengthening the reserve components of all the military services. Each service offered one or more of

the new reserve enlistment programs provided by the act. Through these programs more than 137,000 members had been added to the ready reserve rolls.

In addition, more than 1,000 persons possessing scientific, engineering or other critical civilian skills, and employed in defense-supporting industry or research, were selected by local selective service boards to undergo six months' active duty reserve training instead of being absent from their employment for two years of military service.

The substantial number of volunteers into the new reserve enlistment programs was a factor in the increase to more than 900,000 of members participating in paid reserve training programs. This was the largest number of individuals in training in the history of the reserve forces.

Screening of the ready reserve was initiated by all the military services. This action required the services initially to review the records of more than 3,000,000 ready reservists to select those eligible for discharge, retirement or transfer to the stand-by reserve under law and regulations. The screening process would remove from the ready reserve persons who would not be immediately available for military service upon mobilization, such as those with critical civilian skills excess to the needs of the military, elective and appointive officials of the federal and state governments and reservists whose recall in time of emergency would create an extreme personal or community hardship. Priority in screening was given to combat veterans.

Those who were transferred to the stand-by reserve under the screening process would be subject to involuntary active duty only in time of war or national emergency declared by the congress, and then only when their availability had been determined by selective service.

During the second session of the 84th congress, one important modification of the Reserve Forces act of 1955 was legislated. Whereas the original act established \$50 per month as the rate of pay for young men while undergoing the six months of active duty training, the change enacted by congress put such young men in the same pay and allowance categories as other members of the service in the same grade. (J. A. N.)

Semenov, Nikolai N. (1896—), Russian chemist, was born at Saratov. He was awarded the 1956 Nobel prize in chemistry, jointly with Sir Cyril Hinshelwood (*q.v.*), for his work on the kinetics of chemical reactions. Semenov studied at St. Petersburg (later Leningrad) university and began his first scientific researches as early as 1912. He had long been known to chemists for his outstanding work on the mechanism of chemical transformations, and his book on *Chemical Kinetics and Chain Reactions* was published in English translation in 1935. Less well known is his work on the propagation of explosion waves, which appeared only in Russian. He is a member of the Soviet Academy of Sciences and director of the Institute of Chemical Physics in Moscow. Semenov was the first Soviet citizen to be awarded a Nobel prize.

Seventh-day Adventists. The major activities of this church during 1956, and its plans for the immediate future, are best revealed in certain actions of the annual autumn council held in Takoma Park, Md., the last week in October, as follows: to introduce a course in the theological seminary to orient prospective missionaries to the cultural and other distinctive features of mission lands; to offer

special residency training in the denomination's hospitals for medical missionary appointees; to provide financial aid for nationals of various lands who wish to become doctors and dentists; to create in Washington, D.C., a graduate school with university status; to set the date and place of the next quadrennial session for June 19 to 28, 1958, at Cleveland, O.; to change the evangelistic journal, *Signs of the Times*, from a weekly to a monthly; to expand the vacation Bible schools.

The budget voted at the autumn council for 1957 was \$22,823,758, or more than \$2,000,000 larger than that for 1956. This budget did not include the monies involved in the regular operating of the conferences in North America.

The overseas personnel present at the council brought reports of increasing difficulties confronting mission work in many lands where national religions, under the stimulus of political nationalism, were resurgent. The high light of overseas reports was one given by two European delegates who had just completed a rather extended trip to the U.S.S.R. Their illustrated report revealed that Adventist churches were intact and active, with the membership given a new measure of freedom to worship, though not to propagandize their religion.

The membership in the United States and Canada as of Sept. 30, 1956, was 298,181. This represented something less than 30% of the total world membership.

(See also CHURCH MEMBERSHIP.)

(F. D. N.)

Seychelles. This British colony and dependencies consist of 92 islands in the Indian ocean. Area: 156 sq. mi. (Mahé 55 sq. mi.). Pop.: (1947 census) 34,632, (1955 est.) 338,700; Negro, Creole, Indian, European, Chinese. Language: English; French Creole patois. Religion: Christian (about 66% Roman Catholic). Capital, Victoria (Mahé Island), pop. (1952 est.) 10,000. Governor in 1956, Sir William Addis.

History.—In March 1956 Archbishop Makarios III, deported from Cyprus, arrived to reside as an exile in the Seychelles. Two months later a Labour member of parliament, Eric Fletcher, urged the British government to inquire into allegations of persecution and discrimination against non-Roman Catholics. In July Fletcher caused an uproar in parliament with accusations against the chief justice of the Seychelles. Hopes of solving the islands' unemployment problem were raised later in the year by mention of the possibility of the establishment of a British naval base.

The duke of Edinburgh arrived in Seychelles on Oct. 19 for a visit, on his way to Australia to open the Olympic games.

(K. I.)

Education.—(1954) Government and mission schools: primary 32, junior secondary 2, secondary 2 (with primary departments), vocational 1; all pupils 5,740; all teachers (excluding private) 146, student and pupil teachers 70.

Finance and Trade.—Monetary unit: Seychelles rupee, equal to 1s. 6d. sterling and 21 cents U.S. Budget (1955 est.): revenue Rs. 3,977,419, expenditure Rs. 3,800,447.

Foreign Trade.—(1955) Imports £665,000, exports £468,000. Production (long tons, 1954): copra 6,471; cinnamon leaf oil 99; cinnamon bark 475; patchouli leaf (dry) 67; guano (including phosphate rock) 11,864; vanilla 11,370 kg.

Sheep: see LIVESTOCK.

Shepilov, Dmitri Trofimovich (1905-), Soviet politician, was born in the Don river region, Nov. 4. In 1926 he graduated from Moscow university, joined the Communist party and was appointed public prosecutor to the Yakut A.S.S.R. From 1931 he studied at the Agrarian Pedagogical institute and was an editor in the agricultural department of the *Bolshaya Sovetskaya Entsiklopedia*. He was appointed head of the political department of a state farm in the Chulym district, western Siberia, in 1933. In 1935 he moved to the Communist party headquarters in Moscow, starting as assistant head of the agricultural section. From 1937 he

headed the agricultural section of the Soviet Academy of Sciences, receiving the next year the rank of a professor of political economy.

During 1941-45 Shepilov served with the armed forces as a political instructor and commissar. In 1946 he was appointed head of the propaganda department of the Central Political administration of the armed forces of the U.S.S.R., and following that he returned to the party headquarters as deputy director of the "Agit-prop" (Agitation and Propaganda) department, becoming director in 1949. In 1950 and 1954 he was elected to the supreme soviet, and in Dec. 1952 he was appointed editor of *Pravda*, the chief party organ, having been elected a member of the party's central committee at the 19th congress in October. In July 1955 he was appointed one of the secretaries. At the 20th congress (Feb. 1956) he was re-elected to the central committee and was made a candidate member of the presidium (former Politburo).

On June 1, 1956, Shepilov's appointment as minister of foreign affairs was announced in Moscow. In August he represented the U.S.S.R. at the London conference on the Suez canal problem. In November he was in New York, attending the meetings of the UN general assembly.

Shipbuilding. The total world tonnage under construction or on order (of vessels of 1,000 gross tons or over) as of July 1, 1956, was about 70% above the July 1955 total. The figures shown in the table, released by the Shipbuilders Council of America, do not include construction in the U.S.S.R. or satellite countries.

The world shipbuilding gross tonnage of 21,612,409 was an increase of 9,015,875 gross tons over July 1955. Practically all countries increased the amount of tonnage under construction or on order. Only India and Ireland experienced slight decreases.

United States.—The total number of ships under construction had greatly increased, while the United States position in world shipbuilding had not materially changed. In each of several European shipyards there were more ships under construction than in all the shipyards of the United States.

On Jan. 1, 1956, 25 merchant vessels (1,000 gross tons and

"MAYFLOWER" REPLICA UNDER CONSTRUCTION at Brixham, Eng. An exact replica of the Pilgrim ship was being built in 1956 for a voyage across the Atlantic to the U.S. A crew of 21 men, in 17th-century period costume, would man the ship on its voyage. After arriving, the ship was to be given to the U.S. by Great Britain. The adzes being used to fashion the ribs of the hull in the photograph are replicas of the tools used in building the original ship

Total	2,041	21,612,409	100.0

over) aggregating 312,460 gross tons were on order, under construction or awaiting delivery in privately owned United States shipbuilding yards. This total consisted of 2 passenger-cargo vessels, 14 tankers, 4 cargo vessels, 2 ore carriers, 1 roll-on roll-off vessel, 1 passenger-auto ferry and 1 new cargo vessel undergoing conversion and completion as an auxiliary cargo attack vessel for the navy.

During the first nine months of 1956, contracts for 25 new vessels were awarded, comprising 1 ore carrier, 2 passenger-cargo vessels and 22 tankers, totalling 500,700 gross tons. During the same period six vessels were delivered. They included four tankers, one ore carrier, and one auxiliary cargo attack for the navy, totalling 86,642 gross tons, and during the same period, eight vessels were launched, consisting of one passenger-auto ferry and seven tankers, totalling 111,700 gross tons. In the same months of 1955 there had been three vessels launched and eight delivered. Of the 25 vessels ordered during 1956, 22 were tankers aggregating approximately 456,700 gross tons, all for private account except one being built for the Maritime administration. One ore carrier was being built for private account for service on the Great Lakes and the two combination passenger-cargo vessels were being built for Caribbean and South American service.

Bureau of labour statistics figures showed that there were 98,200 persons employed in construction and repair work in private U.S. shipyards as of Jan. 1955. In Jan. 1956 employment had increased to 98,900 and as of July had increased to 109,800. The average hourly earnings in the shipbuilding and repairing industry, according to the bureau of labour statistics, during June 1956, were \$2.22 as compared with \$2.09 in 1955. The average weekly hours worked also were more in 1956 than 1955, 40.2 compared with 39.8.

Because no new orders for seagoing commercial vessels were received during all of 1953, 7 during 1954 and 18 in 1955, plus 25 in the first nine months of 1956, the amount of new work had not been sufficient or had not arrived in time to provide continuity of work in the shipyards. The yards had maintained employment primarily because of the naval program of construction beginning in 1954. The contracts let by the navy department during the first nine months of 1956 totalled approximately \$260,000,000.

The fiscal 1957 navy construction program proposed the construction of 23 combat vessels, ranging in size from an attack aircraft carrier to destroyer escorts, as well as a great many small service craft.

Construction orders for nonpropelled craft, such as barges, scows and carfloats, during the first eight months of 1956 was reported at 409,965 gross tons, compared with 315,875 for the

same period of 1955. Construction of self-propelled small craft such as towboats, tugs and trawlers also increased from a total of 20,405 gross tons for the first eight months of 1955 to 34,145 gross tons for the first eight months of 1956. (H. G. S.)

Great Britain and Other Countries.—The major maritime disaster of 1956 was undoubtedly the collision in the Atlantic more than 100 mi. from New York of the Italian passenger liner "Andrea Doria" (29,083 tons gross) and the Swedish passenger liner "Stockholm" (12,165 tons gross), both built since World War II. The collision occurred in foggy conditions, although both ships were equipped with radar and had sighted each other on the radar screens at a distance of about 10 mi. Fortunately the loss of life (amounting to less than 50 persons) was comparatively small, and the Italian ship did not sink until about 11 hr. after the collision.

The spate of ordering of new ships throughout the world, which started in 1955, continued in 1956. The majority of the new orders, particularly those for large dry-cargo ships, ore carriers and very large tankers, went to Japanese, German, French, Scandinavian and Italian shipyards, and by the middle of 1956 it was estimated that the order book of the shipbuilding industry throughout the world had reached the unprecedented peacetime total of 23,000,000 tons deadweight, or about 16,000,000 tons gross. Although the majority of the new orders placed during the year went to shipyards outside the United Kingdom, and despite the fact that U.K. shipyards at the beginning of the year had enough orders to keep them fully occupied almost until 1960 at full capacity, orders placed with U.K. shipyards in the 12 months up to June 30, 1956, amounted to 2,560,000 tons gross, and the total U.K. order book at that date amounted to 5,242,000 tons gross. In the second half of the year British shipyards received orders for at least six large passenger liners totalling nearly 200,000 tons gross.

The pressure of demand for new tonnage enabled the less competitive countries to fill their order books to such an extent that they in their turn were unable any longer to offer the advantages of earlier delivery or fixed prices which at one time had put them in an advantageous position.

Japanese, and to a lesser extent German, shipyards were able to increase their output in 1956 to an exceptional extent. In the first six months of the year Japan had actually launched about 70,000 tons more and started work on about 265,000 tons gross more than the United Kingdom. U.K. shipyards, on the other hand, had been subjected to a series of prolonged labour disputes and strikes which held up work on some ships for as long as six months. They also experienced difficulties over steel supplies, which later also affected their main competitors.

All the principal passenger liners completed came from British shipyards. They included the Canadian Pacific liner "Empress of Britain" (25,516 tons gross), the Pacific Steam Navigation company's "Regina del Mar" (20,225 tons), the Cunard liner "Carinthia" (21,947 tons), the Norwegian liner "Bergensfjord" (18,739 tons)—which included the largest all-welded aluminum structure yet built, amounting to more than 400 tons in weight—and the British troopship "Nevasa" (20,527 tons). All these vessels were turbine steamships equipped with antirolling stabilizing fins. A Japanese shipyard controlled by U.S. interests launched the largest tanker in the world, the "Universe Leader," a vessel of 84,700 tons deadweight with an over-all length of 851 ft., a beam of 125 ft. and a draught of 46 ft. The largest tanker in service was the "Spyros Niarchos" (47,750 tons d.w.), completed in the spring by Vickers-Armstrongs, Ltd., who also launched a sister ship. A British shipyard (Cammell Laird) also completed the largest bauxite carrier in service, the "Leader" (33,000 tons d.w.), for a U.S. company although the completion of this ship was delayed for six months by a labour dispute.

Shipbuilding and engineering wages in the United Kingdom were advanced by about 8% and steel prices by about 5%. These increases resulted in an average increase in shipbuilding prices of about 11%. By comparison, however, with overseas yards, U.K. prices at the end of the year were still competitive.

(P. Dr.)

Shipping, Merchant Marine: see MERCHANT MARINE.

Shockley, William Bradford (1910–), U.S. physicist and co-winner of the 1956 Nobel prize in physics with John Bardeen and Walter H. Brattain (*qq.v.*). The prize was awarded to the trio for developing the transistor in the Bell Telephone laboratories at Murray Hill, N.J.; they shared a cash prize of \$38,633 announced by the Nobel committee at Stockholm, Swed., on Nov. 1, 1956.

Shockley, born at London, Eng., on Feb. 13, 1910, graduated from the California Institute of Technology in 1932 and took his Ph.D. from the Massachusetts Institute of Technology in 1936. In the latter year he joined the staff of the Bell laboratories, becoming director of the laboratories' transistor physics department in 1953.

During World War II he was a director of research in anti-submarine operations for the U.S. navy. In 1954 he became director of evaluation of weapons systems research for the U.S. department of defense.

The transistor, developed jointly by the team of Shockley, Bardeen and Brattain, is a tiny semiconductor, sturdy and efficient, that came to be widely used as a substitute for vacuum tubes in radio and television sets, automatic control devices, hearing aids, computing machines and numerous other applications. Shockley was the theorist and analyst of the group. The research that led to perfection of the transistor in 1948 was undertaken after the use of radar in World War II had demonstrated the need for a clearer and fuller understanding of the nature of semiconduction in electronics.

Shoe Industry. The year 1955 was the best production year in the history of the shoe industry. There were 576,973,000 pairs of shoes produced in the U.S. compared with 523,996,000 pairs in 1954. Shoe consumption paralleled output with an estimated 570,000,000 pairs sold in 1955.

Total production figures for Jan.–Aug. 1956 amounted to 402,709,000 pairs compared with 389,694,000 pairs in the same period of 1955. Retail sales appeared to be running 3% to 5% ahead of those for 1955.

New lasts, new constructions and techniques were used during 1956 to ensure better fit, flexibility, lighter weight and softness. Innovations included molded sole constructions that brought the shoe bottoms up over the foot, making them part of the uppers; sewing the uppers to a diamond-shaped, laminated and elasticized material to attain greater flexibility; ripple soles to cushion the feet while walking and "Spring-o-Lators" to keep the backless styles on the feet.

In women's shoe styles, silhouettes, leathers, colours and heel heights played important roles, and shoes-for-the-occasion accounted for additional consumption. The continental influence of the tapered toe and high sliver heels carried over from 1955 and moved down to the popular price range. By June 1956 there

was emphasis by fashion stylists and couturiers on the revival of the 1911–12 Poiret-period clothes with all their elegance, refinements, colours and luxurious materials, with women's shoes reflecting this influence. The silhouette was longer and narrower, heels were high and slim but there was also increased interest in the lower heights, especially the Louis-shaped heel. Closed shoes were gaining in favour, particularly in pump styles. T-straps, spat and gaiter types, reminiscent of pre-World War I days, were reintroduced in their modern counterparts. Tanners kept pace with the trend and produced leathers in finishes, textures and colours that gave impetus to these styles. Satins and brocades became popular for evening shoes.

For the first time in many years, the per capita consumption of men's shoes increased, and although the increase was slight, nevertheless it was encouraging to both manufacturers and retailers. Lighter weights, slimmer silhouettes, new leathers, colours and textures accounted for greater interest on the part of men customers and reflected in increased sales.

In children's shoes, the demand continued for styles resembling adult types such as pumps and one-strap shell silhouettes, more slender toes and slightly higher heels. Boys' shoes were lighter, trimmer and more restrained in detailing, with higher-riding top lines to ensure better fit.

Casuals in men's, women's and children's categories, as well as shoes-for-the-occasion, sport or leisure, were more popular than ever.

The United States continued to lead the world in production

Table II.—World Footwear Production
(In thousands of pairs)

	1952	Per capita 1952	1954	Per capita 1954	1955	Per capita 1955
North America . . .	572,814	2.60	603,815	2.77	661,367	2.84
South America . . .	71,447	.62	75,742	.65	109,774	.90
Europe	498,081	.86	502,368	1.01	546,723	1.36
Asia and Oceania . .	100,258	.07	98,171	.06	130,984	.09
Africa	36,107	.36	37,814	.41	38,310	.42
Total	1,278,707	.57	1,317,910	.60	1,487,158	.68

of leather footwear, and from 1950 accounted for almost 40% of world shoe production.
(E. G. AN.)

Shooting. The 57th Grand American tournament was held at Vandalia, O., Aug. 17–25, 1956. The big prize of the event, the Grand American handicap, was awarded to C. W. Brown of Dayton, O., who won it in a shoot-off after tying Paul Baker of Brookville, O., and Durwood L. Baumgartner of Gallipolis, O., at 99. In the shoot-off, Brown broke 23 of 25 targets, Baker scored 22x25 and Baumgartner had 18x25. Mrs. Rhoda Wolf of Philadelphia, Pa., took the ladies' Grand American handicap with 97x100. Mrs. A. Wayda of Bensenville, Ill., was second with 95x100. Jon Cottrell of Wilmington, Del., won the junior trophy in a shoot-off with John E. Harris III of Canton, O., and Mike Lindsey, Champaign, Ill., after a three-way tie at 94. G. Williamson, Jr., of Compton, Calif., broke 93 to lead the subjunior division and Tom Frye of Maumee, O., beat A. L. Adkins of Louisville, Ky., 23–21, in a shoot-off for the professional honours after each had finished with 94. Other major winners follow:

Preliminary Handicap

Men—Shelby Edwards, Central City, Ky.
Women—Mrs. Julie Deckert, Nashotah, Wis.
Professional—A. L. Adkins, Louisville, Ky.

North American Clay Target

Men—Dan Orlich, Reno, Nev.
Women—Iva Pembroke, Phillipsburg, Kan.
Professional—Cliff Doughman, Alton, Ill.

Champion of Champions

Men—George Genereux, Saskatchewan.
Women—Mrs. Pauline Oliver, Lubbock, Tex.
Veterans—E. T. Daniell, Idalou Falls, Tex.
Women's veterans—Mrs. Gail A. Roose, Salem, O.

Table I.—Shoe Production in the United States

Pairs	1955	Jan.–Aug. 1956
Women's shoes	278,132,000	197,073,000
Men's shoes	106,107,000	75,346,000
Misses' and children's shoes	68,487,000	48,087,000
Boys' and youths' shoes	20,971,000	14,350,000
Infants' and babies' shoes	36,615,000	24,869,000
All other shoes	66,661,000	42,984,000
Total	576,973,000	402,709,000

CAMERA CONSCIOUS DOG could not resist a glance at a photographer even while chasing his quarry during the 1956 Open All-Age stake field trials at Pinehurst, N.C. The dog at the left, intent upon his business, won the stake

High Over-all

Men—Joe Hiestand, Hillsboro, O.
Women—Iva Pembridge
Junior—George Williamson, Jr., Compton, Calif.
Professional—Tom Frye, Maumee, O.

Doubles

Men—Ned Lilly, Stanton, Mich.
Women—Mrs. Pauline Oliver
Professional—Homer Clark, Jr., Alton, Ill.

All-Around

Men—Dan Orlich
Women—Iva Pembridge

Subsmall gauge—E. C. Calhoun, Salisbury, Md.
Veterans' all gauge—A. C. Weaver, Seattle, Wash.
Senior all gauge—Carl Stutzman, Peoria, Ill.
Champion of champions all gauge—K. L. Pendergras, Jacksonville, Fla.
Collegiate all gauge—Jack Horner
Industry all gauge and all around—Fred Missildine, Sea Island, Ga.
Two-man all gauge—Jack Horner and Judy Allen, Oakland, Calif.
Husband-wife all gauge—Mr. and Mrs. Leon Mandel, Chicago
Women's all around, all gauge and 20 gauge—Mrs. Mandel
Women's small gauge—Judy Allen

Rifle and Pistol Shooting.—Competition for United States laurels with both weapons was held at Camp Perry, O., in August and September. Among the pistol winners was Master Sergeant Huelet Benner, coach at the U.S. Military academy, West Point, N.Y., who scored 2,610 out of a possible 2,700 to win his fifth national title. In the team rifle contests, the marine corps had four units finish among the first five; the army gained third place. Other major winners were:

Marine corps, individual trophy—Staff Sergeant V. Mitchell, Santa Paula, Calif.
Marine corps, Leach cup—Warrant Officer C. Gebhardt, Santa Rosa, Calif.
U.S. army sporting rifle—Sergeant L. Crow, Carrollton, Mass.
Small bore—J. K. Johnson, Washington, Pa.

(T. V. H.)

Shows. This article covers horse and dog shows, livestock exhibitions and such travelling shows as circuses, carnivals, ice skating revues and rodeos. For musical and dramatic events of 1956, see the articles DANCE; MOTION PICTURES; MUSIC; and THEATRE. (See also FAIRS AND EXHIBITIONS.)

Horse Shows.—The two leading horse shows of 1956 in the United States were the International Horse show, daily entertainment feature of the International Live Stock Exposition and Horse show in Chicago, Ill., Nov. 23–Dec. 1, and the American Royal Livestock and Horse show in Kansas City, Mo., Oct. 20–27. Both are regarded as outstanding events in the quality and number of gaited horses, harness horses and ponies, and hunters and jumpers. New and more hazardous jumping courses featured at the Chicago show were praised by participants and followers of this old and spectacular sport.

Quarter horses, rapidly gaining in popularity for pleasure purposes, were emphasized at the National Western Stock show in Denver, Colo., Jan. 13–21, 1956; at the Southwestern Exposition and Fat Stock show in Ft. Worth, Tex., Jan. 27–Feb. 5; and at the International Dairy show in Chicago, Oct. 6–13.

The Kentucky State fair is perennially one of the leading saddle horse shows in the U.S. It was held in 1956 for the first time at the new Kentucky State fair grounds at Louisville. Large competitions of hunters and jumpers were featured at the National Horse show in Madison Square Garden, New York city, Oct. 30–Nov. 6, and at the Royal Agricultural Winter fair, Nov. 9–17 in Toronto, Ont.

National Amateur Trapshooting.—Walt Ostrom of Orangeburg, N.Y., won the national singles championship in the 1956 tourney at the Travers Island, N.Y., traps of the New York Athletic club. Ostrom triumphed by breaking 75 consecutive targets in the third extra round after finishing the regulation 200-target test in a triple tie with Harry Whitford, Mountain View, N.J., and Clarence Ziegler, Vernfield, Pa., at 198. In the first shoot-off (25), each had a perfect round. Whitford missed on his 37th shot as Ostrom and Ziegler completed their second 25 shots without error. Ziegler was wide of his 51st disk and Ostrom ran out his string to win. Other champions included Nick Egan, Flushing, N.Y., junior; J. J. McHale, Sr., London, Ont., senior; Mrs. Ken Hard, Brookhaven, N.Y., women; Harry Whitford, handicap; Roy Cole, Hamilton, Ont., men's over-all; M. D. Clark, Woodbury, Conn., doubles; W. J. Oliver and Tom Oliver, Niagara Falls, N.Y., immediate family pairs.

National Skeet Shooting.—Mrs. Leon Mandel of Chicago, Ill., set a women's world mark at Detroit, Mich., on May 20 when she knocked down 150 targets with a 12-gauge shotgun for a string of 529 hits without a miss. She later added to her perfect shooting to bring the record up to 610. In January Mrs. Mandel had been named winner of the National Skeet Shooting association's four-gun award to women for 1955, when she broke 3,924 of 4,000 targets. In the national championships at Reno, Nev., in August, Jack Horner, a sophomore at the University of California, Berkeley, won open all-bore honours by breaking 425 targets in succession. At the end of the regular event the former junior champion was tied with Titus H. Harris, Jr., Galveston, Tex., and Andy Laird, Stockton, Calif., at 250x250. The trio continued even through two shoot-offs, then Laird dropped the low 8 target while Harris and Horner continued until the seventh round before Harris missed on his first try. Among other major national victors were the following:

All-around—Titus H. Harris, Jr., Galveston, Tex.
Western open—Jack Horner, San Francisco, Calif.
Eastern open—Jack Horner
20 gauge—Louis Gordon, Texarkana, Ark.
Small gauge—C. J. Crites, Detroit, Mich.

Other prominent horse shows of the year were featured at the Harrisburg, Pa., show; the Devon Horse show, Devon, Pa.; and those held at the Indiana, Illinois, Minnesota, Missouri, Ohio and Wisconsin state fairs.

Livestock Shows.—The National Western Stock show at Denver, Jan. 13–21, was the first of the country's annual livestock shows in 1956. It included the nation's largest exhibition and sale of Hereford cattle and quarter horses.

The Southwestern Exposition and Fat Stock show at Ft. Worth followed shortly thereafter, Jan. 27–Feb. 5. The Ft. Worth show featured a large exhibition of pure-bred Brahman cattle, a breed gaining rapidly in popularity in the south and southwest for crossing purposes with the English beef breeds. This show also included large showings of the English beef breeds—Aberdeen-Angus, Herefords and Shorthorns. It is the country's oldest livestock exhibition.

The Houston Fat Stock show, Feb. 22–March 4, was also a major competition of the established beef breeds, as well as Brahmans. Both the Ft. Worth show and that at Houston featured championship rodeos as daily entertainment.

Major livestock competitions were prominent features at the midwest state fairs, starting in mid-August. They were preceded by county fairs during July and early August. Winners of county fairs usually go on for further competition at the state fairs. Among the largest livestock exhibitions of 1956 were those of the Illinois, Indiana, Ohio, Iowa, Missouri, Minnesota and Wisconsin state fairs.

Largest in point of attendance, varied features and area is the state fair of Texas at Dallas, which in 1956 was held Oct. 6–21. This event attracted many Latin-American visitors.

The dairy breeds were high lighted at the National Dairy Cattle congress at Waterloo, Ia., Sept. 29–Oct. 6, and the week following, Oct. 6–13, at the fourth annual International Dairy show in Chicago's International Amphitheatre. The Chicago show revived the long-established National Dairy show that was first held there in 1906 and continued up to 1920, after which it became an itinerant event held in many different cities. The 1956 International Dairy show attracted the year's largest total showing of the dairy breeds and included the national show of Jerseys. Considerable Canadian participation made it international in scope as well as in name. A championship rodeo was a daily entertainment feature.

Earliest of a series of livestock exhibitions, which follow soon after the state fairs, was the Eastern States exposition, in Springfield, Mass., Sept. 15–23. It is New England's largest annual farm show and is particularly strong in its exhibitions of dairy cattle.

The Ak-Sar-Ben Livestock show in Omaha, Neb., Sept. 21–30, featured beef breeds and rodeo entertainment, as did the Grand National Live Stock exposition in San Francisco's Cow Palace, Nov. 2–11.

An eastern show of growing importance was the Eastern National Live Stock show at Timonium, Md., which was held Nov. 10–16. It emphasized displays of pure-bred Aberdeen-Angus and Hereford cattle, exhibited by eastern breeders.

The American Royal Livestock and Horse show was held in Kansas City, Oct. 20–27. It is one of the country's longest-

established livestock events and ranks as a major exhibition of the beef breeds. Its horse show is among the nation's foremost.

The show year was brought to a close at Chicago with the International Live Stock Exposition and Horse show, which exceeded all other shows of the year in number of livestock entries. The 57th annual show was held Nov. 23–Dec. 1. It occupied the International Amphitheatre, whose newly expanded facilities made it the nation's largest exhibition building used for livestock exhibits and competitions. The International Horse show is regarded as the country's finest.

The Chicago Stock Yards was the setting of the largest feeder cattle show and sale of the year, Oct. 25–27, when the 12th annual Chicago Feeder Cattle show and sale attracted a record entry of 826 carloads (20 animals to the car) of western-produced calves, yearlings and two-year-olds. These were sold at auction to corn-belt and eastern feeders for \$1,585,669 to convert into finished fat cattle for the 1957 markets.

The two principal livestock exhibitions of Canada are the Royal Agricultural Winter fair, held in 1956 during Nov. 9–17, and the Canadian National exhibition, held Aug. 24–Sept. 8, both in Toronto. The winter fair is among the world's leading exhibitions of pure-bred livestock and farm products.

The historic Smithfield show was held in London, Eng., in early Dec. 1956. It is more than a century old and features meat-animal competition.

The oldest-established stock show in the world is the Highland show of Scotland. Its 117th anniversary showing took place in June 1956, followed by the 108th annual British Royal show in early July under sponsorship of the Royal Agricultural society. (W. E. O.)

Dog Shows.—The high level of dog show activity which had characterized this field of sports during the several preceding years continued during 1956. The number of shows for championship points totalled 725, 1 more than in 1955, but a considerable increase as compared with the 688 of 1954. Of the 1956 events, 406 were for all breeds and the remaining 319 were specialty or one breed shows.

For the first time in the history of the Westminster Kennel club, New York city, the nation's oldest show-giving dog club, a dog of the toy breed won top honours—Mrs. Bertha Smith's 6-lb. white toy poodle Champion Wilber White Swan; there were 2,560 dogs entered.

Winners in the next four largest shows, in order, were: Madi-

LAST PERFORMANCE of the Ringling Bros. and Barnum & Bailey circus under the "big top" tent at Pittsburgh, Pa., in July 1956. In the future the circus would appear only indoors at large U.S. cities

son, N.J. (Morris & Essex), 2,304 dogs—Mrs. S. K. Allman's Dalmatian Champion Roadcoach Roadster; International Kennel club, Chicago, Ill., 2,191 dogs—Mrs. Jouett Shouse's boxer Champion Barrage of Quality Hill; Westchester Kennel club show, Purchase, N.Y., 2,117 dogs—Jack H. Skelskie's six-year-old Irish setter Champion Dunguaire Bryson; Pacific Coast, Harbor Cities Kennel club, Long Beach, Calif., 1,856 dogs—Mrs. Kay Finch's Champion Crown Crest Zardonx.

Field trials continued to hold their popularity. Official national champions were as follows: bird dogs (setters, pointers)—James Hinton's male pointer Palamonium, Grand Junction, Tenn., trial; cocker spaniel—Tom Clute's buff American cocker Prince Tom III; Brittany spaniels—Leroy Magnuson's Jeffrey of Argard; Springer spaniels—Armforth Kennels' Micklewood Scud; retrievers—Wm. T. Cline's Labrador Massie's Sassy Boots.

Obedience trials in competition for the degrees of companion dog, companion dog excellent, utility dog and trailing dog numbered approximately 400. There were several perfect performances of 200 score.

Popularity of breeds during 1956 as indicated by registrations in the stud book of the American Kennel club, 113 breeds, were, approximately in order: beagle, leader for the last four years; Chihuahua, the diminutive Mexican toy breed; boxer; dachshund; German shepherd dog; American cocker spaniel; poodle; collie. These were followed closely by the Boston terrier, Pekingese, Pomeranian, fox terrier, Labrador and Weimaraner.

(W. JU.)

Circuses, Carnivals, Rodeos and Other Travelling Shows.—For outdoor shows in general, 1956 was a highly successful year, except for circuses. Four prominent circuses, headed by the huge Ringling Bros. and Barnum & Bailey circus, suspended operations in mid-season. Union trouble developed for the Ringling Bros. and Barnum & Bailey show when John Ringling North, who controlled 51% of the stock, refused to unionize the circus performers. The American Guild of Variety Artists posted pickets at every stand. The show closed in Pittsburgh, Pa., and North announced that "the tented circus is through" and that in 1957 the show would play only in buildings. Three circuses—King Bros., Clyde Beatty and Arnold Maley—went bankrupt and closed halfway through the season.

The Clyde Beatty show was reorganized and reopened in Arizona on Aug. 30, after which it played to large crowds for the remainder of the season. Approximately 25 circuses travelling by truck had an excellent season, refuting the charge that the tented circus was dead.

Four small circuses in Mexico enjoyed profitable business. They were Circus Union, Circo Vasquez, Circo National and Osario Circus. One show, Circo Muerte, had poor business.

In Europe, most circuses, nearly all of which travelled by truck, had a good season.

Carnivals, of which there were more than 250 on the road in 1956, had a generally profitable season. Dates at state and county fairs accounted for their biggest weeks and overcame losses suffered in early spring because of unfavourable weather. Only eight carnivals were railroad shows; the others travelled by trucks. Topping all others in size and receipts, as it had for many years, was the Royal American shows, which played the larger western Canada exhibitions and leading state fairs of the U.S. midwest and south.

In terms of operating units, the Gooding shows topped all others, with ten separate shows operating in the central and southern states. The Gooding firm was the oldest carnival organization in America, having been organized about 75 years.

Rodeos increased in number. More than 250 were held in 1956, most of them one-day affairs but many running four or five days or longer. The well-known Cheyenne (Wyo.) Frontier days drew

an attendance of 125,000 in seven days and brought an estimated \$3,000,000 to Cheyenne. The Diamond Spur rodeo, in Spokane, Wash., drew 44,000 in four performances, with Gene Autry and Gail (Annie Oakley) Davis as feature attractions. Rodeos were concentrated in the western and southwestern states. Early listings in the *Billboard* gave Oregon the lead with 23 rodeos, followed by California with 22, Idaho 15, Colorado 14, Texas 14, Oklahoma 10, Montana 7, Utah, Nebraska and Kansas 6 each, Wyoming and New Mexico 5 each and 11 other states 1 to 4 each. The World's Championship rodeo in New York city and the International rodeo in Chicago, Ill., both held in late fall, drew large crowds. The Lone Star Ranch rodeo, organized in Houston, Tex., by Bob Estes, made a European tour early in 1956, opening at the Palais des Sports, outside Paris, then playing other French locations for 12 weeks and four one-week dates in Spanish bull rings. The show was a novelty to Europeans and was very successful.

"Hillbilly" shows on the road continued to increase. Most of them featured stars made famous on radio stations in Chicago, Nashville, Cincinnati and Louisville. The drawing power of these travelling shows was exceptionally strong at state and county fairs, and was credited to the desire of radio listeners to see their favourites in person.

Auto thrill shows and auto racing continued to be popular. The main thrill show events continued to be auto crashes, roll-overs and crashes through flaming walls. Earl Newberry's Trans-World Daredevils, one of the largest shows, made a successful tour of Europe early in the year before starting its accustomed U.S. tour. About six auto racing outfits were on the road and were a standard attraction at the larger fairs.

(NA. G.)

Siam: see THAILAND.

Sierra Leone. A British colony and protectorate on the west coast of Africa, Sierra Leone is bounded north and east by French Guinea and southeast by Liberia. Area: colony 269 sq.mi.; protectorate 27,657 sq.mi. Pop. (1948): colony, 124,657; protectorate, 1,733,618; total (1955 est.) 2,050,000. Language: tribal dialects, Hausa. Religion: protectorate, pagan with Moslem minority; colony, mainly Christian. Chief towns (pop., 1952 est.): Freetown (cap.), 64,500; Bo, 15,600. Governors in 1956: Sir Robert Hall and (from July 11) Maurice Dorman; chief minister, M. A. S. Margai.

History.—It was announced in Oct. 1956 that constitutional changes would be introduced incorporating a broader franchise. The legislature would be called the house of representatives and would have 14 elected members from the colony, 24 from the protectorate and 1 from the Bo urban area, as well as 12 paramount chiefs. The ex-officio members would be reduced from 7 to 4, the number of nominated members remaining at 2. These changes, after approval by the secretary of state for the colonies, were passed by the legislative council by a substantial majority. Elections were expected to take place early in 1957.

Between Oct. 1955 and March 1956 serious disturbances occurred, mainly in the northern province, following the announcement of increases in the level of local authority taxation for 1956. A commission of inquiry was appointed under Sir Herbert Cox, whose report was published at the end of September.

Licensed African digging for alluvial diamonds began in Feb. 1956. In September the government stated that since the new scheme had not completely stopped illegal dealing, the issue of a licence to a dealer would in future take into account the value of diamonds he had sold to a licensed exporter in August. The Sierra Leone Development company was to make a further geological investigation at Tonkolili before beginning a £15,000,000 development project there.

On July 11 Maurice Dorman was appointed governor in succession to Sir Robert Hall, who had resigned because of ill health. (W. H. Is.)

Education.—Schools (1954): primary 323, pupils 42,900; secondary 14, pupils 4,369; teachers' training colleges 5, students 458.
Finance and Trade.—Monetary unit: West African pound (£W.A.1=£1 sterling=U.S. \$2.80). Budget (1954-55): revenue £7,621,299, expenditure £6,863,115. Foreign trade (1955): imports £17,170,000, exports £10,300,000. Main exports: palm kernels, iron ore, diamonds, ginger.

Sikkim. An Indian-protected state, Sikkim is bounded north by Tibet, east by Bhutan, south by India and west by Nepal. Area: 2,744 sq.mi. Pop. (1951 census): 137,725, mostly Nepalese (Gurkha) but including Bhotias of Tibetan extraction (about 9%) and Lepchas or Rongpa (about 10%) of Indochinese origin. State religion: Lamaistic Buddhism, but most of the Nepalese are Hindu. Capital, Gangtok. Maharaja, Tashi Namgyal. Dewan (chief minister) in 1956, J. S. Lall.

History.—On May 9, 1956, at the Indian *lok sabha* (national assembly), Jawaharlal Nehru was asked to define the relationship between India and Sikkim. He said that to describe Sikkim as an Indian "protectorate" was misleading. That word from the past had changed in its connotation, meaning and application. Nehru added that he was not aware that any Indian was suffering from any sort of disabilities, civil or otherwise. Sadath Ali Khan, parliamentary secretary in the Indian ministry of external affairs, explained that the status of Indians in Sikkim and Sikkimese in India would be adequately protected when the Sikkim durbar promulgated a Sikkim Subjects Regulation act, which was under consideration.

Finance.—Budget (1951 est.): balanced at Rs. 2,100,000 including the fixed annual subsidy of Rs. 300,000 from India. Monetary unit = Indian rupee, valued in 1955 at 21 U.S. cents.

Silk. The production and consumption of silk in most countries of record in the world was greater in 1956 than in 1955. Significant developments in the United States, the second largest consumer, were the increased usage of douppioni, with its thick and thin effects, in both filament and spun yarns; the continued use of 30/32 and 40/44 deniers for warp stock; the broader employment of silk fibres along with wool, cotton and synthetic fibres, especially in men's wear.

During the year there was active international co-operation in the promotion of silk. In March Japan sponsored a Tokyo meeting of the International Silk association; in September the association's directors meeting in London discussed economic and technical matters, and decided on New York as the site of the Sixth International Silk congress in Oct. 1957.

Japan's Raw Silk Stabilization law successfully functioned to prevent prices from declining below the "floor" of 190,000 yen (about \$4.10) per pound by government purchases at that level; Custody corporation, a nongovernmental Japanese organization, bought silk at higher than government levels and resold to original owners within six months on market advances, reducing fluctuations; another organization provided loans for buyers of raw silk delivered on the silk exchange. New York prices ranged for 2A 20/22 warp stock from \$4.75 to \$4.25 per pound, and for 2200/250 douppioni from \$4.30 to \$3.75.

In Japan, the major producer and consumer, the cocoon crop was about 6% less than in the previous year, whereas the consumption was about 25% greater at 248,580 bales (based on nine months' figures).

Exports of Raw Silk and Douppioni from Japan
(In bales of 132 lb.)

Year	U.S.	France	Italy	Switzerland	Great Britain
1956*	62,606	8,030	6,180	1,192	2,894
1955	54,536	12,389	3,962	2,384	3180
1954	48,067	9,196	1,435	1,647	5,006

* 1956 estimated on nine months' figures. Some European countries incompletely reported.
 Sources: Central Raw Silk Association of Japan; Japan Statistical Monthly.

Japan's export of silk and silk-mixed fabrics increased about 37%, and waste silk, including all types of silk fibres, increased about 30% over 1955. South Korean douppioni use in the U.S. increased, and Italy used more Japan douppioni. China raw silk and fabrics were still prohibited by the U.S. government from entering the U.S., but pongee fabrics made from tussah silk were permitted to enter under strict control of country of origin of fabric, such as Japan; spun tussah yarn was permitted, but tussah waste silk was denied entry into U.S.

(D. D. LD.)

Silver. More than a dozen countries contributed to the 1955 total world output, but most of it was produced by six countries. Table I gives data supplied by the U.S. bureau of mines.

Table I.—World Silver Production
(in 000,000 fine ounces, smelter output)

	1949	1950	1951	1952	1953	1954	1955
United States . . .	34.94	42.31	39.91	39.84	37.74	35.58	36.47

United States.—Second in world output, the United States produced 36,734,565 oz. or 1% less silver in 1955 than in 1954, principally because of strikes at several base-metal mines. Idaho (by far the largest producing state), Utah, Montana and Arizona supplied 84% of the total output. In the first six months of 1956 output of silver was 18,748,937 oz.

Table II.—Silver Industry in the United States
(in 000 fine ounces or of dollars)

	1950	1951	1952	1954	1955

Net consumption . .	110,000	105,000	106,000	86,000	79,265

Canada.—In the first seven months of 1956, output of silver totalled 15,653,914 oz.

Mexico.—Output of silver by the world's leading producer in the first eight months of 1956 was 28,900,000 oz. Effective Jan. 1, 1956, the Mexican congress issued a new decree which lowered the production tax on silver. (F. E. H.; B. B. M.)

Singapore. Singapore is a British island colony off the southern end of the Malay peninsula, with Christmas Island dependency in the Indian ocean. Area: Singapore and adjacent islets 224.5 sq.mi.; Christmas Island 62 sq.mi. Pop.: Singapore Island (1947 census) 938,144, (June 1955 est.) 1,210,534, including 76% Chinese, 12% Malays, 8% Indians; Christmas Island (1947 census) 866, (1955 est.) 2,054. Capital, Singapore city, pop. (1955) 862,222. Governor: Sir Robert Black. Chief ministers in 1956: David Marshall and (from June 8) Lim Yew Hock.

The U.K. commissioner-general in southeast Asia, with responsibility for the co-ordination of policy in Malaya, Singapore, Sarawak, North Borneo and Brunei, has his headquarters in Singapore. Commissioner-general in 1956: Sir Robert Scott.

History.—Talks on a future constitution for Singapore were held in London, Eng., during April 23-May 15, 1956. The Singapore all-party delegation was led by David Marshall, the chief

minister. A. T. Lennox-Boyd, secretary of state for the colonies, headed the colonial office delegation. Although the British government was willing to concede a constitution which granted Singapore full internal self-government, with control only of external affairs and defense reserved to the crown, disagreement arose and the talks broke down over the measure of control of internal security which would follow the reservation of these powers. After the return of the delegation to Singapore, Marshall resigned and was succeeded (June 8) as chief minister by Lim Yew Hock.

There was during 1956 a steady and planned increase of activity by communist front organizations led by members of the People's Action party and various trade unions. Prominent among these was the Singapore Chinese Middle Schools Student's union, the majority of whose members were over-age. When the government ordered the dissolution of this union on account of its subversive activities, the students ordered a stay-in-strike, and when the schools were cleared by the police rioting broke out. The riots lasted three days; military assistance was called in, and casualties numbered 13 dead and about 140 injured. More than 500 arrests were made. (G. G. TN.)

Education.—(1954) Registered schools (government maintained, aided and private) 563, teachers 6,307. Pupils: primary 156,762; secondary 21,196 (including 2 junior technical schools, pupils 356, teachers 34). 1 government teachers' training college and several centres and courses; teachers in training 1,723. University of Malaya (Oct. 1954): students 1,043, teaching staff 161.

Finance.—Monetary unit: Malayan dollar, equal to 2s. 4d. sterling and Mal. \$3.053 to 3.077=U.S. \$1. Budget (1955 actual): revenue £24,091,000; expenditure £27,926,000. Foreign trade (1955): imports Mal. \$2,865,436.208; exports Mal. \$2,781,798,833 (excluding trade with the Federation

of Malaya). Main source of imports (1954): Indonesia 34.1%; U.K. and commonwealth 22.7%. Main destination of exports: Europe 19.0%; U.K. and commonwealth 28.5%. Main exports (1955): rubber 526,300 tons; tin 33,332 tons.

Shipping.—(1955) Vessels entered 18,305 (including 8,981 foreign trade ships of more than 75 tons); total tonnage 51,290,000 net; cargo handled (1955) 6,025,980 freight tons loaded; 10,433,420 freight tons unloaded.

ENCYCLOPÆDIA BRITANNICA FILMS.—Singapore (1955).

Skating: see ICE SKATING.

Skiing. Billy Woods, a 17-year-old skier from Manchester Center, Vt., won the national downhill and Alpine combined titles in the 1955-56 season. Competing in the championships at Squaw Valley, Calif., site of the 1960 Olympic winter games, on April 6-8, 1956, Woods sped down the course of 1 $\frac{7}{8}$ mi. in 1 min. 53.3 sec. Second was Redmond Wilcox of Norwich university (Northfield, Vt.), who was clocked in 1 min. 57.2 sec. Another teen-age skier, Katherine (Renie) Cox, 17, of Port Leyden, N.Y., was victor in the women's downhill and Alpine combined. As the Ridge Ski club entry, Miss Cox made the run down the 1 $\frac{3}{4}$ -mi. course in 2 min. 0.1 sec. Sally Deaver of Whitmarsh, Pa., placed second with a time of 2 min. 0.4 sec. Victors in the giant slalom at Squaw Valley were Thomas Corcoran of Westfield, N.J., and Sally Deaver. Corcoran was clocked in 2 min. 3.3 sec. for the twisting run down a 1,500-ft. slope. Billy Woods was second in 2 min. 7.1 sec. Nonie Foley of Sun Valley, Ida., was runner-up to Miss Deaver in 2 min. 21 sec.

Keith Zuehlke of Eau Claire, Wis., leaped 201 and 200 ft. for 220 points to win the national Class A jumping laurels at Westby, Wis., on Jan. 22, 1956. A crowd of 10,000 persons saw Zuehlke win after close competition with Wilbert Rasmussen of Ishpeming, Mich. Rasmussen leaped 195 and 191 ft. for 215.9 points. The Class B winner was Jerry Lewis of Duluth, Minn.

Mack Miller of the U.S. army, whose home is at McCall, Ida., won the national cross-country title and qualified for an Olympic berth at Spout Springs, Ore., on Dec. 31, 1955. A field of 26 competed. I. Vincelette of Highland Falls, N.Y., was the Class B winner.

The absence of many skiers abroad for the Olympic winter sports caused a number of major United States and North American events to be cancelled in 1956. A list of some of the important title winners for the season follows:

United States

Jumping—Keith Zuehlke, Eau Claire, Wis.
Downhill—Billy Woods, Manchester Center, Vt.
Slalom—Thomas Corcoran, Westfield, N.J.
Giant slalom—Thomas Corcoran
Alpine combined—Billy Woods
18-km. cross-country—Mack Miller, U.S. army
Women's slalom—Sally Deaver, Whitmarsh, Pa.
Women's giant slalom—Sally Deaver
Women's downhill—Katherine (Renie) Cox, Port Leyden, N.Y.
Women's Alpine combined—Katherine (Renie) Cox

U.S. Intercollegiate

Jumping—Billy Olson, Denver, Colo.
Downhill—Walter Taulbee, University of Washington
Slalom—Chiharu Igaya, Dartmouth
Cross-country—Erik Berggren, Idaho
Alpine combined—Chiharu Igaya
Nordic combined—Erik Berggren
Jumping team—Denver
Downhill team—Dartmouth
Slalom team—Denver
Cross-country team—Western (Colo.) State
Alpine team—Denver
Nordic team—Idaho
Over-all team—Denver

"FREEDOM RALLY" at Kallang airport, Singapore, in 1956. A group seeking independence of the British colony turned the gathering into a riot

Smithsonian Institution. This institution, located on the Mall in Washington, D.C., was established in 1846 through a bequest from James Smithson, an English scientist. It is governed by a board of regents, composed of the vice-president of the United States, the chief justice of the United States, three senators, three representatives and six citizens from various parts of the country. The executive officer is the secretary, who in 1956 was Leonard Carmichael. The institution has ten branches: United States National museum, Bureau of American Ethnology, Astrophysical observatory, National Collection of Fine Arts, Freer Gallery of Art, National Air museum, National Zoological park, Canal Zone Biological area, International Exchange service and National Gallery of Art (with separate board of trustees).

Plans were under way in 1956 for the new \$36,000,000 Museum of History and Technology of the Smithsonian, authorized by congress the previous year. The tentative schedule called for the completion of the building by 1960 or 1961. It would be located in Washington's Mall area between 12th and 14th Streets on Constitution avenue.

During 1956 the institution continued its scientific investigations, chiefly in the fields of anthropology, astrophysics, biology and geology. Several field expeditions were in progress in the interests of these researches, resulting in much new information and in large collections of valuable specimens.

The National museum collections were increased by slightly more than 900,000 specimens during the year, bringing the total catalogue entries to 43,756,010. The exhibits-modernization program was successfully continued, and the new Bird hall was opened to the public. Members of the museum staff conducted field work in Peru, Europe, Canada, Palau archipelago, Libya, the West Indies, Panamá and many parts of the United States.

The National Gallery of Art received 477 accessions. It held 10 special exhibits. John Walker was appointed the new director of the gallery, succeeding David E. Finley, who reached retirement age. The National Collection of Fine Arts sponsored 13 special exhibits, and its travelling exhibition service circulated 68 exhibitions, chiefly in the United States. The Freer Gallery of Art acquired many choice specimens of oriental art. During 1956 the Freer gallery celebrated the centennial of the birth of its founder, Charles Lang Freer, and awarded the first Charles Lang Freer medal to Osvald Sirén, of Stockholm, Swed.

Anthropologists on the staff of the Bureau of American Ethnology continued their researches, particularly on Panaman, Mexican and arctic archaeology. The River Basin Surveys unit continued its archaeological work at sites threatened by dam and reservoir construction, particularly in the Missouri valley.

The Smithsonian Astrophysical observatory moved its scientific headquarters to Cambridge, Mass. Broadened research programs of this agency under its new director, Fred L. Whipple, included not only strictly solar research but also meteoritic studies and studies of the higher atmosphere. The observatory also participated in Project "Moonwatch," the satellite tracking program of the International Geophysical year. The division of radiation and organisms continued its research on the role of light in regulating growth in higher plants.

The National Air museum received many valuable accessions, including the first Pitcairn autogiro constructed in the U.S., a Stearman-Hammond aeroplane of the 1930s, the Curtiss Robin monoplane "Ole Miss," an original amphibious aircraft of 1909-12 and a Bell P-39 Airacobra.

The National Zoological park acquired 1,710 individual animals during the year, among which were a pair of European wisents, a rare dwarf Bolivian armadillo, an olingo from Colombia, gelada baboons and a Guianan crested eagle. In all, 252 creatures were born or hatched at the zoo during the year.

"FIFTY YEARS OF DANISH SILVER," a travelling exhibit of the Smithsonian institution in 1956. The exhibit was designed by Finn Juhl

The international exchange service handled 1,161,855 packages (weighing about 800,000 lb.) of scientific and governmental publications, serving as the United States agency for the interchange of such material with other countries.

At the Canal Zone Biological area, Barro Colorado Island, Panamá, Carl B. Koford was appointed the new resident manager, succeeding James Zetek, who retired. The year's visitors to the island totalled 440, many of whom were research scientists.

Seventy-four new publications appeared under the Smithsonian imprint during 1956. Outstanding among these were: *The Bromeliaceae of Brazil*, by Lyman B. Smith; *The Last Cruise of H.M.S. Loo*, by Mendel L. Peterson; *Chazyian and Related Brachiopods* (2 vol.), by G. Arthur Cooper; *The Honey-Guides*, by Herbert Friedmann; *The Diné: Origin Myths of the Navaho Indians*, by Aileen O'Bryan; and *Chinese Porcelains of the Ardebil Shrine*, by John A. Pope. A new series, "Smithsonian Contributions to Astrophysics," was inaugurated. The Smithsonian library, including its various branches, numbered approximately 956,000 volumes.

The year's recorded visitors to the Smithsonian buildings reached an all-time high of 8,947,066, including the main Smithsonian building, the Natural History building, the Arts and Industries building, the Aircraft building, the Freer Gallery of Art, the National Gallery of Art and the National Zoological park.

Soaring: see GLIDING.

Soccer. The Harmorville (Pa.) Hurricanes won the national challenge cup by turning back the Schwaben eleven of Chicago, Ill., in the final play-offs for the U.S. 1956 open title. Harmorville had advanced to the ultimate round by eliminating the Brooklyn (N.Y.) Hakoah team while the Chicagoans had gained at the expense of the Los Angeles (Calif.) Danes. The Hurricanes clinched the cup on May 6 at Pittsburgh (Pa.) by halting the Schwabens, 3-1, in overtime. The Kurtis Soccer club of St. Louis, Mo., captured the national amateur cup and St. Engelbert of St. Louis took United States junior cup honours. The Philadelphia (Pa.) Uhris were champions of the American league and went on to triumph in the long competition for the Lewis cup. The Uhris and the Elizabeth (N.J.) Falcons had tied for the American league title with 10 victories, 2 losses and 4

UGANDA SOCCER TEAM practising in the waters of Lake Victoria, Br.E.Af., in Aug. 1956 before leaving for a tour of England in which they would compete against British teams in London, Liverpool and other cities. By practising in the water the team members were becoming accustomed to the insecure footing which they were advised to expect on muddy English playing fields

deadlocks each and in their play-off for the crown in New York, the Uhriks routed the Falcons, 5-1.

The Austrian national team from Vienna played an extensive schedule in a tour of the United States. Central America and South America and completed its trip with 8 victories, 7 defeats and 1 tie. Everton of Liverpool, Eng., and Aberdeen of the Scottish league visited the United States and Canada, Aberdeen winning 5, bowing in 3 and deadlocking in 1 while Everton finished with 7-1-1. The British clubs met in New York in June, with Everton scoring by 6-3 after having taken the measure of Aberdeen, 3-1, in their meeting at Toronto. The Schwaben football club of Augsburg, Ger., opposed Everton in New York on May 30 and handed the British the lone setback of their tour, 1-0.

A crowd of 42,455 at Yankee stadium in New York saw the Israeli Olympic eleven defeat the American league all-stars, 2-1, in April. Brazil took the Pan-American laurels at Mexico City in March. A crowd of 80,000 saw Brazil clinch the tourney title by playing a 2-2 tie with Argentina in the final game. The victors finished with 9 points as Argentina, with 7, placed second.

(T. V. H.)

Socialism.

The Socialist parties of the world in 1956 geared their international policies in general to the prevention of war, the containment of world communism, the strengthening of independence movements in countries dominated by the great powers, and, in domestic affairs, to the increase in economic security and higher living standards. In the fall, Socialists denounced the use of Soviet troops in crushing the revolt in Hungary.

As in the past, the main centre of Socialist strength during the year was in Europe, where Socialists dominated the Scandinavian governments of Denmark, Norway and Sweden; led the

coalition governments of Belgium, Finland, France and the Netherlands; participated in the cabinets of Austria, Italy and Switzerland; and served as the chief opposition parties in the German Federal Republic and Great Britain.

Outside of Europe, the Socialists were controlling factors in the governments of Israel, Burma, Ceylon, Costa Rica, Puerto Rico, Jamaica and in the province of Saskatchewan in Canada. The Labour and Socialist parties of Australia, New Zealand and Japan constituted the main government opposition in those countries.

Europe.—The powerful British Labour party continued during the year as the government's chief opposition. In the spring, the party gained 325 (net) seats in the county, borough district councils and increased its proportion of votes in several parliamentary by-elections.

In Dec. 1955 the Parliamentary Labour party elected Hugh Gaitskell leader of the party, to succeed Clement R. Attlee who, after his resignation, became a member of the house of lords. The party opposed the government's policy in Cyprus and the landing of armed troops in Egypt in the Suez crisis, declaring that the sending of troops to Egypt could not be justified "except in accordance with our obligations and pledges under the charter of the United Nations."

In Sweden, where Socialists had controlled the government for many years, balloting for the lower house of the *riksdag* on Sept. 16, 1956, resulted in the election of 106 Social Democrats out of a total of 231 (a loss of 4 seats since the elections of 1952). The Social Democrats and Farmers' Union decided to continue their co-operation in a coalition cabinet headed by Tage Erlander. The Farmers' Union consented to a compromise bill on a strengthened pension system, while Social Democrats expressed their willingness to supply farmers with loans and to grant them specified forestry rights.

In Finland, the general elections in Feb. 1956, resulted in a popular vote for the Social Democrats of 23.7% of the total, as contrasted with 27.4% for the Agrarians, the largest Finnish party. Following the elections Urho Kekkonen, Agrarian, was

ected president; Karl A. Fagerholm, Social Democrat, prime minister. In Iceland eight Socialists were elected to a parliament of 52 members. The election was followed by the formation of a coalition government of the Progressive and Social Democratic parties with the Communist People's Alliance. The new government at first urged the withdrawal of U.S. troops from the North Atlantic Treaty organization (NATO) base on the island, although later expressed its willingness to permit the troops to remain under specified conditions. In Norway, the government's health insurance reform went into force. This brought into the insurance system the remaining 10% of the population and entitled all to free medical attention, medicine and hospital care.

The Socialist-Liberal coalition government of Belgium gave much attention to the problems of old-age pensions, education, housing, full employment, foreign trade and a 45-hour work week.

Following the Netherlands elections of June 13, the Dutch Labour party again emerged as the strongest party in the country. During the election campaign, Labourites urged the strengthening of NATO, a more complete economic union among the Benelux countries and the development of democratic unity on a European scale. They opposed the continuance of the denominational party system as undemocratic. After nearly four months of negotiation following the election, Willem Drees, Socialist, prime minister in the previous government, was selected prime minister. In the Jan. 2, 1956, election of members of the French national assembly, Socialists ranked third in the number of candidates elected, winning 94 seats in the assembly, as against 151 for the Communists and 96 for the Independent Republicans, Peasants and dissident Gaullists. André Le Troquer, Socialist, was selected speaker of the new French assembly and later Guy Mollet, secretary of the French Socialist party, prime minister.

During the year, Mollet obtained the passage of a proposal to increase old-age pensions. As a means of solving the Algerian problem, he urged a cease fire, to be followed within three months by free elections, negotiations with the winners of the elections on an Algerian charter and establishment of joint rule by the 8,000,000 Moslems and 1,000,000 French. The Socialist party, in its 48th national congress (June 28-July 1), urged that, without waiting for the adoption of a charter for the new Algeria, the government speed up economic, financial, political, social and administrative reforms in Algeria.

The failure of the government to bring peace to Algeria and initiate reforms therein, and the handling by Mollet of the Suez canal situation were sharply criticized by an important minority of French Socialists.

The Social Democratic party in the German Federal Republic (West Germany) remained throughout 1956 the second largest party and chief opposition to Konrad Adenauer's government. The party program included demands for cancellation of the Conscription act; revision of West Germany's commitment to NATO; the calling of a big four conference on reunification and establishment of diplomatic and trade relations with Poland, Czechoslovakia and other east European states. The party rejected any and all forms of "people's democracy" for Germany, basing its policy "on a freely elected democratic society in which no one party could establish its domination."

In the parliamentary elections of May 13 in Austria, the first since the withdrawal of the occupation forces, the Socialists received 43.3% of the votes and elected 75 representatives, seven less than the People's party (a moderate Catholic party). During the campaign, the Social Democrats urged that former German property which had been handed over to the state under the Austrian state treaty, consisting of oil wells and several hundred factories, be operated by the government with fair compensation to be given to former owners. They also urged public own-

ership and operation of aviation and favoured Austria's joining the Council of Europe.

Throughout 1956 the two branches of the Italian socialist movement, led by Pietro Nenni and Giuseppe Saragat, deputy prime minister, conferred on the question of reuniting the two parties, separated since 1947. Saragat's party declared that both factions before uniting should pledge themselves to democratic control of the united party and to a policy of co-operation with the democratic countries of the west and should reject all forms of the popular front.

The Socialist Union of Central Eastern Europe, containing representatives of Social Democratic parties in exile in ten central-eastern countries, issued a bulletin, "Labour's Call From Behind the Iron Curtain," from its headquarters in London. The bulletin sought to enlighten the western countries on what was going on back of the iron curtain, and to enlist the political and moral support of Socialists against Soviet Communist domination. The union held a special meeting in Strasbourg, Ger., on April 12-14.

In Israel, a coalition cabinet of labour parties, led by Prime Minister David Ben-Gurion of the Mapai or Democratic Socialist party, controlled the government during 1956. In midyear Moshe Sharett, former prime minister, resigned from the office of foreign minister and Golda Myerson, minister of labour, was appointed his successor. In the latter part of the year the government was chiefly occupied with the clash between Israel and Egypt.

Far East.—The recently united Socialist party of Japan elected 80 members to the house of councillors on July 8. These constituted 32% of the total. The party's pre-election strength was 68 house members. Socialists during the year opposed Japanese rearmament and the proposal to strike from the constitution article 9, which renounces war as an instrument of national policy; condemned the retention by the U.S.S.R. of the former Japanese islands in the North Pacific; and fought for continued decentralization of the control of Japanese schools.

The Praja-Socialist party of India remained critical during the year of many of the policies of the Congress party. In late November, following the vote of Krishna Menon, India's delegate to the United Nations, against the resolution calling for the withdrawal of Soviet troops from Hungary and the holding of United Nations' sponsored elections in that country, the leaders of the Socialist party, Jayaprakash Narayan and Ashoka Mehta, denounced the government for Menon's stand. The party during the year refused the Indian communists' offers of united action.

In Burma, the Anti-Fascist Freedom league (A.F.P.F.L.), controlled by democratic Socialists, obtained 47.9% of the popular vote cast for members of the house of deputies in the elections held on April 27, 1956, and pro-A.F.P.F.L. organizations received 7.3%. The A.F.P.F.L. captured 70% of the legislative seats, a small decrease from 1951. On June 5, Premier Nu, Socialist, after eight years of service, turned over his post for one year to Defense Minister Ba Swe to devote his full energies to strengthening the A.F.P.F.L.

The April 1956 election in Ceylon resulted in a victory for the People's United Front, under the leadership of S. W. R. D. Bandaranaike, member of the Social Democratic party (Sri Lanka Freedom party). Following the elections, Bandaranaike was elected prime minister. The new government urged complete independence for Ceylon.

On Feb. 28 the Socialist party of south Vietnam decided to merge with four other parties into the Congress bloc to fight the Diem government dictatorship. The opposition parties in the ensuing campaign were denied freedom of assembly and press and were defeated by the government party.

The Indonesian Socialist party, an opposition party, denounced

during the year those in the country who were attempting to divide the population into native and nonnative Indonesians, and urged a reduction in the influence of foreign capital in Indonesia.

Asian Socialists held a conference in the fall in Bombay, India, and passed numerous resolutions favouring democratic socialist goals and condemning communist aggression and colonialism of all types.

North and South America.—In the elections of June 20, 1956, in Saskatchewan, Can., the Co-operative Commonwealth Federation (C.C.F.) government was elected to its fourth consecutive term, winning 36 seats in the new legislation to 14 for the Liberals and 3 for the Social Credit party. The C.C.F. vote totalled about 45% of the total popular vote, as against 54% in 1952. At its annual conference in Winnipeg, Man., in early August the C.C.F. adopted a new declaration of principles, known as the Winnipeg declaration. This declaration set forth as the aim of the party "the establishment in Canada by democratic means of a cooperative commonwealth in which the supplying of human needs and enrichment of human life shall be the primary purpose of our society." In October the party opposed the use of force in the Suez canal crisis and declared that a solution should be sought through the United Nations.

In the United States the Socialist party at its 1956 convention nominated Darlington Hoopes and Samuel H. Friedman as candidates for president and vice-president respectively, and they were on the ballot in 10 states. The party platform urged the ownership and control "of public utilities, basic industries, banks, and insurance companies either by genuine co-operatives or by publicly owned and democratically managed corporations."

The Socialist parties of Argentina and Uruguay and the Partido Socialista Popular of Chile met in Montevideo, Ur., on May 11-13, 1956, and agreed to establish the Consultative Committee of the Latin American Secretariat of the Socialist International, for the exchange of information among Socialist parties and the promotion of closer contacts between the Socialist parties of Latin America. In Puerto Rico the popular Democratic party, with a socialistic program, led by Gov. Luiz Muñoz Marín, won a fifth consecutive election victory on Nov. 6. The party urged the maintenance of the island's commonwealth status for an indefinite period and opposed complete independence from the United States.

The Socialist party of Argentina, in its June 27-July 1 congress, reaffirmed its stand against co-operation with the Communist party, repudiated the forces favouring colonialism and imperialist exploitation of the peoples of Asia, Africa and Latin America, and urged the creation of a united Europe and universal disarmament.

Socialist International.—Forty-six delegates from 17 European countries plus Israel and Canada met in a council meeting of the Socialist International in March 1956, in Zürich, Switz. The council rejected the renewed proposals of the Communists to co-operate in a combined working class, declaring that the Communist attitude toward dictatorship showed little change since before the anti-Stalinist drive. The council urged progressive controlled disarmament as the world's most urgent problem; criticized the west for "attempting to appease the Arabs," and favoured the proposal to supply Israel with the necessary arms for self-defense.

(H. W. L.; N. T.)

Socialist Soviet Republics: see UNION OF SOVIET SOCIALIST REPUBLICS.

Social Security. There was considerable activity in the field of social security during 1956, as a

few countries passed new laws and some, like the United States, revised their laws governing programs already set up.

Some countries modified their retirement or pension programs. Large benefit increases took effect in Finland, France, Great Britain and the Soviet Union. A Netherlands temporary old-age assistance act of 1947 was replaced by a universal pension law, and Belgium adopted a new act for its wage earners' retirement plan. In Spain general wage increases were accompanied by reduced employer social insurance contributions. Nicaragua adopted a comprehensive social security law.

United States.—Legislative activity in the field of social security was extensive in 1956. Congress enacted amendments to the Social Security act, liberalized benefits under the Railroad Retirement act and the Civil Service Retirement act, and passed a law making changes in military survivor benefits.

Private employee benefits continued to play an important role in industry. Health and welfare provisions were included in at least half the collective bargaining agreements between management and labour in the first six months of 1956, and pension provisions in more than one-third. The subcommittee on welfare and pension funds of the senate committee on labor and public welfare completed its investigation of these funds and proposed legislation to protect the interest of the employees covered. Several bills were introduced in congress calling for disclosure of certain details of the operation of private employee-benefit plans.

The Social Security amendments of 1956, signed Aug. 1, 1956, made major changes in the old-age and survivors insurance program and amended the public assistance, the child welfare and general titles of the Social Security act. The amendments also authorized, for the first time, federal grants to states and public and nonprofit organizations for co-operative research or demonstration projects relating to the prevention or reduction of dependency. No funds were appropriated for this purpose for the fiscal year ending June 1957.

Social Insurance and Related Programs.—The federal old-age and survivors insurance program, administered by the Social Security administration of the department of health, education and welfare, provides monthly benefits related to previous earnings to insured workers and self-employed persons upon retirement at age 65 or later (except for women workers as provided by the 1956 amendments) and supplementary benefits to their dependent children (under age 18 or, if older, with total disability that began before that age); to their wives if aged or having entitled children in their care; and to the dependent, aged husbands of women workers. The program also pays monthly benefits to the following survivors of deceased insured workers: widows or dependent aged widowers, dependent children (as defined above), or the dependent aged parents. A lump-sum death payment of not more than \$255 is also made on the death of every insured worker.

The 1956 amendments provided a new type of monthly payments—disability insurance benefits, payable to insured workers (but not their dependents) between the ages of 50 and 65, and computed at the same rate as the old-age benefit. To be eligible for these benefits, the disabled worker must be determined to be disabled under the definition of disability used in applying the disability "freeze" provision in the 1954 act, meet the age requirements, be fully and currently insured, and have 20 quarters of coverage in the 40-quarter period ending with the first quarter of his period of disability. A six-month waiting period is required after onset of the disability before benefits are payable. July 1957 was set as the first month for which these benefits were payable.

The disability "freeze" provision permits persons meeting specified conditions to omit periods of prolonged disability oc-

curring before age 65 in computing their average earnings. The rules and standards for this provision remained in effect. The freeze can be established for a disabled person before he is 50 years old and if he is still disabled at that time he may apply for and, if qualified, receive the cash disability benefits. Applicants for the freeze and for the disability benefits are referred to the state agency for vocational rehabilitation, and monthly benefits are suspended if a beneficiary refuses to accept rehabilitative services without good cause.

The amendments also provided that, beginning in Jan. 1957, child's benefits are payable for children aged 18 and over who were totally disabled before age 18. When the insured parent of such a dependent child dies or becomes entitled to old-age benefits, the disabled child's benefits may begin regardless of his age and continue as long as he is disabled. Determinations of disability are made in the same way as for disabled workers, and, similarly, benefits will be suspended for refusal to accept rehabilitative services. Mother's (or wife's) benefits are also payable to a mother who has in her care any child entitled to such benefits.

The 1956 law made it possible for women to qualify for benefits at age 62 instead of 65. Effective Nov. 1956, women eligible for benefits as widows or dependent parents or as wives with child beneficiaries in their care receive full benefits at age 62. Retired women workers and wives without entitled children in their care who choose to start receiving their benefits between the ages of 62 and 65 will receive a smaller benefit than they would otherwise get at 65. The benefit reduction is greater for the wife beneficiary than for the retired woman worker, and in each case depends on the number of months before age 65 that the benefit is being received. The reduced benefit is also the amount that will be received after age 65, except that adjustment to take account of any months for which the woman may have her benefit suspended may make it higher, or the woman may later become entitled to a full widow's benefit.

The Social Security amendments of 1956 added about 900,000 persons to the number already covered by old-age and survivors insurance—chiefly additional farmers and members of self-employed professional groups previously excluded (except doctors of medicine). The Servicemen's and Veterans' Survivor Benefits act extended coverage under the program effective Jan. 1957 to about 3,000,000 members of the uniformed services (the armed forces and commissioned officers of the U.S. public health service and the coast and geodetic survey) on a contributory basis. Still excluded were doctors of medicine, most federal civilian employees under a retirement system and, in general, policemen and firemen covered by a state or local government retirement system.

The program is financed by contributions from employers and employees and from the self-employed based on their taxable earnings (up to \$4,200 a year). The 1956 amendments, to finance the new disability benefits, raised the tax rate $\frac{1}{4}$ of 1% for employees and employers and $\frac{3}{8}$ of 1% for the self-employed. The employer-employee rate was 2% each in 1956; it was raised to $2\frac{1}{4}$ % each for 1957-1959; it would rise to $2\frac{3}{4}$ % each in 1960; $3\frac{1}{4}$ % in 1965 and $3\frac{3}{4}$ % in 1970; it would be $4\frac{1}{4}$ % in 1975 and thereafter. For the self-employed the rate is $1\frac{1}{2}$ times the employee rate. The tax increases provided by the amendments were allocated for the disability benefits and would be placed in a separate trust fund.

During the year ended June 30, 1956, \$5,360,813,000 was paid out under the old-age and survivors insurance program—\$115,3340,000 of it in lump-sum death payments. At the end of June 1956 about 8,374,000 beneficiaries were getting benefits at a monthly rate of \$439,423,800. The average benefit paid to a retired worker was \$62.76.

Monthly retirement, long-term disability and survivor benefits were also being paid under other public programs. In June 1956 such benefits were going to 648,200 persons under the railroad retirement program, to 3,914,000 under the veterans' programs, and to 325,300 under the federal civil service program. A large group of beneficiaries was receiving such benefits under state and local government employee programs. For temporary disability that was not work-connected, benefits were being paid in four states and in the railroad industry. For work-connected disability, workmen's compensation programs were in effect for workers in all states and for federal employees.

The state-federal program of unemployment insurance pays benefits to qualified unemployed workers. The programs are financed by employer contributions and, in 3 jurisdictions, employee contributions. In June 1956 a weekly average of 1,072,000 unemployed workers drew benefits under the state programs and the program for federal workers; total benefits in the month were \$116,000,000. Workers in 11 states had their benefits supplemented by small allowances for their dependents. Under the Railroad Unemployment Insurance act, \$2,571,000 was paid in June 1956 to an average (in a 14-day period) of 23,000 unemployed railroad workers.

Assistance and Welfare.—Four special types of public assistance were established by the Social Security act—old-age assistance, aid to dependent children, aid to the blind and aid to the permanently and totally disabled. These programs are administered by the states; the federal government shares in the costs within certain maximums. The 1956 amendments to the Social Security act revised the federal formula for sharing in the assistance payments to permit greater federal financial participation, from Oct. 1956 through June 1959. The amendments also provided, beginning July 1957, a new basis for federal sharing in state expenditures for medical care for assistance recipients, separately from money payments to them.

Expenditures, federal, state and local, for assistance and administration of the four programs during the year ended June 30, 1956, totalled \$3,022,000,000. In June 1956, 2,523,700 needy persons aged 65 or over were receiving old-age assistance (the average payment was \$54.29); 2,250,200 persons, including 1,707,600 children, in 613,700 families were receiving aid to dependent children (average payment per family, \$89.27); 105,800 persons were receiving aid to the blind (average payment, \$60.42); and 258,300 persons in 45 states were receiving aid to the permanently and totally disabled (average payment, \$56.72). About 290,000 cases (640,000 persons) were receiving general assistance, financed by states and localities without federal funds; the average payment per case was \$51.94.

The Social Security act also authorizes federal grants to the states to extend and improve their maternity services for mothers and their health and welfare services for children, including services for crippled children. These grants are administered by the children's bureau.

During the year ended June 30, 1956, \$11,921,455 was paid to the states for maternal and child health services. Typical services were prenatal clinics, child health conferences, immunizations, public health nursing services and health services for children of school age by physicians and dentists. Federal payments to the states for services for crippled children totalled about \$14,803,364; the programs provided diagnostic, medical and surgical services and hospital and convalescent care. Federal payments of about \$6,895,090 were made to help the states, through their child welfare programs, protect and care for dependent and neglected children and children in danger of becoming delinquent.

Only one provision in the 1956 amendments to the Social Security act specifically affected these programs for children—a

\$2,000,000 increase in the authorized amount of federal funds for the child welfare programs. (C. I. S.)

Canada.—The intergovernmental committee of health and finance ministers, set up at the Oct. 1955 federal-provincial conference, convened in Jan. 1956 to hold further discussions on health insurance. In the course of these deliberations, a specific proposal was put forward by the federal government under which it offered to share with the provinces one-half the costs of an insurance system to provide basic ward hospital care and certain laboratory and radiological diagnostic services.

Federal payments would be based on a formula that, while meeting 50% of the national costs as defined, would be weighted to take account of the provinces' varying financial capacities and to provide incentives to economic operation. As a result, the less wealthy provinces would receive more than 50% of their costs while the wealthier ones would receive slightly less than this percentage. The proposed scheme would be administered by the provinces who would decide on methods of financing their share of the costs, and would involve no constitutional change or interference in provincial affairs. The role of the federal government would be limited to the provision of financial support and technical assistance. The program was to go into operation when agreement had been reached with a majority of the provinces representing a majority of the Canadian people.

The Unemployment Assistance act was passed by parliament in July 1956. This legislation authorized the federal government to share with any province signing an agreement a portion of provincial expenditures for assistance to needy persons who were unemployed and who were not covered by other established social welfare measures. Claims for federal assistance could be made when the number of persons receiving aid exceeded 0.45% of the total provincial population. The federal government undertook to share 50% of provincial expenditures on agreed items above this level. There was to be no ceiling on the total federal contribution. It was left to the provinces, and to the municipalities where they were involved, to determine the level of assistance to be paid and the conditions under which it could be obtained. (G. Cy.)

Great Britain.—There was no change in the general rates of benefit under the national insurance scheme in Great Britain, but the government was pressed to make it possible for the retired pensioner, between the ages of 65 and 70, to earn more than the stipulated amount of 40s. without a reduction of his pension. Following consideration by the National Insurance Advisory committee, the amount was raised to 50s. Provision was also made that the rate of pension otherwise payable should be reduced by 6d. for each 1s. of net earnings above 50s. and up to 70s. a week, and by 1s. for each 1s. of net earnings thereafter except in the case of married women with retirement pensions on their husband's insurance, for whom the previous rule remained unchanged.

The family allowance scheme in Great Britain was altered to enable the allowance to be paid up to the age of 18 in respect of a child who remained at school or was apprenticed, and up to the age of 16 in respect of an incapacitated child. There was a general increase of 2s. in the weekly rate for the third and subsequent children of a family. The annual report of the ministry of pensions and national insurance for 1955 showed that family allowances were being paid to about 3,750,000 families containing about 8,000,000 children.

By the end of 1955 it was possible for the first time for the maximum of ten increments of retirement pension to be paid at the highest rate. A single person could thus qualify by remaining at work five years after pensionable age for a pension of 55s. and a married couple for 90s. if the husband only was insured or 110s. if both were insured. At the end of the year the number

of persons who had reached minimum pension age during the previous five years and had not retired was nearly 450,000.

The report of the National Assistance board for 1955 showed reduction in the number of persons receiving assistance because 111,000 persons became entitled to higher rates of pension and benefit under the National insurance scheme. Of the 460,000 persons under pensionable age who were receiving allowances, 246,000 were incapacitated for work by sickness or disability. The total net expenditure of the board for 1955 was about £122,727,000, of which about £98,220,000 was for national assistance grants and about £17,280,000 was for noncontributory old-age pensions.

At the end of 1955, 870,000 war pensions were being paid of which about 385,000 related to World War I and 487,000 to World War II.

Other Countries.—In the German Federal Republic, unemployment assistance was replaced by unemployment aid. By the change of title it was intended to emphasize that it was different from benefits provided by the public welfare authorities. Unemployment aid became organized in a uniform manner over the whole territory of the Federal Republic, and also in west Berlin. Those disqualified were persons over age 65; recipients of a pension for invalidity or occupational incapacity under the insurance scheme and recipients of other benefits of a public character. The rates of the allowances were based on the level of the wages. The maximum rates varied between 90% of the minimum earnings and 69.8% of the maximum earnings. Both husband and wife were entitled to aid. Unemployment aid was financed from federal taxes and was administered by the Federal Placement and Unemployment Insurance institute. In Germany, also, old-age pensions rates were increased.

In Austria unemployment insurance was extended to domestic workers and in Italy to agricultural workers. In the Netherlands the family allowance scheme was extended to cover invalid children of over 20 and under 27 years of age. Children's allowances under the insurance scheme were also made payable in respect of invalidity to orphans under 27 years. In Norway the scope of sickness insurance was extended to cover about 330,000 persons who had previously been excluded. In Switzerland there were increases in pension rates for those who were 65 or over when the scheme came into force in 1948. In Turkey the annual rate of pensions was raised to 20% of the contributions paid by the insured person and his employer during the whole of the insured's career, subject to a minimum rate which was increased. In Nicaragua a comprehensive social security scheme was introduced for the first time, administered by a new body called the National Social Assistance and Welfare board. The scheme provided for compulsory contributions for all employed persons. In Japan a new five-year social security plan was adopted covering the period from 1956 to 1960 and providing for the extension and improvement of sickness insurance. An additional 30,000,000 persons would be covered. (JN. M.)

Social Service: see CHILD WELFARE; SOCIAL SECURITY.

Societies and Associations, U.S. The following is a selected list of U.S. societies and associations, with date of founding, membership, officers and chief activities during 1956.

(See also the separate articles on RED CROSS; VETERANS' ORGANIZATIONS, U.S.; etc.)

Alcoholics Anonymous.—Alcoholics Anonymous is a fellowship of men and women organized in 1935 to help the alcoholic recover. The only requirement for membership is stated to be "an honest desire to stop drinking." In 1956 there were 136,000 members in 6,249 groups throughout the world. The organization publishes the book *Alcoholics Anonymous*, the monthly

The A.A. Grapevine and various other books and pamphlets. Officers' names are not given because of the organization's tradition of anonymity. It is supported solely through voluntary contributions. Headquarters: P.O. Box 459, Grand Central Annex, New York 17, N.Y.

Altrusa International, Inc.—Founded and incorporated in 1917, this organization's purpose is to provide a main channel through which professional and executive women in diversified occupations might join forces to work for community and world improvement. Membership, 1956, 14,000 in 350 clubs located in the U.S., Canada, Great Britain, Guatemala, Hawaii, Mexico, Bermuda and Puerto Rico. In 1956 the organization carried out projects in public affairs, vocational information and international relations, and awarded grants to Latin-American and Asian women graduates who were in the U.S. for higher study. Club funds available during 1956-57 totalled \$23,887. Publication: *International Altrusan*. Officers (1956) included: Marjorie Lamb, president; Edith W. Nelson, president-elect. Headquarters: 332 S. Michigan Ave., Chicago 4, Ill.

American Academy of Arts and Letters.—The purpose of the academy, founded in 1904, is to further "the interests of literature and the fine arts in America." In 1956 the academy consisted of 47 members chosen from the 250 members of its parent organization, the National Institute of Arts and Letters. On May 23, 1956, the joint annual ceremonial with the National Institute of Arts and Letters was celebrated. There were many exhibitions, notably a memorial exhibition of the works of Gifford Beal and a literary exhibition showing manuscripts from the academy collection. Publications include *Proceedings*, an annual; and *Yearbook of the National Institute and the American Academy*. Officers during 1956 were: Archibald MacLeish, president; Mark Van Doren, chancellor; Douglas Moore, secretary; Deems Taylor, treasurer. Headquarters: 633 W. 155th St., New York 33, N.Y.

American Academy of General Practice.—The academy was founded in 1947 to promote high standards in the general practice of medicine and surgery, to encourage medical students to qualify for and establish themselves in general practice, to assure the right of the general practitioner to engage in medical and surgical procedures for which he is qualified, and to develop postgraduate study programs for general practitioners. Membership, open to all physicians engaged in the general practice of medicine and surgery, numbered 22,249 in 1956. The Annual Scientific assembly of postgraduate training was held in Washington, D.C. Research studies in 1956 included better integration of general practice departments into hospitals and a survey of physicians' prescription habits. The academy has no endowment. Publication: *"GP"* (monthly). Officers (1956) included: J. S. DeTar, president; M. F. Cahal, executive secretary. Headquarters: Volker Blvd. at Brookside, Kansas City 12, Mo.

American Academy of Political and Social Science.—Founded in 1889 and incorporated in 1891, this organization acts as a forum for the discussion of social, political and economic questions through meetings and publications. The general topic of the annual meeting of the academy, held April 20-21, 1956, was "Africa and the Western World." Membership as of Jan. 1, 1956, was 14,478. Publication: *The Annals*, a bimonthly journal. Officers (1956) included: Thorsten Sellin, acting president; Raymond T. Bowman, secretary. Headquarters: 3937 Chestnut St., Philadelphia 4, Pa.

American Association for the Advancement of Science.—Founded in 1848, this association seeks to further the work of scientists, facilitate cooperation among them and improve public understanding of the importance of science in human progress. Membership in 1956 was 51,000. During 1956 the annual national meeting was held in New York, N.Y. Publications: *Science*, weekly; *Scientific Monthly*; and others. Officers (1956) included: Paul B. Sears, president; Dael Wolfe, executive officer. Headquarters: 1515 Massachusetts Ave. N.W., Washington 5, D.C.

American Association of University Professors.—This organization of college and university teachers was founded in 1915 to promote discussion and action on problems affecting education in institutions of higher learning, and to provide means of expression for its membership. Membership in 1956 was 37,567. Publication: *The Bulletin*, a quarterly journal. Officers (1956) included: Helen C. White, University of Wisconsin, president; Ralph F. Fuchs, general secretary. Headquarters: 1785 Massachusetts Ave. N.W., Washington 6, D.C.

American Association of University Women.—This organization was founded in 1882 as the Association of Collegiate Alumnae for "the uniting of the alumnae of different institutions for practical educational work," maintenance of high standards of education and more effective participation of college women in the processes of democracy. Membership in 1956 was 140,000. Its principal activity of 1956 was a study-action program in the fields of education, international relations, social studies, status of women, the arts and legislation. Publications: *Journal* (quarterly), the *General Director's Letter*, handbooks, study guides and bibliographies. Endowed funds totalled \$1,485,000 in 1956. Officers (1956) included: Anna L. Rose Hawkes, president; Helen D. Bragdon, general director. Headquarters: 1634 I St. N.W., Washington 6, D.C.

American Bankers Association.—Founded in 1875, the primary objective of this organization is to promote the usefulness of banks. In 1956, it had a membership of 17,385 banks and banking offices. It is the parent organization of the American Institute of Banking for bank employees and the Graduate School of Banking for bank officers. During 1956, a subcommittee of the U.S. senate committee on banking and currency was named, under the chairmanship of Sen. A. Willis Robertson, to study the monetary system and financial institutions. The association actively co-operated in this study and expanded its Washington, D.C., office to include a new department of government relations. Officers (1956-57) were: Erle Cocke, Fulton National Bank, Atlanta, Ga., president; Joseph C. Welman, Bank of Kennett, Kennett, Mo., vice-president; George R. Boyles, Merchants National Bank, Chicago, Ill., treasurer. Headquarters: 12 E. 36th St., New York 16, N.Y.

American Bar Association.—Founded in 1878 to advance the science of jurisprudence and promote the administration of justice in the U.S., the association had a membership of more than 83,000 in 1956. Through the American Bar foundation, an enlarged legal research program was inaugurated. Publications include the *American Bar Association Journal* and the *American Bar News*, both monthly; an annual volume of reports and proceedings; and various pamphlets. Officers (1956-57) included: David F. Maxwell, president; Charles S. Rhyne, chairman of the house of delegates;

Joseph D. Stecher, secretary; Harold H. Bredell, treasurer. Headquarters: 1155 E. 60th St., Chicago 37, Ill.

American Bible Society.—Founded in 1816, the society encourages the wider circulation and use of the Holy Scriptures without note or comment and without purpose of profit. During 1956 translations of the Bible were being made in a number of languages, and there was much activity in revisions. Volumes issued from the Bible House in New York city in 1955 totalled 14,918,353. Works for the blind were distributed in 41 languages and systems. Membership (1956): about 300,000. Publication: *The Bible Society Record*. Officers (1956) included: Eric M. North and Robert T. Taylor, general secretaries; Gilbert Darlington, treasurer. Headquarters: 450 Park Ave., New York 22, N.Y.

American Cancer Society.—Founded in 1913, the society is devoted to cancer control in the U.S. by means of public and medical education, service to patients and research to discover causes and cures for cancer. It is composed of 60 chartered divisions, serving the U.S. and Alaska through 2,788 units and more than 1,000,000 volunteers. For the fiscal year 1956-57 the society allocated \$6,750,000 for its national research program and supported 501 grants and fellowships in 139 universities and scientific institutions. Publications: *Cancer News*, quarterly; *Cancer*, bimonthly; *CA*, bimonthly medical digest; *Annual Report*. The funds of the society are secured through public contributions. Officers (1956-57): David A. Wood, president; Lane W. Adams, treasurer; Granville Whittlesey, Jr., secretary. Headquarters: 521 W. 57th St., New York 19, N.Y.

American Chemical Society.—Founded in 1876 to encourage the advancement of chemistry in all its branches, this organization endeavours to promote "research in chemical science and industry" and to maintain high standards among its members. In 1956 membership totalled 78,000. The association held two national meetings during 1956 and conferred medals for outstanding accomplishments in chemistry. Publications include *Journal of the American Chemical Society*; *Chemical Abstracts*; *Industrial & Engineering Chemistry*; *Chemical and Engineering News*; *Journal of Physical Chemistry*; *Journal of Organic Chemistry*; *Journal of Agricultural and Food Chemistry*; *Analytical Chemistry*. Officers (1956) included: J. C. Warner, president; Alden H. Emery, executive secretary. Headquarters: 1155 16th St. N.W., Washington 6, D.C.

American College of Dentists.—The association was formed in 1920 to advance the standards and efficiency of dentistry, stimulate graduate study in dentistry, confer fellowships in recognition of meritorious achievement especially in dental science, art and literature and improve public understanding of oral health service. Membership in 1956 was about 2,250. Activities throughout 1956 included Teacher's Training Fellowship award grants for graduate study and committee studies of various problems relating to dental health service. Publication: *Journal of the American College of Dentists* (quarterly). Officers (1956): Gerald D. Timmons, president; Alfred C. Young, vice-president; Otto W. Brandhorst, secretary. Headquarters: 4221 Lindell Blvd., St. Louis, Mo.

American College of Hospital Administrators.—Founded on Feb. 13, 1933, for the purpose of improving the care of the sick through the elevation of standards for hospital administration, the association conducts and promotes educational training, promotes adherence to a code of ethics and provides recognition for noteworthy service in the field of hospital administration. The 22nd annual meeting was held in Chicago, Ill., Sept. 15-17, 1956. In 1956 membership totalled approximately 3,000. Publications: *Hospital Administration*, quarterly; *News*, monthly; *Roster*, annually. Officers (1956): J. Dewey Ligan, president; D. Conley, executive director. Headquarters: 620 N. Michigan Ave., Chicago 11, Ill.

American College of Life Underwriters.—Founded in 1927 to establish an educational standard for the profession of life underwriting and to encourage sound life insurance education in colleges and universities, the college grants the Chartered Life Underwriter (C.L.U.) designation to candidates who pass five examinations in subjects related to life insurance (such as economics, family and business finance, social problems, law, taxes, trusts, etc.) and meet the college's requirements of experience and character. A total of 6,181 persons had attained the designation, and 8,737 had earned partial credit toward the designation by passing from one to four of the examinations. At the 29th conferment in Sept. 1956, 426 successful candidates became C.L.U.'s. In June 1956, 4,176 candidates took 5,277 examinations in 164 university locations. Publications: *Announcement*, *Annual Report*, *C.L.U. Annual Review*, brochures and material for teachers and candidates. Officers (1956-57): Julian S. Myrick, chairman of the board; Davis W. Gregg, C.L.U., president. Headquarters: 3924 Walnut St., Philadelphia 4, Pa.

American College of Physicians.—This society was founded in 1915 to bring together physicians of high standing for the maintenance and advancement of medical education, practice and research. Activities in 1956 included the 37th annual session at Los Angeles, Calif., April 16-20, plus 32 regional, state or multistate meetings and participation in many joint endeavours with other medical associations. The college also awarded 6 research fellowships and 11 Latin-American fellowships for training Latin-American doctors for teaching and research in their homelands. Membership in 1956 totalled approximately 9,174. Publications include a directory and *Annals of Internal Medicine*, monthly. Endowment funds totalled \$486,922.87. Officers (1956) included: Walter L. Palmer, president; William D. Stroud, treasurer; Wallace M. Yater, secretary-general; Edward R. Loveland, executive secretary. Headquarters: 4200 Pine St., Philadelphia 4, Pa.

American College of Surgeons.—Founded in 1913 to advance the science of surgery, the organization held its 42nd annual clinical congress in San Francisco, Calif., Oct. 8-12, 1956. Membership of the college in 1956 was 21,000. Publications: *Surgery, Gynecology and Obstetrics*, a monthly scientific journal, and the *Bulletin*, a bimonthly. Officers (1956) included: Warren Cole, president; Daniel C. Elkin, president-elect; Michael L. Mason, secretary. Headquarters: 40 E. Erie St., Chicago 11, Ill.

American Correctional Association (formerly American Prison association).—Founded in 1870 and incorporated in 1871, this association works for the improvement of laws governing public offenders, studies the causes of crime and the nature of offenders and their social surroundings, works for the improvement of penal institutions, and is concerned with the care of and provision of jobs for former prisoners. In 1956 the association sponsored the 86th annual congress of correction. Membership in 1956 was about 2,000, consisting of court, law-enforcement and penal officials and

citizens interested in crime problems. Publications: *American Journal of Correction* (formerly *Prison World*), bimonthly; *Directory of State and National Correctional Institutions*, annual; *Manual of Correctional Standards*, *Manual of Criminal Statistics*, and others. Officers (1956), Myrl E. Alexander, president; E. R. Cass, general secretary; John L. Schoenfeld, treasurer. Headquarters: 135 E. 15th St., New York 3, N.Y.

American Dental Association.—Founded in 1859 "to encourage the improvement of the health of the public and to promote the art and science of dentistry," this professional association numbered 85,984 members as of July 31, 1956. It continued support of measures to add fluoride salts to community water supplies to reduce tooth decay, and by Sept. 1956 almost 1,300 U.S. cities and towns were fluoridating their water supplies. The association in February sponsored its annual National Children's Dental Health week. In mid-1956, the association completed a \$1,400,000 expansion and remodelling program at its Chicago (Ill.) headquarters. The 97th annual session of the association was held in Atlantic City, N.J., Oct. 1-4, 1956. Publication: *Journal of the American Dental Association*. Officers (1956-57): Harry Lyons, president; Harold Hillenbrand, secretary; H. B. Washburn, treasurer. Headquarters: 222 E. Superior St., Chicago 11, Ill.

American Dialect Society.—This organization was founded at Harvard university in 1889 to collect, study and publish material on the English language, especially dialect as found in North America, together with other languages influencing it or influenced by it. Eight research committees were later formed to study the following: regional speech and localisms, place names, linguistic geography, usage, non-English dialects, new words, semantics and proverbial sayings. Membership in 1956 was 472. The annual meeting in 1956 was held in Washington, D.C. Publication: *Publication of the American Dialect Society*. Officers (1956) included: L. J. Davidson, president; I. Willis Russell, secretary-treasurer. Headquarters: University of Alabama, University, Ala.

American Economic Association.—This association, which in 1956 had 8,400 members and 3,000 library, corporate and individual subscriptions, was founded in 1885 to encourage economic research and freedom of economic discussion, and to issue publications on economic subjects. The annual meeting was held in Cleveland, O., Dec. 27-29, 1956. Publications include the *American Economic Review*, quarterly; *Papers and Proceedings* of the annual meeting. Officers (1956) included: Edwin E. Witte, University of Wisconsin, president; James Washington Bell, Northwestern university, secretary-treasurer and editor of the annual proceedings; Bernard F. Haley, Stanford university, managing editor of the quarterly. Headquarters: Northwestern university, Evanston, Ill.

American Geographical Society.—This organization was founded in 1852 to promote geographical research and exploration and to disseminate geographical knowledge. During 1956, the research activities of the society centered on medical geography; mathematical geography; glacial investigations; forest and climatic sequence on the west coast of North America; preparation of a series of geographical handbooks on strategic areas; and a new planning-scale map of Africa and Europe. Publications include *Geographical Review*, quarterly; and *Focus*. Membership (1956): about 4,500. Officers (1956) included: Richard Upjohn Light, president; Charles B. Hitchcock, director. Headquarters: Broadway at 156th St., New York 32, N.Y.

American Historical Association.—This association of professional and nonprofessional students of history, founded in 1884 and incorporated in 1889, was organized "for the promotion of historical studies, the collection and preservation of historical manuscripts, and for kindred purposes in the interests of American history. . . ." The association's membership in 1956 was 6,310, and its endowment was about \$700,000. Publications include the *American Historical Review*, *Annual Report*, and selected historical monographs. Officers (1956) included: Lynn Thorndike, president; Boyd C. Shafer, executive secretary and managing editor. Headquarters: Study Room 274, Library of Congress Annex, Washington 25, D.C.

American Institute for Property and Liability Underwriters, Inc.—The purpose of this organization, founded in 1942, is to establish and administer an educational standard for the profession of property and casualty insurance underwriting. Examinations are conducted annually in June at more than 130 locations. Those who successfully pass the examinations and fulfill the experience and ethical requirements are awarded the designation Chartered Property Casualty Underwriter (C.P.C.U.). By 1956, 1,690 persons had received the C.P.C.U. designation. The institute receives financial support from property and casualty insurance companies and organizations. Publications: *Announcement*, annual; and *C.P.C.U.—Its Purpose and Meaning*, study guides. Officers (1956): S. S. Huebner, chairman of the board; Hugh H. Murray, Jr., president; Harry J. Loman, dean; A. C. Goerlich, secretary. Headquarters: 3924 Walnut St., Philadelphia 4, Pa.

American Institute of Accountants.—The national professional society of certified public accountants was founded in 1887 to maintain high professional and ethical standards, to develop accountancy education and to provide for the examination of candidates for membership. In 1956 the institute had a membership of more than 28,000. The year's activities included the preparing of the uniform C.P.A. examination, and the issuing of bulletins on accounting procedure and case studies in auditing procedure. The annual meeting was held Sept. 23-27, 1956. Publications: *Journal of Accountancy* and *Certified Public Accountant*, both monthly; *The C.P.A. Handbook*; *Accounting Trends and Techniques in Corporate Annual Reports*; and others. Officers (1956-57) included: Marquis G. Eaton, president; J. L. Carey, executive director. Headquarters: 270 Madison Ave., New York 16, N.Y.

American Institute of Architects.—The objects of this organization, founded in 1857, are "to promote the aesthetic, scientific and practical efficiency of the architectural profession; to advance the standards of architectural education, training and practice; and to co-ordinate the building industry and the profession of architecture." Membership in 1956 was 10,900. Publications: *Journal*, monthly; *Bulletin*, bimonthly; and *Memo*, biweekly. Officers (1956) included: Leon Chatelain, Jr., president; Edward L. Wilson, secretary; Raymond S. Kastendieck, treasurer. Headquarters: 1735 New York Ave. N.W., Washington 6, D.C.

American Institute of Chemical Engineers.—This organization was founded in 1908 for the advancement of chemical engineering in theory and practice and the maintenance of a high professional standard among its members. As of July 31, 1956, membership was 15,716. Publications: *Chemical En-*

gineering Progress, monthly; *Journal*, quarterly. Officers (1956) included: Walter G. Whitman, president; F. J. Van Antwerpen, secretary. Headquarters: 25 W. 45th St., New York 36, N.Y.

American Institute of Electrical Engineers.—This association was founded in 1884 to advance the theory and practice of electrical engineering and of allied arts and sciences and to maintain a high professional standing among its members. Its 1955-56 activities included 4 general meetings, 3 district meetings and 22 special technical conferences. The institute participated in many engineering activities with other societies and there was also much activity in the technical divisions and technical committees in advancing developments in science and art. Membership in 1956 was 50,000. Endowment funds as of 1956: \$1,250,000. Publications: *Electrical Engineering*, monthly; *Transactions*, annually; *Preprints* and special publications, published irregularly. Officers (1956): M. S. Coover, president; N. S. Hibshman, secretary. Headquarters: 33 W. 39th St., New York 18, N.Y.

American Institute of Mining, Metallurgical, and Petroleum Engineers.—This society was founded in 1871 to promote the arts and sciences connected with the economic production of minerals and metals and the welfare of the individuals employed in these industries. The regular annual meeting was held in Feb. 1956. In 1956 there were 25,000 members and 2,800 student associates. Publications: *Mining Engineering*, *Journal of Metals* and *Journal of Petroleum Technology*, all monthly. The institute's endowments totalled \$1,350,000 in 1956. Officers (1956) included: Carl E. Reistle, Jr., president, and E. O. Kirkendall, secretary. Headquarters: 29 W. 39th St., New York 18, N.Y.

American Institute of Physics, Inc.—This organization was founded in 1931 for the "advancement and diffusion of knowledge of the science of physics and its applications to human welfare." In 1956 membership totalled 17,000. Particular attention was given to the publication of scientific journals during 1956, and a new expanded program for the translation and publication of four leading Russian physics journals was announced. Publications: *Review of Scientific Instruments*; *Journal of Chemical Physics*; *Journal of Applied Physics*; *Physics Today*; others. Officers (1956): Frederick Seitz, chairman; Henry A. Barton, director; Wallace Waterfall, secretary; Mark W. Zemansky, treasurer. Headquarters: 57 E. 55th St., New York 22, N.Y.

American Iron and Steel Institute.—In 1908 this organization was founded to promote the interests of the iron and steel industry, distribute information and promote discussion of problems relating to the industry. During 1956 the organization was active in research, public relations, statistics, engineering and industrial relations, including health and safety. Its 1956 membership included 2,550 active, associate, honorary and emeritus members, and 102 company members. Publications: *Steelways* and *Steel Facts*, both bimonthly, and numerous booklets and pamphlets. Officers (1956) included: B. F. Fairless, president; Max D. Howell, executive vice-president; George S. Rose, secretary. Headquarters: 150 E. 42nd St., New York 17, N.Y.

American Law Institute.—The purpose of this organization, founded in 1923, is to promote the clarification and simplification of the law and its better adaptation to social needs. In 1956 the committee on continuing legal education conducted and sponsored numerous courses and lectures throughout the U.S., and issued *The Practical Lawyer*, a periodical. Work continued in 1956 on the drafting of a federal income, estate and gift tax statute, and further drafts of a five-year project to draft a code of substantive criminal law were completed. In 1956 there were 1,376 elected members. Officers (1956) included: Harrison Tweed, president; Herbert F. Goodrich, director and secretary; Bernard G. Segal, treasurer. Headquarters: 133 S. 36th St., Philadelphia 4, Pa.

American Mathematical Society.—This organization was established in 1888 to further the interests of mathematical scholarship and research. Publications: *Bulletin of the American Mathematical Society*; *Proceedings of the American Mathematical Society*; *Transactions of the American Mathematical Society*; and *Mathematical Reviews of the American Mathematical Society*. Membership in 1956 was approximately 5,000. Officers (1956) included: R. L. Wilder, president; E. G. Begle, secretary. Headquarters: 190 Hope St., Providence 6, R.I.

American Medical Association.—This federation of constituent state and territorial medical associations was founded in 1847 to promote the science and art of medicine and the betterment of public health. Activities during 1956 included the evaluation of new drugs, foods, physical medicine devices and techniques; the approval of medical schools; the evaluation of hospitals for internship and residency training programs; the provision of two postgraduate training meetings for physicians. Publications: *Journal of the American Medical Association*; *American Medical Directory*; *Today's Health*, a monthly magazine; and special publications. Membership in 1956 was approximately 160,000. Officers (1956): Dwight H. Murray, president; David B. Allman, president-elect; George F. Lull, secretary and general manager. Headquarters: 535 N. Dearborn St., Chicago 10, Ill.

American Optometric Association.—Founded in 1897, this organization's purpose is to promote the visual welfare of America and serve the professional interest of optometrists. During 1956 the association engaged in public information programs; produced a film strip, "Your Child's Vision"; held the annual congress at Miami Beach, Fla.; and held seminars on children's vision, occupational vision and motorists' vision. Membership in 1956 totalled 11,000. The association sponsored the National Save Your Vision week, March 4-10, 1956. Publication: *Journal of the American Optometric Association*, published monthly. Officers (1956) included: Rupert E. Flower, president; H. Ward Ewalt, treasurer; E. H. Kickenapp, secretary. Headquarters: 4030 Chouteau Ave., St. Louis 10, Mo.

American Physical Society.—Founded in 1899 for the advancement and diffusion of the knowledge of physics, this society had more than 12,000 members in 1956. During the year eight meetings were held at various sites in the U.S. Funds as of 1956 were \$50,000, to sustain the O. E. Buckley prize for research in solid-state physics. Publications: *Physical Review*; *Bulletin of the American Physical Society*; *Reviews of Modern Physics*. Officers (1956) included: E. P. Wigner, president; H. D. Smyth, vice-president; K. K. Darrow, secretary; G. B. Pegram, treasurer. Headquarters: Columbia university, New York 27, N.Y.

American Society of Agricultural Engineers.—This organization was organized in 1907 to promote the science and art of engineering in agriculture,

to encourage original research and to co-operate with other groups in broadening the usefulness of agricultural engineering. In 1956 it had 4,800 members. Publications: *Agricultural Engineering*, monthly; and *Agricultural Engineers Yearbook*. Officers (1956-57): Roy Bainer, president; J. L. Butt, secretary; R. A. Palmer, treasurer; J. A. Basselman, publisher and editor. Headquarters: 420 Main St., St. Joseph, Mich.

American Society of Civil Engineers.—Founded in 1852 as the first national engineering group, the society's sphere of influence encompasses technical advances in the profession as well as the professional advancement of its membership. In 1956 membership was 39,473. Organized for the purpose of advancing the sciences of engineering and architecture, the society directs professional activities from its headquarters in New York city, through 74 local sections and student chapters in 137 engineering colleges; also the 14 following technical divisions: air transport, city planning, construction, engineering mechanics, highways, hydraulics, irrigation and drainage, pipeline, power, sanitary engineering, soil mechanics and foundations, structural, surveying and mapping, and waterways and harbours. Publications: *Proceedings*, monthly; *Transactions*, yearly; *Civil Engineering*, monthly; a *Directory* (membership list); and a *Register* (organization details). Officers (1956): Enoch R. Needles, president; William H. Wisely, executive secretary. Headquarters: 33 W. 39th St., New York 18, N.Y.

American Society of Composers, Authors and Publishers (ASCAP).—Founded in 1914, the society, a voluntary, nonprofit unincorporated association, collects performing right royalties for allocation to members whose copyrighted musical works are used in public performances for profit. In 1956 3,900 writers and 907 publishers were members. Officers (1956) included: Paul Cunningham, president; Louis Bernstein and Otto A. Harbach, vice-presidents; John Tasker Howard, secretary; Saul H. Bourne, treasurer. Headquarters: 575 Madison Ave., New York 22, N.Y.

American Society of Heating and Air-Conditioning Engineers.—The purpose of this society, incorporated as the American Society of Heating and Ventilating Engineers in 1895, is to improve the science of heating, ventilating, cooling and air conditioning. The organization maintains a research laboratory which, from its inception in 1919 to 1956, had spent more than \$2,000,000 on research activities. Membership in 1956 was 10,784. Publications: *Transactions*, annual; *Heating, Piping and Air Conditioning*, monthly; and *Heating, Ventilating and Air Conditioning Guide*. Officers (1956) included: John W. James, president; R. A. Sherman, treasurer; and A. V. Hutchinson, executive secretary. Headquarters: 62 Worth St., New York 13, N.Y.

American Society of Mechanical Engineers.—This organization was founded in 1880 to promote the art and science of mechanical engineering, to encourage original research, to foster engineering education, to advance the standards of engineering and to promote interchange of ideas among engineers and with allied technologists. In 1956 the society held 4 national meetings and 16 professional division conferences. In addition, meetings were held by the 85 local sections, 15 subsections, 5 groups and the 142 student branches. Membership in 1956 totalled 40,917. Publications: *Journal of Applied Mechanics*, quarterly; *Mechanical Engineering and Applied Mechanics Reviews*, both monthly; *ASME Mechanical Catalog and Directory*, annual, and others. Officers (1956): Joseph W. Barker, president; C. E. Davies, secretary; J. L. Kopf, treasurer. Headquarters: 29 W. 39th St., New York, N.Y.

American Sunday-School Union.—The purpose of this organization, founded in 1817 as the Sunday and Adult School union, is "to organize and maintain Sunday schools in the rural areas of the United States and to publish and circulate Christian literature." During 1956, 1,490 vacation Bible schools were held with an enrolment of 46,981. More than 2,100 rural Sunday schools enrolled 87,412, and 121 Young People's Bible conferences were attended by more than 9,000 rural youths. The Pioneers For Christ, organized in 1952 for rural boys and girls of high school age, continued to make rapid progress. Publications included a full line of Sunday-school periodicals. The work is supported largely by contributions and a small endowment. Officers (1956): James F. Shrader, president; Lester E. Spencer, secretary of missions; William J. Jones, editor of publications. Headquarters: 1816 Chestnut St., Philadelphia 3, Pa.

Arthritis and Rheumatism Foundation.—This foundation was founded in 1948 to formulate and carry out a national program of research and education in the rheumatic diseases, discover their causes and develop methods for prevention and provide systematic rehabilitation for the disabled. In 1956 the foundation awarded 28 basic research fellowships, and distributed about 300,000 copies of publications about arthritis to physicians. In 1956 there were 44 chapters which provided care to arthritics through foundation-supported facilities. Publications: *Bulletin on Rheumatic Diseases*; *Manual for Arthritis Clinics*; pamphlets and booklets. The foundation is supported by voluntary contributions. Officers (1956) included: Gen. George C. Kenney, president; George C. Texter, treasurer; Hayden N. Smith, secretary. Headquarters: 23 W. 45th St., New York 36, N.Y.

Boy Scouts of America.—This nation-wide youth organization with activities for boys of eight years and older was incorporated in 1910 and chartered by congress in 1916. Objectives are to teach patriotism and citizenship, character development and the importance of religion in daily life. In 1956 the 46th annual meeting of the national council was held in Cincinnati, O. Membership as of July 31, 1956, was 3,023,279 boys and 112,381 adults in 54,374 scout troops, 38,648 cub packs and 14,744 explorer units. Publications include *Scouting* magazine, *Boys' Life* and the *Scout Executive*. Headquarters: New Brunswick, N.J.

Brookings Institution.—A nonprofit organization dedicated to public service through research and education in economics and government, the institution was incorporated on Dec. 8, 1927, and is supported by income from its own endowment, grants from foundations and the sale of publications. During 1956 the following studies were published: *An Introduction to Economic Reasoning*, by Marshall A. Robinson, Herbert C. Morton and James D. Calderwood; *The United Nations and Human Rights*, by James Frederick Green; *Television and Presidential Politics*, by Charles A. H. Thomson; *United States Foreign Policy, 1945-1955*, by William Reitzel; *Morton A. Kaplan and Constance G. Coblenz; The Changing Environment of International Relations*, Brookings Lectures, 1956, by Grayson L. Kirk and others; *The Metropolitan Transportation Problem*, by Wilfred Owen. Officers (1956) included: William R. Biggs, chairman of the board; Robert D. Calkins, president; Mildred Maroney, treasurer; Elizabeth H. Wilson, secretary. Headquarters: 722 Jackson Pl. N.W., Washington 6, D.C.

Buhl Foundation.—Established in 1928, the foundation had by 1956 granted to existing (or especially established) agencies a total of \$10,339,634 for the promotion of nationally significant programs in the Pittsburgh district—in education, health, historical research and publication, and research in natural sciences. During the year a third unit was completed in the foundation's Chatham Village, internationally known demonstration of a large-scale planned residential community built for long-term investment. The Buhl planetarium, built and maintained as a memorial to the founder, has conducted a program of popular science education, from elementary school to adult level, since 1939. Foundation assets in 1956 were, book value, \$13,038,340. Director: Charles B. Nutting. Headquarters: Farmers Bank building, Pittsburgh 22, Pa.

Camp Fire Girls, Inc.—Founded in 1910, this youth organization offers all girls an educational and recreational program designed to develop the individual abilities of each member, to encourage spiritual and ethical values and love of home and family. In 1956, Camp Fire Girls observed Birthday week, March 17-18. In their national project, "Plant Seeds . . . Reap Friendship!", members sent vegetable seeds to Asiatic countries. More than 420,000 members were enrolled in 1956. The three age groups of Camp Fire Girls are: Blue Birds, 7 to 10 years old; Camp Fire Girls, 10 to 15 years old; and Horizon Club members, of senior high school age. Publications: *Book of the Camp Fire Girls*; the *Camp Fire Girl*, monthly; and others. National officers (1956) included: Mrs. Harold H. Hartman, president; John J. Wolkerstorfer, chairman of the board; Mrs. W. Harvey Young, secretary; Martha F. Allen, national director. Headquarters: 16 E. 48th St., New York 17, N.Y.

Carnegie Trusts.—Six autonomous and separately administered agencies in the U.S. were established by Andrew Carnegie for various philanthropic purposes; in addition, there are four Carnegie trusts in Great Britain, and Carnegie Hero funds operate in nine European countries.

Carnegie Corporation of New York (1911), with a basic endowment of \$135,000,000, had in 1956 assets of more than \$183,000,000; the income from \$12,000,000 of this is applicable in the British dominions and colonies. Its purpose is the advancement and diffusion of knowledge and understanding among the people of the U.S. and the British dominions and colonies. Its primary interests lie in the fields of higher education and public and international affairs. Grants totalling more than \$7,000,000 were awarded to institutions of higher education and organizations engaged in research and public education in 1956. President (1956), John W. Gardner; secretary, Florence Anderson. Headquarters: 589 Fifth Ave., New York 17, N.Y.

Carnegie Endowment for International Peace (1910), established by a gift of \$10,000,000, uses its income to further peaceful co-operation among nations. President (1956), Joseph E. Johnson; secretary, Leslie Paffrath. Headquarters: United Nations Plaza at 46th St., New York 17, N.Y.

Carnegie Foundation for the Advancement of Teaching (1905) was established to provide retiring pensions for college teachers and to advance higher education. In addition to an original grant from Carnegie of \$13,000,000, by 1956 it had received sums amounting to more than \$34,000,000 from the Carnegie Corporation for pension purposes and educational studies. President (1956), John W. Gardner; secretary, Florence Anderson. Headquarters: 589 Fifth Ave., New York 17, N.Y.

Carnegie Hero Fund Commission (1904), with assets in 1956 of approximately \$10,000,000, was established to recognize by medals and monetary awards heroic acts performed in the peaceful walks of life. President (1956), Thomas S. Arbutnot; manager, M. H. Floto. Headquarters: Oliver Building, Pittsburgh 22, Pa.

Carnegie Institute of Pittsburgh (1896) includes a department of fine arts, a music hall and a museum of natural history; to it are closely related the Carnegie Library of Pittsburgh, the Carnegie Library school and the Carnegie Institute of Technology. President (1956), James M. Bovard. Headquarters: 4400 Forbes St., Pittsburgh 13, Pa.

Carnegie Institution of Washington (1902), with assets of approximately \$56,000,000 in 1956, conducts fundamental scientific research particularly in astronomy, geophysics, embryology, genetics, plant biology and archaeology. President (1956), Caryl P. Haskins; executive officer, Paul A. Scherer. Headquarters: 1530 P St. N.W., Washington 5, D.C.

Catholic Community Service, National.—This service organization was founded on Nov. 13, 1940, to assist in meeting the religious, social and welfare needs of members of the armed forces, of workers and their families in defense industry areas and of patients in Veterans administration hospitals. During 1956 the service conducted volunteer work in 171 Veterans administration hospitals, staffed 50 U.S.O. clubs and also published and distributed more than 400,000 copies of religious publications. Publications: *NCCS News*; *NCCS-VA Hospital News*; several religious pamphlets; and *Greetings!*, a pamphlet for young men about to be inducted into the armed forces. Thomas D. Hinton was executive director in 1956, and the Most Rev. Francis P. Keough was president. Headquarters: 1312 Massachusetts Ave. N.W., Washington 5, D.C.

Catholic Organizations for Youth.—The National Council of Catholic Youth is sponsored by the National Catholic Welfare conference. Its purpose is to foster spiritual, cultural, social and physical activities, and to represent in the U.S. and abroad, all Catholic youth organizations. The College and University section includes the National Federation of Catholic College Students, reaching students in Catholic colleges, and the National Newman Club federation, reaching Catholic students in nonsectarian colleges. The Diocesan section reaches Catholic organized youth who are outside the college and university field. Parish youth organizations throughout the country affiliate with the council through their Diocesan youth directors; nine national organizations also are affiliated with the Diocesan section. The national organizations include: Catholic Kolping Society of America, Catholic War Veterans of U.S.A., National Catholic Camping association, Columbian Squires, Daughters of Isabella, Junior Catholic Daughters of America, The Queen's Work, Catholic Total Abstinence union and The Fighting 69th.

The total number of young persons reached by the various programs in 1956 was about 7,000,000. Publications include *Youth*, a magazine, and *Program Service*, a bimonthly activities suggestion publication. Director: Msgr. Joseph E. Schieder. Headquarters: 1312 Massachusetts Ave. N.W., Washington 5, D.C.

Catholic Welfare Conference, National.—This organization was founded

in 1919 to organize and co-ordinate the Catholic residents of the U.S. in works of education, social welfare, immigrant aid and other activities. It acts as a clearinghouse of information regarding activities of Catholic men and women. The National Council of Catholic Men produced in 1956 weekly radio programs and television programs. The membership of the conference was composed of the 209 archbishops and bishops of the U.S. and more than 16,000 affiliated lay societies. Officers (1956) included: Francis P. Keough, archbishop of Baltimore, Md., chairman; Joseph E. Ritter, archbishop of St. Louis, Mo., secretary. The general secretary was Msgr. Howard J. Carroll. Headquarters: 1312 Massachusetts Ave. N.W., Washington 5, D.C.

Chamber of Commerce of the United States.—A federation of businessmen's organizations founded in 1912, the chamber was organized "to promote a better understanding of the functions of American business enterprise and of the contribution of business to public well-being and to serve as a clearinghouse of business opinion on economic issues."

In 1956 the national chamber sponsored national conferences on current issues such as the U.S. highway program; improvement of living standards; community development; economy and taxes; labour relations; education; and increasing the effectiveness of U.S. business organizations. In 1956 there were 3,200 organization members (state and local chambers of commerce and trade and industrial organizations), with an underlying membership of more than 1,800,000.

Publications: *Washington Report*, weekly; *Nation's Business*, monthly; newsletters; and special reports, papers, studies, etc. Officers (1956): John S. Coleman, president; Clem D. Johnston, chairman of the executive committee; A. Boyd Campbell, chairman of the board. Headquarters: 1615 H St. N.W., Washington 6, D.C.

Charles Hayden Foundation.—This organization was established in 1937 under the will of Charles Hayden to assist young men to "receive proper training in boyhood and youth . . . in the manner of right and proper living." Its activities are devoted mainly to aiding boys' clubs, boys' camps and similar projects for underprivileged boys, especially those of the New York, N.Y., and Boston, Mass., areas. By Sept. 30, 1956, the foundation had contributed \$30,458,022 for these purposes, and there was \$58,124,218 in the fund. Officers: Edgar A. Doubleday, president, secretary and treasurer; Erle V. Daveler, chairman of the board. Headquarters: 25 Broad St., New York 4, N.Y.

Civitan International.—This organization was founded in 1920 and its purpose is best explained by its motto, "Builders of Good Citizenship." During 1956 principal activities included work on the March of Dimes, Cancer Crusade and Red Cross campaigns, safety projects and essay contests in high schools. Membership in 1956 was about 23,000. Publications: the *Civitan* magazine, edited monthly; informational booklets. Officers (1956) included: Luther R. Medlin, president; Rudolph T. Hubbard, secretary. Headquarters: 1523-28 Comer Bldg., Birmingham 3, Ala.

Commonwealth Fund.—Established in 1918 by Mrs. Stephen V. Harkness "to do something for the welfare of mankind," and increased by other bequests, the fund amounted to approximately \$76,000,000 at the end of the fiscal year 1955-56. Appropriations for that year were \$15,140,154.82. The major concern of the fund in 1956 was helping medical schools to reorient medical education to the student and medical care to the patient, by better integration and increased attention to the relation between the patient and his environment. Grants for medical education, including fellowships and awards in the health field, amounted to \$13,543,033; for experimental health services, \$72,000; and for medical research, \$717,546. During the academic year 1956-57, 62 persons were resident in the U.S. under Commonwealth fund fellowships, including 46 scholars, journalists and civil servants from Great Britain and other parts of the British Commonwealth and 16 scholars from western European countries. The fund publishes an annual report. Malcolm P. Aldrich was president in 1956. Headquarters: 1 E. 75th St., New York 21, N.Y.

Daughters of the American Revolution.—The National Society of the Daughters of the American Revolution was founded in 1890 for historical, patriotic and educational purposes. The society in 1956 had 183,447 members in 2,805 chapters. During the year it operated two schools and provided financial assistance to others; conducted programs for good citizenship; operated Junior American Citizens clubs; maintained a genealogical library; and presented awards for citizenship qualifications in accredited high schools. Publications: *Daughters of the American Revolution Magazine* and *Press Relations Digest*. Mrs. Frederic A. Groves was president general in 1956. Headquarters: 1776 D St. N.W., Washington 6, D.C.

Duke Endowment.—By an indenture executed Dec. 11, 1924, by James B. Duke, the Duke Endowment was established as a common-law trust "to make provision in some measure for the needs of mankind along physical, mental and spiritual lines." The fund allocates payments to educational institutions, including Duke university, Durham, N.C., and also distributes funds to help support hospitals, orphanages and the Methodist Church in rural areas. The total amount allocated and distributed as of Dec. 31, 1955, was \$122,045,652.15. The fund is supervised by a self-perpetuating board of 15 trustees. Officers (1956) included: George G. Allen, chairman; Alex H. Sands, Jr., vice-chairman; Randolph E. DuMont, treasurer. Headquarters: Power Building, Charlotte 1, N.C.

Elks, Benevolent and Protective Order of.—Founded in 1868, this service organization in 1956 had 1,250,000 members in its 1,766 lodges. Its purpose is to practise charity, justice, brotherly love and fidelity; to promote the welfare and enhance the happiness of its members; to quicken the spirit of American patriotism and cultivate good fellowship. During 1956 the organization donated funds for scholarships, infantile paralysis, cerebral palsy and other similar purposes. It emphasized its rehabilitation program in U.S. Veterans administration hospitals and in establishing fraternal centres for members of the armed forces. Publication: the *Elks Magazine*. Officers (1956): Fred L. Bohn, grand exalted ruler; L. A. Donaldson, grand secretary. National headquarters: 2750 Lakeview Ave., Chicago 14, Ill.

Falk Foundation, Maurice and Laura.—This foundation was established in 1929 with the broad purpose of the advancement of human welfare. During 1956 (to Aug. 17) grants totalling \$306,612 were made in support of college and university courses and field projects to prepare students for citizen participation in politics, and for further research to develop a uniform commercial code suitable for adoption by the legislatures of the

several states. Grants outside the foundation's major fields of interest included an allotment of \$120,000 to the Children's hospital of Pittsburgh, Pa., to develop a psychiatric service and training program. Funds as of Dec. 31, 1955, were \$15,398,161.25. Officers (1956) included: Leon Falk, Jr., chairman; Eugene B. Strassburger, secretary; J. Steele Gow, executive director. Headquarters: Farmers Bank building, Pittsburgh 22, Pa.

Ford Foundation.—The Ford foundation was founded in 1936 to receive and administer funds for scientific, educational and charitable purposes, all for the public welfare. During the fiscal year ended Sept. 30, 1956, it approved grants and appropriations totalling \$137,063,164 in support of activities devoted to education, citizenship training, economic development and administration, increasing knowledge of human behaviour, international understanding and economic and social development overseas. In addition, payments of \$500,000,000 in grants to colleges, universities, hospitals and medical schools began in April 1956. The total assets of the foundation as of Sept. 30, 1955, amounted to \$580,918,567. Officers (1956) included: H. Rowan Gaither, Jr., chairman; Henry T. Heald, president; Joseph M. McDaniel, Jr., secretary; Richard W. Lambourne, treasurer. Office: 477 Madison Ave., New York 22, N.Y.

Franklin Institute of the State of Pennsylvania.—This nonprofit institution was founded in 1824 for promotion of the mechanic arts. It devotes itself to interpreting science for nontechnical persons and to research for the benefit of industry and government. Activities include maintenance of the Benjamin Franklin memorial, a museum of science and industry, including Fels planetarium; a technical library of more than 250,000 volumes; lectures and exhibits on a wide variety of subjects; honour awards for distinguished achievements in science and technology; publication of the *Journal of the Franklin Institute*; the Franklin Institute Laboratories for Research and Development; the Bartol Research foundation; and the Bi-chemical Research foundation. In 1956 the institute conducted laboratories for research and development with divisions of mechanical engineering, electrical engineering, solid state physics, and chemistry and physics. Income is derived from dues of 7,500 members, museum and planetarium admissions, bequests and gifts, and industrial sponsorship of research and exhibits. Officers (1956): S. Wyman Rolph, president; John S. Burlew, executive vice-president and director. Headquarters: Benjamin Franklin parkway at 20th St., Philadelphia 3, Pa.

Freemasonry.—Said to be the oldest and largest fraternal organization in the world, the Masonic fraternity is nonsectarian and nonpolitical and has no benefit or insurance provisions. Its purpose is the moral and spiritual elevation of its members and, through them, of mankind. Since the 18th century its lodges have been joined together in grand lodges, mostly on a territorial basis, each grand lodge being independent. Masonic organizations based on lodge membership include the Royal Arch, the Knights Templar and the Scottish Rite. There are 49 grand lodges in the U.S., three in the British Isles, and one in each province of Canada and each state in Australia. There are many lodges in other parts of the world, except in the totalitarian countries. Masonic membership in the U.S. in 1956 was 4,000,000 in 15,765 lodges; world membership was in excess of 5,000,000. Publications: annual proceedings by all grand lodges and many of the related organizations; weekly, monthly and quarterly periodicals by some organizations and individuals.

Future Farmers of America.—Founded Nov. 20, 1928, this is a national organization of boys studying vocational agriculture in public secondary schools under the provisions of the national vocational education acts. The purpose of the Future Farmers is to develop agricultural leadership, co-operation and citizenship. Membership in 1956 was more than 382,000. Publications: *National Future Farmer*, quarterly; and various pamphlets. Officers (1956) included: Daniel B. Dunham, national president; Terrell Benton, Jr., student secretary. Headquarters: U.S. Department of Health, Education and Welfare, Office of Education, Washington 25, D.C.

Girl Scouts of the United States of America.—The purpose of this organization, founded in 1912 by Juliette Low, is "to help girls develop as happy, resourceful individuals willing to share their abilities as citizens in their homes, their communities, their country and the world." In 1956, 2,600,000 girls and adults, including brownie, intermediate and senior scouts, were members. The first national Girl Scout encampment held near Pontiac, Mich., June 29-July 11, 1956, was attended by 6,000 teen-age Girl Scouts and troop leaders. Publications: *Girl Scout Leader*; *American Girl*; and various handbooks. Officers (1956): Mrs. Roy F. Layton, president; Mrs. Charles H. Ridder, secretary; Dorcas Campbell, treasurer. Headquarters: 155 E. 44th St., New York 17, N.Y.

Grange, National.—This farmers' organization, founded in 1867, is said to be the largest farm fraternity in the world. Representing the voice and influence of farmers in all segments of the national economy, the organization sought in its 1956 program to advance legislation on local, state and national levels. Membership in 1956 totalled approximately 850,000 in 7,500 local units. Publication: the *National Grange Monthly*. Officers (1956): Herschel D. Newsom, master; Harry A. Caton, secretary. Headquarters: 744 Jackson Pl. N.W., Washington 6, D.C.

International College of Surgeons.—This organization was founded in 1935 to create a common bond among the surgeons of all nations, to promote the highest standards in surgery throughout the world without regard to nationality, creed or colour, and as a teaching postgraduate unit. The 10th biennial congress and 21st annual assembly of the U.S. and Canadian sections was held in Chicago, Ill., Sept. 9-13, 1956. Membership in 1956 was about 12,000. Publication: the *Journal of the International College of Surgeons*. Officers (1956) included: Carlos Gama (Brazil), president-elect; Max Thorek, founder and international secretary general. Headquarters: 1516 Lake Shore Dr., Chicago 10, Ill.

Jewish Welfare Board, National.—Founded in 1917, this agency is authorized by the U.S. government to serve the religious, welfare and morale needs of Jews in the U.S. armed forces at home and abroad and in Veterans administration hospitals. In 1956, it had 241 armed services committees. It recruited and served 355 full-time and part-time Jewish chaplains and represented the U.S. Jewish community in the United Service Organizations, on whose behalf it operated 30 clubs and area operations. Since 1921, it has also been the national association of Jewish Community centres and Young Men's and Young Women's Hebrew associations. Its 1956 membership included 352 centres with 565,000 members. Officers (1956): Charles Aaron, president; Frank L. Weil, honorary president; S. D. Gershovitz,

executive vice-president. Headquarters: 145 E. 32nd St., New York 16, N.Y.

John Simon Guggenheim Memorial Foundation.—Founded in 1925, the foundation "offers Fellowships, to further the development of scholars and artists by assisting them to engage in research in any field of knowledge and artistic creation in any of the fine arts including music, under the freest possible conditions." Fellowships are offered to citizens of the United States of America, all other American republics, the Republic of the Philippines, Canada and the British Caribbean. Endowment (1956): \$45,000,000. Officers (1956): Mrs. Simon Guggenheim, president; Henry Allen Moe, secretary. Headquarters: 551 Fifth Ave., New York 17, N.Y.

Kellogg Foundation.—The W. K. Kellogg foundation was established in 1930 to promote the health, education and welfare of mankind, principally of children and youth without regard to race, sex, creed or nationality. It functions through the divisions of agriculture, dentistry, education, medicine and public health, hospitals, nursing and the Latin-American division. It is administered by a board of nine trustees, and its assets totalled more than \$124,257,200 in 1956. Officers (1956): Emory W. Morris, president; Orville L. DeBolt, treasurer; Leonard L. White, secretary. Headquarters: 250 Champion St., Battle Creek, Mich.

Kiwanis International.—Founded Jan. 21, 1915, in Detroit, Mich., this service organization operates through community service clubs, comprised of business and professional men. During 1956 it sponsored with the U.S. air force the eighth annual observance of National Kids' day; served as co-ordinating agency for the second annual observance of Farm-City week; sponsored programs aimed at increasing religious interest; helped underprivileged children; promoted agricultural and conservation projects and vocational guidance programs. Membership in 1956 numbered more than 250,000 in more than 4,200 clubs in the U.S., Canada, Alaska, Hawaii and the Yukon territory. Publications: the *Kiwanis Magazine*; the *Keynote*, the official organ of the Kiwanis-sponsored Key clubs for outstanding high school youths; and the *Bulletin of Circle K International*, the official organ of the Kiwanis-sponsored Circle K clubs for college leaders. Officers (1956-57) included: Reed C. Culp, president; O. E. Peterson, secretary; H. Park Arnold, treasurer. Headquarters: 520 North Michigan Ave., Chicago 11, Ill.

Knights of Columbus.—This organization of Catholic men was founded in 1882 for the mutual help of its members. Later its purposes were broadened to include educational, charitable, religious, social and relief work. Its program of advertising the facts concerning the Catholic religion in newspapers and magazines, begun in 1948, was continued during 1956, resulting in 2,366,978 inquiries concerning Catholicism and the enrolment of 238,546 persons for instruction in the Catholic religion. Also its work of microfilming historic documents at the Vatican library, Vatican City, for deposit at St. Louis university (Mo.), where they would be available for study by scientists and scholars, was progressing. Membership in 1956 was 1,009,395. Publication: *Columbia*, a monthly. Luke E. Hart was supreme knight. Headquarters: Columbus Plaza, New Haven, Conn.

League of Women Voters of the United States.—Founded in 1920 to promote informed and active participation of citizens in government, membership in 1956 was 126,000 in 1,000 local leagues in 48 states, the District of Columbia, Alaska and Hawaii. In 1956 the league program included evaluation of the federal loyalty-security programs, with recognition of the need for safeguarding national security and protecting individual liberties; and a study of water resources. The organization is not endowed. Publications: the *National Voter*, newsletter issued 16 times a year; and *Report From the Hill*, issued monthly during sessions of congress. Officers (1956) included: Mrs. John G. Lee, president; Mrs. Donald F. Bishop, secretary; Mrs. Carl Marcy, treasurer. Headquarters: 1026 17th St. N.W., Washington 6, D.C.

Lions Clubs, International Association of.—The purpose of this organization, founded in 1917, is "to recognize community needs and develop means of meeting them, either through the clubs' own efforts or in co-operation with other agencies." In 1956 Lions clubs completed more than 170,000 activities for the betterment of communities, states and nations. These activities included projects in agriculture, education, and health and welfare. In 1956 there were 12,427 Lions clubs in 75 countries. Membership in 1956 was more than 542,000. Publication: the *Lion*, monthly. Officers (1956) included: John L. Stickley, president; R. Roy Keaton, director general. Headquarters: 209 N. Michigan Ave., Chicago 1, Ill.

Milbank Memorial Fund.—A membership corporation under the laws of the state of New York, this organization was founded in 1905 to improve the physical, mental and moral condition of humanity and generally to advance charitable and benevolent objects. In 1956 the fund appropriated funds to support activities and projects in the fields of public health and medicine. Total funds as of Dec. 31, 1955, amounted to \$15,620,830.01. Publications: *Milbank Memorial fund Quarterly*; *Annual Report*; *Proceedings of Annual Conference*. Officers (1956) included: Samuel R. Milbank, chairman of the board; Frank G. Boudreau, president. Headquarters: 40 Wall St., New York 5, N.Y.

Moose, Loyal Order of.—Founded in 1888, the purpose of this organization is "to unite in the bonds of fraternity, benevolence, and charity all acceptable . . . persons of good character; to educate and improve their members . . . to encourage tolerance of every kind . . . and to serve aged members and their wives. . . ." In 1956 the organization continued operations of its institutions at Mooseheart, Ill. (caring for children who had lost one or both parents), and Moosehaven at Orange Park, Fla. (for dependent elderly members). Membership in 1956 numbered 1,062,693. Publications: *Moose Magazine*; *Moose Docket*. Officers (1956): Paul P. Schmitz, director general; George Eubank, supreme secretary. Headquarters: Mooseheart, Ill.

National Academy of Sciences-National Research Council.—The academy was established in 1863 by act of congress as a nongovernmental organization of natural scientists to further science and advise the government in scientific matters. Membership in 1956 was 552; 30 new members are elected annually. The Research council was established by the academy in 1916; among its 243 members are representatives of major scientific and engineering societies and of the government. About 3,000 scientists serve on various boards and committees of the Academy-Research council. In 1956 the Academy-Research council advised the government on loyalty criteria for unclassified research grants, and reported on the biological effects of atomic radiation. It is endowed by the Carnegie Corporation of New York. Publications: *Proceedings of the National Academy of Sciences*; periodicals.

Detlev W. Bronk was president of the academy in 1956. Headquarters: 2101 Constitution Ave. N.W., Washington 25, D.C.

National Association for the Advancement of Colored People.—Founded in 1909, this organization directed its 1956 activities toward implementing the U.S. supreme court decisions banning segregation of races in public schools; abolishing segregation in private and public housing; securing the franchise for Negroes; and ending terrorist acts against Negroes. Membership in 1956 was approximately 305,000. Publications: *The Crisis*, a monthly magazine. Officers (1956) included: Arthur B. Spingarn, president; Roy Wilkins, executive secretary. Headquarters: 20 W. 40th St., New York 18, N.Y.

National Association of Manufacturers.—The N.A.M. was founded in 1895 to promote the industrial interests of the U.S., foster domestic and foreign commerce, improve employer-employee relations, protect individual liberty and the rights of employer and employee, and support legislation in furtherance of those principles. Its activities in 1956 concentrated on federal surtax rate reduction, correction of abuses in the labour field and creation of an atmosphere which inspires public confidence and faith in the future. Membership in 1956 was approximately 22,000. Publications: *N.A.M. News*, weekly; *Industrial Press Service*, biweekly; *Service for Company Publications*, monthly; *Program Notes*, bimonthly. Officers (1956) included: Henry G. Riter, III, chairman of the board; Cola G. Parker, president; Kenneth R. Miller, managing director; Thomas M. Brennan, secretary. Headquarters: 2 E. 48th St., New York 17, N.Y.

National Association of Real Estate Boards.—This association was founded in 1908 with the goal of raising the standards in the real estate profession. It holds all property rights in the term "realtor," a trade-mark which denotes a person engaged in the real estate business who is an active member, and who subscribes to the ethics, of the National Association of Real Estate Boards. In 1956 the organization and its specialized groups were comprised of 57,000 members and 1,200 real estate boards in the U.S., Canada and Hawaii. Headquarters: 1737 K St. N.W., Washington 6, D.C.

National Association of State Libraries.—This association was founded in 1889 "to develop and increase the usefulness and efficiency of the state libraries and other agencies performing library functions at the state level." Its 1956 membership included 231 institutional, individual, associate and honorary members. Publications include check lists of legislative journals and statutes; the *Newsletter*, quarterly; and a pamphlet, *Role of the State Library*. Officers: Ralph Hudson, state librarian, Oklahoma City, Okla., president; deLafayette Reid, Springfield, Ill., secretary-treasurer. Headquarters: Illinois State Library, Springfield, Ill.

National Council of the Churches of Christ in the United States of America.—The purpose of this nonprofit organization, founded in 1950, is to express practically the unity of spirit and purpose which Christian people have because of their common loyalty to Christ. It serves as a co-operative instrument of 30 nationwide Protestant and Eastern Orthodox communions, whose aggregate membership in 1956 was about 36,800,000. In 1956 the organization furthered its teachings via home and foreign missions, radio, television, educational films and the press. Publications include: the *National Council Outlook*; the *Church Woman*; *International Journal of Religious Education*. The budget for 1956 was more than \$13,000,000. Officers included: Eugene C. Blake, president; Charles E. Wilson, treasurer; Roy G. Ross, general secretary. Headquarters: 297 Fourth Ave., New York 10, N.Y.

National Education Association of the United States.—This organization was founded in 1857 "to elevate the character and advance the interests of the teaching profession and to promote the cause of education throughout the country." In 1956 the association continued construction of a new \$5,000,000 education centre in Washington, D.C., and held 70 major conferences and conventions. In 1956 membership was 659,000; membership of affiliated state associations was more than 1,000,000. Publications include the *NEA News*; *NEA Journal*; and a *Research Bulletin*. Officers (1956-57) included: Martha A. Shull, president; Gertrude E. McComb, treasurer; William G. Carr, executive secretary. Headquarters: 1201 16th St. N.W., Washington 6, D.C.

National Foundation for Infantile Paralysis, Inc.—Founded in 1938 by Franklin D. Roosevelt for the purpose of combating infantile paralysis (polio), the organization treats patients, extends fellowships and scholarships to train medical personnel in polio treatment methods, and finances research into prevention and treatment. In 1956 there were 3,100 chapters in the U.S., its territories and administered areas. During 1956 the foundation continued grants-in-aid to 18 regional respirator centres in hospitals. It also provided enough vaccine to inoculate all children in the first and second grades of school. Publication: *National Foundation News*, monthly. Support is derived by voluntary contributions to the annual March of Dimes in January. Officers (1956): Basil O'Connor, president; Raymond H. Barrows, executive director. Headquarters: 120 Broadway, New York 5, N.Y.

National Recreation Association.—Founded in 1906 to "help assure every child in America a place to play in safety and every person, young and old, an opportunity to find the best and most satisfying use of his expanding leisure time," this association in 1956 had 1,483 affiliate (agency) members, 3,318 associate (individual) members and 16,000 contributing members. Publication: *Recreation* magazine. Officers (1956): Otto T. Mallory, chairman of the board; Joseph Prendergast, executive director. Headquarters: 8 W. Eighth St., New York 11, N.Y.

National Science Foundation.—The National Science foundation is an independent agency of the federal government, established by congress in May 1950 "to promote the progress of science; to advance the national health, prosperity, and welfare; to secure the national defense; and for other purposes." The foundation consists of the National Science board and a director. Its principal activities are the development of national science policy; the support of basic research; and the furtherance of education in the sciences through the award of graduate fellowships and by other means. Detlev W. Bronk was chairman of the board in 1956 and Alan T. Waterman was director.

During 1956 the foundation awarded 706 grants, or a total of \$9,897,805, in the biological, mathematical, medical, physical and engineering sciences. The foundation awarded a total of 925 fellowships for the academic year 1956-57, including 775 predoctoral awards, 98 postdoctoral awards and 52 senior postdoctoral awards. During 1956 the foundation continued a com-

prehensive survey of science in the U.S., which included research and development in industry; research and development at nonprofit organizations; and studies of scientific manpower. Headquarters: 1520 H St. N.W., Washington 25, D.C.

National Society for Crippled Children and Adults, Inc.—Founded in 1921, this organization is also called the Easter Seal society. Its purpose is to help crippled children and adults by providing care and treatment services; to conduct a public educational program; and to encourage research into causes, prevention and treatment of crippling conditions. In 1956 the society maintained hundreds of facilities and programs, including diagnostic clinics, rehabilitation centres, employment programs and outpatient treatment-training centres. In 1956 there were state member societies in 52 U.S. states and territories, including the District of Columbia, Alaska, Hawaii and Puerto Rico. Publications: *Crippled Child Magazine*; *Bulletin of the National Society*; *Bulletin on Current Literature*. Funds derived from the 1956 annual Easter Seal campaign totalled \$9,600,000. Officers (1956) included: Theodore H. Wegener, president; Dean W. Roberts, executive director. Headquarters: 11 S. LaSalle St., Chicago 3, Ill.

National Temperance League, Inc.—This federation of state temperance organizations was formed by the merger in 1950 of the Temperance League of America and the National Temperance Movement, Inc. In 1956 the league sought federal action to ban the sale of alcoholic beverages upon air lines; to prevent the advertising of such beverages in interstate commerce and the dispensing of them in the armed services. It also sought to reduce the number of accidents resulting from drinking and to promote research and education with respect to drinking as a factor in modern social problems. The official publication is the *American Issue*. Officers in 1956 included: president, Duke K. McCall; executive director, Clayton M. Wallace. Headquarters: 131 Independence Ave. S.E., Washington 3, D.C.

Parents and Teachers, National Congress of.—This organization, founded in 1897 as the National Congress of Mothers, had in 1956 a membership of 10,130,352 parents, teachers and other citizens organized in 42,182 local associations. Its purpose is to promote the welfare of children; raise the standards of home life; secure laws for care and protection of children and youth; bring the home and school into closer relationship; and develop plans for joint action along these lines by educators and the general public. In 1956 a new action program was put into effect, based on the current administration theme: "The Family and the Community: Each Shapes the Other—The P.T.A. Serves Both." Publications include: the *National Parent-Teacher*; *The P.T.A. Magazine*; *National Congress Bulletin*; and *National Congress Proceedings*, annual. Officers (1956) included: Mrs. Rollin Brown, national president; Mrs. L. W. Alston, national secretary. National headquarters: 700 N. Rush St., Chicago 11, Ill.

Research Libraries, Association of.—Founded in 1931, this association of 45 institutions seeks "by co-operative effort to develop and increase the resources and usefulness of the research collections in American libraries." In 1956 it established a co-operative plan for the acquisition of foreign newspapers in a national pool. R. A. Miller was executive secretary in 1956. Headquarters: the Indiana University library, Bloomington, Ind.

Rockefeller Foundation.—Founded in 1913 "to promote the well-being of mankind throughout the world," the foundation during 1956 made grants to colleges, universities, research institutes and similar organizations. Its program for the advancement and application of knowledge to human welfare was concentrated in certain specific fields of medical education and public health, biological and medical research, agriculture, social sciences and humanities. The 21 trustees are the 21 members of the corporation. Assets as of Dec. 31, 1955, totalled \$547,450,313 (market value). Officers (1956): Dean Rusk, president; Edward Robinson, treasurer; Flora M. Rhind, secretary. Headquarters: 49 W. 49th St., New York 20, N.Y.

Rotary International.—Founded Feb. 23, 1905, this organization sponsors a program to encourage and foster the "ideal of service." Rotary activities include community betterment undertakings, leading boys and girls into good citizenship, promotion of high standards in businesses and professions, and the advancement of international understanding, good will and peace. By 1956, 827 Rotary fellowships for graduate study for one year abroad, averaging \$2,500 each, had been awarded to students from 61 countries for study in 40 countries, as a contribution by Rotary International in the field of international understanding. There were 9,200 Rotary clubs with a membership of 435,000 business and professional executives in 99 countries. The 1957 convention was to be held in Lucerne, Switz., May 19-23. Publications: the *Rotarian* (English) and *Revista Rotaria* (Spanish), monthly magazine; pamphlets. Officers (1956) included: Gian Paolo Lang, president; George R. Means, secretary. Headquarters: 1600 Ridge Ave., Evanston, Ill.

Russell Sage Foundation.—This foundation was established in 1907 by Mrs. Russell Sage for "the improvement of social and living conditions in the U.S." Its 1956 program consisted of varied research and consultation projects, designed to advance the use of the social sciences in the fields of health, education, philanthropy, professions and professional training, the child and the family and intergroup and cultural relations. Assets of the foundation, Sept. 30, 1956, were in excess of \$23,000,000 (market value). Officers (1956): Donald Young, president; E. W. Debevoise, chairman of the board; Dave H. Morris, Jr., treasurer; Ralph G. Hurlin, secretary. Headquarters: 505 Park Ave., New York 22, N.Y.

Seeing Eye, Inc.—A national philanthropy founded in 1929 and supported through annual memberships, public contributions and bequests. The society's purposes include securing and training dogs to guide blind persons, teaching instructors the technique of training guide dogs and teaching qualified blind people how to care for and use guide dogs. During 1956, 167 blind persons were provided with dog guides. Membership was about 20,000; 2,350 persons, of whom 1,000 had obtained second, third or fourth dogs, had received Seeing Eye dogs since the organization's inception. Publications: the *Seeing Eye Guide*, published quarterly for the members of the Seeing Eye; and printed booklets. Officers (1956): Henry A. Colgate, president; James Carey, treasurer; George Werntz, Jr., executive vice-president and secretary. Headquarters: Morristown, N.J.

Sloan Foundation, Inc., Alfred P.—Founded in 1934, the foundation is a nonprofit corporation established for educational, scientific and related purposes. The foundation's grants during 1956 went largely to projects in basic science, medicine, especially cancer and ophthalmological research,

scholarship and fellowship projects in colleges and universities, and popular educational projects. From 1937 to Aug. 1956 the foundation had made grants totalling more than \$31,000,000. The market value of the foundation's investments as of July 31, 1956, was approximately \$148,206,000. Officers (1956): Alfred P. Sloan, Jr., president; Raymond P. Sloan, vice-president; James F. Kenney, secretary and treasurer; Arnold J. Zurcher, vice-president and executive director. Headquarters: 30 Rocketteller Plaza, New York 20, N.Y.

Sodality of Our Lady.—This international Catholic body was founded in 1563 to advance the spiritual and corporal works of mercy under the patronage of the Mother of God. In 1956 seven weeks of leadership training were given in six U.S. cities and one in Canada. A total of 174 new sodalities were erected in the U.S. during the first six months of 1956. At the 18th annual meeting of Diocesan Sodality directors, the National Diocesan Sodality Directors' conference was established with the Rev. Erwin Juraschek of San Antonio, Tex., as president. The Rev. James J. McQuade, S. J., was named new national director in Sept. 1956. U.S. headquarters: 3115 S. Grand Blvd., St. Louis 18, Mo.

Twentieth Century Fund.—Founded in 1919 by Edward A. Filene, the fund is a nonprofit, nonpartisan foundation for research and public education on current economic and social problems. In 1956 the fund issued a report on the economic needs of older people and completed studies of U.S. farm commodity programs; antitrust policies and enforcement; and the economic effects of technological changes. Research projects relating to the U.S. economy included studies of distribution costs and methods, urban growth, civil-military relations and welfare and pension funds. Several projects of international scope were in progress, including studies of economic and political systems in the world, Europe's needs and resources, the European Coal and Steel Community, economic, social and political conditions in tropical Africa, and others. During 1956 the fund published three issues of a *Newsletter* and *Newsbriefs*, a clip-sheet, to keep its activities before the public. Total assets as of Dec. 31, 1955, were \$13,913,297. Officers (1956): Adolf A. Berle, Jr., chairman of the board; Francis Biddle, vice-chairman of the board; H. C. Sonne, treasurer; August Heck-scher, director. Headquarters: 330 W. 42nd St., New York 36, N.Y.

United States Junior Chamber of Commerce.—The purpose of this organization, founded in 1920, is to help make every community (and the country) a better place in which to live through the promotion of constructive civic projects, and to help develop civic leadership. In 1956 the chamber sponsored projects such as traffic safety, disaster relief, sports, and a public education program, and was active in such fields as agriculture, public health, fire prevention, voter registration, international relations and youth welfare. Membership in 1956 was 185,000 in 3,200 chapters. Publications: *Future and Action*, both monthly. Officers (1956) included: Wendell H. Ford, president; Ben Sisson, treasurer. Headquarters: 21st St. and Jaycee Blvd., Tulsa, Okla.

Woman's Christian Temperance Union, National.—The W.C.T.U., founded in 1874, is an organization of Christian women banded together to disseminate information as to what alcohol is and what it does, and the impact which the use of alcoholic beverages has upon the social and economic life of the nation. Membership, about 400,000; publications include the *Union Signal*, weekly, and the *Young Crusader*, monthly for children. Officers (1957): Mrs. Glenn G. Hays, president; Mrs. Fred J. Tooze, corresponding secretary; Mrs. H. F. Powell, treasurer. Headquarters: 1730 Chicago Ave., Evanston, Ill.

Women's Clubs, General Federation of.—Founded in 1890, this organization aims at uniting women's clubs throughout the world to promote education, philanthropy, public welfare, moral values, civics and fine arts. During 1956 emphasis was placed upon study of the historical foundations of religions of the world. Membership in 1956 included 850,000 individual paying members, with a total in affiliated organizations of about 11,000,000 in the U.S. and 58 other countries. Publication: *General Federation Clubwoman*, monthly. Officers (1956): Mrs. R. I. C. Prout, president; Chloe Gifford, first vice-president; Mrs. E. Lee Ozbirn, second vice-president. Headquarters: 1734 N St. N.W., Washington 6, D.C.

World Council of Churches.—Founded in 1948, this association's purpose, "through ecumenical fellowship and work and study programs, is to promote better understanding between churches and encourage them in their will toward Christian unity." The program of the council is co-ordinated through three main divisions: studies, ecumenical action, and interchurch aid and service to refugees. The council maintains contact with the United Nations through the commission of churches on international affairs. During 1956 special attention was given to a three-year study dealing with the church's responsibility in world areas of rapid social change. Member churches in 1956 totalled 165 in 47 countries, representing more than 160,000,000 persons. Publications: *Ecumenical Review*, quarterly; *Ecumenical Press Service*, weekly; *Ecumenical Courier*, bimonthly. In 1956 the basic budget was \$456,000. Council activities are guided by a central committee which met in 1956 in Galyatetö, Hung. Samuel McCrea Cavert was executive secretary in 1956. Headquarters: 17 Route de Malagnou, Geneva, Switz.; U.S. office: 156 Fifth Ave., New York, N.Y.

Young Men's Christian Association.—Founded in London, Eng., in 1844, this is a world-wide fellowship seeking to improve the spiritual, social, recreational and physical lives of young people. During 1956 there were 1,818 Y.M.C.A.'s operating in cities and rural areas, with memberships of 3,112,037. About 168,581 clubs, classes, teams, special interest groups and councils met regularly with programs emphasizing physical, educational, social and religious needs, plus emphasis on citizenship and world affairs. Among high school youth, 10,444 Hi-Y clubs for boys and 5,010 Tri-Hi-Y clubs for girls were functioning. Publications included *National Council Bulletin* and the *YMCA Year Book*. Endowments totalled \$61,173,600. Officers (1956): Clifford C. Gregg, president; Jay A. Urice, general secretary. Headquarters: 291 Broadway, New York 7, N.Y.

Young Women's Christian Association of the United States of America.—This organization was founded in England in 1855 and in the U.S. in 1858 to build a fellowship of girls and women devoted to the pursuit of Christian ideals in personal and social living. Reported registration in community Y.W.C.A.'s in 1956 totalled approximately 2,000,000. Publications: the *Bookshelf*; *YWCA Magazine*; and *Young Adults in the YMCA*. Officers (1956) included: Lilace R. Barnes, president; Mrs. F. Beardsley Foster, vice-president; Mrs. A. Hudson Sealy, secretary. Headquarters: 600 Lexing-

ton Ave., New York 22, N.Y.

Zonta International.—A service organization of executive women in business and the professions founded in 1919, this organization encourages high ethical business and professional standards, the improvement of the legal, political, economic and professional status of women, and international understanding through a world fellowship of executive women. Membership in 1956 included 335 clubs with approximately 12,000 members in the U.S. and 12 other countries. During 1956 two Amelia Earhart graduate scholarships were awarded. Publication: *Zontian* (magazine). Officers (1956-57) included: Emma L. Conlon, president; Ellen Fireoed, executive secretary. Headquarters: 59 E. Van Buren St., Chicago 5, Ill.

Sociology. The year 1956 was characterized by growth in areas that had been dormant for some time or that had not been cultivated intensively. Most developments could be viewed as worthwhile, although sharp criticism was by no means lacking.

Perhaps the sharpest criticism was offered by Pitirim Sorokin in his *Fads and Foibles in Modern Sociology and Related Sciences*. His attack was over a wide front, but was chiefly centred on disregard of past achievements, jargon, operationism and natural-science imitation, poorly conceived and misused tests, over-elaborate mathematical procedures, spurious experimentation, trivial small-group studies, platitudes hailed as epoch-making discoveries, undue stress on prediction and failure to deal with societal and cultural systems as such. Not all of the criticism could be viewed as relevant or valid.

Criticism interspersed with a great deal of value judgment, and obscured for many readers by the fascinating content of the book, was contained in C. Wright Mills' *The Power Elite*. Mills charged contemporary sociologists with absorption in trivial issues to which, because of their limited range, "rigorous" techniques of investigation could be readily applied; or, putting it more drastically, with choosing topics for investigation not for their real importance but for their amenability to currently approved practice.

Contemporary in emphasis, the procedures used in Mills' study could nevertheless be viewed as adapted, in their sounder aspects, to the use of historical evidence for sociological purposes, since the point at which the past begins is always a matter for more or less arbitrary decision, and "history" is not exclusively the concern of the professional historian. Accordingly, the American Sociological society, at its annual September meeting, devoted one section session to sociology of history. Historians having sociological inclinations, and sociologists utilizing data commonly viewed as historical, were among the participants. Issues were sharply drawn, one historian accusing sociologists of having little to offer because of unsuitable techniques, and one sociologist asserting that all generalization about social affairs, past or present, is the special preserve of the sociologist under whatever name. In spite of such contrasts, however, the section session proved worthwhile, and the hope was expressed that at future annual meetings such a section would not only be continued but also expanded. Mention was made of the new *International Journal of Social History*, published in the Netherlands, as a possible medium for at least some of the papers that might be presented.

Sociology of religion, a field of research and instruction to which relatively little effort had been devoted in recent years, showed signs of revival in many countries, among them the United States and France. This was revealed in several significant articles, as well as in the lists of research projects, theses and dissertations published in American sociological journals during the year; in active French participation in journal publication; and in the sections on sociology of religion held at the third International Congress of Sociology, meeting at Amsterdam, Neth., in August. A symposium, *Modern Sociological Theory in Continuity and Change*, contained a valuable chapter on sociology of religion, with an excellent bibliography, by the German social scientist, Paul Honigsheim.

Pervading the various studies on sociology of religion was the effort to construct usable typologies of religious organizations; cult, sect, denomination, ecclesia and the like all figured prominently. Similar concern with adequate typology was also to be observed in urban sociology. This field, after the decline of so-called human or social ecology, had suffered eclipse, but during the year many signs of renewed interest appeared. The sociology of work, chiefly as viewed in its urban setting, also enjoyed some popularity, especially at The University of Chicago under E. C. Hughes, where it was conveniently paired with the sociology of leisure under David Riesman. In the *American Journal of Sociology*, an issue featuring sociology of work included an excellent article on the typology of work leadership. The use of "typology" as a mere substitute for "classification" pointed, in a few instances, to failure to observe the cardinal principle of good typological procedure; namely, to develop types only in conjunction with (1) a clearly posed question; (2) a culture case study aimed at securing a tentative answer; (3) formulation of a definite hypothesis and its related types; and (4) proper validation of the hypothesis by all suitable methods of causal inference.

Some of the year's work in rural sociology followed good typological practice; the article on Latin-American communities by C. P. Loomis and J. C. McKinney, in the March number of the *American Journal of Sociology*, was a commendable example. Not explicitly typological, but affording a good basis for reformulation in such terms, was the book by W. M. Williams, *Gosforth: the Sociology of an English Village*. Since the general topic of the third International Congress of Sociology was social change, many studies of rural societies undergoing change were presented. Several of these, in their orientation toward some well-defined body of sociological theory, provided a refreshing contrast to the naïve collections of raw data which passed as rural sociology in the United States a generation before, and in some circles even in 1956. A Dutch book combining zeal for fact gathering with sound theory in rural sociology was I. Gadourek's *A Dutch Community: Social and Cultural Structure and Process in a Bulb-Growing Region in the Netherlands*. The German journal of rural history and sociology, *Zeitschrift für Agrargeschichte und Agrarsoziologie*, continued to present articles of high quality.

During 1956 social change continued to hold the attention of sociologists everywhere. Social change was selected as the topic for the third International Congress of Sociology and many of the papers making up the *Proceedings* of the congress (published in advance) were of first-rate quality. The general interest in social change evoked defensive reactions among the adherents of structural-functional analysis, which is difficult to apply to problems of social change without begging crucial questions. This defensiveness was especially evident in the article by Bernard Barber in the April 1956 number of the *American Sociological Review*. In the May number of *Social Forces* the structural-functional approach was the subject of an article which was not defensive but critical, "Position, Role, and Status: a Reformulation of Concepts," by Frederick M. Bates.

Among other important topics considered in *Social Forces* was that of sociological field work, particularly in the October number. Anthropologists had long stressed the necessity of living as a participant observer with the people being studied, and in an earlier period sociologists also had followed this practice. Of recent years, however, sociologists had tended to restrict their efforts to the more formalized techniques. In 1956 this restriction was challenged in the two aforementioned *Social Forces* articles, both by sociologists who had themselves carried out extensive field investigations.

The year was a presidential election year in the United States, and various polls and highly publicized computing devices were

much in evidence. Made wary by the debacle of 1948, when Pres. Harry S. Truman triumphed in spite of poll predictions, most polling organizations severely qualified their forecasts of an Eisenhower victory. By contrast, the searching one-man analyses of Samuel Lubell, based on field studies, not only flatly predicted an Eisenhower sweep, but also correctly forecast in detail the anomaly of a Democratic house and senate victory, district by district and state by state.

Sociological societies throughout the world were active. Among the several new organizations was the Scottish branch of the British Sociological association which held a two-day conference in Edinburgh in April. The third International Congress of Sociology provided a prominent place for reports on the teaching of sociology and the professional activities of sociologists; Austria, Belgium, Canada, Finland, the Netherlands, Poland, Turkey and Venezuela were included in one collection, and research going on in Austria, Finland, France, Great Britain, Israel, Norway, Poland and Sweden was considered in another.

The Helen DeRoy award of the Society for the Study of Social Problems went to Reuben Hill, J. Mayone Stycos and Kurt W. Back. The MacIver lectureship of the American Sociological society was granted to E. Franklin Frazier for his book, *Bourgeoisie Noire*. (H. BEC.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Centralization and Decentralization* (1952); *Cities—How They Grow*, 2nd ed. (1953); *The Baltimore Plan* (1953); *Food and People* (1956); *Inside Story* (1952); *The Living City* (1953); *Man and His Culture* (1954); *Political Parties* (1952); *Presidential Elections* (1952); *Pressure Groups* (1952); *Public Opinion* (1946); *The Social Process* (1952); *Social Revolution* (1952); *Wastage of Human Resources* (1947).

Sodality of Our Lady: see SOCIETIES AND ASSOCIATIONS, U.S.

Softball. The Clearwater (Fla.) Bombers regained the championship of the Amateur Softball association by winning the annual world tournament at Sacramento, Calif., in Sept. 1956. The Bombers, who had been dethroned by the Raybestos Cardinals of Stratford, Conn., the year before, swept through the championship series with five victories in five starts. Clearwater clinched the title by routing the Raybestos team, 14-9, in the final. In their march to the title, the Floridians also beat San Diego (Calif.) Anderson Furniture, 6-0; Montreal (Que.) Fisher Brothers Tomato Kings, 6-0; Meenan Oilers of Levittown, N.Y., 2-1, and the Raybestos Cardinals, 2-1. The award to the most valuable player of the championship went to Harvey Sterkel of the Sealmasters of Aurora, Ill. In 51 innings of hurling, Sterkel struck out 97, allowed 16 hits and walked 5 batters.

A record field of 36 teams was attracted to the fourth annual slow-pitch tourney at Cleveland, O., necessitating a division of entries into open and industrial classes. The Gatliff Auto Sales team of Newport, Ky., won the open title, beating the defending champion, Lang's Pet Shop of Covington, Ky., in the final, 2-1. The Cincinnati (O.) Fire Department team carried off honours in the industrial division.

The Orange (Calif.) Rock Products Lionettes retained women's world laurels at Clearwater, sweeping past six rivals in tournament competition. Nonie Hoehn and Teddie Hamilton turned in no-hitters for the five-time champions. Bertha Ragan of the Raybestos Brakettes of Stratford, Conn., was chosen most valuable player. (T. V. H.)

Soil Bank: see AGRICULTURE; FORESTS; SOIL CONSERVATION.

Soil Conservation. Studies of plants and their environment, preliminary to solving some of the more puzzling soil conservation problems, was an important

feature of the conservation movement from the world viewpoint during 1956. Ecological studies and vegetation classifications, to determine present soil and water conditions, and to indicate first steps toward restoring the soil's native fertility, were reported from several African countries, the middle east, India, Australia and New Zealand. In the last two countries and in the United States, the ecological method was in practical use for range improvement, the objective being to restore and preserve the climax vegetation.

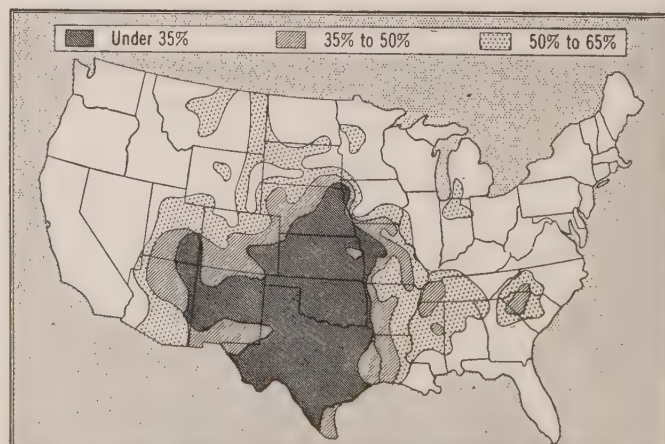

Aside from improvement of range and pasture, there were many other needs for handling problems solvable only by using the right plants in the right places. Widespread adoption of such essential practices as rotation of crops, use of green manure crops, barrier plantings for wind erosion control, protection of embankments and gully heads, dune fixation and cover crops for moisture absorption had served as an incentive to the ecological studies with special emphasis on conservation of soil and water. A list of 101 native plants valuable for soil cover and erosion control in Africa south of the Sahara was compiled and published by the Inter African Bureau for Soils and Rural Economy during the year.

Drought in many parts of the world focused attention on soil and water relationships in irrigation. Subjects selected for study by the Third International Congress on Irrigation included moisture movement in irrigated soils; special methods for preservation of soil structure and the conservation of soil fertility; and the effects of soil fertility on irrigation water. Production by use of irrigation expanded most rapidly in the United States, Australia, India and Mexico.

Brief summaries of some important accomplishments in soil and water conservation in various parts of the world are given in the following:

United States.—Under state laws, the people had organized 2,721 conservation districts including about 91% of all the farms and ranches in the country. Sixteen states, and Puerto Rico and the Virgin Islands, were completely covered by the districts, while 18 other states were from 90% to 99% covered. About 35% of all farmers and ranchers in the districts were co-operating actively in the program to apply soil and water conservation to their land.

Complete conservation plans had been prepared, by technicians of the soil conservation service working with farmers and ranchers, for 1,102,804 farms and ranches with a total area of nearly 307,000,000 ac. During 1956, 89,262 new plans were compiled for farms totalling 27,000,000 ac., while 8,770 plans were revised to conform with changed conditions. Work plans for 180 watersheds covering more than 7,000,000 ac. also were completed.

U.S. DROUGHT CONDITIONS in the fall of 1956, shown in percentages of normal pasture feed supply. Areas in white were relatively unaffected. From U.S. department of agriculture data

Soil surveys suitable for conservation planning were made on 31,500,000 ac. during the year, and range site and condition surveys were completed on nearly 11,000,000 ac. of rangeland. This brought the total area surveyed for conservation purposes to 564,000,000 ac., of which nearly 56,000,000 ac. was Great Plains and western range used solely for livestock grazing.

The figures given in the table show some of the major soil and water conservation practices applied to farm and range land in soil conservation districts as of July 1, 1956, with estimates of acreages needing similar treatment but not yet treated.

Conservation Practices Applied in Soil Conservation Districts

Conservation practice	Total applied as of July 1, 1956	Remaining to be applied (preliminary estimates)
Conservation crop rotations (ac.)	54,255,000	181,000,000
Contour farming (ac.)	32,736,000	110,000,000
Cover cropping (ac.)	19,438,000	60,000,000
Strip cropping (ac.)	13,815,000	56,500,000
Seeding range and pasture (ac.)	28,384,000	101,000,000
Tree planting on farmland (ac.)	3,883,000	24,000,000
Farm areas improved for wildlife (ac.)	3,665,000	12,400,000
Drainage of farmland (ac.)	17,585,000	66,000,000
Land levelling for irrigation (ac.)	4,493,000	15,000,000
Conservation water use in irrigation (ac.)	7,470,000	17,000,000
Terracing of cropland (mi.)	1,045,000	4,670,000
Water diversion ridges and channels (mi.)	58,500	402,000
Pond construction (no.)	748,617	1,500,000

A national inventory of soil and water conservation needs was begun during the period to provide additional and more accurate information on the extent of the conservation job remaining to be done. The inventory was to be developed for each county in the United States and for appropriate subdivisions of the territories. As planned, it would provide basic facts about the amount and kinds of soil, water and plant resources as well as a realistic estimate of treatments needed to protect and improve these resources. The goal for actual making of the inventory was three years.

Legislation to strengthen the national soil and water conservation program was passed by the 84th congress. Amendment of the Watershed Protection and Flood Prevention act liberalized provisions of the act to broaden the scope of water conservation activities. Federal assistance was provided for watershed projects that include municipal and industrial water supply development, as well as those involving upstream flood prevention, irrigation and other phases of agricultural water management. The amendments also increased the maximum size of dams and reservoirs for upstream protection, extended benefits of the program to Alaska, Hawaii, Puerto Rico and the Virgin Islands, and permitted retroactive application of the new provisions to watershed projects that were already underway. As of Sept. 1, 31 watershed projects had been authorized for operation under the act, and 200 more were in the planning stages. Soil conservation districts sponsored all the projects. The soil conservation service continued to administer the federal assistance program.

New legislation in the form of an amendment to the Soil Conservation and Domestic Allotment act and the Agricultural Adjustment act of 1938, authorizing a special Great Plains Conservation program, was signed by Pres. Dwight D. Eisenhower on Aug. 7. Under this amendment, the department of agriculture may enter into 10-year contracts, based on conservation plans, with Great Plains farmers and ranchers to provide them with cost-sharing as well as technical assistance. The new provisions were intended to give land users adequate time for making the needed land-use changes, rehabilitating denuded ranges and for applying suitable erosion control practices on cropland subject to drought, soil blowing or erosion caused by sudden heavy rain storms. The bill authorized a maximum of \$150,000,000 for the entire program, with not more than \$25,000,000 to be spent on the program in any one year. Between Nov. 1, 1955, and June 1, 1956, nearly 10,000,000 ac. in the Great Plains were damaged by wind erosion.

Steps were taken immediately to implement the Great Plains program. Soil survey work for land classifications was intensified, especially on cropland in the critical wind erosion areas. Such surveys had been completed on 42,000,000 ac. in the region. At the same time a cost-sharing plan was set up in the department of agriculture to help farmers in applying those conservation practices essential to a long-range program to safeguard the land of the 10 Plains states. It was estimated by the soil conservation service that from 11,000,000 to 14,000,000 ac. of cropped land in the region should be converted to grass or other permanent vegetative cover if the region was to be kept productive and subject to only minimum damage from drought, floods and depletion of fertility by misuse. At the beginning of 1956, 63% of the farmers and ranchers in the Great Plains were co-operating in the programs of soil conservation districts.

The Soil Bank act, passed by the U.S. congress May 28, as Title I of the Agricultural act of 1956, included features intended to contribute to soil and water conservation. It set forth a long-term Conservation Reserve program offering all farmers and ranchers income protection while making needed adjustments in land use. While its first purpose was to reduce the volume of production of crops in surplus, it was considered important as a conservation measure in that it specified that land retired from crop production must be planted to grass or trees, or used for water storage facilities such as lakes and ponds. Payments to help defray costs of establishing conservation practices on the designated acreage were made available to farmers and ranchers contracting to take advantage of the opportunity.

Latin-American Countries.—Studies were made of the Llanos of Venezuela, about one-third of the country, to determine the extent of deterioration of that vast tropical savannah and to attempt to devise ways to restore at least a measure of its original value for grazing. It was found that the Llanos was no longer supporting nutritious grasses. Livestock carrying capacity had decreased about one-half, and many areas were subjected yearly to serious soil erosion and alternate floods and drought which killed large numbers of cattle. The government had taken initial steps to correct the situation but faced great difficulty because of lack of knowledge concerning the conservation practices needed. Artesian wells had been drilled in many places, and several hundred large ponds had been constructed to carry livestock through the dry season. Experiments had shown that the introduced perennial, kudzu, offered considerable promise for good pasturage. The government was attempting to stop, or lessen, the systematic burning of the inferior grasses, in the hope that better forage plants would revive naturally.

In El Salvador, the soil conservation section of the ministry of agriculture was providing technicians to assist farmers in erosion control on all types of land. Work in progress included terracing for cultivation of fruits, water diversion for cotton cultivation, planting of living fences, and the making of rotation plans for sugar cane and cereal farms. A type of terrace suitable for cultivation of maize and zacate (forage crops) was worked out, and a guide for making land capability surveys was completed and ready for use.

In Uruguay a division for conservation was established in the ministry of agriculture. Soil conservation demonstrations on sloping land in Rio Negro department featured contour strip cropping, adapted rotations, cover cropping, grass waterways and restoration of eroded grazing land by seeding and controlled grazing.

Important steps were taken in Argentina to halt land damage by wind erosion in the semiarid region, about 50,000,000 ac., lying between the Colorado and Paraná rivers. Survey of the region by the Instituto de Suelos y Agroecnia revealed that more than 11,000,000 ac. were severely eroded, with active dunes

and loss of more than 25% of the original soil. Nearly 18,000,000 ac. were moderately eroded, with dune formation starting. The Estación Experimental de Anguil, in the state of La Pampa, and Estación Experimental de Manfredi in Córdoba were assigned responsibility for introducing suitable conservation practices and providing technical assistance to farmers and ranchers. The first soil conservation district in the region was organized in La Pampa, under the state's law decreeing a soil conservation program for all lands. Stubble mulch farming of grain land had proved effective in the northern part of the region subject to wind erosion.

Africa.—A soil, vegetation and erosion survey was made of the Ubangi-Shari region of French Equatorial Africa, an area long used by human beings. Natural vegetation was found to have changed drastically, especially in the savannahs, owing to deterioration of soils resulting from misuse without any attempts at conservation.

The agriculture department of Northern Nigeria reported a survey of land use in the Kano province where rainfall averages 30 to 40 in. annually. Only in the central zone were native farmers using any conservation practices. There, a system of permanent cultivation was the rule, with manuring and composting, intercropping which appeared to protect the soil, but no semblance of crop rotations.

In Mozambique, East Africa, owners of large plantations had adopted contour farming on a wide scale, especially for production of tobacco. In Zambezi province, contour planting of tea, in areas carefully selected by land capability studies, had begun to produce greater yields than were ever before realized. About 30,000 ac. had been contour planted.

The successful soil and water conservation program of Southern Rhodesia, developed over the last 15 years to deal with the country's peculiar conditions, was being studied as a model by conservationists from many other parts of Africa where primitive or nearly primitive peoples occupy vast areas of land. In Rhodesia, the work of applying conservation to land farmed by Europeans had been virtually completed. Sixty percent of all plowed land was protected by contour ridges and storm drains where needed. Thousands of water storage dams had been built, and all gullies and roadside erosion had been eliminated. Yield of maize had increased more than sixfold and other crops showed similar gains.

The difficult problem of extending soil and water conservation to native reserves appeared to have been solved in Rhodesia, through educational programs, demonstrations and sympathetic leadership. At the beginning of the year, responsibility for controlling erosion in native reserves was transferred from the department of native agriculture into the hands of the native cultivators themselves. This was done by implementing the Native Land Husbandry act which permits division of reserve lands into individual holdings, loans and grants-in-aid, and formation of intensive conservation areas (soil conservation districts) by native farmers.

Europe.—A soil erosion survey of Poland showed that 20% of the land of the country was subject to erosion and required control methods suited to rolling or highland terrain. The areas most severely eroded were the Carpathian and Sudety piedmonts, the Slask-Malopolska highland, the Kocie Córy hillock, the Lublin highland, the Northern Lake district, and local rolling and hilly moraine areas and river valley slopes within the belt of the Great Valley and the Baltic shoreline. A demonstration farm in the Lublin upland, including strip cropping, tree barrier plantings, and gully control by use of vegetative plantings, was proving successful for enlisting interest of farmers. Yields on the demonstration lands were twice as high as those obtained before introduction of erosion control practices.

A program to improve about 10,000,000 ac. of agricultural land in southern Italy, including parts of Sicily, was launched by banking and business interests of the country. The project started with bench terracing on steep slopes and supporting water-control methods, irrigation systems and production of fertilizers needed in the region.

Somalia. This Italian trust territory in East Africa is bounded southeast by the Indian ocean, west by Kenya and northwest by the Somaliland protectorate and Ethiopia. Area: 198,275 sq.mi. Pop. (1954 est.) 1,269,000, including 30,000 Arabs, 1,000 Indians, 4,858 Italians and 139 other Europeans. Chief Somali tribal groups: Darot, Hawiya, Rahanuin, Dighil, Dirr and Tunni (nomadic or seminomadic pastoralists). Religion: Sunni (Shafi) Moslem. Capital: Mogadishu, pop. (1953 est.) 63,000. Administrator in 1956, Enrico Anzilotti.

History.—The first general election ever held in Somalia took place on Feb. 29, 1956. Of the 60 seats in the legislative assembly, the Somali Youth league (advocating the unification of British, French and Italian Somalia) obtained 42 seats, while 13 seats went to the Hizbia Dighil Mirifle (a party favouring the retention of tribal organization). The legislative assembly was inaugurated on April 27, Benjamin Cohen representing the secretary-general of the United Nations.

The UN Trusteeship council received complaints that Egyptian propagandists were exercising political pressure against the inhabitants of Somalia. The objective was to woo the territory toward membership of the Arab league as soon as it attained independence (scheduled for 1960). This accusation was denied by Kamal-ed-Din Salah, Egyptian member of the UN Advisory council in Somalia.

(See also TRUST TERRITORIES.)

Education.—Schools (1954-55): primary (including nursery and adult) 232, pupils 23,346, teachers 420; secondary (including 1 teachers' training school with 37 students; other vocational in parentheses): 23 (13), pupils 1,328 (575), teachers 119 (65, excluding Italian commercial school). Institute of legal, economic and social studies (1955): students 45, teachers 4.

Finance and Trade.—Monetary unit: somalo (=14 cents U.S.). Budget (1955): revenue 99,956,000 somali, expenditure 99,956,000 somali.

Foreign Trade.—(1955) Imports 100,843,000 somali, exports 73,479,400 somali. Chief exports: bananas, hides and skins, cotton.

Somaliland, British: see BRITISH EAST AFRICA.

Somaliland, French. This overseas territory of the French union in the Gulf of Aden is bounded north, northwest and southwest by Ethiopia and southeast by Somaliland Protectorate. Area: 8,494 sq.mi. Pop. (1955 est.): 63,700, including 28,000 Somalis, 25,000 Danakils, 6,000 Arabs, 3,132 Europeans. Capital, Jibuti, pop. (1955 est.) 31,855. Governor in 1956, René Petitbon.

History.—On Jan. 2, 1956, Farah Hamud Harbi was elected a member of the French national assembly. He suggested lightening the local budget by instituting a special fund for the port of Jibuti.

On May 14 a demonstration by the unemployed led to clashes with the police, in the course of which people were injured. A general strike broke out in August and went on for 20 days.

The closing of the Suez canal at the beginning of November sorely tried the economy of the territory by reducing considerably the maritime traffic which is its chief resource. The terri-

tory lacked supplies and its budget was forced to rely on subsidies from the central government.

The native councillors refused to take their seats in the representative council.

(HU. DE.)

Education.—(1954-55) Public and private schools 23, pupils 2,103, teachers 66.

Foreign Trade.—(1955) Monetary unit: Jibouti franc=1.64 metropolitan French francs, U.S. \$1=350 metropolitan francs. Imports 2,324,000,000 Jibouti fr., including 870,000,000 Jibouti fr. from France; exports 2,727,000,000 Jibouti fr., including 2,474,000,000 Jibouti fr. in provisions for ships.

South Africa, British: see BRITISH SOUTH AFRICAN TERRITORIES.

South Africa, The Union of. A realm of the Commonwealth of Nations, the Union of South Africa extends from the southernmost point of the African continent northward to the Limpopo, Molopo and western Orange rivers. The mandated territory of South-West Africa is administered by South Africa. (See also TRUST TERRITORIES.)

Province	Area (sq.mi.)	Population (1951 census)	Capital (total and European pop., incl. suburbs, 1951)
Cape of Good Hope	278,839*	4,426,726	Capetown (577,211; 247,442)
Natal	33,578	2,415,318	Pietermaritzburg (74,407; 32,139)
Orange Free State	49,866	1,016,570	Bloemfontein (109,180; 49,074)
Transvaal	110,450	4,809,145	Pretoria (283,535; 151,400)
Total, Union of			
South Africa	472,733†	12,667,759‡	
South-West Africa	317,725	414,601§	Windhoek (20,490; 10,246)

*Including Walvis Bay (374 sq.mi.) an enclave of Cape province administered with South-West Africa. †Excluding Marion Island (about 85 sq.mi.) and Prince Edward Island (about 18 sq.mi.), subantarctic dependencies. ‡European 20.9%, African 67.5%, Asian 2.9% (mainly in Natal), coloured (mixed) 8.7% (mainly in Cape). §Including 48,588 Europeans.

Total pop. (1955 est.): Union, 13,669,000; South-West Africa 458,000. Official languages (1951, Europeans only): 73% spoke Afrikaans and English, 15.3% English only, 11.4% Afrikaans only; Africans, generally Bantu (Xhosa, Zulu, Swazi, etc.). Adherence to the most important religious groups was as follows:

	European (%; 1951)	Coloured (%; 1946)	African (%; 1946)
Dutch Reformed	53.2	31.5	3.4
Anglican	15	20.0	7.1
Methodist	8.2	9.7	12.9
Roman Catholic	5.3	6.0	4.3

Also Europeans 4.1% Jewish, 3.6% Presbyterian; coloured 10.8% Congregational; Africans 9.7% members of native separatist churches, 5% Lutherans; Asians 63.2% Hindu, 21.5% Moslem. Of non-Europeans, 51% were Christian.

Capetown is the seat of the legislature, Pretoria that of the government and Bloemfontein that of the supreme court. Other principal towns, including suburbs (total pop. and European pop., 1951): Johannesburg (880,573; 359,477); Durban (476,236; 151,111); Port Elizabeth (188,892; 78,670); Germiston (166,310; 71,572); Springs (119,392; 31,588); East London (91,190; 43,946). Queen, Elizabeth II. Governor general in 1956, Ernest George Jansen. Prime minister, J. G. Strijdom.

History.—**Legislation.**—The 1956 parliamentary session lasted, as usual, from January until June. After a joint sitting of both houses, the bill amending the constitution was passed by 174 votes to 68. The necessary two-thirds majority had been assured by the reform of the senate in 1955 and the new measure removed about 50,000 Cape coloured voters from the common electoral roll. They were transferred to a special communal roll and would in the future elect four white members to the house of assembly. The passage of this bill ended the constitutional crisis that had continued for several years. The Cape provincial division of the supreme court upheld the validity of the act reforming the senate and the appeal court, which had itself been reformed, in fact confirmed this decision late in the year. The amending bill abolished the entrenchment that had hitherto protected the franchise rights of non-Europeans, but the bill did not impair the entrenchment requiring a two-thirds majority for

an alteration in the equality of the two official languages, Afrikaans and English.

The senate was dissolved late in 1955 and indirect elections were held under the new system. As a result 27 senators were elected for the Transvaal province, 22 for the Cape province, 8 for the Orange Free state, 8 for Natal and 2 for South-West Africa. Four were elected by Africans and 18 were nominated by the government, which held all but 12 of the total 89 seats.

In spite of continued opposition from the trade-union movement, the Industrial Conciliation act was passed. This measure prohibited the continuance of unions with mixed membership of white and coloured or Indian workmen. No more such unions would receive legal recognition in the future and existing unions would have to divide on racial lines. Strikes of any kind were prohibited in various circumstances, and trade unions were forbidden to affiliate or give financial support to any political party or candidate. The minister of labour was given far-reaching powers to reserve certain types of work in any industry for persons of a specified race. The government claimed that this was a safeguard against interracial competition for jobs. Opponents of the whole measure feared that it would seriously weaken the trade unions, especially in manufacturing industry, and that it would cause labour unrest. Other new laws that evoked public controversy restricted the personal freedom of Africans. Local authorities were empowered to banish individual Africans from municipal areas, a power hitherto reserved to the central government. The supreme court was denied jurisdiction in all banishment cases until after the order had been obeyed by the individual concerned.

The cabinet was reshuffled. Eric H. Louw resigned as minister of finance in order to devote himself wholly to his other portfolio of foreign affairs, including the supervision of the expanding state information office. He was succeeded by J. F. Naudé, who had been minister of health, the latter office being taken over by J. H. Viljoen, minister of education. The salary of members of parliament was raised from £1,400 by an allowance bringing it to £2,000.

Economic Position.—The budget, introduced in March, showed total estimated expenditure for the ensuing year at £277,000,000 and total revenue at £278,000,000. On capital works further expenditure of £96,000,000 was estimated. Various tax concessions were announced. A new formula for the taxation of the gold mines resulted in a saving of £700,000 to the industry; and ultradeep mines were to receive special encouragement. Income tax was reduced for a large group of taxpayers by raising the level of supertax from £1,775 to £2,300. In the past year the Union's economy had shown its inherent strength, according to finance minister Eric H. Louw. Inflation had been checked. An increasing part of the government's capital expenditure was being met from South Africa's own resources, with minimum dependence on loans from abroad.

At the 36th annual meeting of stockholders of the South African reserve bank the deputy governor, E. H. D. Arndt, reviewed recent monetary policy. After years of exceptionally rapid economic expansion, he said that the Union's economy seemed to be returning to more normal conditions. There was, however, no evidence of incipient depression. The net capital inflow from abroad had declined and the balance of payments continued to show a deficit (£15,000,000 for the first half of 1956), but improvement was expected later in the year. As a precaution, a limited control over the transfer of Union funds to sterling countries was instituted.

The Union's first attempt to raise a public loan in the United States was a remarkable success. The loan of \$25,000,000 was immediately oversubscribed. A similar loan was made by the International Bank. Before the loan was issued, the U.S. firm of

underwriters, Dillon, Read and Co., made a detailed survey of South Africa's financial position and prospects. This survey revealed that the net national income in 1955 rose to £1,457,000,000 (apart from £176,000,000 going outside the Union). To this total, manufacturing industries contributed £386,000,000; trade and commerce £218,000,000; agriculture £245,000,000; gold mining £136,000,000, and other mining £62,000,000. U.S. private capital investment, small in comparison with British investment in the Union, was nevertheless important. It amounted to £69,000,000 and was increasing substantially, said the survey.

Race Relations.—Controversy was stirred by the publication of the report of the commission on the socioeconomic development of the Bantu areas (known as the Tomlinson report). After a comprehensive inquiry, the commission, which consisted of specialists sympathetic to the idea of total *apartheid*, produced, in elaborate detail, a plan for the separate economic and social development of the existing native reserves. In order to achieve a diversified economy, the report envisaged the emergence of a Bantu farming class securely settled on units big enough to ensure a living from the land. Those Africans who could not obtain a livelihood from agriculture must be removed and encouraged to live in an industrial and urban life, but within the reserves. The report did not contemplate the purchase of much more land for African occupation but the better use of land already held. The cost of the whole scheme for the first ten years of the program was estimated at £104,000,000, about half of which would probably be recoverable. In a white paper, the government, while accepting the general principles of the report, rejected some of its main proposals. Among these was the substitution of individual for tribal land tenure. It also rejected the establishment within the reserves of European-owned industries, holding that the Bantu should try to develop their own industries. As a result of the report, however, parliament voted an additional £3,500,000 for the development of the reserves in the ensuing year. At a big conference called by representative Afrikaner organizations, the report was welcomed and the government was urged to implement it even if that involved sacrifices from Europeans. Another big conference of leading Africans rejected the report, demanding rights of citizenship instead.

A beginning was made with the extension of the pass laws to African women. In protest against this measure, 10,000 African women travelled to Pretoria on Aug. 9 in a nonviolent demonstration held at the Union buildings, the administrative centre of the government. On various occasions during the year the police were in conflict with urban Africans mainly on account of the enforcement of the pass and allied laws. In 1955 the number of Africans convicted under these laws rose to the record figure of 337,603. The African national congress adopted a "charter of freedom" demanding various human rights. Banishment from certain areas was imposed on a number of African political leaders and teachers. The classification of nonwhite people into ethnic groups encountered difficulties with marginal persons whose race administrative tribunals found it hard to decide. A new law made physical appearance the sole test of race in doubtful cases. The system of racial zoning in urban areas began to be applied on the Rand and in the Cape peninsula amid protests from the Indian and coloured communities who were specially affected. Their new limited areas for residence and trade were held to be inadequate and the zoning system threatened economic dislocation.

Commonwealth Relations and External Affairs.—The prime minister, J. G. Strijdom, in July paid his first official visit to Great Britain on the occasion of the Commonwealth conference. He declared that it was the government's policy ultimately to establish a republican form of government in South Africa should a sufficiently large number of voters support such a step; but a republic, he said, would in no way affect South Africa's policy

of co-operation with Great Britain and other commonwealth countries. He assured British investors that their capital would be safe in the Union, that they would find investment profitable, and that capital would be repatriated at will.

The consulates of the U.S.S.R. in Pretoria and Capetown were closed in Feb. 1956 at the request of the Union government, which alleged that members of their diplomatic staff had maintained contact with subversive elements, especially among the Africans and Indians. In December a number of persons were arrested and charged with treason. (Ju. L.)

Education.—European schools under provincial control (1955): primary 2,170, intermediate 18, high schools 141, secondary and all-age schools 344; (1951, all schools) pupils 1,668,000, teachers 49,600. Vocational: European state vocational schools (1955) 42, pupils 58,500; technical institutes 11; agricultural colleges 5. Teacher-training colleges (European, 1955) 13, (non-European, 1948) 55; students (all races, 1951) 10,291. Non-European schools (1953) 5,346, pupils (1955) 900,000. Private schools (all levels, 1950): European 284, non-European 672. Universities (1955) 9, students (including external) 24,703. Nonwhite students about 3,000. University college of Fort Hare (for Bantu), 374 students.

Finance and Banking.—Monetary unit: South African pound at par with the pound sterling and with an exchange rate of £(S.A.) 0.35 to the U.S. dollar. Budget (1956–57 est.): revenue £(S.A.) 283,350,000 (on basis of existing taxation), expenditure £(S.A.) 276,950,000. Total public debt (Dec. 1955) £(S.A.) 960,197,000 of which £(S.A.) 74,831,000 external. Currency circulation (Dec. 1954) £(S.A.) 471,300,000. Bank deposits (Dec. 1954) £(S.A.) 335,200,000, (Dec. 1955) £(S.A.) 315,700,000. Gold and foreign exchange, official holdings (April 1955) U.S. \$392,000,000, (April 1956) U.S. \$326,000,000.

Foreign Trade.—(1955) Imports £(S.A.) 485,200,000; exports £(S.A.) 385,000,000. Main sources of imports: U.K. 34%; other sterling area 11%; U.S. and Canada 25%; continental E.P.U. (European Payments union) countries 18%. Main destinations of exports: U.K. 34%; other sterling area 20%; continental E.P.U. 21%; U.S. and Canada 8%. Main exports: wool 16%; diamonds (1954) 4%; re-exports 10%.

Transport and Communications.—Roads (1955) 316,640 km. Motor vehicles in use (1954): passenger 561,078; commercial 161,130. Railways (1954): 21,600 km.; freight ton-km. 22,960,000,000. Shipping: merchant vessels of 100 gross tons and over (July 1955): 138; total tonnage 160,623. Air transport (1954): passenger-km. 329,786; cargo, ton-km. 8,139. Telephones (March 1955) 613,525. Radio receiving sets (1954) 717,000.

Agriculture.—(On farms and estates only, except as indicated.) Main crops (metric tons, 1955; 1954 in parentheses): wheat 664,000 (642,000); maize 2,920,000 (3,299,000); barley (1954) 61,000; sorghum (1954, total crop) 145,000; oranges and tangerines 289,000 (279,000); grapefruit 14,000 (14,000); lemons 4,000 (3,000); (1953): potatoes (total crop) 184,000; (1954): groundnuts (peanuts) 189,000; sunflower seed 47,000; tobacco 17,200; raisins 10,500; dry beans 30,000; grapes 504,000. Live-stock (Aug. 1954) cattle 11,604,249; sheep 37,141,579; pigs 491,140; goats 5,407,171; poultry (Sept. 1953) 15,725,000; horses (Sept. 1951) 676,000. Miscellaneous production (metric tons, 1955): cane sugar, raw value 842,000; wool 65,000; meat 388,000, of which beef and veal 259,000; butter (factory) 35,520; cheese 12,000; milk (1954) 2,102,000; wine (1954) 2,850,000 hectolitres. Fish landed (1953): 374,000 metric tons.

Industry.—Fuel and power (1955): coal 32,256,000 metric tons; electricity 16,416,000,000 kw.hr. Production (metric tons, 1955): iron ore (60–65% metal content) 2,004,000; pig iron 1,300,800; crude steel 1,584,000; copper, smelter 42,840; cement 2,336,400; asbestos 108,817; gold 14,602,267 fine oz.; diamonds 2,636,900 metric carats; ores (metal content, 1954): chrome 597,000 short tons; tungsten 367; antimony 8,639; manganese 647,000 short tons. New dwellings completed in 18 principal urban areas (1955) 15,396. Index of employment (1954; 1948=100) 125, (1953) 123.

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Union of South Africa (Its Land and Its People)* (1956).

South America: see ARGENTINA; BOLIVIA; BRAZIL; BRITISH GUIANA; CHILE; COLOMBIA; ECUADOR; FRENCH GUIANA; PARAGUAY; PERU; SURINAM; URUGUAY; VENEZUELA.

South Carolina. A south Atlantic state of the United States, eighth of the original 13 to ratify the constitution, South Carolina is known as the "Palmetto" state. Area: 31,055 sq.mi. (750 sq.mi. inland water). Population: (July 1, 1956, est.) 2,353,000; (1950 census) 2,117,027; 61.1% white, 38.9% nonwhite (almost entirely Negro), 63.3% rural. Capital: Columbia, pop. (1950) 86,914. Other chief cities (with 1950 pop.): Charleston, 70,174; Greenville, 58,161; Spartanburg, 36,795; Rock Hill, 24,502; Florence, 22,513; Sumter, 20,185.

History.—Civil rights of Negroes continued to be the dominant political issue in South Carolina in 1956. Various additional laws were enacted designed to maintain segregation in the public schools, notably one requiring the closing of white colleges when

served with a court order to admit students, in which case the state college for Negroes must also cease operation. The legislature closed one state recreational park to forestall a pending suit for admission of Negroes and ordered other parks closed when served with a desegregation court order. While officially commending the activities of prosegregation citizens councils, the legislature prohibited employment of members of the National Association for the Advancement of Colored People by the state or its subdivisions. A so-called "interposition" resolution condemned the desegregation decision of the U.S. supreme court and declared the intention of the state to exercise all reserved powers to protect its "sovereignty." In other fields the legislature prohibited the practice of naturopathy, placed a state lien on property of persons receiving old-age assistance, required merchants selling Japanese textiles to display signs advertising the fact, authorized the highway department to build controlled access express roads and to fix minimum speeds and created a commission to plan for the 1970 tricentennial celebration of the settlement of Carolina. In a special session a 500-ac. limit on alien land ownership was raised to 500,000 ac. to insure location in the state of a Bowater Paper Co. plant.

State elections in 1956 were marked by the small number of contests. U.S. Sen. J. Strom Thurmond, in accordance with a pledge made during his successful 1954 write-in campaign, resigned to seek renomination in the Democratic primary, met no opposition in the primary and general elections and immediately replaced interim appointee Thomas A. Wofford. In the only primary contest for congress, Robert W. Hemphill was nominated for the seat vacated by Rep. James P. Richards. In the general election Republican opposition for congressional offices was absent or inconsequential except in the case of Republican Leon P. Crawford who polled one-fifth as many votes as did Sen. Olin D. Johnson. Chief interest was focused on the presidential election. The Democratic state convention after naming delegates to the national Democratic convention at Chicago, adopted a "wait and see" policy by recessing until two weeks after the national convention. In Chicago the delegation voted against both platform and nominees but the reassembled state convention pledged electors to Adlai E. Stevenson and Sen. Estes Kefauver, thus inspiring an independent movement and the nomination by petition of electors opposed to the civil rights position of both national parties and committed to Sen. Harry Byrd of Virginia and Rep. John Bell Williams of Mississippi. In the election in November about 45% of nearly 300,000 votes were Democratic, 30% Independent, 25% Republican. It was the largest Republican vote in state history and the first time since 1874 that Democrats failed to gain a majority.

Chief state officers in 1956 were: George Bell Timmerman, Jr., governor; Ernest F. Hollings, lieutenant governor; O. Frank Thornton, secretary of state; Jeff B. Bates, treasurer; T. C. Callison, attorney general; Eldridge C. Rhodes, comptroller general; Jesse T. Anderson, superintendent of education; Taylor H. Stukes, chief justice.

Education.—Construction of public schools continued under a 1951 program financed by sales tax. The Educational Finance commission by Oct. 1956 had approved (since the beginning of the program) projects costing \$169,881,764 of which about 53% was for Negro schools. Total expenditures for public schools in the year ended June 30, 1956, were \$134,811,154 of which \$83,523,521 was for current expenses. Of 563,244 pupils enrolled, 214,954 were in white elementary schools, 181,470 in Negro elementary schools, 104,716 in white high schools, 62,104 in Negro high schools. Elementary teachers numbered 6,927 white and 5,033 Negro; high school teachers, 4,472 white and 2,233 Negro. Average teacher's salary was \$2,956.

Social Insurance and Assistance, Public Welfare and Related Programs.—In the year ended June 30, 1956, public expenditures for relief of needy persons amounted to \$25,366,482 of which \$18,535,226 were federal funds. The total of 94,376 persons receiving assistance included 47,914 aged, 2,220 blind, 33,362 dependent children, 9,109 totally disabled and 1,771 needing general assistance. The average weekly number of persons receiving unemployment compensation was 8,943 and the amount paid in benefits during the year was \$9,140,424. On June 30 funds available for unemploy-

ment compensation totalled \$71,510,727. Patients in the state mental hospital, June 30, numbered 6,199; in the school for feeble-minded, 1,764. On the same date there were 1,874 in the state penitentiary, 205 in Negro boys' reformatory, 264 in white boys' reformatory, 83 in Negro girls' reformatory, 97 in white girls' reformatory.

Communications.—Highway mileage in the state system on June 30, 1956, was 25,012 of which 19,001 were paved; mileage of rural roads 26,096, largely unpaved. State highway department receipts for the fiscal year were \$53,584,434 and expenditures \$53,760,820. At the end of 1955 railway mileage was 3,340 and telephones numbered 376,383. Estimated imports tonnage in the calendar year 1955 was 1,342,542; exports, 520,266. The value of imports for the fiscal year ended June 30, 1956, was \$66,500,000; of exports, \$122,200,000.

Banking and Finance.—On June 30, 1956, there were 26 national banks with 61 branches, 113 state banks with 25 branches, 1 military facility, 8 cash depositories. Total resources, deposits and capital were respectively, national, \$547,746,000, \$505,068,000, \$10,436,000; state, \$332,825,365, \$298,764,136, \$12,759,000. Resources of 36 state building and loan associations were \$102,839,494; of 41 federal associations \$291,192,582.

During the year ended June 30, 1956, the state operated under a general appropriations budget of \$171,570,517 and showed a general fund surplus of \$1,987,472 at the end of the year. Total state receipts and expenditures were respectively, \$308,383,280 and \$320,156,115. For the year beginning July 1, 1956, the general appropriations act totalled \$178,329,180. The June 30 funded debt was \$156,027,292 of which \$117,683,000 was for public schools and colleges, and \$36,366,000 for highways. Federal internal revenue collected amounted to \$269,837,864; customs collections, \$6,002,331.

Agriculture.—The October estimate of total 1956 value of field and commercial truck crops was \$285,424,000, about 10% below 1955 when the year-end estimate was \$316,790,000 from 3,746,000 ac. harvested. Cash farm income in 1955 was \$350,559,000 of which about 75% was from crops, 24% from livestock and its products, 1% from government payments.

Table I.—Principal Crops of South Carolina

	Indicated 1956	1955	Average, 1945-54
Corn, bu.	20,685,000	29,344,000	24,567,000
Wheat, bu.	3,984,000	2,812,000	2,849,000
Oats, bu.	17,892,000	14,245,000	14,404,000
Hay, tons	528,000	626,000	499,000
Peanuts, lb.	10,200,000	9,350,000	13,213,000
Soybeans, bu.	2,596,000	2,740,000	710,000
Irish potatoes, cwt.	605,000	585,000	978,000

Table II.—Value of Principal Industrial Products of South Carolina

Industry	Year ending June 30, 1956	Year ending June 30, 1955
Textiles (including knitting)	\$1,843,143,190	\$1,604,691,784
Lumber products (barrels, boxes, baskets, veneering, paper and pulp, furniture, woodwork)	241,637,384	187,120,267
Clothing	143,703,288	123,761,684
Electricity	99,115,763	88,350,622
Textile supplies	38,466,002	
Foundries and machine shops	35,101,884	33,487,363

Source: South Carolina Department of Labor.

Manufactures.—The value of products manufactured in 2,125 reporting establishments during the year ended June 30, 1956, was \$2,788,636,467, an increase of \$378,471,701 over the previous year. Total manufacturing capital was \$1,270,375,915, an increase of \$42,834,105. Employees numbered 195,358, an increase of 6,359. Wages paid industrial workers totalled \$542,802,035, an increase of \$48,600,536. (C. E. CN.)

Mineral Production.—Table III shows the tonnage and value of minerals produced in South Carolina in 1953 and 1954 whose value exceeded \$100,000. In 1954, South Carolina was first of the only two states that produced kyanite, a refractory material, and was second in kaolin or china clay output with 17% of the U.S. total of clay. It ranked 42nd in the value of its mineral output, with 0.13% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Southeastern States*, 2nd ed. (1956).

South Dakota. A north central state of the United States, admitted to the union in 1889. South Dakota is called the "Land of Infinite Variety." Area: 77,047 sq.mi., of which 511 sq.mi. are water. Pop.: (est. July 1, 1956) 696,000;

(1950 census) 652,740, one-third urban, two-thirds rural. In 1950 the state had 23,334 Indians and 727 Negroes. Capital: Pierre, pop. (1950) 5,715. Principal cities: Sioux Falls, 52,696; Rapid City, 25,310; and Aberdeen, 21,051.

History.—Two events in the state attracted national attention during 1956. While congress was considering a controversial gas measure, Sen. Francis Case announced that interested parties had tendered a \$2,500 contribution to his campaign managers in Sioux Falls. A small southeastern community, Elk Point, made the headlines when public buildings developed alarming cracks as a result of the shifting of subsurface sand and mud. The town is located on the flats of the Missouri river.

Two laws passed by the 1955 legislature were the subject of much debate. Although courts upheld the validity of a school measure designed to speed up the reorganization of school districts, strong opposition was still expressed in rural areas. The operation of a new system of tax assessment was attacked in particular by county supervisors, who desired more autonomy at the county level. Both political parties expressed support for the calling of a convention to revise the state constitution, adopted in 1889.

Two federal dams neared completion during the year. Pactola, in the Black hills, was ready to take water in August. When filled, it would supply water for irrigation and for Rapid City and the adjacent air base. Gavins Point dam, on the Missouri, produced commercial power for the first time early in September. Fort Randall dam and reservoir, the first mainstem project to be completed under the Pick-Sloan river control plan, was dedicated July 28. Oahe, the largest of all the dams planned by the army engineers and the bureau of reclamation, was brought to approximately 20% of completion during the year.

Thirty-five of the state's 68 counties were designated emergency drought areas. Starting in July the national guard was used to haul hay from Minnesota. An emergency revolving fund of \$100,000 established by the 1955 legislature was used to assist farmers in hay purchases. A total of 25,173 soil-bank agreements were signed, covering one-fourth of the state's wheat area and 7% of the normal corn area.

Elective state officers of South Dakota in 1956 were: governor, Joe J. Foss; lieutenant governor, Roy Houck; attorney general, Phil Saunders; secretary of state, Geraldine Ostroot Tweet; state treasurer, Ed Elkins; state auditor, F. A. Allbee.

In the November election Republicans once again captured all state house offices; the slate of officials remained unchanged except for a new secretary of state, Mrs. Clara Halls. Pres. Dwight D. Eisenhower carried the state by a wide margin, but by a substantially lower one than in 1952. For the first time since 1938 a Democrat was elected as U.S. representative for South Dakota, while Republican Sen. Francis Case was re-elected in a close race. Democrats were elected to 18 of the 35 state senate positions and 26 of the 75 house positions. The explanation generally given for the marked change in the voting pattern was drought, low farm prices and higher tax assessments.

Education.—There were 271 public high schools maintained in South Dakota in the 1954-55 school year, with 2,028 teachers and 31,393 students. Public elementary enrolment was 100,784 students, with 5,451 teachers. Total expenditures for public education (1954-55) were \$39,134,679. Harold S. Freeman was superintendent of public instruction.

Social Insurance and Assistance, Public Welfare and Related Programs.—The department of public welfare distributed \$5,673,694 in old-age assistance, \$2,724,898 as aid to dependent children, \$418,245 for disabled and \$106,494 for the needs of blind persons during the fiscal year ended June 30. Average payment (June 1956) for 10,273 aged was \$45.05; for 9,257 recipients of aid to dependent children, \$25.08; for 789 disabled, \$46.86; for 198 blind, \$44.91. Unemployment benefits for the fiscal year were \$1,477,718 to a total of 6,216 individuals; there were 1,710 new veteran's claims, total payments to all veterans were \$483,899. The state maintained one prison and one training school; expenditures during the fiscal year amounted to \$926,345. There were 435 inmates at the prison on June 30, 1956.

Communications.—In the year ended June 30, 1956, the state maintained a highway system of 6,707 mi.; county highway systems totalled 20,771

mi., other rural roads, 62,027 mi. Total expenditures for all highway purposes were \$26,112,892, the largest single item in the budget. There were 4,580 mi. of railroad in operation at the end of 1955 and a total of 179,383 telephones.

Banking and Finance.—There were 137 state banks in operation as of June 30, 1956, with resources of \$286,826,035 and total deposits of \$261,228,422; 34 national banks with resources of \$310,470,000 and deposits of \$285,769,000. Eight state building and loan associations reported total assets of \$17,574,478; six federal savings and loan associations had total assets of \$22,480,000.

Total receipts of state agencies for the year ended June 30, 1956, were \$92,331,558; total disbursements, \$93,643,168. The state was free of all bonded indebtedness.

Table I.—Principal Crops of South Dakota

Crop	Indicated 1956	1955	Average, 1945-54
Corn, bu.	105,952,000	87,318,000	106,860,000
Wheat, bu.	17,986,000	27,461,000	42,288,000
Oats, bu.	47,434,000	98,736,000	100,753,000
Barley, bu.	6,360,000	9,198,000	20,745,000
Rye, bu.	1,881,000	4,088,000	4,079,000
Flaxseed, bu.	6,256,000	5,783,000	5,233,000
Soybeans, bu.	3,003,000	2,794,000	971,000

Table II.—Farm Value of Livestock

Livestock	Indicated 1956	1955	Average, 1945-54
All cattle	\$279,461,000	\$306,993,000	\$326,695,000
All hogs	29,133,000	56,187,000	66,827,000
All sheep	19,182,000	21,473,000	19,173,000

Source: State-Federal Crop and Livestock Reporting Service.

Agriculture.—Farm income in 1955 totalled \$534,683,000, including \$5,790,000 in government payments; two-thirds of cash farm income was derived from livestock. At the start of 1956 the index of all farm commodities was at the lowest point since 1946. Crop and meat prices continued below 1955 prices until September. Cattle and calves on feed July 1 were down one-third from 1955, and hog inventories were below average.

Manufactures.—Employees engaged in manufacturing numbered 12,600 in June 1956, with average weekly earnings of \$75.49; employees in non-agricultural establishments totalled 125,600. (Ev. W. S.)

Table III.—Mineral Production of South Dakota

Stone	1,189,000	4,996,000	1,615,000	4,929,000
Other minerals	3,923,000	...	6,178,000

*Preliminary. †Total has been adjusted to eliminate duplication in the value of clays and stone. ‡Value included with other minerals.

Source: U.S. Bureau of Mines.

Mineral Production.—Table III shows the tonnage and value of those mineral commodities whose value in 1953 and 1954 exceeded \$100,000. In 1954, as in previous years, South Dakota was first among the states in gold output. It also led in output of columbium-tantalite and was third in beryllium; and it was 37th among the states in the value of its mineral output, with 0.27% of the U.S. total.

Southeast Asia Treaty Organization. A regional defense system established by non-Communist members of the UN, this international association is neither as compact as the ANZUS (Australia-New Zealand-U.S.) group which it encompasses, nor as solid as the NATO group (North Atlantic Treaty organization) to which it is a counterpart. Membership in the SEATO organization is not mutually exclusive with membership in the so-called "Bandung group" of Asian-African powers, since the Philippines, Pakistan and Thailand are members of both groups.

During 1956 the SEATO political and military fronts were relatively quiet. The incursions of Chinese Communist forces into border sectors of Burma were naturally of interest to the SEATO powers, but since the Burmese government handled the matter directly with Communist China, no official action was taken. Instead, the SEATO powers developed their staff at Bangkok, conducted several highly successful air, land and sea military exercises and improved their communications and co-ordination for the sake of readiness, should defense be needed. A considerable amount of work, very little of it published for the world public, was also achieved in the field of economic, social

and health programming, but it was not anticipated that the SEATO organization would do more than monitor these activities, leaving the substance to be carried out by existing governments.

In Nov. 1955 U.S. Secretary of State John Foster Dulles proclaimed his interest in preparing a new foreign ministers' meeting which might give greater political content and higher morale to this group of nations.

Established originally by the Manila pact of Sept. 8, 1954, SEATO, as an organization, came into being as a result of the Bangkok conference of Feb. 1955. Three Asian states (Thailand, Pakistan and the Philippines), two Australasian states (Australia and New Zealand) and three powers with Pacific possessions (the U.S., France, Britain) comprised the original group. Membership has neither been lost nor added.

Relative quiet in the far east kept SEATO out of the news during 1956. Cambodia quietly remained connected with SEATO by retaining a connection with France, but the other east Asian nations were in a position to profit by SEATO help if they were attacked, while bearing neither the expense nor commitment of membership while they stayed out.

Soybeans. The U.S. 1956 soybean crop was a record 457,394,000 bu., 23% more than the previous record crop of 1955 and 80% above the 1945-54 average. The 20,953,000 ac. harvested was 12% more than in 1955 and far in excess of the 12,698,000-ac. average for the previous decade. The yield was 21.8 bu. per acre, as compared with 19.9 bu. in 1955 and a 1945-54 average of 20.0 bu. per acre. Once again, Illinois with 135,632,000 bu. (98,325,000 bu. in 1955) was the leading producing state, followed by Indiana (53,214,000 bu.), Minnesota (53,120,000 bu.), Iowa (51,500,000 bu.) and Missouri (41,000,000 bu.). Illinois set a new record of 28.5 bu. per acre.

The 1956 crop price support was \$2.15 per bushel (75% of parity), as compared with \$2.04 per bushel (70% of parity) for the 1955 crop. Prices in 1956, held near the support level early in the year, then rose in spite of the record crop to \$2.98 per bushel to producers in May, after which there was a prolonged decline to support level. Prices on the new crop in the fall of 1956 were slightly above the official support level, in spite of the record crop. The U.S. department of agriculture encouraged farmers to put a sizable part of the record crop under the loan program, announcing that any soybeans delivered to the Commodity Credit corporation in May 1957 would be withheld from the market, at least until the autumn of 1957, except under certain favourable price conditions.

Exports from the 1955 crop were 67,289,000 bu., 7,000,000 bu. more than the previous record, with a further increase anticipated in 1956-57. A program, jointly between the U.S. department of agriculture and the American Soybean association, to improve the soybean export trade with Japan was announced. World production, for the third successive year, was indicated at new record levels, 853,595,000 bu. in 1956, compared with 765,910,000 bu. in 1955, an average for 1945-49 of 551,280,000 bu. and for 1935-39 of 463,720,000 bu. (J. K. R.)

ENCYCLOPEDIA BRITANNICA FILMS.—*Science and Agriculture* (The Soybean), 2nd ed. (1953).

Spain. A country of southwestern Europe, Spain is bounded north by the Bay of Biscay and France, west by the Atlantic ocean and Portugal and south and east by the Mediterranean sea. Area: 194,945 sq.mi., including Balearic (1,936 sq.mi.) and Canary (2,894 sq.mi.) islands. Pop. (1950 census) 27,976,755, including Balearic (422,089) and Canary (793,328) islands; (1956 est.) 28,203,000. Language: mainly Spanish (Castilian) but Catalan, Galician and Basque are also spoken. Religion: Roman Catholic; Protestants, about 25,000. Chief towns (pop., 1950 census, 1953 est. in parentheses): Madrid (cap.) 1,618,435 (1,641,954); Barcelona 1,280,179 (1,288,283); Valencia 509,075 (515,917); Seville 376,627 (383,900); Málaga 276,222 (278,505); Zaragoza 235,444 (267,952); Bilbao 229,334 (238,766); Murcia 218,375 (224,558); 16 towns with a population from 100,000 to 200,000. Chief of state, president of the council of ministers and commander in chief in 1956, Gen. Francisco Franco Bahamonde.

History.—Foreign Relations.—As in 1955, so in 1956, the U.S.-Spanish agreement of Sept. 26, 1953, may be said to have remained the pivot of Spanish foreign policy. Relations between the two countries were uniformly cordial on all levels. A \$3,000,000 scheme was initiated for mutual visits of technicians, a logical outcome both of the increasing interest taken by the United States in Spanish economic development and of the employment of U.S. engineers on the \$350,000,000 construction program of naval and air bases under the agreement, which by the end of 1956 were well on the way to becoming fully operative. Modernizing the equipment of the Spanish armed forces continued. If grants for the fiscal year 1957 be included, Spain's share so far of U.S. financial aid amounted to \$280,000,000, but of this sum \$115,000,000 was allocated to the purchases of U.S. agricultural surpluses. These purchases were paid for in Spanish currency, part of the peseta proceeds of such sales being made available to Spain in the form of long-term loans. A similar procedure was followed in the case of surplus food stuff purchases from the United States made under public law 480.

Spain continued to maintain normal diplomatic relations with all nations of any importance, except the Soviet Union, Communist China and the other peoples' democracies. Diplomatic relations were renewed with Austria, a trade and payments agreement with that country being concluded in February. The United Kingdom remained Spain's best customer, but political relations continued to be affected to a certain extent by the Spanish government's avowed policy of regarding Gibraltar as a *terra irredenta* and by the maintenance of certain restrictions imposed by the Spanish authorities with the object of creating economic difficulties for the rock.

On April 7, the Spanish government formally recognized the independence of Spanish Morocco.

Peaceful relations with the Islamic world were, as before, an important feature of Spanish foreign policy which led Spain to condone Egyptian seizure of the Suez canal, while at the same time advocating the collaboration of user states to assist Egypt in running it as an international waterway.

Internal Affairs.—Though there were no overt signs of what could be construed as serious political unrest, there were indications (disclosed by a fact-finding inquiry carried out late in 1955) that a large cross section of the students of Madrid university were dissatisfied with the authoritarian nature of the regime. This dissatisfaction expressed itself in February in a partial students' strike and in clashes between Falange and anti-Falange student elements, the latter holding that the Falange-controlled University Students union, representatives of which were at that juncture due for election, did not adequately represent the interests of the students as a whole. Fortunately the clashes had no untoward results, but they were taken sufficiently

seriously by the authorities to be officially ascribed to the effect of subversive propaganda. Eight students and former students were tried and sentenced to fines and terms of imprisonment.

These developments resulted in the dismissal of the secretary general of the Falange, Raimundo Fernandez Cuesta, the minister of education, Joaquin Ruiz Jimenez and the rector of the university, Pedro Lain Entralgo. The new secretary general of the Falange, José Luis Arrese, whose appointment was intended to strengthen party influence, made clear party objectives in this context by announcing the eventual introduction of legislation to integrate the Falange more closely with the machinery of government and also to enable the nation to participate "democratically" (though without the formation of political parties) in the "political tasks of the state."

Economic Situation.—Generally speaking employment remained at a satisfactory level, with even signs of over-employment in some industrial areas such as Bilbao. There was, however, a certain amount of unrest over the ever-rising cost of living, resulting in strikes (illegal under the present regime) which took place at Barcelona, Vitoria and Bilbao. The strikes were also in protest against the alleged inadequacy of the officially authorized wage increases. Wages were ultimately raised by an average of from 40% to 50% in commerce and industry as from Nov. 1. As on previous occasions when wage problems were at issue, the Catholic hierarchy came out strongly in favour of the workers, their claims being urged in a pastoral issued by the archbishops in September.

Building activity, both for industry and housing, continued unabated. In an endeavour to keep pace with the rapid growth of the population coupled with the influx of workers from the country into the towns, the government announced a five-year housing plan providing for an annual expenditure of 12,000,000,000 pesetas per annum.

As it had been in 1955, industrial development was well maintained. Further progress was made in the expansion of the national electricity grid and it was generally held that even if droughts recurred, power restrictions were a thing of the past.

Results in the agricultural sector were less satisfactory. Though the wheat harvest was better at 4,200,000 tons as compared with 3,700,000 tons in 1955, there remained some doubt as to whether the necessity for wheat imports would be altogether eliminated. The olive crop for 1955-56 was poor, necessitating the import of edible oil. The most serious setback resulted from the unprecedented February frosts which reduced a record exportable surplus of 1,300,000 tons of citrus fruit to 550,000 tons with a corresponding loss in foreign exchange estimated at about \$100,000,000, not to mention the destruction of trees, which it would take an estimated five years to make good. The United States donated 13,000 tons of foodstuffs for relief in the areas affected.

Miscellaneous.—Spain being an officially Catholic country, relations between church and state were good and called for no special comment. As already stated the church championed the workers in wage claims, and much interest was aroused by a report published in Spain's principal Catholic daily which recounted the experiences of a number of priests who worked voluntarily for a time in various factories at Bilbao and whose conclusions were that the workers there were overworked and underpaid.

The small native Protestant minority, estimated at about 25,000, remained in disfavour with the authorities who maintained their refusal in principle to allow the civil marriage of such Protestants who, though born Catholics, had ceased to practise their religion and desired to make the prior declaration of "non-catholicity" as permitted under the civil code. Other measures taken by the authorities were the closing in January of the only Protestant seminary in Spain (in Madrid) and the confiscation

in April of about 30,000 Bibles and devotional works, the property of the British and Foreign Bible society, though the society's Madrid office was allowed to remain open.

On Nov. 6 Spain withdrew from the Olympic games. The Spanish Sports federation said it was not fitting for Spanish athletes to compete "while the liberty of peoples is being trampled on."

(AL. WA.)

Education.—Schools (1952-53): primary (including private) 65,411, pupils 2,887,090, teachers 80,719; secondary 119, pupils 247,713; vocational, pupils 159,690; teacher training (primary) 106, students 25,421. Universities 12, students 58,143, professors and lecturers (1952) 3,268.

Finance and Banking.—Monetary unit: peseta, with a basic export exchange rate of 21.90, a principal effective export rate of 30.42 and a controlled free rate (principal import rate) of 38.95 pesetas per U.S. dollar. Budget: (1954-55) revenue 26,074,200,000 pesetas, expenditure 26,020,800,000 pesetas; (1955-56 est.) revenue 33,834,046,000 pesetas, expenditure 35,832,671,000 pesetas. Public debt (Dec. 1954): 86,896,700,000 pesetas, of which 4,442,400,000 pesetas was external. Currency circulation: (Sept. 1954) 40,500,000,000 pesetas, (Sept. 1955) 44,800,000,000 pesetas. Deposit money: (Dec. 1954) 64,400,000,000 pesetas, (Dec. 1955) 71,300,000,000 pesetas. Gold reserves: (June 1954) U.S. \$113,000,000, (June 1955) U.S. \$122,000,000.

Foreign Trade.—(1955) Imports 1,918,519,000 pesetas (gold); exports 1,374,953,000 pesetas (gold). Main sources of imports (1955): U.S. and Canada 19%; sterling area 15%; continental E.P.U. (European Payments union countries) 41%. Main destinations of exports: sterling area 20%; Germany 19%; U.S. and Canada 12%; continental E.P.U. 44%. Chief exports: oranges 12%; wine 5%; iron ore 8%.

Transport and Communications.—Roads (1954) 120,763.6 km., of which 73,475.8 km. national roads. Motor vehicles in use (1954): passenger 116,511; commercial 99,404. Railways 17,307 km., of which about 13,090 km. state lines. Rail traffic (state only): passenger-km. (1954) 7,879,000; freight, ton-km. (1955) 7,632,000. Shipping: merchant vessels of 100 gross tons and over (July 1955) 1,225; total tonnage, 1,383,239. Air transport (1955): passenger-km. 403,116,000; freight, ton-km. (1954) 2,292,000. Telephones (Jan. 1955) 996,525. Licensed radio sets (1954) 1,622,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 3,922,000 (4,798,000); barley 1,729,000 (2,205,000); oats 503,000 (526,000); rye 491,000 (526,000); maize 610,000 (751,000); potatoes 4,300,000 (3,535,000); rice 399,000 (401,000); chick-peas 146,000 (122,000); lentils 28,000 (21,000); broad beans 90,000 (111,000); dry beans 92,000 (96,000); cotton, lint 36,000 (22,000); cottonseed 73,000 (45,000); oranges 1,560,000 (1,305,000); beet sugar, raw 300,000; olive oil 284,000; wool 26,000; wine 16,120,000 hl. Miscellaneous production (metric tons, 1954; 1953 in parentheses): onions 504,000 (556,000); lemons 48,000 (49,000); bananas 214,000 (205,000); tobacco 30,000 (31,700); sweet potatoes and yams 126,000 (148,000); peanuts 12,000 (11,000). Livestock (animals over one year old, Sept. 1954): cattle 4,500,000; sheep 20,000,000; pigs 5,000,000; horses 600,000; mules 1,200,000; asses 800,000; chickens (Sept. 1953) 26,623,000; goats (1950) 4,135,000. Fish landings (1954) 577,600 metric tons.

Industry.—Fuel and power (1955): coal 12,396,000 metric tons; lignite 1,824,000 metric tons; electricity 12,432,000,000 kw.hr.; manufactured gas 316,800,000 cu.m. Production (metric tons, 1955): iron ore (50% metal content) 3,888,000; pig iron 987,600; crude steel (excluding castings) 1,212,000; zinc (smelter) 23,760; copper, blister, 5,760; lead (refined) 61,200; cement 3,756,000; cotton yarn 53,040; wool yarn 15,360; rayon filament yarn 14,280; rayon staple fibre 32,160; potash, K₂O content (1954), 184,000. Ore production (metal content, 1954): lead 55,700; manganese 12,800; antimony 471; tin concentrates 664; tungsten 1,319; pyrites 1,914,000. Index of production (Sept. 1955; 1953=100) 110.

Spanish Colonial Empire. Under this heading are grouped the Spanish possessions in Africa. Their total area is approximately 134,477 sq.mi. and the total population (1950 census) 1,402,004. Areas, populations, capital towns, and governors of the territories are given in the table.

History.—The year witnessed the end of Spanish rule in that region of northern Morocco of which the protectorate had been assigned to Spain under the Madrid treaty of Nov. 27, 1912. Nationalist agitation in Morocco had culminated in the recognition by France of Morocco as an independent sovereign state. Spain, whose policy it had been to promote the participation in its zone of Moroccan elements in the administration with a view to eventual self-government, had no option but to follow the French lead.

In April the sultan of Morocco, Mohammed V ben Yusuf, paid a state visit to Madrid, and on April 7 an agreement was concluded between the two countries by which the Northern and

Spanish Colonial Empire					
Country	Area (sq.mi.)	Population (1950 census)	Capital	Status	Governor
Spanish Morocco					
Northern zone	7,589	1,010,117 (incl. 84,716 Spanish)	Tetuán pop. (1950 census) 80,732	Protectorate	High commissioner: Lieut. Gen. Rafael García Valiño y Marcén Khalifa (viceroys): Muley Hassan Hassan ben el-Mehdi
Southern zone	12,693	5,878	Cabo Juby	Protectorate	
Ceuta, Melilla, Alhucemas, Chafarinas and Peñón de Vélez	82	141,302	—	Administered as part of Spain	
Spanish West Africa					
Ifni territory	579	38,295	Sidi Ifni	Colony	—
Rio de Oro	71,043	1,304	Villa Cisneros pop. (1950 census) 1,011	Colony	—
Saguia el Hamra	31,660	6,445	—	—	—
Spanish Guinea including Fernando Po and four small islands	10,831	198,663	Santa Isabel, on Fernando Po pop. (1950 census) 11,098	Colony	—

Southern zones of Spanish Morocco were formally incorporated in the new Moroccan state. Spain was to maintain military forces there during the transitional period of the transfer of powers from the Spanish to the Moroccan administration and to render assistance in matters of foreign affairs and defense. In return Morocco undertook to guarantee the rights and liberties of all Spaniards residing in the zone, including those in state employment. Alhucemas, Chafarinas, Peñón de Vélez and the ports of Melilla and Ceuta, though located on the coast of the zone, having long been Spanish territory and administratively part of metropolitan Spain, were not included in the transfer arrangements. To settle these details negotiations between Spanish and Moroccan representatives began in May.

Among the specific problems to be dealt with were the Spanish assets in the zone (tentatively estimated at between 7,000,000,000 and 10,000,000,000 pesetas) and that of the future of the Rif iron mines. Little information became available as to conditions in the zone after the initial stages of the transfer, but there were definite indications that, as the year wore on, public order had seriously deteriorated. There were also signs of tension in Spanish-Moroccan relations. In October the Spanish ambassador in Rabat addressed a protest to the Moroccan government pertaining to an incident involving the Spanish military authorities and the Moroccan governor of Larache. The protest was also against a speech delivered by Abdeljalek Torrès, former leader of the Spanish-sponsored Reformist party in the Spanish zone who was subsequently appointed Moroccan ambassador to Spain. The speech in which he made references to Morocco's achievement of independence and "victory over imperialism" was considered offensive to Spain.

The central government's expenditure on Spanish possessions in Africa for 1956 was budgeted at 1,202,490,000 pesetas, an increase of 102,890,000 pesetas over 1955. (AL. WA.)

Finance.—Spanish Morocco, budget (1954 est.): balanced at 470,200,000 pesetas, of which receipts from zone 220,200,000 pesetas. Spanish Guinea, budget (1953): balanced at 73,936,000 pesetas. Expenditure of central government on African territories (1955 est.) 1,099,600,000 pesetas.

Foreign Trade.—Spanish Morocco (1954): imports 915,800,000 pesetas; exports 622,200,000 pesetas. Spanish Guinea (1953): exports 617,303,300 pesetas (of which 513,932,400 pesetas to Spain); imports 317,315,300 pesetas (of which 282,159,200 pesetas from Spain). Spanish West Africa (1952): exports 38,702,750 pesetas; imports 34,041,980 pesetas.

Transport and Communications.—Spanish Morocco: roads (1954) 2,453 km.; railways (1951) 173 km. Motor vehicles (1954): 3,736. Telephones (Jan. 1955): Spanish Morocco 8,533; Spanish Guinea 604; Spanish North and West Africa 4,480.

Spanish Literature. Translations and discussions with foreigners at congresses effected little change during 1956 in the Spaniard's concentration on his national setting. Within this setting, powerful shibboleths increased the broad obscurity of social, moral and religious subjects and liberated expression in the novel, which was generally limited to the description of the lower forms of society to which national standards of conduct or responsibility do not apply. This fiction portrayed life which was individual, dramatic, often coarse-grained and brutal, selfish and suspended wholly in con-

temporary time. Any resemblances to conditions or persons which could be a subject of reform or revolt were purely coincidental. The essential immobility of this fiction was masked by multiple sound and colour effects, brilliantly "popular" dialogue, impressionistic though detailed delineation and evocation of "place," and a restless episodic succession of inci-

dents and persons, presented rather truculently.

Abundant short stories, many of high quality, occasionally achieved greater intensity. Comic writing and books for children were popular and more numerous than hitherto. Vicente Aleixandre again (Academy lecture, January) emphasized the triple preoccupation of contemporary poets with their own times, with the anguish and hopes of religion and with their country. There were signs in religious verse of a simple, more virile and personal expression, which, in unexceptional forms, included a few notes of hope and of gratitude for friendship, memories and natural settings, among many more of unforced despair and isolation. The sense of communication with *patria* and *paisanos* had obviously deepened, though the future was still unseen.

Two centenaries were widely celebrated, those of St. Ignatius of Loyola and of Marcelino Menéndez y Pelayo. In October it was announced that Juan Ramón Jiménez (*q.v.*) had been awarded the 1956 Nobel prize for literature. Two prominent literary journals, *Índice de Artes y Letras* and *Insula*, were suppressed. An informative survey of the work of 1955 appeared in Sainz de Robles' *Panorama Literario* (1955). Notable works published included (1956 unless otherwise stated):

Poetry.—J. de Bengoechea, *Hombre en forma de elegía* (winner of the Premio Adonais, 1955); C. Riba, *Obra poética* (with Castilian versions); R. Montesinos, *País de la esperanza* (1955); R. Millán (ed.), *Antología de poesía española 1954-55* (1955); Gerardo Diego, *Amazona* (1955); J. García Nieto, *La Red*; R. Santos Torroella, *El hombre antiguo*.

Prose Fiction.—C. J. Cela, *Judíos, moros y cristianos*; J. A. de Zunzunegui, *El hijo hecho a contrata*; A. Prieto, *Tres pisadas de hombre* (winner of the Premio Planeta, 1955); R. Sánchez Ferlosio, *El Jarama* (winner of the Premio Nadal, 1955); M. Delibes, *Diario de un cazador*; M. Halcón, *Los Dueñas*.

Essay.—P. Lain Entralgo, *España como problema*.

Scholarship.—G. Torrente Ballester, *Panorama de la literatura española contemporánea*; M. Fernández Almagro, *Historia política de la España contemporánea*; P. J. Juambelz, *Bibliografía sobre S. Ignacio de Loyola 1700-1950*. (R. F. B.)

Spices. United States consumption of and trade in spices in 1956 appeared to be more nearly stabilized than in any year since World War II. For most major types, supplies were fully equal to demand, and prices eased. Spices, classed as complementary imports, amounted to 79,330,000 lb. valued at \$30,174,000 in 1955-56; imports for the previous year were 84,352,000 lb. valued at \$34,830,000.

Total available world supplies of pepper in 1956 were estimated at 68,152 tons including carry-over stocks, as compared with 61,393 tons in the previous year. The Indian 1955-56 crop was 24,000 tons as compared with 19,000 tons in 1954-55. The

Lamong, Indon., crop increased to 6,500 tons from 5,000 tons in 1955. World consumption of pepper in 1955 was about 46,365 tons against 50,776 tons in 1954, but U.S. consumption increased to 15,500 tons, from 14,000 tons in 1954. U.S. imports were 14,550 tons of black pepper and 1,225 tons of white pepper in 1955, a total of 15,775 tons against 16,937 tons in 1954. India, having abolished the export duty late in 1955, supplied about one-half, with the remainder rather evenly divided between Sarawak and Lampong, with small amounts from Ceylon. Prices drifted lower, to a level of about 10% as high as the post-World War II peak, when something near \$3.00 per pound was obtained.

A pepper futures market was activated in Rotterdam and Amsterdam, Neth., after a 16-yr. suspension. An Indian commission recommended that a futures market for pepper should be established at Cochin (India). The government of India sponsored a Pepper Export Promotion council, which included within its scope production, crop estimation, export promotion, trade terms and standardization of quality. Simpler methods of propagating the pepper plant appeared to be successful and aided in the establishment of plantings in Puerto Rico.

The price of vanilla beans continued to decline during the early part of 1956 but reacted violently to the report of hurricane damage in Madagascar. Vanillin declined about 7% in price under competitive pressure.

The nutmeg industry in Grenada, Wind. Is., severely damaged by a hurricane in Sept. 1955, was reported as needing a long period of recuperation.

The more important flavouring essential oils presented no major shortages nor any major price changes during 1956. Those of the citrus group were generally abundant and declined somewhat in price. Oil of lemongrass strengthened in price. The mint oil group presented diverse trends. Peppermint was well below the previous year in price, whereas spearmint advanced. Indicated domestic production was 2,230,000 lb. of peppermint oil and 757,000 lb. of spearmint oil, as compared with 1,945,000 lb. and 593,000 lb. respectively in 1955. Increased quantities of anise oil were available at rather high prices. Cassia oil continued scarce and clove oil eased in price. (J. K. R.)

Squash Racquets. G. Diehl Mateer, Jr., of Philadelphia, Pa., regained the United States squash racquets singles championship at the Hartford (Conn.) Golf club on Feb. 13, 1956, when he defeated the defending titleholder, Henri Salaun of Boston, Mass., 15-9, 15-10, 15-10, in the final round of the 1956 tournament. The New York city team swept to its second straight intercity team title, winning all three of its matches by 5-0. Carl Badger and James Ethridge, III, of the Field club of Greenwich, Conn., triumphed in the national doubles competition conducted at the Racquet and Tennis club in New York city in March. Badger and Ethridge subdued Richard Remsen of the University club in New York city and John Russell, III, of the Sea Bright Squash Racquets club, 15-7, 17-15, 15-13, in the title round.

Mateer added to his stature as the leading U.S. amateur by annexing the Harry Cowles invitation tourney. In the final of the tenth annual event at the Harvard club in New York city, Mateer defeated Calvin MacCracken of the Englewood (N.J.) Field club, 15-11, 15-8, 18-16.

Al Chassard of the Saucon Valley club of Bethlehem, Pa., won national professional honours by defeating Al Molloy of the Buffalo (N.Y.) Squash and Tennis club at the New York Athletic club on Jan. 22. The score of the bitterly fought final was 10-15, 15-0, 10-15, 15-13, 15-13, 15-13, 15-13. The 1955 title winner, Hashim Khan of Pakistan, did not defend his championship. Badger and Ethridge regained the Lockett cup when they conquered Russell and Remsen in the final of the annual doubles tourney at the University club. The score was 15-18, 15-10, 15-11, 15-12.

Mrs. Pepper Constable of Princeton, N.J., won the United States women's singles laurels in a five-game final with Mrs. Charles Wetzel of Philadelphia. The score was 10-15, 11-15, 17-16, 15-8, 15-10. The team of Mrs. John Carrott, Greenwich and Hilda Smith-Peterson, Boston, defeated Mrs. Garth Kauffman, Greenwich, and Mrs. J. Newton Hunsberger, Philadelphia, 15-10, 15-11, 18-16, in the invitation doubles final.

Ben Heckscher, Harvard, won national intercollegiate laurels by halting Juan Hermosilla, Massachusetts Institute of Technology, 18-13, 15-9, 15-10. Harvard, unbeaten in ten dual matches for the season, was team champion with 14 points, Navy being next with 13. Steve T. Vehslage of Haverford Prep, Philadelphia, won both national junior and interscholastic honours.

The U.S. beat Canada, 11-4, in the annual international competition for the Lapham trophy at the Agawam Hunt club, East Providence, R.I. In England, Hashim Khan set a record by winning the British open crown for the sixth consecutive year when he defeated a cousin, Roshan Khan, 9-4, 9-2, 5-9, 9-5. Roshan Khan took the Canadian open by downing Mateer, 9-15, 15-8, 18-15, 15-3. (T. V. H.)

Stevenson, Adlai Ewing (1900-), U.S. political figure, was born at Los Angeles, Calif., on Feb. 5. He was graduated from Princeton university in 1922, subsequently earning his law degree at Harvard and Northwestern (Evanston, Ill.) universities. After serving abroad as a newspaper correspondent, he became a federal official, principally with the agriculture, state and navy departments. He was governor of Illinois from 1949 to 1953, and was the Democratic nominee for president in 1952. Carrying only nine states, he was defeated on Nov. 4 by Dwight D. Eisenhower.

Despite his 1952 defeat, Stevenson was renominated for the presidency in 1956. He conducted a more energetic campaign than in 1952, travelling more extensively and adopting a less lofty oratorical style. He offered the voters a social and economic program for what he called a "New America," which consisted largely of an expansion of the Franklin D. Roosevelt-Harry S. Truman reforms. On the domestic side, he assailed the Eisenhower administration as too favourable to "big business" and forgetful of the "little people."

Stevenson criticized especially the administration's conduct

ADLAI E. STEVENSON smiling in front of an equally jubilant campaign poster when announcing at a press conference that his chief opponent for the Democratic party presidential nomination, Estes Kefauver, had withdrawn and had urged his supporters to switch to Stevenson

of foreign affairs, charging that Eisenhower had not shown courageous leadership in this field and that the president's policies had cost the U.S. prestige and friends throughout the world. He called for an end to the draft and to hydrogen-bomb tests, provided that their termination did not jeopardize national security.

But foreign developments in the last few weeks of the campaign operated against him. The Soviet premier, N. A. Bulganin, endorsed Stevenson's plan for terminating hydrogen-bomb tests, and the brutal Soviet suppression of the revolts in Poland and Hungary, as well as the Anglo-French-Israeli invasion of Egypt, stirred thoughts and fears of a World War III. U.S. voters apparently felt that the troublous times required in the White House a more experienced man than Stevenson, and especially a military leader. Stevenson himself blamed the extent of his loss on the "foreign crisis."

On Nov. 6 Stevenson carried only seven southern and border states for an electoral total of 73, or 16 less than in 1952, against Eisenhower's 457. Six southern and border states fell into the Republican column. Moreover, many large cities, which had been historic Democratic strongholds because of labour, liberal and racial support, voted for Eisenhower, while contributing to the election of a Democratic congress.

Although Stevenson's post-election statement said that he would maintain his interest and faith in the Democratic

party, politicians believed that his two unsuccessful attempts had eliminated him as a future presidential candidate.

(R. Tu.)

Stocks and Bonds. U.S. Stocks.—The 1956 bull market was characterized by a much higher degree of uncertainty about the future course of stock prices than at any time since 1953. Based in large degree upon monetary factors, particularly in the second half of the year, there was a growing bearishness on the part of investment analysts and the public. A strong sentiment developed about midyear that the market had reached the end of its record three-year climb. Measured by Standard and Poor's composite index of 90 stocks, as shown in Table I, U.S. common stock prices rose to a peak in April at a level 27% above the corresponding month in 1955. During May and June the composite index fell off, but the highest level in many years was achieved in July 1956. Toward the end of the summer, however, the market declined uncertainly with relatively little response to the presidential election of November. At the July peak the industrial average had attained a level of 520.7 which represented a gain of 11.4% over the January level. While railroads registered a gain of 4.5%, the public utilities group of stocks climbed to its highest point in Aug. 1956, almost 6% above the level at the beginning of the year.

The average yield on common stocks fluctuated within a narrow range about 4% during the greater part of 1956. While a small spread remained between stock and bond yields, investors in the autumn of 1956 were able to obtain better yields on many high-grade corporate bonds than they could from securities in the industrial averages. By way of highlighting the relatively low yield basis to which stocks had fallen it was noteworthy that at one point during October 91-day treasury bills drew an interest rate of 3.024%, the highest short-term borrowing cost since banks were closed during the "holiday" of March 1933.

The total number of shares traded on all registered exchanges in the U.S. as reported by the Securities and Exchange commission was 625,221,000 during the first six months of 1956. This represented a decline of almost 15% from the aggregate trading volume established during the first half of 1955. Expressed in terms of market values, the trading in the first half of 1956 amounted to \$18,601,000,000, a decrease of approximately 9% as compared with the \$20,415,000,000 worth of shares sold during the last six months of 1955.

The slackening in trading volume on the New York Stock exchange which prevailed during 1956 was not as pronounced as the decline in the aggregate for all registered exchanges. While average monthly sales were down about ½% from the 1955 pace, the 68,400,000 figure remained near the highest level in several decades.

U.S. Bonds.—United States government long-term bond prices, according to Table II, underwent a substantial decline from the levels which prevailed during 1954 and early 1955. Dur-

ing the first nine months of 1956 the average long-term bond price was 100.3 as contrasted with 102.7 for the corresponding period in 1955 and 106.1 for 1954. By Sept. 1956 the price of long-term government bonds had dropped to 97.6, the lowest point in several years. Corporate bonds with A1+ ratings, as shown in Table III, responded to the credit tightening phase of federal reserve board policy in the same manner as did government securities. The average price for the first three quarters of 1956 was 110.7, as compared with 114.7 in 1955 and 117.1 in 1954.

Bond yields, as indicated in Tables II and III, rose substantially during the first nine months of 1956 in line with the trend toward higher interest rates throughout the economy. The levels attained in Sept. 1956 of 3.592 for high-grade corporates and 3.21 for long-term government issues were the highest since 1953.

The market value of bond sales, exclusive of United States government bonds, on all registered exchanges in the United States during the first half of 1956 amounted to \$631,365,000. While this figure represented a substantial increase over the \$567,256,000 sales volume for the corresponding period in 1955, it was slightly less than the amount sold during the last six months of 1955.

According to the U.S. department of commerce, the market value of all bond issues listed on the New York Stock exchange at the end of June 1956 was \$104,289,000,000, which was almost identical with the \$104,282,000,000 value reported a year earlier. Domestic issues accounted for more than 99% of the total.

Market Conditions.—The most significant set of developments affecting the market in 1956 related to changes in the level of interest rates. During April and August, the board of governors of the federal reserve system approved increases to 3% in order

SALES AND PRICES on the New York Stock exchange, 1956

to bring rediscount rates into line with open market rates. The prime rate of commercial banks rose above 4% during Sept. 1956. Brokers were charging 5½% and more on debit balances, a rate substantially higher than the average stock yield, so that in-comewise it had become unprofitable to carry stock on margin. In the face of a strong demand for funds by all classes of borrowers and a rise in the cost-of-living index, the restraints on credit imposed by the federal reserve board pushed interest rates upward with a moderately depressive effect on bond prices and current stock yields.

Corporate profits during 1956 failed to sustain the year-by-year gains which had characterized corporate earnings since 1952, but the dividend pattern was such that the year's payment rate was the greatest in history. Corporations listed on the New York Stock exchange boosted their cash dividends during the first three quarters of the year by more than 17% above the corresponding 1955 period. Of the 1,079 common stocks listed in Sept. 1956, 961, or 89%, paid one or more cash dividends in the first nine months. Increased payments were made by 573 of the common stocks with 321 paying the same amount in both periods and 67 paying less in 1956 than in 1955.

New York Stock Exchange.—Investment clubs, a new phenomenon in the market, showed an enormous rate of growth in 1956. Before 1951 there were fewer than 400 investment clubs in existence. By the end of 1956 the National Association of Investment Clubs estimated that there were more than 10,000 groups of investors banded together for the purpose of systematically investing small sums of money in carefully selected securities, in accordance with the requirements of the "dollar-averaging" principle. A New York Stock exchange study of trading on June 8 and 15, 1956, showed that investment clubs accounted for 92,000 shares or 5.6% of the total volume.

The Monthly Investment plan, which was inaugurated in Jan. 1954 by members of the New York Stock exchange to give more people a way to invest out of income on a pay-as-you-go basis, showed continuing growth during 1956. More than 50,000 such plans were in effect by the end of the year, and it was noteworthy that investors tended to be conservative in their selection of securities, with more than 80% of the plans providing for automatic reinvestment of dividends.

The New York Stock exchange midyear report showed an increase in gross income from the 1955 level of \$7,935,333 to \$8,478,133, but net income declined by about \$100,000 under the

HENRY FORD AND KEITH FUNSTON, president of the New York Stock exchange, standing on the littered floor of the trading area after Ford Motor company stocks were placed on the market for the first time in 1956

preceding year. Lower trading volume in the first six months resulted in lessened income from direct charges to members and member firms. Listing fees, however, showed a gain during the six months. This reflected the new listing of 11 companies, including the Ford Motor Co., and approval of 354 applications for listing of additional shares, including the mammoth three-for-one stock split of Standard Oil Company of New Jersey.

Expenses rose as the exchange increased wages and salaries and added new employees. Advertising expenses during the first six months rose \$247,244 as the exchange stepped up its program to promote wider stock ownership throughout the country.

Stomach and Intestines, Diseases of the.

Oesophagus.—Prolonged contact of the lining of the oesophagus with acid from the stomach or alkaline contents from the intestine caused inflammation of the oesophagus (oesophagitis). The most important factor was repeated vomiting, as in persons with oesophageal hernia or intestinal obstruction, during pregnancy and after operations. Symptoms included a burning sensation or pain in the upper abdomen and beneath the breastbone and gaseous distress relieved by belching; difficulty in swallowing resulted from spasm or scar tissue narrowing of the oesophagus. Treatment included medicines to reduce the acid and to counteract the inflammation, elevating the head of the bed to decrease the regurgitation of irritating fluid, and mechanical stretching of narrowed areas of the oesophagus. Prevention was most important; correcting the causes of vomiting and avoiding unneces-

sary operations on the lower part of the oesophagus or the upper portion of the stomach.

Difficulty in swallowing (dysphagia) necessitated careful examination of the throat and larynx, direct inspection of the oesophagus and special X-ray techniques to determine the cause. In addition to inflammatory and motility disorders, dysphagia resulted also from emotional disturbances, causing pronounced spasm of the muscle layers of the oesophagus.

Stomach.—The importance of hydrochloric acid in the stomach as a vital factor in the development of peptic ulcer is no longer questioned. While the high acidity in duodenal ulcer has been considered nervous in origin, acid production in stomach (gastric) ulcer was attributed to a hormone. Prolonged, excessive stimulation of the lower end of the stomach (antrum), as in patients with narrowing of the stomach outlet, liberated increased quantities of gastrin. Removal of the antrum experimentally reduced the amount of acid. The operation of vagotomy and hemigastrectomy for peptic ulcer was based upon this concept. Other endocrine influences, including the adrenal glands, also have been implicated in the excessive secretion of hydrochloric acid in duodenal ulcer. There appeared to be a higher incidence of blood group O in patients with duodenal ulcer, whereas in gastric ulcer the distribution of blood groups was normal. The incidence of ulcer was increased in patients with diminished ventilation of the lungs and retention of carbon dioxide in the blood (pulmonary emphysema). These intriguing observations stimulated further interest in the factors predisposing to peptic ulcer.

The objectives of ulcer therapy—relief of pain, healing of the active ulcer and prevention of recurrences and complications—necessitated a carefully supervised medical program, emphasizing adequate diet, efficient control of stomach acidity and the identification and management of physical and nervous stresses; co-operation of the patient was important. Newer drugs to lessen stomach acidity excelled earlier preparations, but the effective dose varied greatly and often was much higher than original estimates indicated. These medicines appeared to be most useful when administered for long periods in adequate amounts as determined for each individual. Several new compounds lowered acidity for long periods, suggesting their use in controlling acid production during the night, when the ulcer program could not be maintained. The hazard of haemorrhage from ulcer increased with age, but a previous haemorrhage did not necessarily intensify the risk; the excessive use of salicylates not infrequently precipitated bleeding. In treatment of this complication, co-operative care by a "keen physician and somewhat reluctant surgeon" was most important. Medical management, including adequate replacement of blood, was effective in most instances. For patients requiring surgery, various procedures were available, including direct operative closure of the bleeding area. The undesirable consequences of extensive gastric surgery remained a major concern. Problems, in addition to the "dumping" syndrome, included poor nutrition and obstruction of the intestinal loop joined to the stomach. However, surgery remained highly effective in those persons requiring operation.

Statistical evidence re-emphasized the increasing incidence of stomach cancer with advancing age and the greater susceptibility of males than females. Diagnosis remained a challenging problem because of the long asymptomatic interval. Examination of "susceptible" persons, careful appraisal of all gastric ulcers, and improved techniques, including gastric biopsy and the study of cells from stomach washes (cytology), were the most useful methods of diagnosis. Cytology also was helpful in the recognition of other tumours of the stomach and intestine (lymphomas), for which more effective therapeutic methods were available.

Intestines.—Defective absorption of fat and other nutrient

materials from the small bowel resulted in excessive loss of fat from the body, diarrhoea with large, greasy bowel movements (steatorrhoea), abdominal distress, severe weight loss and various biochemical disturbances. The numerous causes of this disorder included inflammation of the small intestine, rapid passage of food through the bowel following stomach operations, pancreatic deficiency, a possible bowel infection and unusual sensitivity to the gluten in wheat, as postulated for the disease sprue. Treatment included decreased fat intake, elimination of gluten from the diet, sulfa drugs and antibiotics, occasionally pancreatic extract, and the administration of iron, calcium, vitamins and folic acid to correct nutritional deficiencies. Corticotrophin, cortisone or prednisone often improved intestinal absorption and, together with a gluten-free diet, facilitated better control of this disorder. Intestinal infections with *Salmonella* bacteria, often resistant to sulfonamides and antibiotics, responded to large amounts of crystalline penicillin injected intravenously; but this treatment did not eliminate the carrier state in children.

In addition to the excessive use of laxatives and dietary irritants, nervous tension was an important cause of the irritable colon, producing spasm and irritability of the large bowel. The principal symptoms were abdominal discomfort, flatulence and constipation or diarrhoea. The term "irritable colon" was preferable to "colitis," for there was no inflammation or ulceration. Treatment included the avoidance of irritating foods, adequate rest, relief of tension and intelligent management of the emotional difficulties present.

Ulcerative colitis, characterized by severe inflammation and ulceration of the large bowel and by numerous complications, continued to present a more serious problem. Despite extensive study in many countries, the cause remained obscure and treatment consequently difficult. In some cases, fat absorption was reduced; in a few patients, anaemia developed as a result of immunological processes destroying blood cells. In pregnant colitis patients the first trimester was the most trying period; the illness was less troublesome later in pregnancy. Interest in the operative treatment of ulcerative colitis increased as the response to medical treatment was not sustained and as surgical techniques improved. However, the procedure of total colectomy and ileostomy not infrequently was followed by complications such as obstruction, prolapse, haemorrhage and skin irritation.

Diverticula, small pouches projecting from the bowel wall, are common and usually do not cause symptoms. Inflammation of these diverticula produced diverticulitis involving especially the left (descending) colon. In the acute stage, treatment with limited intake of food, fluids intravenously and antibiotics was highly successful. In occasional patients not responding to such management, an opening in the bowel (colostomy) was necessary. In patients with recurrent bouts of acute diverticulitis despite medical treatment, the diseased segment of colon could be removed surgically and normal bowel continuity restored, eliminating the cause.

Liver.—Chlorpromazine, a nonbarbiturate compound, prescribed in the treatment of emotional disturbances and in certain instances of nausea and vomiting, produced a characteristic type of liver injury, attributed to hypersensitivity; the incidence was 1% or less, depending upon the dosage. The illness resembled obstruction of the larger bile ducts; jaundice usually appeared during the second or third week of treatment and cleared after several weeks. ACTH and cortisone reportedly were helpful in some cases.

An unusual outbreak of hepatitis in Sweden was attributed to the eating of infected oysters; the incubation period ranged from 21 to 32 days. The clinical course suggested influenza, but some patients developed severe abdominal pain suggestive of a surgical disease.

There was further evidence of the direct injurious action of alcohol upon the liver. Excessive alcohol, malnutrition and hepatitis caused fatty changes, inflammation, scarring and anatomic distortion of the liver (cirrhosis).

In severe liver disease ammonia metabolism was abnormal, and excessive amounts of protein foods and nitrogen-containing medicines occasionally resulted in coma and large increases in blood ammonia. The disturbance was related in part to bacterial action within the colon; treatment with certain antibiotics and sulfa drugs appeared helpful. The management of liver disease continued to emphasize rest, avoidance of excessive alcohol and other potentially damaging materials, adequate diet and vitamins; salt restriction was necessary to control the accumulation of fluid within the abdomen.

Gall-Bladder.—Though removal of the gall-bladder (cholecystectomy) was helpful in most patients with gallstones requiring this operation, results were not satisfactory in 10% to 15% of patients. Three principal causes of the operative failures were (1) the presence of a disorder other than gallstones, unrecognized or improperly evaluated before operation; (2) incomplete surgery, with residual stones or a portion of the gall-bladder and its duct remaining; and (3) injury to the common bile duct, the normal channel for the transfer of bile from the liver and gall-bladder to the small intestine. The observations re-emphasized the importance of careful study of each patient before operation.

Pancreas.—Additional aids in the recognition of pancreatic disease included measurements of the fluid and enzyme response to secretin and the amount of chymotrypsin in the duodenal fluid. Pancreatitis, a serious disease, developed occasionally in patients with gallstones, after excessive intakes of alcohol and following operations upon the stomach and gall-bladder areas. The tissue destruction was attributed to the presence of a powerful enzyme, collagenase, in the pancreatic fluid. Treatment included medicines to decrease pancreatic secretion, correction of the blood volume deficit and the use of antibiotics. The presence of carcinoma of the pancreas occasionally was heralded by the development of thrombophlebitis. In cancer of the body and tail of the pancreas, visualization of the splenic and portal veins by the technique of percutaneous splenoportography demonstrated displacement of these vessels by a mass, facilitating the recognition of this difficult-to-diagnose cancer. An unusual tumour of the pancreas was found in a few patients with peptic ulcer secreting tremendous quantities of hydrochloric acid in the stomach, who had not responded consistently to medical treatment and who had developed recurrent ulcers after one or more operations. Strawberries: see FRUIT.

Strikes. **United States.**—An increase occurred in the level of strike activity in 1955 over the previous year. The number of work stoppages rose by 25% (from 3,468 in 1954 to 4,320 in 1955), the number of workers involved in work stoppages increased by 73% (from 1,530,000 in 1954 to 2,650,000 in 1955) and the number of man-days idle grew by 25% (from 22,600,000 in 1954 to 28,200,000 in 1955). On the other hand, the (unweighted) average duration of work stoppages, declined from 22.5 days in 1954 to 18.5 days in 1955. The average duration of strikes ending in 1955 was less than in any year since

World War II, except 1951. During 1955, the number of man-days idle was only 0.26% of the estimated working time of all workers. Only in two postwar years was this percentage lower than in 1955. In 1954 this figure was 0.21% and in 1951 it was 0.23%, while in 1953 it was 0.26%, the same as in 1955.

The general rise in strike activity affected most industries. Work stoppages and man-days of idleness in the manufacturing industries increased by about 40%, while in the nonmanufacturing industries there were increases of about 8% in the number of work stoppages and 6% in the man-days of idleness over 1954. During 1955, 28,200,000 man-days of idleness occurred. The manufacturing sector accounted for two-thirds of this total, and six manufacturing industries accounted for 72% of the man-days idle in the manufacturing sector. These industries were: machinery (except electrical), 3,800,000 man-days idle; electrical machinery, equipment and supplies, 3,300,000 man-days idle; transportation equipment, 1,900,000 man-days idle; fabricated metal products, 1,590,000 man-days idle; primary metal industries, 1,570,000 man-days idle; and textile mill products, 1,400,000 man-days idle.

As in other postwar years, wages and supplemental benefits were the most frequent issues in work stoppages in 1955. These issues accounted for half of the stoppages, two-thirds of the workers involved in stoppages and 63% of the man-days idle. Combined with questions of union organization, they were responsible for another 7% of the stoppages, 5% of the workers involved and 16% of the man-days idle during 1955. Questions of union organization alone produced 12.5% of the stoppages, 3.8% of the workers involved and 10.1% of the man-days idle. Disputes arising from other working conditions were responsible for 22.3% of the stoppages, 20.8% of the workers involved and 9.2% of the man-days idle. Finally, interunion or intraunion matters accounted for 6.9% of the stoppages, 2.5% of the workers involved and 1.0% of the man-days idle. The major strike issues were not reported in the remaining 1.4% of the work stoppages.

Since the merger of the American Federation of Labor and the Congress of Industrial Organizations did not take place until Dec. 1955, the strikes involving their affiliates can be attributed to the appropriate federation throughout that year. Unions affiliated with the American Federation of Labor were involved in slightly more than half of the work stoppages and accounted for 23% of the workers idle and a third of the idleness. About a fourth of these stoppages occurred in the construction industry. Affiliates of the Congress of Industrial Organizations took part in almost one-third of the year's strikes, idled three-fifths of all workers and accounted for two-fifths of the idleness. A large proportion of the stoppages involving unaffiliated or independent

PICKET REFUSES CAKE offered to him by owner of gasoline station in Morton Grove, Ill., celebrating in 1956 owner's first year of resisting demands that he sign a collective bargaining agreement with a local union of truck drivers, oil drivers, filling station and platform workers

unions were the brief, local strikes in bituminous coal mines. The unaffiliated unions accounted for a smaller proportion of total workers and idleness than in most years since World War II.

(P. TA.)

Major U.S. Strikes.—The most publicized strike during 1956 idled about 650,000 workers in the steel industry and shut down about 90% of the steel-producing mills during the month of July. The major issues in the strike involved length of contract, wage increases and premium pay for weekend work. The companies offered a five-year contract providing wage and fringe benefits which it was claimed would have increased the labour costs over the five-year period by 65 cents an hour; the Steelworkers union averred that the total cost of the package offered by the employers had been exaggerated and rejected the proposal as not being commensurate with recent rises in productivity. The union also opposed on principle a five-year contract. The steel companies and the union conducted extensive campaigns to present their views to the steelworkers and to the public.

A settlement was reached after a month's work stoppage, thus concluding what had been characterized as the most peaceful major strike in recent years. The agreement called for a three-year contract with increases in wages and fringe benefits variously estimated at 46 to 58 cents per hour by 1958. Hourly wage rates were boosted by 10.5 cents and additional hourly increases of 9.1 cents were scheduled during each of the two succeeding years. The contract further included supplementary unemployment compensation financed by the companies, liberalized health and welfare insurance, the addition of a seventh paid holiday and, for the first time in basic steel, premium pay for Sunday work. Provision was also made for wage increases proportionate to rises in cost of living as measured by the Department of Labor Consumer Price Index.

The longest major strike (involving more than 10,000 employees) in 20 years idled 70,000 Westinghouse employees, most of whom were members of the International Union of Electrical Workers (A.F. of L.-C.I.O.). The strike lasted 156 days and was settled in March 1956. The most significant issues in this controversy involved the duration of the contract, the size of wage increases and technical matters pertaining to the use of time studies and work standards in determining wage rates. It was a bitterly contested strike. Unions contributed more than \$2,000,000 to the striking workers. The final settlement called for a

Table 1.—United States: Work Stoppages, Workers Involved and Man-Days Idle*

Year	Work Stoppages		Workers involved†		Man-days idle during year		
	Number	Average duration (calendar days)‡	Number (000s)	% of total employed	Number (000s)	% of estimated working time of all workers	Per worker involved

five-year contract with 3% annual wage increases during the first three years of the contract and 3.5% increases during each of the last two years of the contract. In addition, skilled workers received immediate increases up to 12 cents an hour. The controversy over time studies was resolved by compromise of the union and management positions.

Another strike of long duration involved the International Association of Machinists and Republic Aviation, a company engaged in the manufacture of jet planes for the United States government. The major issue in this work stoppage concerned the amount of wage increase. The strike was settled after 119 days and was accompanied by some violence. The contract was of a two-year duration and called for an annual increase of 7 cents an hour plus certain improvements in fringe benefits.

A 10-day strike involving the Amalgamated Meat Cutters and the United Packinghouse Workers, both A.F. of L.-C.I.O. affiliates, idled 25,000 Swift company workers in 26 states. The strikers won a 25-cent pay boost over a three-year period, a cost-of-living increase of 1 cent with each half point rise in the government Consumer Price Index and the liberalization of fringe benefits, but failed to secure a union shop which had previously been accepted by other major meat processors.

The Kohler strike, involving the United Automobile Workers and a producer of plumbing fixtures at Kohler, Wis., continued into its third year. Prior to the second anniversary of the strike in April 1956, the United States Mediation and Conciliation service made an attempt to effect a settlement but without success. The U.A.W. organized a boycott of Kohler products, and

claimed that this was effective in reducing company sales. The company denied these claims and averred that its production was close to the prestrike level. The U.A.W. was alleged to have spent in excess of \$8,000,000 in support of the strike.

The United States supreme court rendered an important decision in connection with the Kohler strike when it ruled that a state agency may act to prevent mass picketing or violence in a labour dispute, even when the controversy comes under the jurisdiction of the National Labor Relations board. The Wisconsin Employment Relations board had issued an injunction prohibiting mass picketing of the Kohler premises. The union appealed to the federal courts to invalidate the injunction on the ground that a state agency could not interfere in the case since the strike involved interstate commerce. The supreme court upheld the right of the state agency to issue the injunction.

(S. A. LN.)

United Kingdom.—The number of work stoppages arising from industrial disputes rose by 22% from 1954 (1,989) to 1955 (2,424). Similarly, increases occurred in the number of workers involved in all stoppages in progress and in the aggregate number of working days lost in all stoppages in progress. In 1954, the number of workers involved in all stoppages in progress was 450,000. This number rose by 49% to 670,900 in 1955. A larger percentage increase occurred in the aggregate number of working days lost in all stoppages in progress. About 3,794,000 working days were lost in all stoppages in progress in 1955, a 54% increase over the 2,457,000 days lost in the previous year. Both the number of stoppages beginning in the year, and the aggregate number of working days lost in the year in stoppages, were greater in 1955 than in any year since 1936. Only in 1944 and 1953 was the number of workers involved in stoppages, in progress in the year, greater than it was in 1955. About 2.3% of the total number of civil employment was involved in these

*The figures for 1955 are provisional and subject to revision. †Fewer than 50 workers or 500 working days. ‡Some workers, largely in the coal mining and transport industries, were involved in more than one stoppage in the year, and have been counted more than once in the year's total. The net number of individuals involved in stoppages in progress during the year was approximately 499,000 in 1955, compared with approximately 349,000 in 1954. For coal mining alone the corresponding totals were approximately 228,000 and 139,000, while for transport the net totals were approximately 121,000 and 87,000. §A sympathetic stoppage in September involved workers in more than one industry group but was counted as only one stoppage in the total for all industries taken together. ||A stoppage of electricians which began in April 1954 involved workers in more than one industry group but was counted as only one stoppage in the total for all industries taken together. ¶Workers involved in more than one stoppage in any year are counted more than once in the year's total (see footnote ‡ above). Workers involved in a stoppage beginning in one year and continuing into another are counted in both years in the column showing the number of workers involved in stoppages in progress.

Source: Ministry of Labour Gazette.

stoppages, and the loss of time for each worker involved averaged nearly eight working days during 1955.

The largest number of stoppages of work arising from industrial disputes in 1955 occurred in the coal mining industry. These stoppages accounted for about one-third of the aggregate loss of time in 1955, and for about one-half of the total number of workers involved in all stoppages in the year. Substantial numbers of working days were lost as a result of disputes in the transport, vehicles and shipbuilding and ship-repairing industries. These industries, including the coal mining industry, accounted for 89% of the aggregate number of working days lost in all stoppages in progress during 1955.

Canada.—An increase of 27% occurred in the time lost in labour disputes in Canada from 1954 to 1955. In the former year, 1,475,000 man-working days were lost. A year later, in 1955, 1,875,000 man-working days were lost in labour disputes.

Four industries accounted for approximately 80% of the total man-working days lost. A total of 1,088,000 man-working days were lost in the motor vehicles and parts industry, 193,000 man-working days were lost in the aircraft, shipbuilding and farm implements industry, 119,000 man-working days were lost in other iron and steel industries and 90,000 man-working days were lost in the nonmetallics, chemicals and miscellaneous industry, as a result of industrial disputes in 1955.

Table IV.—Canada: Time Lost in Labour Disputes

Industry	1954 000 man-working days	1955
Manufacturing		
Food, animal and vegetable products	57.6	26.0

Source: Canadian Statistical Review, June 1956.

Labour disputes in the construction industry accounted for 203,000 man-working days lost in 1954. Only the motor vehicles and parts industry accounted for a greater loss of time in 1954. However, in 1955, only 37,000 man-working days were lost in the construction industry, as a result of labour disputes.

Sudan. This republic in northeast Africa is bounded north by Egypt, east by the Red sea, Eritrea and Ethiopia, south by Kenya, Uganda and the Belgian Congo, west by French Equatorial Africa and northwest by Libya. Area: 967,500 sq.mi. Pop. (1955 est.): 8,960,000. Language: English, Arabic and various Nilotic and Negro tribal dialects in the south. Religion: in the six northern provinces the Sudanese, a Negro-Hamitic race, are almost entirely Sunni Moslem; in the three southern provinces, containing one-quarter of the country's population, the Negroes are mainly pagan, but one-fifth of them are Christian. Chief towns (pop., 1955 est.): Khartoum (cap.) 82,700, Khartoum North 44,200 and Omdurman 130,400—the three towns constituting one agglomeration divided by the joining there of the Blue and White Niles; Port Sudan 60,600. Prime ministers in 1956: Ismail el-Azhari, and (from July 5) Abdullah Khalil.

History.—Following the resolutions passed by the Sudanese house of representatives and senate, the Sudan became a sover-

eign independent state on Jan. 1, 1956. It was immediately recognized as such by all the leading nations and was admitted to the Arab league.

The new (transitional) constitution which came into force was substantially the same as that under which the country had lived—evolving toward complete independence—since 1952. The major differences were that the governor general, who had hitherto been British, was replaced as head of state by a council of state of five members and that the government became responsible to parliament for foreign affairs and certain other matters, which before had been reserved to the governor general.

This constitution was meant to be only temporary, and a constitution commission of 40 persons was set up to frame proposals to be submitted to the new parliament (when elected) for a permanent constitution.

Early in the year, as a result of strong representations, the National Unionist party, which was then in office with a comfortable majority under the leadership of the prime minister, Ismail el-Azhari, agreed to form a coalition government. In July, however, there was a major split in the party, a section of it joining the Umma party against El-Azhari who was thus deprived of office. The new government was a coalition of the People's Democratic party (formerly the Khatmia section of the Nationalist Union party), the Southern Liberal party (representing the south) and the Socialist Republican party. The prime minister was Abdullah Khalil, secretary of the People's Democratic party. The chief significance of this government was that it brought together the two principal religious sects of the country—the Ansar, or followers of Abdel Rahman el-Mahdi and the Khatmia or followers of Ali el-Mirghani, which had been in conflict for many years. The opposition consisted of the core of the National Unionist party, the old Ashigga group, under the leadership of Ismail el-Azhari. The five members of the council of state, it was agreed, should represent the different parties, and would continue to exercise the functions of head of state until the new constitution should be adopted, when the Sudanese republic would elect a single president.

During 1956 the Sudan formed its diplomatic service and began an exchange of ambassadors with the leading countries of the world.

The internal administration of the country proceeded satisfactorily except for an unfortunate incident in January. Following a riot at Kosti against the owners of cotton plantations, a large number of tenant farmers were arrested and imprisoned for one night in conditions of such airless congestion that many of them died. A strict inquiry was held by the authorities and those guilty of the negligence that caused the tragedy were punished. The work of restoring confidence and normal conditions in the south, after the mutiny of the previous year, was pursued, and although government control was not completely restored in the remoter parts of the country, the main administrative centres were functioning once again.

Negotiations with Egypt were resumed on the allocation of the volume of Nile waters expected to result from the building of the Aswan high dam, but the Sudanese were not satisfied with the Egyptian offer, and no agreement was reached. Like other Arab countries, the Sudan condemned the Anglo-French military action against Egypt. On Nov. 12 the Sudan was admitted to the membership of the United Nations.

(E. S. AH.)

Education.—(1953-54) Schools: primary (including subgrade and Koran) 1,636, pupils 168,329; intermediate and vocational 101, pupils 15,343; secondary 23, pupils 4,333; teacher training colleges 19, students 1,645. University college of Khartoum (July 1954): students 616, teaching staff 94.

Finance and Banking.—Monetary unit: Egyptian pound with an exchange rate of £E0.348 to the U.S. dollar. Budget (1953-54 closed accounts): revenue £E35,436,422, expenditure £E27,611,034; (1956-57 est.): rev-

enue £E37,501,729, expenditure £E33,403,558. Total external debt (1956) £E9,218,890. Bank deposits (March 1954) £E13,939,906.

Foreign Trade.—(1954) Imports £E48,492,000, exports £E40,458,000. Main sources of imports (1954): U.K. 32.4%; Egypt 10.4%; India and Pakistan 11.8%; (1953): Italy 5.9%; Germany 5.3%; U.S. 2.6%. Main destinations of exports (1954): U.K. 42.2%; India and Pakistan 7.8%; Germany 4.6%; France (1953) 6.9%; Italy 7.6%; Egypt 8.8%; U.S. (1953) 2.5%. Main exports: cotton, cottonseed, gum arabic.

Transport and Communications.—Railways (1954) 3,956 km.; freight (1954) 1,108,800,000 ton-kilometres. Waterways 3,744 km. Roads (1954) 73,120 km. (few suitable for motor traffic). Motor vehicles in use (Jan. 1954): passenger 6,201; commercial (including buses) 5,935. Telephones (Jan. 1955) 13,712. Licensed radio receivers (1951) 6,000.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): cotton lint 87,000 (91,000); cottonseed 173,000 (165,000); sesame (1953-54) 29,400; peanuts (1953-54) 24,000. Miscellaneous production (metric tons, 1953): broad beans 3,000; dry beans 23,000; chick-peas 1,000; dates 23,900. Livestock (1955 est.): cattle 5,500; sheep 6,000,000; goats 5,000,000; camels 2,000,000; horses 20,000; asses 500,000.

Suez Canal Conflict.

The invasion of Egypt by Israel on Oct. 29, 1956, brought the Suez canal crisis (see MIDDLE EASTERN AFFAIRS) to a head. This invasion came as a complete surprise to the United States. As late as June 1, 1956, the Israeli prime minister, David Ben-Gurion, had declared that Israel must "refrain from initiating war even if provocation by Arab rulers is intensified." He acknowledged that war in the middle east would turn into a world conflagration and went on: "There is no greater danger than this in our days for the human race generally and for the Jewish people in particular." On Aug. 26 he again warned against a preventive war against the Arabs. Despite these assurances, the British and French were less surprised; in fact, the French seemed to have been well informed of Israeli plans in advance of Israeli action. The two powers defeated by their veto a United Nations Security council action to stop the Israeli invasion.

Anglo-French Move for the Occupation of the Suez Canal.—Israeli troops conquered the Sinai peninsula in a few days and occupied the port of Aqaba and the city and territory of Gaza, with its 200,000 Palestinian Arabs who had fled from the Israelis at the time of the war of 1948. On Oct. 30 Britain and France sent an ultimatum to Egypt and Israel. This ultimatum demanded that both countries withdraw their armed forces to a distance of ten miles from the Suez canal, though the canal was deep in Egyptian territory and about 150 mi. from the Israeli border. Egypt, to nobody's surprise, rejected this ultimatum. British and French forces from Cyprus then started the invasion of the Suez Canal Zone. The invasion was preceded by air bombardments of the Egyptian airfields to eliminate Egyptian air resistance to the invasion. Not until this was accomplished did British and French sea- and air-borne forces land on Nov. 5 and Nov. 6 in Port Said and in Port Fuad at the northern end of the Suez canal, occupy the two cities and move southward along the canal to El Cap, a point 22 mi. S. of Port Said. There their advance came to a halt.

The British and the French originally justified their action as a step to end the Israeli-Egyptian war. This war, however, offered the pretext for realizing two other objectives: the humiliation or overthrow of Gamal Abdel Nasser, president of Egypt, and the re-establishment of effective international control over the Suez canal. President Nasser had nationalized the Suez Canal company on July 26, 1956. He did it in a spirit of defiance of the western powers. Disappointed in his hope to receive arms and financial help from the west, Nasser had turned to the U.S.S.R. and had received considerable military equipment from communist lands. The French were eager to overthrow Nasser because they hoped thereby to repress more easily the demands of the Algerians for independence. The British and the French claimed later that their action prevented further Soviet penetration of the middle east and that it concentrated public attention on the need for finding equitable solutions to the Suez canal conflict and to the Arab-Israeli tension.

International Repercussions.—The Israeli-British-French aggression against Egypt coincided with the Hungarian revolution against Russian communist rule and with the ruthless suppression of this revolution by the U.S.S.R. The U.S.S.R. hoped to use the invasion of Egypt to turn world attention from the disturbed situation in the Soviet satellite states. For that, it tried to enlist the Asian and African nations in a campaign against Franco-British "imperialism." The Israelis, the British and the French were accused of using old-fashioned methods to impose their will upon the Arabs, methods no longer applicable in the middle of the 20th century when the Asian and African peoples were claiming equality of status with the western nations. The U.S.S.R. presented itself as the protector of the Arabs and of all Asian and African nations in their nationalist opposition to imperialist aggression. In a letter sent to Premier Ben-Gurion on Nov. 5, 1956, the Soviet premier, N. A. Bulganin, declared that "the Soviet government is at this very moment taking steps to put an end to the war and restrain the aggressors." He warned that "the government of Israel is criminally and irresponsibly playing with the fate of the world." But Soviet agitation in Asia and Africa was successfully countered by the United States, which restored the confidence of the nonwestern peoples in the moral forces in the west, when it moved in the general assembly of the United Nations for an end of Israeli-British-French aggression against Egypt and for the speedy evacuation of all the occupied territories by the invading forces. The stand taken by the United States led also to the revitalization of the United Nations, whose secretary-general, Dag Hammarskjöld, played an active role in the easing of the international tension. It should be noted however that a very large part of British public opinion of all parties, and some of the most influential press organs of England, sharply criticized the invasion of Egypt, both on moral grounds and on grounds of political practicability. Nothing similar to this protest was heard in France or Israel.

United Nations Action.—The general assembly of the United Nations voted on Nov. 2 and Nov. 7 almost unanimously for a cease-fire and for the withdrawal of the three invaders' forces from Egypt, which meant in the case of Israel a withdrawal behind the 1949 armistice demarcation line. Under the pressure of world opinion, of Soviet threats and of United States insistence, Britain, France and Israel agreed upon the withdrawal of their troops from Egypt. Israel did it most reluctantly, reversing a former declaration by Premier Ben-Gurion that Israel not only would not withdraw from any conquered territory but also would not allow any foreign troops under whatever name to be stationed in these conquered territories.

The United Nations established an international UN command force under the command of Maj. Gen. E. L. M. Burns, a Canadian. Consisting of soldiers of many nations, with the exclusion of the Great Powers, it proceeded to Egypt to supervise first the withdrawal of the Anglo-French forces from the northern end of the Suez canal and then the withdrawal of the Israeli forces to the 1949 armistice lines. On Nov. 20 Hammarskjöld called on Britain, France and Israel to explain their failure to withdraw from the occupied territory in compliance with the resolution of the general assembly. On Nov. 24 the general assembly, by a vote of 63 to 5, with 10 abstentions, called on the three invading powers to withdraw their forces "forthwith." The British and the French complied, and by Dec. 22 all their troops had evacuated Egyptian territory. United Nations forces helped to maintain order in the transitional period.

Arab Reactions.—As far as could be judged by the end of 1956, the invasion of Egypt did not diminish the prestige of President Nasser among the Arabs, but rather rallied them behind him. Nor were Arab-Israeli peace negotiations brought nearer, though the Israelis had claimed that they had invaded

Egypt partly in order to force Egypt and the Arabs to enter into direct negotiations with Israel. In fact, the Israeli action increased Arab fears of future Israeli expansion and considerably broadened the already deep gulf of suspicion and hatred separating Israelis and Arabs. Of the Arab lands, Syria, like Egypt, though anti-communist, was willing to receive arms and support from the Soviet Union. Other Arab nations, however, while defending Arab rights against Israel and against western aggression, wished to keep the Soviet Union out of the middle east. On Nov. 13 nine Arab nations met in Beirut, Leb., to discuss their common problems. The kings of Jordan, Iraq and Saudi Arabia and the presidents of Syria and Lebanon were present to stress the importance of the meeting, while Libya, Yemen, Sudan and Egypt were represented by high-ranking diplomats. The aggression against Egypt was declared to be an aggression directed against all Arab states. The Arab spokesmen insisted on Israel's unconditional withdrawal behind the armistice line and promised support to the Algerian people in their struggle for the attainment of independence and sovereignty.

By far the most prowestern and anticommunist Arab nation is Iraq, which is a member of the Middle East Defense organization (MEDO), called the Baghdad pact after the capital of Iraq, where the original treaty was signed. The pact nations, with the significant exclusion of Great Britain, met on Nov. 8 in Tehran, Iran. They condemned Israeli aggression and declared that Israeli troops must be withdrawn immediately to the armistice line. The four pact nations, Turkey, Pakistan, Iran and Iraq proposed the United Nations 1947 resolution on the partition of Palestine as a basis for a possible Arab-Israeli settlement. The four nations met again late in November in Baghdad, where the representatives of Iran, Turkey and Pakistan were reported to have agreed with Iraq that Israel was the greatest threat to peace and order in the middle east. The Turkish premier and foreign minister and the Pakistani president and prime minister attended the meeting to stress its importance. On Nov. 26 Turkey withdrew its minister from Israel in order to strengthen the Baghdad pact. The attempts to draw other Arab nations into the pact failed, though Iraq took great pains to stress Arab solidarity. On Dec. 6 the Iraqi representative told the UN general assembly that on the Israeli issue "all the Arab world is Egypt and all Arab statesmen are Nassers." He demanded the repatriation of the Palestinian Arab refugees to their homes in Palestine.

Oil and the Suez Canal Conflict.—Great Britain and France acted originally in order to assure the unhampered flow to the west of middle eastern oil, on which the economy of western Europe depends, through the Suez canal and the pipelines. In 1947 Europe imported 40,000,000 tons of oil, of which 6,000,000 tons came from the middle east. In 1955 the import had risen to 130,000,000 tons, of which nearly 100,000,000 tons came from the middle east. Because of vastly increased domestic consumption, the United States had changed in the same period from an exporter to an importer of oil; hence the middle east was the main source of oil supply for Europe. In 1955 the middle east produced 162,000,000 tons, only about one-fifth of the world production, but the estimated oil deposits there amounted to roughly 70% of the world resources. Thus an interruption in the flow of oil seriously endangered western European economy and its future prospects.

As could have been foreseen, the invasion of Egypt did not promote and secure the flow of oil to the west but rather stopped it. To counter the invasion, Egypt put the Suez canal temporarily out of use and the Syrians wrecked the pipeline installations carrying Iraqi oil to the Mediterranean. As soon as it was clear that the British-French forces would withdraw, Egypt asked the United Nations to help clear the canal. The United Nations ap-

pointed Lieut. Gen. Raymond A. Wheeler, U.S. army, as director of the clearing operation. The Syrians promised to proceed with the repair of the pipeline as soon as the Israeli forces had complied with the United Nations resolution of withdrawing to the 1949 armistice line.

To alleviate the European oil shortage, U.S. oil companies increased their shipments of oil to western Europe from the ports along the Gulf of Mexico, beginning about the second week of November. Whereas throughout 1955 and in the first week of Nov. 1956 the daily shipments from the U.S. averaged 44,000 bbl., they reached a daily average of 944,000 bbl. in the last week of Nov. 1956, and for the following weeks an over-all target average of 550,000 bbl. per day was contemplated for the relief of the oil shortage in western Europe. Nevertheless western Europe, which before the Israeli-Anglo-French invasion of Egypt had gone through a period of great prosperity, faced, as a result of the Suez canal conflict, at least temporary economic difficulties and maladjustments.

Sugar. U.S. consumption of sugar in 1956 was indicated at 95.6 lb. per capita, slightly less than the 96.3 lb. of 1955, but not much changed from the pre-World War II level.

As the year proceeded, it became clear that the quota set in Dec. 1955 of 8,350,000 tons of sugar to be marketed in 1956 (as compared with 8,400,000 tons in 1955) was too restricted. In June the U.S. department of agriculture revised the distribution of sugar quotas in accordance with the new Sugar act and added 125,000 tons to the sugar quota, bringing the total to 8,475,000 tons. The quota was increased to 9,000,000 tons in December. In October the U.S. department of agriculture twice increased the quota of sugar that might be sold in the domestic market in 1956, reaching 8,775,000 tons. Prices reached the highest wholesale level of several years, and at retail advanced to approximate the previous high of about \$9 per hundredweight of Dec. 1923.

The Sugar act of 1948 was amended by public law 545 (May 29, 1956). In brief, the new law provided that when requirements exceed 8,300,000 tons a year, domestic producers shall be given a larger share of the market than under the previous legislation. Provisions included extension of the act through 1960. The domestic industry was awarded the right to supply 55% of the domestic market growth in consumption. The first 165,000 tons of increase in domestic sugar quotas would be divided 51.5% to the domestic beet area and 48.5% to the mainland cane area, with the next 20,000 tons of increase apportioned to Puerto Rico,

Table I.—U.S. Sugar-Beet Production of the Principal Producing States

State	(in 000 tons)		Average 1945-54

the next 3,000 tons of increase to the Virgin Islands, with further increases in domestic quotas prorated among the five domestic areas. The 45% of market growth assigned to foreign countries was allocated 29.6% to Cuba and 15.4% to other foreign countries. The existing quota of 980,000 tons for the Philippines was retained.

Domestic production of sugar was indicated at about 2,400,000 tons, almost one-fourth above prewar but well below the 2,610,000 tons of 1954. The cane crop for sugar and seed was indicated at 6,396,000 tons, sharply down from 7,251,000 tons in 1955 and an average for 1945-54 of 6,689,000 tons.

Sugar beets were estimated at 12,962,000 tons, 6% above 1955 and 15% over the 1945-54 average. Area for harvest was 789,000 ac., more than 6% above 1955 and slightly above the ten-year average. Yields were 16.4 tons per acre, 0.1 ton below the record of 1955. It appeared necessary to continue the limitation on sugar-beet acreage which became effective with the 1955 crop.

Miscellaneous sweets added substantially to the total. The honey crop of 213,719,000 lb. from 5,315,000 bee colonies was 16% less than in 1955. Extracted honey was supported at 9.7 cents per pound but market prices were generally higher. Adverse weather reduced the maple harvest. The number of maple trees tapped was 6,335,000 against 6,708,000 in 1955; 115,000 lb. of maple sugar and 1,592,000 gal. of syrup were produced, both well below the 1955 total. Sorghum and cane for syrup were below average.

U.S. sugar imports in 1955-56 were 4,186,000 tons valued at \$440,524,000; data for the previous year were 3,483,000 tons and \$374,831,000.

World production and consumption continued in an expanding phase, reaching a new high record of 44,457,000 tons as compared with 42,770,000 tons in 1955-56 and an average of only 28,536,000 tons prewar. Of the total, 26,772,000 tons were cane and 17,685,000 tons were beet sugar. Production of the less refined noncentrifugal sugar was 6,444,000 tons in 1955. Cuba continued to restrict production and reduce stocks. Carry-over of world sugar supplies at the end of the year was estimated at only about 1,000,000 tons, of which 800,000 would be held by Cuba, whereas Cuba alone had held stocks of more than 3,000,000 tons in some recent years.

World sugar-beet production, primarily in Europe, the U.S.S.R. and the United States, increased to about 129,300,000 tons in 1956, 4.5% larger than the 123,746,000 tons of 1955 and far above the average 68,374,000 tons of 1945-49 or the average 82,071,000 tons of prewar 1935-39. Acreage expanded to 12,849,000 ac., about 50% above prewar and comparable with 12,068,000 ac. in 1955. Whereas in 1955 the International Sugar council was confronted with greatly increased amounts of sugar available on the world market at prices averaging slightly below 3.25 cents per pound (the minimum of the range within which it

attempts to stabilize world sugar prices), the situation in 1956 was much firmer. Prices fluctuated between 3.15 and 3.85 cents per pound, averaging about 3.40 cents for the year, with some indication of greater strength in 1957. The International Sugar conference, meeting in Geneva, Switz., in October, raised export quotas for 1957 by 577,000 tons to 5,547,000 tons total for members.

(J. K. R.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Story of Sugar* (1953).

Suicide Statistics. The suicide rate in the United States for 1956 was about the same as for 1955, according to provisional data for the first seven months of both years. For this period, the rate in 1956 was 10.3 per 100,000 population. During the entire year 1955 there were 16,200 suicides, and the rate was 9.9 per 100,000 population, or about 2% less than the rate for 1954.

The frequency of suicide increases with advance in age. In 1955 the suicide rates per 100,000 population at the various ages were: 15-24 years, 4.5; 25-34 years, 8.4; 35-44 years, 11.0; 45-54 years, 18.3; 55-64 years, 24.8; 65-74 years, 25.1; 75-84 years, 28.0; and ages 85 and over, 19.8. In 1955 the rates per 100,000 population according to race and sex were: white males,

Suicide Rates per 100,000 Population in Selected Countries

Country	1954	1953	Country	1954	1953
Japan	23.4	20.5	Luxembourg	10.4	8.9
Denmark	23.3	24.1	New Zealand	8.9	9.9
Austria	23.1	23.4	Ceylon	8.0	7.0
Switzerland	22.6	21.8	Norway	7.4	7.7
Germany (western)	19.3	18.2	Canada	7.3	7.1
Finland	18.9	17.4	Netherlands	6.2	6.5
France	15.8	15.3	Scotland	5.9	5.5
Belgium	13.8	13.5	Northern Ireland . .	3.5	3.3

16.3; white females, 5.1; nonwhite males, 5.5; and nonwhite females, 1.9.

Within the U.S., the Pacific coast states usually record the highest rates and the south central states the lowest. The suicide rates per 100,000 population in 1954 were: New England, 9.5; middle Atlantic, 8.7; east north central, 10.4; west north central, 11.1; south Atlantic, 9.7; east south central, 7.8; west south central, 7.8; mountain, 12.4; Pacific, 15.7.

(M. Sp.)

Sulphur. Total world production of sulphur is shown by countries in MINERAL AND METAL PRODUCTION AND PRICES. Of the total produced in 1955, the United States contributed more than 90%. Italy and Japan continued to supply most of the remaining 10%.

United States.—Output of sulphur, consisting of native (Frasch) sulphur of 97% or greater purity, attained a record high in 1955. The production of native sulphur was 4% and of recovered sulphur 12% greater than in 1954. Sales greater than production caused a slight reduction in sulphur stocks. Output in 1955 was expanded considerably by the new Chacahoula mine in Louisiana which went into operation in Feb. 1955.

Data on Sulphur Industry in the United States

	(In 000 short tons)					
	1950	1951	1952	1953	1954	1955*

By-product recovery	159.6	206.1	281.3	382.7	400.3	449.8

*Preliminary.

In the first six months of 1956, output of native sulphur was 3,478,848 short tons and of recovered sulphur, 255,808 tons.

Mexico.—In 1955 a large mine began operating by the Frasch method. The industry had expanded so much that Mexico was

able to enter world markets with a large exportable surplus.

Poland.—According to the British Sulphur Corp., Ltd., *Quarterly*, no. 11 (Dec. 1955), a number of deposits of sulphur of commercial importance had been discovered in the Dandomierz area of southern Poland. The largest, believed to have been under active development since 1954, was said to contain more than 50,000,000 metric tons. The expected output was estimated to be enough to produce 200,000 tons of refined sulphur a year.

Summerfield, Arthur E(IIsworth) (1899—), U.S. government official, was born at Pinconning, Mich., on March 17. He worked in various automobile plants and in real estate, and in 1924 became distributor in Flint, Mich., for the Pure Oil company.

In 1929 he founded the Summerfield Chevrolet company and in 1938 became president of the Bryant Properties corporation. He first became active in Republican politics during Wendell Willkie's campaign for the presidency in 1940. In July 1949 he was appointed to the chairmanship of the Republican strategy committee and in July 1952 he was elected chairman of the Republican national committee.

On Nov. 25, 1952, Pres.-elect Dwight D. Eisenhower selected Summerfield to serve as U.S. postmaster general. He was confirmed by the U.S. senate on Jan. 21, 1953, and was sworn into office the same day.

During 1954, 1955 and 1956 Summerfield made strenuous but unavailing efforts to secure from congress an increase in postal rates in order to cut the post office department's annual deficit.

Support Prices: see AGRICULTURE.

Supreme Court of the United States. The annual term of the court began Oct. 3, 1955, and ended June 11, 1956. Harold B. Willey, clerk of the court since 1952, retired as of June 30, 1956, and was succeeded by John T. Fey, former dean of the George Washington university law school. Associate Justice Sherman Minton retired on Oct. 15, 1956, and William Joseph Brennan, Jr., was appointed to take his place.

The court experienced its busiest term in history. There were 1,856 cases on the docket compared with 1,566 the term before; 1,637 cases were disposed of whereas the previous high was 1,520 in 1946. The court heard oral argument in 123 cases compared with 105 the previous year. There were 82 full opinions, four more than during the previous term, and 52 dissenting opinions. There were also 19 concurring opinions and 4 designated separate opinions.

Members of the Court.—The United States supreme court in 1956 was composed of the following members (dates indicate year appointment was confirmed by the senate): chief justice, Earl Warren (1954); associate justices, Hugo L. Black (1937), Stanley Reed (1938), Felix Frankfurter (1939), William O. Douglas (1939), Harold H. Burton (1945), Tom C. Clark (1949), John M. Harlan (1955) and William Joseph Brennan, Jr. (appointed 1956). (See also LAW.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*The Supreme Court of the United States* (1954); *John Marshall* (1950).

Surgery. During 1956 F. J. Lewis and his co-workers at the University of Minnesota reported the repair of two hearts in which there were only three chambers instead of four, which were successfully operated upon under refrigeration anaes-

thesia. D. S. Leighninger reported the end results in a series of patients operated upon by increasing the blood supply to the heart muscle following the production of adhesions by powder dust of asbestos placed in the cavity surrounding the heart. In a series of 83 patients operated upon between 1935 and 1953 the mortality within the first two years was 18%, and in a group of 103 patients followed for more than six months the pain was either absent or greatly relieved in 90%. J. R. Keys and his co-workers at the Mayo clinic reported 100 cases of patients with coronary heart disease who had associated gall-bladder disease. Ninety-nine of the 100 had gallstones. Although these patients were supposed to be poor risks, there were only three deaths, and in only one was insufficient blood supply to the heart, because of the coronary disease, thought to be a contributory cause. Sixty-four of the patients were observed six years after the operation; 17 of these were definitely improved, 7 were worse and 36 reported no change in their heart symptoms.

The re-establishment of circulation in the extremities by shunting around obstructive areas was emphasized by R. R. Linton. He advocated replacing a blood vessel by one taken from another person, joining it to the vessel in the pelvis and implanting the distal end into the vessel in the leg, in this way circumventing the obstruction of the artery. W. S. Edwards and J. S. Tapp employed a similar procedure, using chemically treated nylon tubes. Both these methods were successful in relieving circulatory disorders of the extremity.

A not infrequent occurrence in elderly persons, particularly in those who are fat, is hernia of the diaphragm. This is attended occasionally by severe digestive symptoms and frequently by marked anaemia caused by ulceration of the stomach and loss of blood. Although the hernia can be repaired by closing the opening in the diaphragm, it was suggested by R. Nissen that the symptoms could also be relieved by anchoring the stomach to the abdominal wall and thus preventing the stomach from herniating into the chest.

In order to facilitate the early diagnosis of cancer of the oesophagus and the upper part of the stomach, K. Nakayama of Japan suggested the use of radioactive phosphorus, which, because of the extremely rapidly growing tumour, becomes localized in a high concentration in the tumour, permitting early diagnosis. He found that a tumour of the oesophagus takes up more than three times as much radioactive phosphorus as does normal tissue. It was suggested that radioactive gold might be injected in the region of the tumour, because it is taken up by the regional lymph glands and in this way might be active in destroying the tumorous nodes. C. G. Thomas, Jr., however, on the basis of 35 patients treated in this way, came to the conclusion that this form of treatment does relatively little good and might even be hazardous because of the possibility that radioactive material might by-pass through cancerous lymph nodes and extend to distant, noncancerous nodes.

Ulcer of the duodenum is almost invariably the result of an ulcer tendency in the patient plus the effect of acid on the duodenum. Most methods of treatment are directed toward the control of acid. R. M. Zollinger and E. H. Ellison called attention to the fact that there is a rare type of persistent ulcer which may occur as a result of a tumour of the pancreas. Patients with these ulcers, in contrast with the average patient with an intractable ulcer, are not relieved by more extensive operations on the stomach, but are relieved by removal of the tumour of the pancreas.

Because of the difficulty in making early diagnosis of cancer of the stomach, it was suggested that routine X-rays of the stomach be made in men past the age of 40. It is generally conceded that this is not feasible unless the person has total ab-

sence of acid in the stomach. J. R. Amberg and L. G. Rigler, in a group of 39 patients who previously had been examined and in whom either nothing or a benign ulcer was found, discovered that in subsequent examinations (at intervals of from 6 to 48 months) cancer subsequently appeared. The operability in this group of patients was 90%, as contrasted with 77% in a group in whom symptoms preceded the examination. The resectability was 72% in the former group and 47% in the latter group. The cancer was apparently limited to the stomach, as evidenced by the absence of lymph gland involvement in 46% in the former and in only 15% in the latter. These statistics illustrate the necessity of careful, repeated examinations of all noncancerous tumours of the stomach and the danger of treating ulcer of the stomach (not the duodenum) by medical means.

A polyp of the colon is considered by most persons to be a precancerous lesion, and certainly all multiple polyps, particularly in patients with a familial tendency toward cancer, are definitely precancerous. There are many who believe that a complete removal of the colon should be done as soon as the diagnosis is made, because it is generally conceded that these tumours which number in the thousands in the colon will ultimately become malignant if the patient lives long enough. In order that the patient may have relatively normal bowel movements and not have an ileostomy, I. Teicher and J. I. Abrahams advocated removal of the colon, except the rectum, and anastomosis of the small intestine to the rectum. By proctoscopic technique the polyps in the rectum can be removed and this segment of the colon can be carefully examined from time to time to determine whether new polyps are developing and whether there is any evidence of the development of cancer. If the latter does occur, obviously resection of this segment of the colon must be done.

Surinam (DUTCH GUIANA) lies between British Guiana to the west and French Guiana to the east, and has an area of 55,143 sq.mi. It is an integral part of the kingdom of the Netherlands, but enjoys sovereign autonomy in all domestic matters. Its population (1956 est.) of 240,000 lives chiefly on the coastal plain; less than 40,000 live on the extensive plateau to the south, where they are engaged chiefly in mining and timber enterprises. The capital is Paramaribo, pop. (1956 est.) 95,000. The population is about one-half of Asiatic origin, India and Indonesia being the areas of chief importance. Persons of European, African or indigenous stock, predominantly in mixed strains, constitute a minority. The official language is Dutch, but various dialects prevail; English is generally understood. During 1956, J. van Tilburg was governor, and J. H. E. Ferrier was prime minister.

History.—The so-called "Unity group" of small parties con-

tinued in control of the legislative body, called the *staten*, consisting of 21 members. Its presiding officer was H. C. van Ommeren, of the Democratic party. The new constitution worked smoothly so far as Surinam was concerned. At the end of 1955, a parliamentary delegation from the Netherlands visited Surinam as guests of the *staten*.

Progress continued to be made during 1956 in carrying out the public works and developmental program initiated in accordance with the extensive study of the International Bank for Reconstruction and Development, but going beyond the proposals in that study. Ten years' work, with a cost well above \$60,000,000, was involved in two large hydroelectric plants, extensive road construction, several canals, an airport, model farm development, forest and mining enterprises and large-scale fisheries and fish-processing plants. Technical assistance from the U.S. government was secured during 1956 for many phases of this program. Legislation was under consideration to provide exemption from taxation of new enterprises for ten years, as well as additional customs exemptions.

(See also NETHERLANDS ANTILLES.)

(C. E. Mc.)

Education.—On Jan. 1, 1956, there were 182 elementary schools with 1,201 teachers and 42,531 pupils, 12 advanced and higher elementary schools with 170 teachers and 4,346 pupils, 1 secondary school with 48 teachers and 230 students and 4 normal schools with 723 students.

Finance.—The monetary unit is the Surinam gulden or florin, valued at 53.0264 cents U.S. currency, official rate, in 1956. The 1956 budget estimated revenue and expenditure at 40,657,000 florins; revenue in 1955 was 39,276,000 florins and expenditure 43,184,000 florins. Currency in circulation on June 30, 1956, totalled 14,236,895 florins.

Trade and Communications.—Exports in 1955 totalled 49,684,000 florins; imports, 51,610,000 florins. Leading exports were bauxite (over 80%), timber, rice and coffee. Leading customers were the U.S. (70%), Canada (10%) and the Netherlands (8%); leading suppliers, the U.S. (33%), the Netherlands (32%), Trinidad (10%) and the U.K. (7%).

Internal transportation is largely by water; on Dec. 31, 1955, there were 83 mi. of railway, 525 mi. of roads, 3,551 telephones and 3,031 motor vehicles. Vessels entered in 1955 totalled 800 of 1,804,082 net registered tons; vessels cleared, 803 of 1,809,357 tons. In 1955, 564 commercial aircraft landed at Zandery airfield.

Production.—Figures for 1955 included bauxite 3,060,000 metric tons; gold 7,235 troy ounces; balata 183 tons; sugar 7,401 tons; rice (paddy) 64,526 tons; timber 121,400 cu.m.; rum 222,435 U.S. gal.; molasses 335,500 gal.

Sweden. A democratic monarchy of northern Europe, Sweden has an area of 173,564 sq.mi. Pop. (1956 est.) 7,290,000. Capital: Stockholm, pop. (1955 est.) 776,947. Other principal cities (pop., Jan. 1, 1955): Göteborg 373,433; Malmö 205,640; Norrköping 88,295; Helsingborg 73,342; Örebro 70,412; Uppsala 68,596. Religion: Lutheran Christian. Ruler in 1956: King Gustav VI Adolf. Prime minister: Tage Erlander.

History.—Although governmental policy moved steadily leftward during 1956, the electoral movement was clearly toward the right. In the September elections for the second chamber the trend of several years was strongly emphasized: the Conservatives won 11 new seats, and the Farmers' Union-Social Democrat coalition lost 11 seats; the liberal Folk party held its own, and the Communists won one additional member (the total number of seats was increased from 230 to 231); 79.4% of the voters went to the polls.

	%	1952 seats	pop. vote	1956 %	seats
Conservatives	14.4%	31	663,742	(17.2%)	42
Farmers' Union	10.7%	26	366,567	(9.4%)	19
Social Democrats	46.1%	110	1,729,501	(44.6%)	106
Folk party	24.5%	58	923,551	(23.8%)	58
Communist	4.3%	5	194,017	(5.0%)	6

For the first time in 25 years the Socialists were outnumbered, although as long as the Farmers' Union (*Bondeförbundet*) stood with the Social Democrats the coalition could muster a majority with 125 votes. If the Farmers' Union should shift allegiance to their more natural allies, the Conservatives and

ROYAL BARGE, carrying Queen Elizabeth II of Great Britain, arriving at the town hall, Stockholm, during her visit to Sweden in 1956

the liberal Folk party, such a combination could claim a slim majority with 119 votes. For the present, however, the Farmers' Union were remaining with the Social Democrats.

It was believed that the coalition's narrowed margin of power and the popular trend of opinion would probably put brakes on further socialization, but no sharp change in policy was indicated. In the first chamber, much slower to respond to shifts in the electorate, the Social Democrats retained a clear majority with 78 seats out of 150. For the occasional joint votes of the two chambers the Social Democrats controlled 184 against a possible 188 for Farmers' Union, Conservatives and the Folk party, and 9 for the Communist party.

Leaders of the U.S.S.R. repeatedly praised the neutrality of Sweden, and official visits were exchanged, but the relations between the two countries continued tense. Most annoying to Sweden's national pride and sense of justice was the Soviet handling of the Wallenberg affair. Raoul Wallenberg, architect and scion of a great banking family, had gone to Hungary toward the end of World War II and had done a notable job in saving Jews from Nazi persecution. When the Soviet forces entered Budapest in Jan. 1945 Wallenberg was last seen going off with several Soviet soldiers. Reports persisted that the victim had been seen in concentration camps in the U.S.S.R., and the Soviet government repeatedly promised investigation and information. But nothing was forthcoming, and after 11 years the Swedes were thoroughly aroused.

Antagonism was heightened by the uncovering in Sweden of the fourth case in five years of Communist espionage. In Aug. 1956, after six months of careful police work, Anatole Erikson, a Russian-born instrument maker at the L. M. Ericsson Telephone company, was arrested for photographing and selling to the Russians information on Sweden's latest radar developments. Peter Miroshnikov, member of the Soviet's trade delegation in Stockholm, was expelled for his part in the affair.

At the end of 1955 Sweden attempted a general nationwide wage negotiation between the associations of employers and employees. The result was an increase of 4% in wages for almost all workers in 1956.

(F. D. S.)

Education.—Schools (1954): primary 8,777, pupils 758,201, teachers 38,862; secondary 390, pupils 166,807, teachers 10,994; vocational (trade) 507, pupils 109,364; students at other vocational institutes 29,118; teachers' training colleges 28, students 5,300. Institutions of higher education 16 (including 4 universities), students 20,800, teaching staff 2,695.

Finance and Banking.—Monetary unit: krona (pl. kronor), with an exchange rate of 5.17 kronor to the U.S. dollar. Budget: (1955–56 est.) revenue 9,000,000,000 kronor, expenditure 8,200,000,000 kronor; (1956–57 est.) revenue 11,173,000,000 kronor, expenditure 10,225,000,000 kronor.

Public debt (March 1956) 15,884,000,000 kronor. Currency circulation (Jan. 1955) 4,940,000,000 kronor, (Jan. 1956) 5,130,000,000 kronor. Deposit money (Jan. 1955) 5,660,000,000 kronor, (Jan. 1956) 5,570,000,000 kronor. Gold and foreign exchange (March 1955) U.S. \$560,000,000, (March 1956) U.S. \$572,000,000.

Foreign Trade.—(1955) Imports 10,297,000,000 kronor; exports 8,949,000,000 kronor. Main sources of imports: Germany 22%; other continental E.P.U. (European Payments Union countries) 30%; U.K. 14%; U.S. and Canada 10%; Latin America 7%. Main destinations of exports: U.K. 20%; Germany 13%; other continental E.P.U. 38%; Latin America 6%; U.S. and Canada 6%. Main exports: wood pulp 18%; wood 15%; iron ore 9%; paper 10%.

Transport and Communications.—Roads (rural public, 1955) 91,236 km., (total, 1953) 173,000 km. Motor vehicles in use (June 1955): passenger 589,976, commercial 108,211. State railways (1954) 15,176 km; passenger-km. (1954) 6,138,000,000; freight, ton-km. (1955) 9,600,000,000. Shipping: merchant vessels of 100 gross tons and over (July 1955) 1,217; total tonnage 2,807,166. Air transport (1955): 473,928,000 passenger km.; cargo, ton-km. 12,684,000. Telephones (Jan. 1955) 2,097,738. Radio-receiving sets (Dec. 1954) 2,391,000.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): wheat 747,000 (1,020,000); barley 423,000 (360,000); oats 634,000 (861,000); rye 176,000 (301,000); potatoes 1,284,000 (1,429,000); sugar beet 1,468,000 (1,848,000); rapeseed 137,000 (156,000); broad beans 90,000 (111,000). Livestock (Sept. 1955): cattle 2,575,000; sheep 177,000; horses 312,000; pigs 1,575,000; chickens (1954) 11,751,000. Fish landings (1954) 184,400 metric tons.

Industry.—Fuel and power (1955): coal 280,800 metric tons; electricity 24,972,000,000 kw. hr. Production (metric tons, 1955): iron ore (metal content, 60%) 17,448,000; pig iron 1,172,400; crude steel 2,148,000; cement 2,544,000; cotton yarn 27,240; wool yarn 16,560. Ore production (metal content, 1954): copper 13,300; lead 29,700; zinc 58,400; tungsten 274; gold 2,643 kg. Lumber production (1954): sawn softwood 7,413,000 cu.m.; wood pulp 3,641,000 metric tons. Merchant vessels launched (100 gross tons and over, 1955) 524,400 gross tons.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Laplanders* (1952); *People of the Reindeer* (Wind from the West) (1956); *Scandinavia—Norway, Sweden, and Denmark* (1950); *Sweden* (1955).

Sweet Potatoes: see POTATOES.

Swimming. Athletes from the United States and Australia dominated the sport in 1956, a year unsurpassed for breaking records. Among the top U.S. swimmers were George Breen of Cortland (N.Y.) State Teachers college and Bill Yorzyk of the New Haven (Conn.) Swim club. Breen set a world record at New Haven on March 29 when he swam the 1,500-m. free style

in 18 min. 5.9 sec., and established a one-mile free-style mark on April 5 at New Haven with a 19 min. 40.4 sec. performance. Yorzyk's record times were made at Winchendon, Mass., April 14 when he was clocked at 2 min. 16.7 sec. for the 200-m. butterfly and at 2 min. 18.7 sec. for the 220-yd. butterfly. Al Wiggins of Ohio State, on Jan. 1, set a world record of 54.4 sec. for the 100-yd. butterfly event. Other new records set in 1956 and approved by the International Amateur Swimming federation appear in Table V.

Murray Rose, an Australian, improved on Breen's clocking when he was timed at 17 min. 59.5 sec. for the 1,500 m. in Australia's Olympic

trials at Melbourne. A Russian quartet in the Soviet Union trials at Moscow on Aug. 14, 1956, won the 400-m. medley relay in 4 min. 14.8 sec. to surpass the world record of 4 min. 15.7 sec. set by a Japanese team in 1955.

Women's Events.—Among the many outstanding U.S. swimmers, with sights on the Olympic games, were Shelley Mann, Carin Cone, Sylvia Ruuska, Mary Jane Sears and Pat McCormick (diver). Lorraine Crapp, a 17-year-old Australian, set a world mark of 5 min. 5.9 sec. for the 440-yd. free style early in the campaign and improved on this time as the year pro-

gressed. On Aug. 25, she bettered four world records, being clocked at 4 min. 50.8 sec. for the 400 m. and 4 min. 52.4 sec. for the 440 yd., bettering her own 440-yd. time and the 400-m. mark of 5 min. .1 sec. set by Denmark's Ragnild Hveger in 1940. She also surpassed Dawn Fraser's world figures of 2 min. 20.7 sec. for the 200 m. and 2 min. 21.2 sec. for the 220 yd. when she was timed at 2 min. 19.3 sec. and 2 min. 20.5 sec. respectively. Eighteen-year-old Dawn Fraser of Australia accounted for two new records on Aug. 25 as she won a 110-yd. free-style race. She swam the 100 m. in 1 min. 3.3 sec. after recording 56.9 sec. for the 100-yd. event. Miss Crapp set five records on Oct. 20: 440 yd. (4 min. 48.6 sec.); 200 m. (2 min. 18.5 sec.); 220 yd. (2 min. 19.1 sec.); 400 m. (4 min. 47.2 sec.) and the 110-yd. leg in relay race (1 min. 3.2 sec.). In the 440-yd. relay, Lorraine Crapp, Margaret Gibson, Barbara Jackson and Dawn Fraser won in 4 min. 22.3 sec.

Intercollegiate Meets.—A world-record performance by Breen featured the National Collegiate Athletic association (N.C.A.A.) championships held at Yale in New Haven, Conn., when he was clocked at 18 min. 5.9 sec. for the 1,500-m. free style. Ohio State won team laurels with 68 points. Other N.C.A.A. victors are listed in Table III. Robin Moore, in winning the 100-yd. free style in 48.9 sec., helped Stanford win the Pacific Coast conference title for the eighth straight season. Other leading college team champions were: Yale, Ivy league; Ohio State, Big Ten; Oklahoma, Big Seven; North Carolina State and North Carolina (tied), Atlantic coast; Beloit (Wis.), Central Collegiate; Pittsburgh (Pa.), Eastern Collegiate; North Central (Naperville, Ill.), Illinois conference; Catholic university, Mason-Dixon; New York university, Metropolitan; Bowling Green (O.), Mid-American; Grinnell (Ia.), Mid-West; Denver (Colo.), Mountain States; Florida, Southeastern; Virginia Military institute, Southern; Texas A. and M., Southwest.

(See also OLYMPIC GAMES.)

(T. V. H.)

Switzerland.

A republican confederation of 22 cantons (three of which have half-cantons) in west central Europe, Switzerland is bounded west by France, north by Germany, east by Austria and Liechtenstein and south by Italy. Area: 15,941 sq.mi. Pop. (1950 census) 4,714,992; (1956 est.) 5,001,000. Language (1950): German 72.1%; French 20.3%; Italian 5.9%; Romansh 1.0%. Religion (1950): Protestant 56.3%; Roman Catholic 41.6%; Jewish 0.4%; other 1.6%. Chief towns (pop., 1950 census, 1952 est. in parentheses): Berne (cap.) 146,499 (150,600); Zürich 390,020 (400,300); Basle 183,543 (187,800); Geneva 145,473 (151,400); Lausanne 106,807 (109,000). President of the confederation for 1957, Hans Streuli; vice-president of the federal council (government), Thomas Holenstein.

History.—The prosperity of Switzerland in 1956 broke all previous records; its foreign trade increased steadily, especially with the German Federal Republic. The dangers of inflation were fairly successfully combatted, but a rise in the price of milk and related products on May 1 was followed by other increases. The trade union leaders had long before abandoned the strike weapon in favour of negotiation. In October, however, they refused to meet the employers to discuss the price and wage situation; instead they asked for shorter hours for the same pay.

Meanwhile a slight reduction of taxation had become operative at the beginning of the year and, apart from bigger cost-of-living bonuses, the salaries of all civil servants went up by 5%, and by more than this for the least well paid; even so, and after repayment of a considerable portion of the national debt, the budget surpluses were not used up.

Foreign undertakings were eager to borrow from the capital which was accumulating in Switzerland. Thus in June the Swiss government provided a 200,000,000 Fr. credit to the Italian state railways. On Sept. 18 it was announced that Switzerland would lend a further 200,000,000 Fr. to the International Bank for Reconstruction and Development at 3½% interest a year, the loan to be repaid between 1960 and 1965. Proceeds in Swiss francs from the loan were to be used to buy dollars from the Swiss National bank in order to prevent any increase in the circulation of Swiss franc notes.

Samuel Chevallier continued to enjoy the limelight. Early in 1956 he drew up two fresh "initiatives": (1) should the government intend to spend more than 500,000,000 Fr. upon the armed forces in any one year (for 1956 the figure was 673,000,000 Fr.), popular approval by referendum must be made necessary; (2) at least one-tenth of annual military expenditure should always be spent upon social aid or cultural work, half of this tenth being spent abroad. At first Chevallier seemed to be fairly well sup-

ported, particularly in his own Vaud canton; many young French Swiss were seemingly embarrassed by their own prosperity and simultaneously irritated when called up to undergo military discipline for brief periods. The "initiatives" were handed in to the authorities on Oct. 17, the first having received 84,716 signatures and the second 68,402; this time there seemed no doubt that they would be voted upon. But they were withdrawn on Nov. 18, by which time the Soviet reaction to the Hungarian uprising had caused a violent swing of Swiss opinion away from pacifism.

In the spring of 1956 the Swiss were largely absorbed with discussion of whether further state aid should be provided to the Holzverzuckerung A.G. or "Hovag." This was a concern in the canton of Graubünden (Grisons) which had been heavily subsidized during World War II for extracting alcohol (for internal combustion engines) and other chemical substances from wood. The subsidies had indeed been continued for ten years after the end of the war, and their prolongation for a further five years was approved by the Swiss chambers in Sept. 1955. This led to something of an uproar since the Hovag, while claiming to be in grave financial difficulty, was making no serious effort to convert its production to peacetime needs, but was founding daughter concerns which were eminently flourishing. On May 13, 1956, 315,704 Swiss citizens, affected by the talk of the dependence of a poor canton like Graubünden upon the Hovag factories, voted in favour of continued aid while 429,314 pronounced against it. The Hovag, after some reorganization, appeared by the end of 1956 to be running quite successfully without aid.

Some controversy was aroused by an agreement signed with the United States on June 21, 1956, according to which Switzerland was to buy 500 kg. of uranium 235 from the United States, with certain rights of supervision for the Americans which were claimed by some critics to involve an infringement of Swiss neutrality.

On Nov. 6 the Swiss government sent an urgent appeal to the president of the United States and the heads of government of France, Great Britain, the U.S.S.R. and India. It proposed that an immediate conference of the five powers should be held in Switzerland to deal with the deteriorating international situation; but the powers concerned refused.

(E. Wl.)

Education.—Schools (1953–54): primary, pupils 518,050, teachers 15,204; secondary and lower middle, pupils 85,477, teachers 3,442; vocational (1951, excluding agriculture) 89, pupils 21,112. Institutions of higher education (1954–55) 9, students 15,622, teaching staff 1,954.

Finance and Banking.—Monetary unit: Swiss franc, with an exchange rate of 4.28 Fr. to the U.S. dollar. Budget: (1955 est.) revenue 1,906,566,000 Fr., expenditure 1,875,240,000 Fr.; (1956 est.) revenue 2,432,463,000 Fr., expenditure 1,968,832,000 Fr. Public debt (Dec. 1954): 7,772,700,000 Fr. Currency circulation: (Dec. 1954) 5,830,000,000 Fr., (Dec. 1955) 5,940,000,000 Fr. Deposit money: (Dec. 1954) 7,368,000,000 Fr., (Dec. 1955) 7,690,000,000 Fr. Gold and foreign exchange holdings: (March 1955) U.S. \$1,628,000,000, (March 1956) U.S. \$1,744,000,000.

Foreign Trade.—(1955) Imports 6,397,000,000 Fr., exports 5,616,000,000 Fr. Main sources of imports: Germany 24%; France 13%; other continental E.P.U. (European Payments union countries) 24%; U.S. and Canada 15%; Latin America 5%; U.K. 5%. Main destinations of exports: U.S. and Canada 13%; Germany 13%; Italy 8%; other continental E.P.U. 26%; Latin America 9%; sterling area 13%.

Transport and Communications.—Roads (1953): 49,000 km. Motor vehicles in use (Sept. 1955): passenger 270,821, commercial 57,069. Railways (1955) 7,900 km.; passenger-km. (1955) 6,954,000,000; freight, ton-km. (1955, federal system only) 2,868,000,000. Shipping (July 1955): merchant vessels of 100 gross tons and over 29; total tonnage 95,061. Air transport (1955): passenger-km. 515,652,000; cargo, ton-km. 12,458,400. Telephones (Jan. 1955) 1,141,443. Radio receiving sets (1954) 1,198,000.

Agriculture.—Main crops (metric tons, 1955; 1954 in parentheses): wheat 331,000 (346,000); rye 42,000 (45,000); barley 55,000 (62,000); oats 54,000 (66,000); potatoes 1,100,000 (1,395,000); apples (1954) 620,000, (1953) 340,000; pears (1954) 220,000, (1953) 270,000. Food production (metric tons, 1955): meat 80,400 (in 43 towns only and including horse meat); milk (delivered) 1,932,000; butter 25,200; cheese 56,400; beet sugar, raw, 28,000. Livestock (Sept. 1955): cattle 1,583,000; sheep 195,000; pigs 1,038,000; horses 120,000; goats (1951) 148,244.

Industry.—Production: electricity (excluding industrial generation, 1955): 13,068,000,000 kw.hr.; manufactured gas (1954) 323,000,000 cu.m.; cement (1954) 1,817,000 metric tons. Watches: exports (1954) 22,294,000; value, including parts (1954) 1,039,915,622 Fr. Index of employment (March 1956; 1953=100) 108.

Syria. This Arab republic is bounded west by the Mediterranean and Lebanon, northwest and north by Turkey, east and southeast by Iraq, south by Jordan and southwest by Israel. Area: 71,227 sq.mi. Pop. (1955 est.) 3,906,000. Language: Arabic (86%); also Kurdish, Armenian, Turkish, Circassian. Religion (1954 est.): Moslems (mainly Sunni) 86.3%; Christian 12.8%. Chief towns (pop., 1954 est.): Damascus (cap.) 395,124; Aleppo 398,461; Homs 293,643; Hama 172,988; Latakia 109,216. President in 1956, Shukri el-Kuwatli. Prime ministers in 1956: Said el-Ghazzi, and (from June 15) Sabri el-Assali.

History.—Syria continued to pursue its policy of close co-operation with Egypt and Saudi Arabia. In March President Kuwatli met Col. Gamal Nasser and King Saud in Cairo, and in September a meeting of the three heads of state took place at Riyadh in Saudi Arabia, although on this occasion there were grounds for believing that the president and the king, while still proclaiming their complete support for Egypt, impressed on Nasser the need for moderation in view of the danger to Arab oil interests that might arise from a conflict with the west.

In June the government of Said el-Ghazzi resigned after a long period of political uncertainty, and after some confusion was succeeded by a national coalition under Sabri el Assali, who had been in power before el-Ghazzi in the previous year. The new government adopted as the basis of its policy a national charter, drawn up by the various political parties, the main points of which were: Arab unity, neutrality between the west and the communist powers, the rejection of foreign pacts, but readiness to accept arms from any source "without strings." The dismissal earlier in the year of Brigadier Shawkat Shoukair from his post as chief of staff represented an attempt to eliminate army influence from politics, still surviving from the previous regime.

The year was characterized by much military activity and public interest in military preparations following the Israeli attack on a Syrian frontier post in 1955. These preparations included the raising of funds, both inside and outside Syria, in aid of the army; the strengthening of the country's defenses, the building of air-raid shelters and the introduction of military training in secondary and trade schools.

The tenth anniversary of the evacuation of French troops was celebrated with a military parade of unusual éclat at which all the Arab states were represented, with the notable exception of Lebanon.

The Syrian government decided not to accept outright either the U.S. or the Soviet offer to build the Homs oil refinery (with a capacity of 750,000 to 1,000,000 tons a year) but to invite tenders. These were received from the United States, the United Kingdom, the U.S.S.R., Czechoslovakia and Rumania, but no adjudication was immediately made.

Syria's biggest scheme of economic development, the Ghab project, continued to make progress. The objects of this scheme were to drain the swamps of the Orontes valley, reclaim land for cultivation, provide water for irrigating 200,000 ac. as well as hydroelectric power for industry, exterminate disease-bearing insects and improve communications in the area. The scheme was to cost £10,000,000 and the annual yield of the land reclaimed was expected to be about 435,000 tons of agricultural crops.

On Oct. 30, following the advance of the Israeli army into Egyptian territory, martial law was proclaimed throughout Syria, and as a riposte to the Anglo-French military action against Egypt in November a Syrian Army unit blew up the Iraq Petro-

leum company's pipelines in Syrian territory. Relations between Syria and Iraq in consequence became extremely strained.

(E. S. AH.)

Education.—Schools (1953-54): primary 2,584, pupils 319,438, teachers 9,660; secondary 212, pupils 54,040, teachers 3,691; vocational 12, pupils 1,976, teachers 244; teacher training colleges 6, students 1,226. University of Damascus (1953-54): students 2,960, teaching staff (1952) 107.

Finance and Trade.—Monetary unit: Syrian pound, with an official exchange rate of L.S. 2.2 and a free rate of L.S. 3.55 to the U.S. dollar. Budget (1955 est.) balanced at L.S. 261,000,000; (1956 est.) balanced at L.S. 324,000,000. Currency circulation: (Dec. 1953) L.S. 288,432,000; (Dec. 1954) L.S. 366,750,000. Deposit money: (Dec. 1953) L.S. 292,748,000; (Dec. 1954) L.S. 334,849,000. Gold and foreign exchange: (Dec. 1953) L.S. 77,200,000; (Dec. 1952) L.S. 49,200,000. Foreign trade (1955): imports L.S. 647,000,000; exports L.S. 532,000,000.

Transport and Communications.—Roads (1953) 10,016 km. of which 2,424 km. asphalted. Motor vehicles in use (Jan. 1954): passenger 8,351; commercial 6,674. Railways (1955) 900 km. Telephones (Jan. 1955) 29,836. Radio receiving sets (1950) 45,000.

Agriculture.—Production (metric tons, 1954; 1955 in parentheses): wheat 965,000 (500,000); barley 635,000 (150,000); oranges, etc., 3,000 (2,000); cotton lint 80,000 (85,000); (1954): rice 25,000; cottonseed 141,000; lentils 58,000; sesame 14,200; olive oil 8,000; apricots 25,000; grapes 257,000; raisins 10,000; figs 56,000; lemons, etc., 1,000. Livestock (Sept. 1955): cattle 552,000; sheep 3,955,000; horses 103,000; mules 84,000; asses 271,000; goats (1951) 1,433,000.

Industry.—Production (metric tons, 1955): cement 264,000; electricity 146,040,000 kw.hr.; cotton yarn (1953) 6,600; rayon yarn (1953) 1,200.

Table Tennis. The 23rd world championships in table tennis were held in Tokyo, Japan, April 2-11, 1956. Stockholm, Swed., was selected for the next world meeting.

In the 1956 event, there was no change from the previous year in the world team championships, Japan and Rumania retaining the Swaythling and Corbillon cups, respectively. The winner of the men's singles was Ichiro Ogimura of Japan; women's singles, Tomi Okawa, Japan; men's doubles, Ichiro Ogimura and Yoshio Tomita, Japan; women's doubles, Angelica Rozeanu and Ella Zeller, Rumania; mixed doubles, Erwin Klein, Los Angeles, Calif., and Mrs. Leah Neuberger, New York, N.Y.; Jubilee cup, J. D'antas, Portugal.

In the U.S. National open championships, held at White Plains, N.Y., March 16-18, the winners were: men's singles, Erwin Klein, Los Angeles, Calif.; women's singles, Mrs. Leah Neuberger, New York, N.Y.; senior men's singles, Laszlo Bellak, Miami, Fla.; esquire singles, Bill Gunn, Mamaroneck, N.Y.; junior men's singles, Erwin Klein; junior miss' singles, Sharlene Krizman, South Bend, Ind.; boys' singles, Norbert Van De Walle, Chicago, Ill.; girls' singles, Jackie Koehnke, Glen Ellyn, Ill.; mixed doubles, Sol Schiff and Mrs. Leah Neuberger, New York, N.Y.; men's doubles, Erwin Klein, Los Angeles, and Richard Bergmann,

WOMEN'S DOUBLES MATCH at world table tennis championship tournament in Tokyo, Japan, in April 1956. Japanese team (near side of table) defeated U.S. girls, 21-18 and 21-12

London; women's doubles, Mrs. Leah Neuberger and Mildred Shahian; senior men's doubles, Laszlo Bellak, Miami, Fla., and Tibor Hazi, Chevy Chase, Md.; junior men's doubles, Roger Desormeaux and Denis Limoges, Montreal, Can.; junior mixed doubles, John Kromkowski and Sharlene Krizman, South Bend, Ind.

The Canadian international table tennis championships were held Sept. 8–10, 1955. In the men's team event Canada beat the United States 6 to 4, but the U.S. junior men's team beat Canada's junior team 3 to 1. Other winners were: men's singles, Erwin Klein, Los Angeles; women's singles, Mrs. Leah Neuberger, New York city; junior men's singles, Erwin Klein; junior miss' singles, Carolee Leichty, South Bend, Ind.; boys' singles, Norbert Van De Walle, Chicago; senior men's singles, Max Markinko, Canada; mixed doubles, Charles Burns and Mrs. Leah Neuberger, New York city; women's doubles, Mrs. Leah Neuberger and Lona Flam, New York city.

In the English open championships, held at Belle Vue, Manchester, February 28–March 2, 1956, the men's singles crown was won by Elemer Gyetvai, Hungary; women's singles, Gizi Farkas, Hungary; men's doubles, Elemer Gyetvai and Kalman Szepesi, Hungary; women's doubles, Diane Rowe and Ann Haydon, England; mixed doubles, Johnny Leach and Diane Rowe, England; boys' singles, I. Harrison, Gloucester; girls' singles, Ann Haydon, Warwickshire; boys' doubles, I. Harrison and K. Edwards, Warwickshire; girls' doubles, Ann Haydon and Miss Worrall, Warwickshire; junior mixed doubles, L. Landry and Ann Haydon; veteran singles, H. Spears, Warwickshire; veteran women's singles, Mrs. G. Davies, Lancashire.

Winners in the U.S.S.R. closed championships held in March 1956 at Leningrad were: men's singles, A. Saumoris, Lithuania; women's singles, E. Lestal, Estonia; mixed doubles, A. Saumoris and B. Balaisjene, Lithuania; men's doubles, A. Saumoris and Baltakis; women's doubles, B. Balaisjene and O. Zileviciute, Lithuania. (P. W. R.)

Tangier. From 1912 an international and demilitarized zone of Morocco, on the south side of the Straits of Gibraltar, Tangier is controlled by Belgium, France, Great Britain, Italy, the Netherlands, Portugal, Spain and the United States, under the nominal sovereignty of the sultan of Morocco. Area: 135 sq.mi. Pop.: (1955 est.) 183,000, including 15,000 Moroccan Jews and 42,000 Europeans (35,000 Spaniards, 6,000 French, 1,000 others). Languages: Arabic, French and Spanish. Religion: mainly Moslem. Pop. of Tangier city: (1953 est.) 162,110. Administrator (post suppressed on July 5, 1956), Robert van de Kerchove d'Hallebast (Belgium). Sultan's representative (mendub), Haj Mohammed el-Tazi (resigned July 8). Moroccan governor, Abdullah Ghenun.

History.—As a consequence of the recognition of Morocco's independence and sovereignty the statute of Tangier had to be revised. On April 28, 1956, Haj Mekki Benani, a Moroccan member of the Tangier legislative assembly, requested the immediate opening of negotiations for a new statute within an independent and sovereign Morocco.

The British and U.S. governments, when recognizing Morocco's independence, expressed the hope that the Moroccan government would agree that it would be generally advantageous to preserve some of the international facilities for goods in transit and favourable currency regulations.

At the invitation of Ahmed Balafrej, the Moroccan foreign minister, members of the Tangier committee of control flew to

Rabat on July 5 and attended a meeting presided over by M'Barek ben Mustafa el-Bekai, the premier. A protocol was signed to take effect until the final outcome of negotiations on the incorporation of the zone in the Sherifian empire. The post of administrator, however, was suppressed.

On Oct. 8, the nine-power conference on the future of Tangier was opened formally at Fedala, near Casablanca. Besides Morocco, the eight administering powers were represented. Sultan Mohammed V ben Yusuf told the delegates of the eight powers that he was only consulting them about the means of safeguarding the national and foreign economic interests that had been developed in Tangier. The real work of the conference started two days later in Tangier. It ended on Oct. 29 by a signature of an eight-power declaration and of a protocol, the last-named signed also by Ahmed Balafrej.

The declaration stated that the Tangier international regime was abolished and that the Moroccan government was to take possession of public and private property formerly administered by the international committee of control. The protocol, to come into force on Jan. 1, 1957, stipulated that all existing laws would remain in force unless modified or cancelled by the Moroccan government.

Economy.—Currency equivalent to metropolitan franc (350 fr.=U.S. \$1). Budget (1954 est.): revenue 2,130,000,000 fr.; expenditure (ordinary) 1,600,000,000 fr., (extraordinary) 413,000,000 fr. Foreign trade (1954): imports 9,579,000,000 fr.; exports 996,000,000 fr. Shipping handled in the port of Tangier (1952): ocean-going ships entered 382 (546,000 gross tons), coasters entered 2,786 (1,555,000 gross tons). Roads (1954) about 104 km. Telephones (Jan. 1955) 10,376.

Tariffs. The general stability of the tariff structure of the world that had prevailed during several preceding years was again noted in 1956. Probably the most significant changes during the year involved additions to the many postwar projects undertaken to modernize the nomenclature of individual import tariffs and to adjust rates of duty to compensate for the general increase of world prices (or, at times, to adjust for more dramatic price increases in individual countries). There was no discernible tendency for countries generally to move toward, or away from, protectionism, or to make greater, or less, use of the tariff as an instrument of commercial policy. Increased interest was manifest during the year in the establishment of customs unions. Activities under the General Agreement on Tariffs and Trade (G.A.T.T.) were confined largely to routine holding operations, although some further achievements were made toward the general objective of liberalizing world trade.

General Tariff Revisions.—During the decade 1946–55, 25 countries made comprehensive revisions of their import tariffs. These comprehensive changes generally resulted in one or both of the following: (1) the adoption of a new tariff nomenclature, and (2) provision for a new schedule of import duties. During 1956, two countries, France and Iraq, completed general tariff revisions, and at least eight others—Austria, Germany, Sweden, Brazil, Mexico, Panamá, the Philippines and New Zealand—had projects for such revisions in various stages of completion.

More than half of the 25 countries used, for their tariff classification, the so-called Brussels nomenclature; *i.e.*, the tariff nomenclature sponsored by the Customs Cooperation council (formerly the European customs union study group), which had its headquarters at Brussels. In a protocol, signed July 1, 1955, the 13 members of the Customs Cooperation council agreed to adopt for their individual import tariffs the main headings of the Brussels nomenclature. Various of the member countries had already taken preliminary steps toward this end. On Jan. 1, 1956, the French government became the first member of the council to put into force a new tariff nomenclature conforming fully to the agreed classification.

Comprehensive tariff revisions, involving extensive changes

of both tariff nomenclatures and schedules of import duties, were either completed or nearing completion in Brazil, the Philippines and Iraq. The new tariffs in Brazil and the Philippines were submitted for congressional approval during 1956, but had not gone into effect by the close of the year. The Iraqi tariff became effective on Jan. 1, 1956. All three countries used the Brussels nomenclature as a basis for new tariff commodity classifications. As had occurred frequently in recent years, the projected tariffs in both Brazil and the Philippines made wide-scale use of ad valorem duties in lieu of specific-type duties previously in force. Reports indicated that the new Brazilian rates of duty, when applicable, would afford considerably added tariff protection to domestic industries. The revised Philippine tariff was also reported as providing additional protection for domestic industries but, apparently, the increases would be less extensive than those in Brazil. The new tariff in Iraq provided for numerous decreases in duty for various foodstuffs, machinery items and essential raw materials. Nevertheless, additional protection was granted by that country to selected domestic manufacturing industries.

In Central America, Mexico, in addition to three countries that had done so in earlier years, revised its tariff classification to conform with the N.A.U.C.A. (*Nomenclatura Arancelaria Uniforme Centroamericano*) nomenclature which had been developed by the Central American countries in anticipation of a possible economic union in that area. During the year the New Zealand government announced that it would undertake a review of its import tariff to modernize its nomenclature and to revise its schedule of duties.

Less Extensive Modifications.—During 1956 various countries made across-the-board adjustments of their tariff schedules that resulted in increased duties on virtually all their imports. Among the countries effecting such changes were Bolivia, Chile, the Dominican Republic, Ecuador, Egypt, Ireland, Sweden, Syria and the Philippines. In all of these instances, the tariff increases were, for the most part, moderate; and were designed primarily (1) to adjust specific-type duties for changes that had occurred in the general level of prices, (2) to raise additional revenue, or (3) in at least one instance, to improve the balance-of-payments situation of the country.

In Bolivia, the "currency devaluation surcharges," which had been employed to adjust for the disparity between the free-market rate of exchange and the official rate (applicable to all import purchases) were increased for most items. A similar adjustment was made in Chile, where customs duties are stated in terms of gold pesos no longer serving as the national medium of exchange but are paid in paper pesos; during the year, the Chilean "customs coefficient" (used to adjust for the depreciating value of the paper peso) was increased consecutively from 4900 to 1, to 6400 to 1, to 6450 to 1 and later to 9760 to 1. In the Dominican Republic, a special surcharge that was levied on virtually all import duties was increased from 3% to 5% of the basic duties. In Ecuador all imports became subject to an additional ad valorem duty of 0.75%, making imports subject to ad valorem as well as specific duties. Early in 1956, the Republic of Ireland imposed surcharges of either 3½% or 60% ad valorem on about 150 "nonessential" import items, with a view to reducing the volume of such imports and thereby improving the country's balance-of-payments position. Late in the year, Sweden imposed special import levies as part of a system for supporting farm prices and for maintaining farm incomes at parity with urban incomes. It was announced that the new import levies would be raised or lowered more or less automatically as agricultural prices fell below, or rose above, the designated parity level. Both Egypt and Syria increased duties on all imports by means of a uniform surtax levied to obtain additional revenue for the national treasury. One of the most important changes increasing a

country's tariff during 1956 was that made by the Republic of the Philippines; in January, duties on nearly 80 items became subject to increases ranging from 50% to 10 times higher than the rates previously in effect, and virtually all other import duties were increased by 30%.

Several other countries, including Israel, Lebanon, Nigeria and Thailand, increased import duties on a substantial number of items—though not on an across-the-board basis. Moreover, as was usually the case in earlier years, a quite substantial number of countries made piece-meal changes in their tariffs affecting selected import items. Changes of this character appear to have been made somewhat less frequently in 1956 than in immediately preceding years.

Piece-meal decreases in duty by individual countries appear to have been made during 1956 by about as many countries, and they affected about as many individual import items, as did the afore-mentioned piece-meal increases. Many of such decreases were "protective" in character, in that they were designed to assist domestic industries in obtaining essential supplies. In various countries, duties on items important in the cost of living, or essential to agricultural production (e.g., insecticides and fertilizers), were temporarily suspended or lowered.

The most extensive decreases in duty by an individual country during 1956 were those by the German Federal Republic; by a series of decrees during the year, the government reduced duties on many items in its tariff. Early in the year, primarily in order to reduce prices of items important in the cost of living, duties on about 120 categories of imports were temporarily reduced, on the average, to about four-fifths their former level. In addition, duties on about 100 agricultural and manufactured products were reduced by somewhat equivalent margins.

The General Agreement on Tariffs and Trade.—Activities of the General Agreement on Tariffs and Trade in 1956 involved principally the fourth round of tariff negotiations sponsored by the G.A.T.T. members and the 11th session of the contracting parties to G.A.T.T. During the year, the G.A.T.T. membership made little progress toward the establishment of the Organization for Trade Cooperation (O.T.C.)—designed to be the official administrative agency for G.A.T.T. Under the provisions of the projected organization, the O.T.C. could not enter into force until the United States accepted it. Although legislation authorizing United States acceptance was reported favourably by the house committee on ways and means, the congress did not take further action. Most other G.A.T.T. members also delayed acceptance of the O.T.C., apparently awaiting action by the United States.

Tariff Negotiations Under G.A.T.T.—From January to May 1956, the contracting parties, meeting at Geneva, held their fourth general round of tariff negotiations. In contrast to actions at previous tariff conferences sponsored by the G.A.T.T. members, no countries at this time negotiated for accession to the General agreement. Twenty-two of the 35 G.A.T.T. members participated in the 1956 negotiations: Australia, Austria, Belgium, Canada, Chile, Cuba, Denmark, the Dominican Republic, Finland, France, the German Federal Republic, Haiti, Italy, Japan, Luxembourg, the Netherlands, Norway, Peru, Sweden, Turkey, the United Kingdom and the United States. In addition, the High Authority of the European Coal and Steel Community (E.C.S.C.), participating for the first time, negotiated with various members for concessions on certain iron and steel products in exchange for concessions by three of the community's members: France, German Federal Republic and Italy.

The 22 participating countries and the High Authority of the E.C.S.C. concluded about 80 pairs of bilateral negotiations at Geneva. In view of the fact that most of the individual import items involved in such negotiations were already subject to con-

cessions in G.A.T.T., the new negotiations made little change in the estimated 60,000 items covered by concessions in the General agreement. The United States completed negotiations with each of the 21 other participating countries; by legislative authority, its concessions on individual items were generally limited to a maximum reduction of 5% in each of three successive years. Although other participating countries were not similarly limited in the concessions they could offer, the tariff reductions granted at the conference tended to be of modest proportions. By the end of September, Cuba, Haiti and Italy had placed their concessions in effect, and the United States had made effective the first stage of its concessions.

During 1955 and the first half of 1956, 21 of the 35 G.A.T.T. members renegotiated certain individual tariff concessions they had previously granted in the General agreement; generally, this course was pursued to permit them to impose increased restrictions on imports of the items involved. Italy, India, the Netherlands, Sweden and the United States renegotiated only one or two items from their schedule of G.A.T.T. concessions; Cuba, Greece and Peru renegotiated a substantial number of the concessions they had granted. As envisaged in the G.A.T.T. procedures, the members concluding such renegotiations granted compensatory concessions to countries having a principal trade interest in the renegotiated items.

Customs Unions.—The most ambitious proposal for a common market under consideration during the year became known as Euromarket. This project, one of several that had been proposed in postwar years for European integration, was sponsored by the council of ministers of the European Coal and Steel Community (Schuman plan). Being dissatisfied with the limited results that had been achieved through other projects (*e.g.*, Customs Cooperation council, Western European union, European Movement, etc.) and believing that effective European cooperation might best be obtained by working through established institutions, the council of ministers decided to seek European integration through the membership, and using the model, of the Coal and Steel Community. As that organization had already established a common market for coal and steel, the ministers proposed to establish a similar community of states which would eventually provide a common European market for other commodities. To that end, the Brussels Intergovernmental Community on European Integration was created. The membership of the committee consisted of representatives of the countries already belonging to the Coal and Steel Community. The projected Euromarket, when established, would provide a common market for all European states willing to affiliate therewith; import-export licences, quotas and tariffs would be eliminated within the community and a common tariff would be established for the products of third countries.

During 1956, the Scandinavian countries proceeded with their project to establish a Nordic customs union. During the year, the Nordic council studied proposals whereby a common Nordic market would be achieved. It was envisioned that, over a period of years, a complete customs union would be established by gradually expanding the number of items of trade covered—ultimately eliminating all trade restrictions between the member states and creating a common tariff on imports from without the free-trade area.

The Central American states moved closer to a type of economic integration which, among other things, would establish a customs union in that area. By the close of the year, four countries—Costa Rica, Honduras, Mexico and Nicaragua—had adapted their import tariffs to the N.A.U.C.A. nomenclature, and the ministers of economy of the five Central American countries had created a permanent secretariat with instructions to: (1) devise a common tariff for the area based on the

N.A.U.C.A. classification, and (2) propose measures to create a free-trade area for designated merchandise. Closely related to this project were various bilateral agreements concluded by individual pairs of Central American countries. In Dec. 1955, Costa Rica and Guatemala negotiated a treaty providing for free trade between the two countries on a substantial list of items, as well as for limited free trade for many other products and reduced import duties on still others. By the close of the year, El Salvador had negotiated similar treaties with all Central American states, the general objective being to lay the basis for a more inclusive multilateral agreement.

United States Tariff Policy.—During 1956, the United States, on balance, eased somewhat its import tariff restrictions. Although new import restrictions were imposed on some items, a considerable number of U.S. import duties were reduced through the afore-mentioned G.A.T.T. negotiations. Such changes, however, did not alter materially the prevailing level of duties. By congressional action, the United States revised its procedures for determining the dutiable value of imported articles.

Import Restrictions.—Either unilaterally or through negotiation with foreign countries, a few U.S. import duties were increased during the year. On recommendation of the tariff commission after an escape-clause investigation, Pres. Dwight D. Eisenhower withdrew a concession that had been granted in G.A.T.T. on linen towelling, and increased the duty on imports of that product. In two other escape-clause reports (relating to acid-grade fluorspar and para-aminosalicylic acid), the tariff commission divided equally (3-3) on whether escape action should be taken; the president, however, decided not to increase the import duties on either of those products. At the G.A.T.T. tariff negotiations held early in the year, the United States, under article 28 of the General agreement, negotiated increases in its concessions on liquid sugar and certain fur-felt hats. Late in September, the president invoked the Geneva wool-fabric reservation, whereby the United States, in granting a concession on woollens and worsteds at Geneva in 1947, had reserved the right to increase the duty on any imports of such fabrics in excess of 5% of United States production thereof.

During 1956, several attempts in congress to impose import quotas on Japanese cotton textiles or to direct the tariff commission to conduct escape-clause investigations of all cotton textiles were ultimately defeated, some by narrow margins. On application of domestic producers, however, the tariff commission instituted four escape-clause investigations of cotton textile products that were being imported predominantly from Japan. In an attempt to lessen the mounting demands in the United States for rigid import restrictions on cotton textiles, Japan maintained export controls throughout the year limiting shipments of some cotton goods to the United States. In September, after conversations with U.S. officials, Japan announced that, beginning in 1957, it would establish comprehensive controls over exports of cotton cloth, apparel and manufactured items to the U.S. market; these controls apparently would limit such exports for a number of years, initially to 1955 levels.

Customs Simplification.—In August, President Eisenhower approved the Customs Simplification act of 1956, which, among other things, changed the method of determining the dutiable value of imported goods subject to ad valorem duties. Earlier customs simplification acts, approved in 1953 and 1954, had modified various customs methods and procedures, but had not amended U.S. valuation procedures. The new legislation established the "export value" of imported products as the primary dutiable value. Previously, customs appraisers had been required to determine both the export value and the foreign value of imported goods; the ad valorem duty was then levied on the basis of the higher of the two values.

The new method for determining primary dutiable value was not to be applied to all merchandise subject to ad valorem duties. The treasury was directed to determine those imported articles on which the use of "export value" would reduce their dutiable value by 5% or more (based on actual imports in 1954). For such articles, the customs' appraisers were to continue to ascertain both export value and foreign value, the higher of the two to be regarded as dutiable value. Late in the year, the treasury had not published the list of excepted articles. According to reports, however, the number of such articles was expected to be a small fraction of all imported articles subject to ad valorem duties.

ENCYCLOPEDIA BRITANNICA FILMS.—*Distribution of Foods* (1946); *Food and People* (1956); *Round Trip: The U.S.A. in World Trade* (1952); *World Affairs Are Your Affairs* (1952); *World Trade for Better Living* (1951).

Taxation. Net budget receipts of the federal government for the fiscal year ending June 30, 1956, were the highest in the history of the United States. Rising levels of personal income and corporate profits pushed receipts to \$68,141,000,000, an increase of \$3,641,000,000 over the estimates made in the budget presented in January. Expenditures, which also increased over the January budget estimates, amounted to \$66,386,000,000. The surplus, which in January was expected to be \$230,000,000, was actually \$1,754,000,000. This was used principally to reduce the public debt.

U.S. Legislation.—The *Midyear Review* of the 1957 federal budget, published Aug. 28, 1956, anticipated continued increases in expenditures. The 1956 legislation expanded defense, agricultural, social security and housing programs; authorized the "soil bank" program and a huge highway program (the latter to be financed outside the regular budget); initiated a flood insurance program and various flood control and navigation projects. The midyear estimates indicated that in the fiscal year 1957 the increase in receipts would not keep pace with the increase in expenditures, and that the surplus would be reduced to \$707,000,000.

Federal tax legislation in 1956 was designed to maintain or increase revenue. The five percentage point reduction in the corporation income tax rate and various reductions in excise taxes which had been scheduled for April 1, 1956, were postponed for one year. Some of the excise taxes scheduled for reduction were incorporated into the Highway Revenue act of 1956.

A few minor tax reductions were enacted. Gasoline used on the farm was exempted from the tax on gasoline. Admissions up to 91 cents and transportation fares up to 61 cents were exempted from the 10% excise taxes on these services.

Substantial increases were enacted in taxes outside the regular budget. The old age and survivors' insurance program was expanded to include disability insurance and to provide benefits for women retiring between the ages of 62 and 65. To finance these added benefits social insurance taxes were increased to 2½% on the first \$4,200 of wages and salaries for both employers and employees and to 3⅜% for the self-employed (effective Jan. 1, 1957).

An unprecedented highway aid program was enacted for the expansion and modernization of the interstate highway system. To finance this program new and increased highway user taxes were levied and earmarked for a highway trust fund for payment to the states. The higher taxes (effective July 1, 1956) included an increase from 2 cents to 3 cents per gallon in the tax on gasoline, diesel fuel and special motor fuels; an increase from 5 cents to 8 cents per pound in the tax on tires for highway vehicles; an increase from 8% to 10% of manufacturers' price in the tax on trucks, buses and truck trailers. A new tax of 3 cents

per pound was imposed on tread rubber, and also an annual licensing fee of \$1.50 per 1,000 lb. on vehicles with a total weight of more than 26,000 lb.

U.S. State Taxation.—In 1956 about half of the state legislatures convened, as compared with 1955 when all but one met. The unusually large volume of tax legislation in 1955 was reflected in 1956 tax collections, which hit an all-time high of \$13,335,000,000. The 15% increase of state tax collections in 1956 over 1955 was one of the largest in history. State tax collections by source are shown in the table.

State Tax Collections by Source*

Tax	Fiscal Year 1956

Source: Department of Commerce.

In 1956 there were relatively few increases in state tax rates.

Several states extended "emergency" taxes or temporary tax increases enacted in 1955 and prior years. In Massachusetts, "emergency" taxes on income, insurance companies, cigarettes, etc., were extended for another year. Rhode Island extended for a year its "emergency" sales and use taxes, and taxes on corporate incomes and pari-mutuel betting. The Mississippi Emergency Revenue act of 1955, which imposed a surtax of 14% of the income, estate and various privilege and severance taxes, was extended to 1958.

Among the tax changes in 1956 were the following:

Connecticut levied temporary increases (for flood relief) in its taxes on retail sales, cigarettes, alcoholic beverages, motor fuels and theatre seats. Kentucky imposed higher taxes on individual and corporate incomes and on distilled spirits. Louisiana increased its liquor and pari-mutuel taxes. Maryland raised its corporate income tax from 4.5% to 5%. New Jersey raised its cigarette tax from 3 cents to 5 cents per package. New York enacted a reduction of 15% of the first \$100 and 10% of the next \$200 of income tax on individuals. Ohio raised its cigarette tax from 2 cents to 3 cents per package. Pennsylvania increased its corporate income tax from 5% to 6%. West Virginia increased its cigarette tax and the fee on pari-mutuel pools, and enacted a new franchise tax on insurance companies.

Canada.—Walter Harris, minister of finance, reported in his budget speech on March 20, 1956, that revenues and expenditures for the fiscal year ending March 31, 1956, were higher than those originally estimated. The revenue of \$4,385,000,000 reflected greater expansion, employment and prosperity than expected. Expenditures amounted to \$4,437,000,000, an increase of \$75,000,000 over the original estimate. New legislation for wheat storage, agricultural supports plus higher interest on the public debt accounted for a large part of the increase. The deficit for fiscal 1956 amounted to \$52,000,000.

For the fiscal year ending March 31, 1957, Harris estimated revenues at \$4,763,000,000 (after proposed tax changes), expenditures at \$4,650,000,000, and a surplus of \$113,000,000. He did not propose any general tax reduction. "Clearly," he said, "it is only sound and responsible finance to run a modest

"... AND AS YOU CAN SEE I NEVER RECOVERED from my first income tax jolt," a cartoon of 1956 by Lichty of the Chicago Sun-Times Syndicate

surplus in times as good as these we are now in."

While there were no general changes in tax rates, other changes involved an expected revenue loss of \$12,000,000. The definitions of exempt building materials and production goods under the manufacturers' sales tax were broadened. A special excise tax of 20% was imposed on the gross advertising revenues of special editions of non-Canadian periodicals (effective Jan. 1, 1957). Certain technical changes and clarifications were made in the provisions of the income tax law relating to profit-sharing plans and the depletion allowance in the oil industry.

(See also BUDGET, NATIONAL; DEBT, NATIONAL; MUNICIPAL GOVERNMENT.) (H. J. Mr.)

Taylor, Maxwell Davenport (1901-), U.S. army officer. was born on Aug. 26 at Keytesville, Mo., and was graduated from the U.S. military academy at West Point, N.Y., in 1922. Later he studied at the army's engineer and field artillery schools, at the Command and General Staff school, Fort Leavenworth, Kan., and at the Army War college in Washington, D.C. After three years in Hawaii (1923-26) he transferred to the field artillery. He taught at the U.S. military academy from 1927 to 1932 and later (1945-49) was academy superintendent.

After U.S. entry into World War II Taylor helped train the first U.S. air-borne divisions and was made artillery commander of the 82nd air-borne division which participated in the Sicilian and Italian campaigns. In March 1944, prior to the Normandy landings, he became commander of the 101st air-borne division, which saw some of the war's fiercest fighting, including the Battle of the Bulge in Dec. 1944.

After his retirement as superintendent of West Point, Taylor was U.S. commandant in Berlin, Ger. (1949-51), and assistant, then deputy army chief of staff in charge of operations (1951-53). In Feb. 1953 he took command of the U.S. 8th army in Korea, soon being advanced to the rank of full general. After the Korean armistice in July 1953, Taylor remained to assure

observation of the armistice terms and to direct the rehabilitation of South Korea. He became commander of the U.S. army far eastern forces on Nov. 20, 1954.

On May 13, 1955, Pres. Dwight D. Eisenhower named Taylor chief of staff of the U.S. army, to succeed Gen. Matthew B. Ridgway as of June 30. In July 1956 Taylor was reported to have opposed a plan under consideration by Adm. Arthur W. Radford (*q.v.*), chairman of the U.S. joint chiefs of staff, to reduce U.S. armed forces personnel by a reported figure of 800,000 within four years.

Tea. The London auctions opened in April 1956 with the best grades of north India tea sharply higher in price, the best Assam broken pekoes at 6s.10d. per pound, and fannings at 8s. per pound, up about 1s. Common teas, in contrast, were approximately 3s.5½d., barely sufficient to cover costs of many producers. The Colombo (Ceylon) auctions were at a state of near collapse in May, following record Ceylon production of 380,000,000 lb. in 1955-56. Shipment of unrestricted quantities of medium-grown teas direct to London for auction was then permitted. Prices advanced later in the year under the influence of U.S. and South African buying, plus a three-way trade involving Ceylon tea, Egyptian cotton, and Japanese sterling. The U.S.S.R. took Indian tea in part payment for steel.

Tea imports into the U.S. in 1955-56 were 101,455,000 lb. valued at \$50,985,000 compared with 96,638,000 lb. valued at \$63,618,000 in 1954-55. Under the stimulus of major merchandising programs and improved packaging, the U.S. continued to use about .63 lb. of tea per capita in 1956, the same as 1955, but about 11% more than in 1947-49. Usage in the United Kingdom was reported as approximately stabilized at an average 11 oz. per household per week.

The long awaited report on the tea industry of India was submitted by a commission appointed in 1954. It recommended reduction in the internal price of tea to increase domestic consumption; creation of a tea replanting fund to replace at least the 29% of tea bushes which it estimated would end, within the next 5 years, their approximate 60 years of productive life; a labour welfare organization for the more than 1,000,000 workers employed by the tea industry; abolition of the quota export system; and decrease in remuneration of managers and payment of a consolidated salary instead of a commission to them. The report resulted in considerable discussion and criticism, particularly in the U.K. Production in India for the first three months of the crop year was 125,065,000 lb., 8.4% larger than in the same period of 1955.

In view of the oversupply of ordinary teas, the Calcutta Tea Regulation committee recommended that tea picking be halted on Nov. 20 instead of continuing as usual until the end of December.

The Pakistan Tea board approved a ten-year plan to increase tea production from 55,000,000 lb. to 80,000,000 lb. and acreage from 75,000 ac. to 100,000 ac. Ceylon, with 365,518 ac. under tea cultivation as of March 1955, uprooted 10,000 ac. of uneconomic plantation during the year. Argentina stressed tea output and with 33,000 ha. of tea plantings, mostly just coming to bearing age, began to search for export markets. Kenya and Uganda teas were offered at the first auction held in Nairobi, Kenya.

(J. K. R.)

Telegraphy. Progress of the telegraph industry in 1956, the centennial of the Western Union Telegraph company's incorporation under its present name, was featured by continued rapid expansion in the facsimile, microwave and private wire fields.

Facsimile.—Additional compact Desk-Fax machines were

Western Union Telegraph Company—Statistics

(Fiscal Year Ended Dec. 31, 1955)

Item	Amount	Item	Amount
Gross operating revenues	\$242,097,359	Average hourly earnings of employees, apart from messengers	\$1.88
Income from operations (after federal income tax)	\$13,040,690	Miles of telegraph circuits	3,622,161
Telegraph offices and agencies	23,290	Miles of carrier-equipped telegraph circuits	2,893,409
Number of employees	39,763	Nautical miles of ocean cable	28,378
Salaries, wages, social security taxes, pensions and other benefits	\$149,186,473		

placed in operation in the offices of business firms in all parts of the United States during 1956, enabling businessmen to send telegrams instantly in picture form by pressing a button. Progress was made in providing business firms with direct wire connections giving them immediate access to Western Union's high-speed message network, a total of 50,000 customers having been equipped with printing telegraph and Desk-Fax facsimile machines. Also, private facsimile systems, called Intrafax, were leased to many firms to connect their scattered departments, offices and buildings for fast and efficient communications.

Radio Beam System.—Western Union was carrying out the extension to Cincinnati, O., and Chicago, Ill., of its microwave radio beam system, which by late 1956 had 220,150 telegraph channel miles in operation between Philadelphia, Pa., Washington, D.C., and Pittsburgh, Pa. The extension would add almost 11,000 channels between Pittsburgh, Cincinnati and Chicago for leasing to industry and government. Dual mast towers 127 to 270 ft. in height and 20 to 50 mi. apart on elevated ground would be used, replacing the old pole lines.

As of June 30, 1956, telegraph channel mileage approximated 33,850,000 for message services. Two-thirds of this mileage was derived from the use of "carrier" equipment which creates a multiplicity of message circuits on a single radio beam or pair of wires. Prior to 1945 only 110,000 mi. of carrier channel facilities were in Western Union service.

Integrated Data Processing.—A factor contributing to the rapid growth of private wire systems is their ability to transmit data for processing by business machines and computers. The first nationwide private wire system, designed exclusively for automatic transmission of control data, was placed in operation in 1956 for Sylvania Electric Products, Inc. This 18,000-mi. network connects 61 cities with Sylvania's data processing centre at Camillus, N.Y.

Another nationwide private wire system installed by Western Union in 1956, for E. F. Hutton & company, stockbrokers, was designed to meet the maximum speed requirements of brokerage firms. The system, linking 20 cities, is the world's fastest. It can flash an order 2,600 mi. from the Hutton Los Angeles, Calif., office to New York city and the floor of the New York Stock exchange in 8 to 10 sec. The entire transaction, from the time the order is placed at Los Angeles to the arrival of the confirmation back in Los Angeles, takes less than 60 sec.

Armed Services.—The air matériel command awarded Western Union a contract in 1956 to carry out a plan to unify and improve the efficiency of the domestic and global communications system of the U.S. air force. The new centres would be part of a 1200,000-mi. network leased by Western Union to the air force. Messages would be typed only once at origin and flashed automatically to any air force base in the world.

New multipoint selective signalling equipment was designed and built by Western Union for the signal corps, and frequency modulation carrier telegraph terminal equipment was developed for use in distant overseas communications.

Financial.—By 1956 the number of Western Union stockholders increased 43%, from 19,942 to 28,450, after the company's stock was split 4-for-1 on May 17, 1955. Revenues from facsimile and private wire services had grown nine-fold since

1946 and in 1956 were running at the rate of more than \$35,000,000 a year. About 2,000,000 mi. of Western Union's wire facilities were devoted to private wire services.

Submarine Cables.—Western Union agreed to sell the Western Union Cable system to American Securities corporation, subject to regulatory and stockholder approvals and other conditions, for \$18,000,000 plus an amount equal to net current assets. A definitive contract was to be executed after various problems were resolved. This agreement followed termination of negotiations with Trextron American, Inc., in 1955 for purchase of the cable system by a subsidiary of Trextron.

(See also FEDERAL COMMUNICATIONS COMMISSION.)

(W. P. MA.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Development of Communications* (From Telegraph to TV), 2nd ed. (1955); *Story of Communications* (1955).

Telephone. At the end of 1956 there were an estimated 109,000,000 telephones in the world. Of these, approximately 60,000,000 were in the United States.

Fourteen countries had more than 1,000,000 telephones each. Besides the U.S., they were the United Kingdom (with more than 7,000,000 phones), Canada (with more than 4,500,000), the German Federal Republic (West Germany), France, Japan, Sweden, Italy, Australia, Switzerland, Argentina, the Netherlands, Spain and the German Democratic Republic (East Germany).

Bell system overseas service was extended during 1956 to Kuwait, on the Arabian peninsula, to Saudi Arabia and to Jordan. Telephone users in the United States could call any of nearly 105,000,000 telephones throughout the world at the end of 1956. About 85% of all U.S. telephones were dial-operated.

Transoceanic Cables.—A transatlantic telephone cable system, first ever to span an ocean, was officially opened Sept. 25, 1956. The twin-cable system stretches 2,250 mi. across the bottom of the Atlantic between Newfoundland and Scotland. It is connected by land facilities with the telephone networks of the United States, Canada and Great Britain. The submarine system can carry 36 conversations at the same time, or about three times the capacity of radiotelephone circuits between Great Britain and North America. A joint undertaking of American Telephone and Telegraph company, the British post office and the Canadian Overseas Telecommunication corporation, the project had been under construction for more than two years and cost \$42,000,000.

Also completed late in 1956 by A.T. & T. was a similar undersea cable system extending 870 mi. between Port Angeles, Wash., and Ketchikan, Alaska.

Work was under way on a third cable system, spanning 2,500 mi. of the Pacific ocean between Point Arena, Calif., and the shore of Hanauma bay in the Hawaiian Islands. It was expected to be in service by late 1957. The new cable systems make overseas telephone service speedier and more reliable, since they are not subject to atmospheric disturbances which sometimes affect radiotelephone.

Financing.—The total investment in telephone plant and

U.S. Telephone Statistics

(As of July 1, 1956)

PICTURE PHONE, an experimental model of a telephone equipped with two-way picture transmission, demonstrated by Bell Telephone laboratories in 1956

equipment in the U.S. reached \$18,500,000,000 by June 30, 1956. This figure was growing rapidly. For example, in 1956 alone, the Bell system spent more than \$2,000,000,000 for new construction to meet the public's growing requirements for telephone service. In Sept. 1956, at a special meeting, the company's share owners authorized the largest direct offering of stock ever made by a U.S. corporation. About 5,720,000 shares were involved in the offering, which was expected to make about \$572,000,000 available to meet Bell system needs for new capital. The shares were offered to share owners at \$100 par, on the basis of one new share for each ten shares outstanding. With about 1,450,000 share owners, the Bell system continued to be the most widely owned of all businesses in the world at the end of the year.

Electronic Phone Connections.—Work advanced on the development of new central office equipment which works on electronic principles. It makes use of the transistor, the tiny amplifying device invented at Bell laboratories that operates on a fraction of the power needed by a vacuum tube. The new switching apparatus operates at unbelievably high speeds. The first telephone central office of this kind was planned for Morris, Ill., and was expected to be ready for service early in 1959.

Defense Developments.—Bell laboratories during 1956 developed an improved transistor that opened the way for many new possibilities in military technology. The new transistor's superior performance at very high frequencies makes it ideally suited for application in guided missiles and electronic "brains." Progress was made, too, on a nation-wide semiautomatic air warning control system integrating U.S. radar and defense weapons. The system, known as SAGE, was to include numerous centres where radar information could be electronically computed to guide defensive weapons. In the North American arctic area, work neared completion on a series of radar stations designed to give the U.S. and Canada advance warning of an air attack. Western Electric, manufacturing and supply unit of the Bell system, was the prime contractor for the U.S. air force in building the arctic radar fence, known as the distant early warning (DEW) line.

(F. R. K.)

Tennessee. A south central state of the United States, 16th to enter the union, Tennessee is called the "Volunteer state." Land area, 41,797 sq.mi., water area about 447 sq.mi. Population (1950): 3,291,718; rural 1,839,116; urban 1,452,602; rural farm 1,016,204; white 2,760,250; nonwhite 531,468. The July 1, 1956, estimated population was 3,466,000. The population of principal cities in 1950; Nashville (cap.) 174,307; Memphis 396,000; Chattanooga 131,041; and Knoxville 124,769.

History.—With three Tennesseans (Gov. Frank G. Clement, Sen. Estes Kefauver and Sen. Albert Gore) being prominently mentioned for national political office, more than usual interest was manifested in the meeting of the Democratic state convention which was to select Tennessee's delegation to the national nominating convention. Despite Senator Kefauver's strong campaign for the presidential nomination, the state convention refused to endorse him and instead instructed the Tennessee delegates, most of whom were Clement supporters, to cast their votes for any Tennessean who had an "opportunity" to be nominated for the presidency or vice-presidency. Shortly after this action was taken Senator Kefauver withdrew his candidacy for the presidential nomination. At the national Democratic convention Governor Clement was keynote speaker, and Senator Kefauver was selected as vice-presidential nominee, the Tennessee delegation giving him their support after first supporting Senator Gore for that office.

In a mild political surprise, Republican presidential candidate Dwight D. Eisenhower won Tennessee's electoral votes for the second successive time in the general election on Nov. 6. Eisenhower not only rolled up a bigger majority than in 1952, but carried native son Estes Kefauver's home town, county and congressional district, and put the Democratic stronghold of Shelby county (Memphis) in the Republican ranks for the first time since the Reconstruction period. Eisenhower's total vote was 462,288, as against 456,507 for Adlai E. Stevenson and Kefauver, and 19,820 for States Rights candidate T. Coleman Andrews.

In the state congressional races all incumbent representatives were returned with the exception of J. Percy Priest, of the fifth district, who died shortly after being nominated for a ninth successive term. Priest was replaced by veteran district attorney general, J. Carlton Loser. There was no race for U.S. senator or governor this year.

Tennessee attracted national attention in the field of traffic safety when, under the leadership of new safety commissioner, Hilton Butler, the state highway patrol set up periodic surprise roadblocks on important state and federal highways to check for drunken drivers and for those without licences, and to impress drivers with the need to obey state traffic laws and to observe basic rules of safety. As a result of this campaign, Tennessee's number of traffic fatalities during the first eight months of 1956 showed a reduction of 16% over the comparable period of 1955.

Integration of white and Negro students in Tennessee institutions of higher learning proceeded without incident, but violence flared in Anderson county over Labor Day weekend when Negro children sought admission to the high school at Clinton, which had been ordered to desegregate by U.S. District Judge Robert L. Taylor. The presence of prosegregation leaders, a number of whom were from outside the state, was blamed for rioting that resulted in injuries to a few persons. Governor Clement,

on request from local authorities who were unable to cope with the rioters, sent in 2 battalions of national guard troops and 100 state highway patrolmen to help restore order. By the end of September the integration had been accomplished without any recurrence of violence.

In the primary elections in August, which are tantamount to election, all Tennessee representatives to congress were renominated. Neither senate seat became vacant in 1956.

Chief state officers during 1956 were: governor, Frank G. Clement; lieutenant governor, Jared Maddux; secretary of state, G. Edward Friar; treasurer, Ramon Davis; comptroller, William R. Snodgrass; attorney general, George P. McCanless; and adjutant general, Joe Henry, Jr.

Education.—Enrolment in elementary and high schools during the school year 1955-56 was 754,945, with an average daily attendance of 677,816. The total number of public school teachers was 26,081. Grand total expenditures for public schools from all sources during 1954-55, the latest year for which figures were available, were \$131,022,111.89; for special schools \$1,322,917.02; and for six state colleges and the University of Tennessee \$14,669,831.43 out of state funds. The commissioner of education was Quill Cope.

Social Insurance and Assistance, Public Welfare and Related Programs.—During 1955 the total amount of unemployment compensation paid was \$29,009,057 for 1,541,596 man-weeks of unemployment. Other public assistance during 1955-56 totalled \$44,330,889.90, of which \$26,136,889.60 was for old-age assistance, \$15,773,706.00 for dependent children, \$1,564,446.90 aid to the blind, and \$855,847.40 for disabled persons. As of June 30, 1956, there were 61,043 recipients of old-age assistance, 19,683 dependent children, 3,129 blind and 2,268 disabled persons receiving public assistance.

In 1955-56 there were 4 juvenile and correctional institutions with 730 inmates and expenditures of \$780,093.61; 3 penal institutions with 2,820 inmates and expenditures of \$1,740,820.12; 4 state hospitals for the insane with average population of 7,486 and one home for the mentally deficient with an average population of 1,087. Total state expenditures for mental health were \$5,982,504.61.

Communications.—Of the 70,044.56 mi. of public roads on Jan. 1, 1956, 8,329 mi. were state highways. There were 56,292.44 mi. of country rural roads and 4,363.70 mi. of county urban roads. State and federal parks and reservations contained an additional 1,059.52 mi. of roads. Total highway expenditures during the fiscal year were \$83,722,617 of which \$48,890,838 was from the state and \$24,831,779 from counties. There were 3,443.34 mi. of railroad on Oct. 1, 1955.

Banking and Finance.—On June 30, 1956, there were 220 state banks with 66 branches and assets of \$807,583,675.02; and on April 10, 1956, there were 76 national banks with assets of \$1,957,404,000. Savings and loan associations on June 30, 1956, numbered 48 with total assets of \$423,275,319.09. Of these 47 were federal associations with assets of \$422,749,625.83.

Total state revenue from all sources in 1955-56 was \$325,906,283.68. Federal aid was \$61,073,084.79. Proceeds from bonds sold were \$8,550,000, and debt outstanding decreased \$6,461,500 to a total of \$107,373,500 on June 30, 1956. Of total disbursements from state appropriations of \$317,602,887.37, \$95,866,409 was for education, \$59,778,419 for highways, \$47,873,123 for public welfare and \$38,342,260.50 for cities and local governments. Accrued surplus on June 30, 1956, was \$10,502,781, plus a working capital reserve of \$25,000,000.

Agriculture.—Another drought year in 1955 brought an 8% decrease in cash receipts from farming in Tennessee, from \$473,817,000 in 1954 to an estimated \$436,698,000 in 1955. Income from livestock and products in 1955 was \$210,582,000; from crops \$220,505,000; and from government payments \$5,611,000. Value of crops, livestock and products consumed by families on the farms where they were produced was estimated at \$83,470,000. Cotton remained Tennessee's leading cash crop in 1955, but tobacco dropped from second to fourth place behind dairy products and cattle and calves, which ranked second and third respectively.

During 1955, 70,613 ac. of forestland were burned by 3,467 forest fires. Estimated forest area in Oct. 1956, was 13,000,000 ac.

Manufacturing.—Tennessee experienced one of its best years of industrial expansion in 1955. Total investment in industrial expansion was \$176,000,000 for 138 new industries and 197 expansions of established concerns in 86 different towns and cities. During 1955 the total estimated value of manufactures was \$3,797,000,000, an increase of \$453,000,000 and an

estimated 291,300 persons were engaged in manufacturing in 4,700 establishments. Total wages paid to persons covered by unemployment compensation were \$977,619,791. In Aug. 1956, 187,400 persons were engaged in the manufacture of nondurable goods and 108,000 in the manufacture of durable goods. Leading employing industries were chemicals with 47,500, textiles with 33,600, fabricated metal products with 17,800, and lumber with 22,400. (W. T. A.)

Table III.—Mineral Production of Tennessee

(In short tons, except as noted)

Mineral	Quantity 1953	Value 1953	Quantity 1954†	Value 1954†
Total		\$98,050,000		\$105,686,000‡
Cement (bbl.)	7,277,000	18,283,000	7,569,000	19,734,000

Mineral Production.—Table III shows the tonnage and value of those minerals produced in Tennessee in 1953 and 1954 whose value exceeded \$100,000. In 1954 the state was first among the states in ball clay and pyrite output, second in phosphate rock and fourth in manganese. It ranked 27th in the value of its mineral output, with 0.76% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Southeastern States*, 2nd ed. (1956).

Tennessee Valley Authority. Nearly three-fifths of the power that the Tennessee Valley authority sold during the 1956 fiscal year went to the United States Atomic Energy commission and other defense agencies. Out of total sales of 53,800,000,000 kw.hr. the Atomic Energy commission and the other defense agencies took 30,500,000,000 kw.hr. Use by the federal government agencies during the fiscal year was more than 15 times as great as in 1950, when less than 2,000,000,000 kw.hr. were sold to them. The increase in fiscal 1956 over 1955 was 39%, from 21,800,000,000 kw.hr. to 30,500,000,000 kw.hr.

During the year the installed capacity of the system was increased to 9,280,000 kw., compared with 7,810,000 kw. at the close of the 1955 fiscal year. Most of the increased capacity was constructed to supply the Atomic Energy commission, which operates two major plants at Oak Ridge, Tenn., and Paducah, Ky. The 1956 earnings of the power system amounted to \$53,900,000 out of total revenues of \$221,600,000 and represented a return of 3.9% on the TVA power investment, a trifle below the 4% annually earned over the entire period of TVA operations. TVA paid \$59,000,000 to the U.S. treasury during the year, bringing to more than \$210,000,000 its payments from power revenues. In addition, TVA had paid nearly \$35,000,000 to the treasury from nonpower proceeds.

Table I.—Principal Crops of Tennessee

Crop	Indicated 1956	1955	Average 1945-54
Corn, bu.	57,492,000	61,285,000	58,149,000
Oats, bu.	7,161,000	6,844,000	5,587,000
Soybeans, bu.	4,860,000	4,500,000	2,737,000
Barley, bu.	1,992,000	1,656,000	1,512,000
Hay, tons	1,955,000	1,949,000	1,896,000
Peanuts, lb.	2,400,000	2,850,000	3,132,000
Tobacco, lb.	133,500,000	129,397,000	145,122,000
Apples, bu.	410,000	64,000	353,000
Peaches, bu.	320,000	*	429,000
Pears, bu.	140,000	5,000	116,000
Potatoes, Irish, cwt.	784,000	945,000	1,142,000
Potatoes, sweet, cwt.	616,000	854,000	728,000
Wheat, bu.	4,322,000	3,417,000	4,152,000
Cotton, bales	575,000	623,000	564,000

Municipal and co-operative electric systems bought 15,500,000 kw.hr. from TVA for distribution to 1,436,000 consumers in the 80,000-sq.mi. area they serve. During the year, residential consumers of TVA power used an average of 5,812 kw.hr. per customer, which was more than double the national average. When TVA was established in 1933, the average residential use, both in the nation and in the present TVA area, was about 600 kw.hr. per customer.

Use of the navigation channel provided by the TVA multiple-purpose dams continued its rapid growth, with more than 1,600,000 ton-miles of traffic moving in 1955. Users of the waterway saved an estimated \$16,700,000 in freight costs compared with the next cheapest available mode of transportation. Traffic in 1955 was 32% above 1954.

Although water conditions had been below normal generally for four years, storms produced flood conditions which the TVA system was called on to regulate. At Chattanooga, Tenn., two flood crests were reduced with savings of \$200,000 in flood damage, and nearly \$700,000 of flood damage was averted on the lower Ohio and Mississippi rivers by TVA operations.

TVA's production of 257,700 tons of phosphate and nitrogen fertilizers in the fiscal year 1956 was a 26% decrease from the previous year. TVA is not a commercial producer of fertilizers, and its output is used in farm test demonstrations and in educational sales conducted by farm co-operatives and private industry firms in 35 states. The programs emphasize improved fertilizer practices and stimulate demand for fertilizers to be supplied by private industry. The results of TVA's fertilizer research and development are made available to private industry, and through 1956 more than 90 licences had been issued to commercial firms for use of TVA-developed processes or equipment.

TVA seeks to encourage the states in resource development activities. In the fiscal year 1956, state forest nurseries for the first time produced more seedlings for use in reforestation than did TVA. In two decades, nearly 300,000 ac. had been reforested, with 90% of the seedlings provided by TVA.

Members of the TVA board of directors in 1956 were Brig. Gen. Herbert D. Vogel, retired, chairman; Harry A. Curtis; and Raymond R. Paty. (See also ELECTRICAL INDUSTRIES.)

(K. R. K.)

Tennis. Australia dominated international amateur lawn tennis play in 1956. The two Australian Davis cup champions, Lewis Hoad and Kenneth Rosewall, won all the important international championships between them and, following a round-the-world tour, returned to Australia to participate in various state championships prior to defending the Davis cup in the 1956 Challenge round at Adelaide at the end of the year.

Davis Cup.—Thirty-two nations challenged Australia for the Davis cup in 1956. Italy again won the European zone competition, defeating Sweden 5-0. The United States defeated Canada and Mexico to win in the American zone. In the interzone semifinal, the U.S. defeated Italy 4 to 1 at Forest Hills, N.Y., in September. Nicola Pietrangeli and Orlando Sirola played for Italy and the U.S. players were E. Victor Seixas, Hamilton Richardson, Samuel Giammalva and Michael Green. The winner was scheduled to meet India, which won the eastern zone, in the interzone final at Perth, Austr., early in Dec. 1956, for the right to challenge Australia.

Men's Singles.—Hoad won the singles championships of Australia, France and Great Britain and needed only to win the U.S. title to equal the 1938 record of W. Donald Budge, the only player who ever won the world's four major championships in the same year. However, Hoad was beaten by Rosewall in the all-Australian final of the U.S. championship at Forest Hills.

A SMASH by Richard "Pancho" Gonzales, who established himself as the outstanding professional player of 1956 after a series of matches against Tony Trabert. Of the 101 matches played, Gonzales won 74

The score was 4-6, 6-2, 6-3, 6-3. In the Australian and Wimbledon finals Hoad had beaten Rosewall in four sets. At Forest Hills, Richard Savitt of the U.S., former Australian and Wimbledon singles champion, gave Rosewall his toughest battle in the U.S. championship which the Australian won, 6-4, 7-5, 4-6, 8-10, 6-1. Seixas, the only American to reach the semifinals at Forest Hills, was beaten by Rosewall, 10-8, 6-0, 6-3. Hoad also won the Italian championships, defeating Sven Davidson of Sweden who also was runner-up to Hoad for the French title. Rosewall, after winning the U.S. title, lost to Herbert Flam, U.S., in the final of the Pacific Southwest championship at Los Angeles, Calif. Earlier in the U.S. Rosewall lost to Richardson in the Eastern Grass Court championships which Richardson won, but Rosewall defeated Richardson to win the important Newport Invitation tournament.

Men's Doubles.—Hoad and Rosewall won recognition as the

world's top amateur doubles team as well as the foremost singles players. They won the doubles championships of Australia, Great Britain and the United States. Rosewall did not compete in the French championships in which Hoad was runner-up in the doubles with his countryman Ashley Cooper to Robert Perry of the U.S. and Don Candy, another Australian. In winning the Australian doubles title, Hoad and Rosewall defeated Mervyn Rose and Candy in straight sets; at Wimbledon they beat the Italian team of Pietrangeli and Sirola in the final and, at Longwood, Hoad and Rosewall downed the American team of Seixas and Richardson in four sets to gain the U.S. title. The two Australians completed their victorious tour by winning the Pacific Southwest doubles championship at Los Angeles.

Juniors.—For the first time an Australian player won the U.S. junior championship when left-handed Rodney Laver defeated Chris Crawford at Kalamazoo (Mich.) college. Ronald Holmberg, U.S., previously had defeated Laver for the British junior title at Wimbledon.

Women's Singles.—Since Doris Hart, U.S. women's champion in 1954 and 1955 had become a professional, two U.S. players, Shirley Fry and Althea Gibson, stood out among the women players in 1956. For the first time in the 12 years that she had been ranked among the first ten in the U.S., Miss Fry won the women's singles at Wimbledon and also at Forest Hills. In capturing her first British championship, Miss Fry defeated Miss Gibson, Louise Brough, former Wimbledon and U.S. champion, and in the final defeated Angela Buxton of Great Britain. In winning the U.S. title Miss Fry beat Miss Gibson in the final. She also defeated Miss Gibson to win the U.S. clay court title. Miss Gibson made a successful long tour abroad which included a trip to southeast Asia as a member of a U.S. good-will team. In Europe she defeated England's foremost players, Shirley Bloomer, Angela Buxton and Angela Mortimer, to win the French championship.

Women's Doubles.—In doubles the U.S. pair of Margaret Osborne duPont and Miss Brough scored their 11th win of the U.S. women's doubles championships at the Longwood Cricket club, Chestnut Hill, Mass. They had won the title nine years in succession, from 1942 to 1950, and in 1955 and 1956. Miss Gibson further distinguished herself by teaming with Miss Buxton to win the women's doubles championships of France and of Great Britain.

Wightman Cup.—At Wimbledon the U.S. team of Shirley Fry, Louise Brough, Dorothy Knodel and Beverly Baker Fleitz defeated Great Britain's team of Misses Mortimer, Buxton, Bloomer and Patricia Ward, to retain possession of the Wightman cup. (E. S. BR.)

Texas. Texas is a west south central state of the United States bordered on the southeast and southwest by the Gulf of Mexico and Mexico, respectively. It became a state through annexation Dec. 29, 1845, of the republic of Texas, 1836-45. Known as the "Lone Star state" from the single star in the flag of the republic, it is the largest state in the union. Land area, 263,513 sq.mi.; inland water, 3,826 sq.mi.; submerged coastal area, 5,078 sq.mi.; total, 272,417 sq.mi. Pop.: (1950 census) 7,711,194; (U.S. census provisional est. July 1, 1956) 8,925,000. Urban population (1950) 4,838,060, or 62.7%; total rural, 2,873,134, or 37.3%, divided into 1,580,867 nonfarm rural and 1,292,267 farm rural; white 6,726,534, nonwhite 984,660. Capital, Austin, with pop.: 132,459 (1950); 167,100 (1955 est.). Following are other cities ranked by population in 1950 with unofficial estimates for 1955 in parentheses: Houston 596,163 (714,000); Dallas 434,462 (575,000); San Antonio 408,442 (597,300); Fort Worth 278,778 (343,685); El Paso 130,485 (182,505); Corpus Christi 108,287 (165,000); Beaumont 94,-

014 (106,000); Waco 84,706 (112,600); Amarillo 74,246 (110,000); Lubbock 71,747 (110,000); Wichita Falls 68,042 (102,100).

History.—The Democratic primary race for governor was the principal political event of 1956. Principal contenders in the first primary were United States Sen. Price Daniel, Ralph Yarborough, a contestant for the place in each of the two preceding primaries, and W. Lee (Pappy) O'Daniel, former governor and former United States senator. The vote in the first primary was Daniel 622,321, Yarborough 460,134 and O'Daniel 347,757. In the second primary, Daniel won 698,187 to 694,844 over Yarborough. After the second primary, Daniel tendered his resignation from the United States senate effective Jan. 15, 1957, or earlier.

In the May 1956 convention of the Democratic party, the liberal element regained control from the conservatives who had been in direction of the party during the last two years. In the Sept. 1956 convention, however, Governor-nominate Daniel was able to gain control by a narrow margin through a coalition of conservatives and moderates.

The issue of segregation of Negro and white children in the public schools was a disturbing factor in many points of the state during 1956. At the end of the year, fewer than 10% of the 1,857 independent and common school districts had abolished segregation. Picketing and other mass demonstrations occurred at some points, notably at the town of Mansfield in Tarrant county. Where there was delay in abolishing segregation, school boards usually protested lack of time to make the adjustments.

Charges of dishonesty and poor administration in the state's land office and insurance department affairs, begun in 1955, were a campaign issue in the 1956 elections. Nine amendments to the state constitution were submitted to the people in the November elections, most important of which were those proposing (1) broadening tax powers of the county commissioners courts; (2) giving the legislature wider authority to use its own discretion in providing assistance to needy persons; (3) providing for different procedure in trial of lunacy cases, including waiver of jury trial; (4) providing greater freedom in investing the permanent funds of the University of Texas and A & M college of Texas; and (5) reorganizing the veterans' land board, increasing regulation of its activities and increasing from \$100,000,000 to \$200,000,000 the amount of bonds it may issue for assisting in the veterans' land-purchase program.

In the general election, Nov. 6, and the special election, Nov. 13 (set on this date by mistake of the legislature), the nine constitutional amendments were adopted. The Democratic ticket carried in Texas, as usual, except the vote for president, in which Pres. Dwight D. Eisenhower received a considerable majority, and in the Dallas district, where a Republican, Bruce Alger, was re-elected to congress.

The drought which had prevailed over most of Texas since 1949 continued throughout the crop-growing season of 1956, seriously cutting yields and drying livestock ranges. The declining flow in streams and the falling water tables in underground supplies also menaced the water supplies of approximately 50% of Texas' cities and towns, according to report of the state board of water engineers late in 1956.

Principal state officials for the term ending Dec. 31, 1958, were: governor, Price Daniel; lieutenant governor, Ben Ramsey; attorney general, Will Wilson; comptroller of public accounts, Robert S. Calvert; treasurer, Jesse James; state commissioner of education, J. W. Edgar (indefinite appointive term); commissioner of agriculture, John C. White; commissioner of the general land office, J. Earl Rudder; railroad commissioners, Ernest O. Thompson, Olin Culberson and William J. Murray (six-year overlapping terms).

Education.—Scholastic population for the school year 1955-56 was 1,853,492, according to the Texas State Education agency. Number of schoolteachers, 75,246; average salary, \$3,850. Scholastic apportionment from state available school fund was \$76 per scholastic per annum. In addition, there was supplementary state aid to local districts through the Gilmer-Aikin (equalization) act. Total revenues for school purposes, unofficial estimate, were approximately \$450,000,000, of which a little more than half came from local funds, a little less than half from state funds and less than 1% from federal funds.

Social Insurance and Assistance.—At the close of the fiscal year Aug. 31, 1956, 224,474 aged Texans were receiving monthly payments of \$41.88; 6,580 needy blind persons were receiving an average of \$45.81 monthly; and 66,864 dependent children (representing 21,705 families) were receiving an average of \$21.01 per child, or \$64.73 per family represented. These figures are according to the state department of public welfare. Total payments for the fiscal year were \$130,692,741.50, including \$111,410,645.25 for old-age assistance, \$15,731,429.00 for aid to dependent children and \$3,550,667.25 for aid to the blind.

Transportation and Communication.—There were 54,707 mi. in the state designated highway system at the end of the fiscal year Aug. 31, 1956, according to the state highway department. They were distributed: federal aid primary system, 15,935 mi.; exclusive state-aid highways, 10,439 mi.; farm-to-market roads, 28,333 mi. There were 50,851 mi. of these highways having asphalt, concrete or brick pavement. Total road system of Texas, including all rural roads, measures about 200,000 mi. Total receipts for year ending Aug. 31, 1956, were \$231,425,100; disbursements were \$212,524,394. Total number of vehicles registered March 31, 1956, was 4,087,165.

Texas railroad mileage Aug. 31, 1956, included 15,378.57 mi. of main-line track and 6,274.29 mi. of siding and other auxiliary track. Number of passengers carried during fiscal 1956 was 4,079,815; passenger revenue, \$17,537,361. Tons of freight, 166,742,660; freight revenue, \$395,422,200. There were 654 Texas airports listed by the Civil Aeronautics administration May 31, 1955, of which 43 were in use by standard air lines. Passengers enplaned (1955), 2,327,364; airmail enplaned, 8,633 tons; express cargo, 18,236 tons. A total of 136,927,140 short tons passed through Texas gulf ports during 1955, according to the U.S. army engineers. As of Aug. 1, 1956, there were 2,649,395 telephones in Texas.

State Government Finance, Banking.—State government receipts for the fiscal year ended Aug. 31, 1956, were \$913,422,792. Expenditures were \$805,686,551. Principal sources of revenue were: net motor fuel taxes, \$157,325,551; gross production tax on crude oil, \$136,295,770; mineral leases and rentals, \$79,548,891; motor vehicle license fees, \$52,423,152; ad valorem tax, \$30,521,892; production tax on natural gas, \$40,855,308; franchise taxes, \$31,817,516; occupation tax on insurance companies, \$22,450,937; all federal aid, including public welfare and highways, \$173,938,006. Principal expenditures were for education, \$323,980,814; pensions and other public welfare, \$147,274,441; highways, \$10,237,740; eleemosynary and correctional institutions, \$42,999,705. At the beginning of the year 1956, there were 487 national and 575 state banks in Texas; total 1,062, according to the Federal Reserve Bank of Dallas. National banks had \$9,188,735,000 in resources and \$8,496,017,000 in liabilities. The state banks had \$2,626,044,000 in resources and \$2,439,286,000 in liabilities. Total resources all banks, \$11,814,779,000; liabilities, \$10,935,303,000.

Agriculture.—Because of the drought that prevailed over most of Texas during 1956, there was a general decline in crop and livestock production. Total acreage harvested in Texas in 1956 was 24,500,000, according to the October estimate of the U.S. department of agriculture. On basis of

Table I.—Leading Agricultural Products of Texas

Crop	Indicated, 1956	1955	Average, 1945-54
Cotton lint, bales	3,460,000	4,039,000	3,518,000

Oranges, boxes	2,300,000	1,600,000	2,946,000

Source: U.S. Department of Agriculture.

the first six months, crop cash income for 1956 was \$809,000,000; cash income from livestock, \$771,000,000; total, \$1,580,000,000. This was a decline from \$1,822,956,000, total cash farm income for 1955 in Texas. The total number of farms and ranches in Texas (census of 1954) was 292,946, a decrease from 331,567 in 1950.

The number and value of livestock on farms, Jan. 1, 1956, were as follows: all cattle, 8,586,000, valued at \$609,606,000; hogs, 1,100,000, valued at \$16,060,000; sheep, 5,208,000, valued at \$56,561,000; goats, 2,775,000, valued at \$19,425,000; horses and mules, 298,000, valued at \$13,410,000; chickens, 15,335,000, valued at \$15,335,000; turkeys, 375,000, valued at \$1,725,000.

Manufacturing and Industry.—Employment in Texas, except agriculture, in Aug. 1956, was 2,901,500, of which 533,300 were employed in manufacturing, according to the Texas Employment commission. This was a slight increase over the corresponding figures for Aug. 1955. Outstanding individual events of the year were the placing of several new large chemical industries in the gulf coast country and developments in the metropolitan area between Dallas and Fort Worth. (S. McG.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in Texas in 1953 and 1954 whose value exceeded \$100,000. In 1954 Texas produced all the U.S. commercial output of magnesium metal. It was far in the lead in output in bromine, natural gas, crude petroleum and sulphur; it had the third largest output and shipments of cement and output of asphalt; and it was fourth in output of bentonite, lime, salt, and sand and gravel and fifth in stone output. Texas has the only commercial production of helium in the world. It also has the only tin plant in the U.S.—the government-owned tin smelter at Texas City. In 1954 Texas was first among the states in the value of its mineral output, with 25.37% of the U.S. total.

Textile Industry. Consumption of the four major textile fibres (cotton, wool, silk and the man-made fibres) in the United States from 1953 through the first half of 1956 is shown in Table I.

During the first half of 1956, fibre consumption was at an annual rate of 6,686,000,000 lb. or at about the same level as the previous year. In comparison, 1939 consumption was 4,500,000,000 lb.

Cotton represented 68% of the poundage of all fibres consumed during the first half of 1956, compared with 66% in 1955 and 69% in 1954. The share of the market held by raw wool remained between 6% and 7% of the total. Use of man-made fibres grew from 24½% in 1954 to 27½% in 1955, but during the first

Table I.—United States Fibre Consumption

(In millions of pounds)

	1953	1954	1955	1st half 1956

half of 1956 it decreased to 25% of the total. Silk consumption remained nominal at less than 1% of the four fibre total.

Prices.—The Sept. 1956 price of raw wool (scoured basis, at Boston, Mass.) was \$1.38 a pound, marking an increase from the low level of \$1.28 per pound in April 1956.

Table II.—Selected Textile Prices in the United States*
(In cents per pound)

Annual Averages	Raw Cotton	Raw Wool	Raw Silk	Rayon Yarn	Rayon Staple
1950	36.2	199.2	349.4	73.2	36.1
1951	41.4	270.5	480.5	78.0	40.0
1952	38.8	165.3	515.6	78.0	39.7
1953	33.0	172.9	529.5	78.0	35.0
1954	34.1	170.6	492.0	78.0	34.0
1955	33.6	142.1	459.4	82.0	33.7
1956†	34.4	131.4	447.9	85.8	32.0

*Cotton is the 10-market spot price for 1³/₁₆-in. middling cotton, through 1954; beginning with 1955, the 14-market price is shown. Wool is fine-grade territory wool, scoured basis, at Boston, Mass. Silk is the 20-22 AA grade. Rayon yarn is 150-denier viscose rayon yarn. Rayon staple is 1¹/₂-denier, 1¹/₂-in. bright viscose rayon staple. †First nine months of 1956 for all prices except silk, which is a seven-month average.

The Sept. 1956 cotton price was 31.9 cents a pound, a decline from the year's high of 35.5 cents reached in the second quarter, despite the fact that the 1957 cotton crop was expected to be the smallest since 1882. The main reason for the decline was a decrease in the Commodity Credit corporation's loan rate from 90% to 82¹/₂% of parity.

For the first three quarters of 1956, the prices of both rayon and acetate staple remained at 32 cents a pound; the rayon staple price was reduced from 34 cents and the acetate staple price from 37 cents a pound late in 1955. In Jan. 1956, the price of 150-denier rayon filament yarn was raised to 86 cents a pound from the previous price of 82 cents established in March 1955.

Broad Woven Goods.—Table III outlines the production of cotton, woollen and worsted, man-made fibre and silk broad woven fabrics, the largest fibre consuming branch of the textile industry, for 1953 through the first half of 1956. Production

Table III.—Broad Woven Goods and Tire Cord Production

	1953	1954	1955	1st half 1956
Broad woven fabrics (millions of linear yards)				
Cotton fabrics	10,203	9,773	10,100	5,345
Man-made fibre fabrics*	2,405	2,245	2,573	1,197

Cotton (except chafer fabric)	16	13	16	6
Nylon‡	18	30	50	31
Rayon	430	324	406	181
Cotton chafer fabric	57	47	51	23
Total	521	414	523	241

*Including silk. †Excluding carpets, rugs and felts. ‡For the first half 1956 includes 2,500,000 lb. of other man-made fibre tire fabrics, including chafer.

during the first half of 1956 was at an annual rate of 13,428,000,000 yd., an increase of 3¹/₂% over the 1955 total.

Through the first six months of 1956, tire cord and fabric production was at an annual rate of 482,000,000 lb., a decline of 8% from 1955 and 20% below the all-time record set in 1951. For several years, high tenacity rayon represented the bulk of the yarn used; however, the use of nylon had increased from 4,000,000 lb. in 1951 to a 1956 annual rate of 62,000,000 lb.

Per Capita Fibre Consumption.—Civilian per capita consumption of cotton, wool and the man-made fibres in the first half of 1956 was at an annual rate of 36.1 lb., a decline of 0.3 lb.

Table IV.—U.S. Civilian Per Capita Consumption of Certain Textile Fibres
(In pounds)

Year	Total	Man-made	Wool	Cotton
1950	40.4	9.2	4.4	26.8
1951	36.4	8.5	2.6	25.3
1952	34.9	8.5	3.1	23.3
1953	36.2	8.6	3.4	24.2
1954	32.5	8.2	2.6	21.7
1955	36.4	10.3	2.9	23.2
1956*	36.1	9.1	3.2	23.8

*First half 1956 data multiplied by two to determine the annual rate.

MINIATURE LOOM designed by a textile manufacturing concern in 1956 to weave samples of new fabrics for distribution to buyers and customers. The machines are scale models of the large looms used in the factory

or 1% from the 36.4 lb. consumed in 1955, as shown in Table IV. Cotton consumption was at a 1956 annual rate of 23.8 lb., an increase of 2¹/₂% over 1955, and wool usage was running at the rate of 3.2 lb. per year, a gain of 10¹/₂%. The 1956 consumption rate for the man-made fibres of 9.1 lb. per year was 1.2 lb. or 11¹/₂% below the record high of 10.3 lb. established in 1955.

Imports and Exports.—During the first half of 1956, the annual rate of United States exports of all textile fibres and manufactures exceeded imports by a narrow margin, the exports being valued at \$1,131,000,000 and the imports at \$1,073,000,000. While the United States is traditionally a net exporter of textile fibres and products, mainly raw cotton, cotton textiles and non-cellulosic man-made fibres, the 1956 export balance of \$58,000,000 was smaller than in any recent year; for example, the export balance was \$110,000,000 in 1955 and \$621,000,000 in 1954.

While the United States is traditionally a net importer of raw wool and manufactured wool textiles, an additional important 1955 import item was rayon staple. There were 172,000,000 lb. valued at \$46,000,000 imported that year.

Canadian Textile Developments.—During 1955, the Canadian textile industry experienced a general improvement over the low levels of the previous year, and a higher volume of business was maintained in some sections of the industry on into 1956.

As one measure of the increased activity, the textile industry working force in mid-1956 numbered about 83,000 persons, compared with 77,000 two years earlier. Further, retail apparel sales had been on the uptrend through mid-1956, rising between 6% and 10% over the same period of 1955. Another favourable factor was the relative stability of textile raw material prices through midyear. In contrast to the general level of consumer textile business done, however, Canadian mills were experiencing difficulty in maintaining their share of the market because of increasing imports of foreign textiles and apparel.

This problem showed up particularly in the man-made fibre section of the textile industry. Man-made fibres accounted for about 27% of all fibres consumed in 1955, and there were about

18,000 workers in the industry. In spite of an increase in man-made fibre fabric usage from 84,000,000 yd. in 1954 to 93,000,000 yd. in 1955, the share of this business done by Canadian mills declined from 75% in 1954 to 73% in 1955. This trend continued in 1956.

(See also LINEN AND FLAX; SILK; WOOL.) (S. B. H.)

Thailand

(SIAM). A kingdom of southeastern Asia, Thailand is bounded west and northwest by Burma, north-east and east by Laos and Cambodia and south by Malaya. Area: 198,270 sq.mi. Pop.: (1947 census) 17,442,689; (1956 est.) 20,686,000. Language: Thai (Siamese) 74%; Chinese 20%; Indian and Malayan 6%. Religion (1947 est.): Buddhist 95%; Moslem 4%. Capital (1947 census): Bangkok 620,830. Ruler, King Phumiphon Adundet (or Bhumibol Aduladej); prime minister in 1956, Marshal Pibul Songgram.

History.—During 1956 Thailand modified somewhat the rigidity of its attitude to the communist countries. This was partly because during the first half of the year the country had an unfavourable balance of visible trade amounting to 460,000,000 bahts. It was announced in May that the Thai legation in Moscow and the Soviet legation in Bangkok would be raised to the status of embassies as from June 1, and the Soviet government put forward a proposal for increased trade between the two countries. On June 21 the government announced the lifting of the ban on the export of nonstrategic goods to China. A new trade arrangement with Japan was also signed on April 9.

The prime minister, Marshal Pibul Songgram, stated on March 9 that his government had requested the United States to convert part of their defense aid into economic aid. A total of more than \$34,000,000 in aid was agreed upon through the U.S. International Cooperation administration in the fiscal year to June 30. This aid was devoted to a number of purposes of which road building was one of the more important. On March 13 U.S. Secretary of State John Foster Dulles and Prince Wan Waithayakon, the foreign minister, signed an agreement by which the United States was to provide Thailand with an atomic reactor for experimental purposes. The first Australian aid under the Colombo plan was received in September.

Despite the movement toward a less openly committed position in international politics, Thailand continued to be an active partner in the South East Asia Treaty organization and on Feb. 6 invited all the signatories of the treaty to participate in manoeuvres known as Exercise "Firm Link." This exercise took place on Feb. 15, 16 and 17 and Thai, U.S., Australian, British, Filipino and New Zealand forces took part. Thailand also continued to play a part in the United Nations and Prince Wan Waithayakon was elected president of the general assembly on Nov. 12.

The program introduced during 1955 to liberalize political affairs appeared to come to a standstill early in 1956. A bill to lower the qualifying age for candidates for election to the assembly from 30 to 20 met strong resistance in the prime minister's own party and on Feb. 21 the government introduced a ban on public gatherings. At the same time members of a party of Siamese who had returned from a visit to China were arrested. On May 11, however, Marshal Pibul stated that the government was considering a plan for more local self-government. There were changes in the cabinet in April; Marshal Phin Chunhawan, the minister of agriculture, was relieved of his position as deputy prime minister and was succeeded in this position by Lieut. Gen. Banyat Devahastin, who ceased to be minister for industry, being succeeded by his deputy, Maj. Gen. Pramarn Adireksarm.

Education.—Schools: state primary (1954) 19,331, pupils (including secondary, June 1953) 3,264,499, teachers (including secondary, June 1953) 93,597; state secondary (1954) 267, pupils 96,300; pupils at private

secondary schools 110,797; vocational (1954) 194, pupils 40,093, teachers 2,059. Institutions of higher education (1954) 12, including 5 universities, students 21,050, teaching staff 711.

Finance and Banking.—Monetary unit: baht or tical, with a buying rate of 20.73 baht to the U.S. dollar and a selling rate of 20.89 baht to the U.S. dollar (April 1956). Budget (1955 est.): revenue 4,180,000,000 baht, expenditure 5,416,000,000 baht; (1956 est.) revenue 4,752,500,000 baht, expenditure (ordinary) 4,647,500,000 baht, (capital) 1,265,900,000 baht. Currency circulation (Dec. 1954) 6,058,000,000 baht, (Dec. 1955) 6,915,000,000 baht. Deposit money (Dec. 1954) 1,511,000,000 baht, (Dec. 1955) 1,739,000,000 baht. Gold and foreign exchange (March 1955) U.S. \$294,000,000, (March 1956) U.S. \$308,000,000.

Foreign Trade.—(1955) Imports 7,201,000,000 baht, exports 6,521,000,000 baht. Chief exports (1955): rice 44%; rubber 25%; tin 6%.

Transport and Communications.—Roads (1954) 7,520 km. Motor vehicles in use (1953): passenger 20,832; commercial (including buses) 21,295. Railways (1954) 3,354 km.; passenger-km. (1954) 2,349,000,000; freight, ton-km. (1955) 777,600,000. Shipping (1953): merchant vessels of 500 gross tons and over 10, gross tonnage 13,900. Air transport (1955): 49,656,000 passenger-km.; freight, 1,281,600 ton-km. Telephones (Jan. 1955) 9,420. Radio receiving sets (1954) 108,000.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): rubber (exports) 132,300 (119,600); rice 7,711,000 (5,709,000); soybeans 20,000 (22,000); sesame 11,200 (9,900); peanuts 94,000 (92,000); cotton, lint 8,000 (9,000); cottonseed 14,000 (15,000); sugar, crude brown 30,000 (30,000); tobacco (1954) 52,600, (1953) 49,800; teak (1954) 408,002 sq.m. Livestock (1953): cattle 5,548,734; buffaloes 5,402,210; pigs 3,327,281; horses 213,868; elephants 12,695; poultry 46,061,371. Fish landings (metric tons, 1954): 251,800.

Industry.—Production (1955): electricity (Bangkok only) 189,600,000 kw.hr., (Bangkok and Thonburi, 1954) 196,124,307 kw.hr.; tin concentrates (metal content) 11,160 metric tons; cement 386,400 metric tons; tungsten ore (metal content, 1954) 718 metric tons. Estimated cotton cloth output (1954): 40,000,000 yd. (A.S.B.O.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Thailand* (1955).

Theatre. The 1955–56 season proved the most prosperous one that the theatre in the United States had enjoyed since the end of World War II, the trade weekly, *Variety*, reporting that the Broadway stage and its touring companies accumulated a total gross of \$58,000,000 during the year.

But while the war era saw the constant production of much shoddy fare to meet the indiscriminating tastes of the entertainment-hungry, the 1955–56 season was one of relatively high artistic values. Many good plays had lengthy engagements. *My Fair Lady*, a handsome and witty musical comedy version of G. B. Shaw's *Pygmalion*, became an enormously popular hit, and the off-Broadway groups found eager audiences for their revivals of Anton Chekhov, Eugene O'Neill and Bert Brecht.

Extremely high production costs and the shortage of Manhattan playhouses remained the New York theatre's most pressing problems, and as a result of the scramble for stage space two of the year's most interesting offerings—Tyrone Guthrie's mounting of Christopher Marlowe's *Tamburlaine the Great*, with Anthony Quayle as the barbaric Asian conquerer, and Sean O'Casey's drama of the 1913 dock strike in Dublin, *Red Roses for Me*, a work rich in poetic beauty—were forced to withdraw after brief runs.

No new native play of important stature appeared on the scene, but O'Neill's last work, an autobiographical tragedy concerning its author's unhappy youth, *Long Day's Journey into Night*, was published after receiving its world première at the Royal Dramatic theatre in Stockholm (Feb. 1956) and was announced for U.S. production during 1957.

The Diary of Anne Frank, by Frances Goodrich and Albert Hackett, based on the journal of an adolescent girl done to death in a German concentration camp in 1944 which told of the plight of a Jewish family hiding in an Amsterdam attic during the Nazi occupation, won both critics and public, thanks to a moving presentation directed by Garson Kanin and acted by Susan Strasberg as the young daughter and Joseph Schildkraut as the hunted father.

There was only light applause and a short engagement for Arthur Miller's double-bill, *A View From the Bridge*, two short dramas of New York waterfront life, but Tennessee Williams' *Cat on a Hot Tin Roof*, William Inge's *Bus Stop*, and *Inherit the Wind* by Jerome Lawrence and Robert E. Lee—all held over

from the previous season—continued to draw playgoers. The television writer Paddy Chayevsky, author of *Marty*, wrote a comedy, *Middle of the Night*, about a middle-aged, middle-class businessman who falls in love with a lady 25 years his junior, and Edward G. Robinson, returning from the motion pictures, enacted it realistically. The subject matter of two of the new plays—*A Hatful of Rain*, a study of narcotic addiction, and *Time Limit*, which studies some brain-washed soldiers—attracted discussion, though the plays themselves were not of the first order.

Virtually all the new comedies seemed to have had stars in mind. *The Great Sebastians*, a Howard Lindsay-Russell Crouse melodrama of the comic adventures of a vaudeville magician and his wife behind the "iron curtain," served Lynn Fontanne and Alfred Lunt as a popular vehicle; Margaret Sullavan, Robert Preston and Claude Dauphin bolstered *Janus*, a sort of Palais-Royal triangle farce written by an American, Carolyn Green; David Wayne, assisted by a promising young actress, Sarah Marshall, charmed audiences with his humorous characterization of a weak-minded but engaging southern gentleman accused of murder in *The Ponder Heart*; Shirley Booth rescued the feeble *Desk Set*; and Thornton Wilder tailored a 100-year-old Viennese farce by Johann Nestroy, *The Matchmaker*, to suit the effusive talents of Ruth Gordon.

George Axelrod's *Will Success Spoil Rock Hunter?*, though starless, had to do with the Hollywood star-makers, and *No Time for Sergeants*, a cartoon of an amiable hillbilly undergoing basic military training, made a star of Andy Griffith, who played the out-of-order rookie.

Several hits came from abroad. The Comédie Française undertook its first U.S. tour in its 300-year history, playing in repertory the classic comedies of Molière. Marivaux and Beaumarchais. *Tiger at the Gates*, Christopher Fry's version of Jean Giraudoux's *La Guerre de Troie n'aura pas lieu*, arrived with the British actor Michael Redgrave in the leading role and repeated its London success on Broadway. Lillian Hellman's free adaptation of Jean Anouilh's St. Joan play, *The Lark*, was another hit of Gallic origin, and in it Julie Harris as the Maid and Christopher Plummer as Warwick contributed two of the season's outstanding performances.

Another Parisian visitor was Marcel Marceau, the extraordinary French mime, whose one-man show of pantomime playlets caught the public fancy and was repeated to great acclaim on television.

From England came Enid Bagnold's comedy about an eccentric country household, *The Chalk Garden*, memorable for its good dialogue and the acting of Gladys Cooper and Siobhan McKenna (who later in the year scored a tremendous personal success in a revival of Shaw's *Saint Joan*). Noel Coward's 1925 parlour piece, *Fallen Angels*, was revived with Nancy Walker and Margaret Phillips, and the D'Oyly Carte Opera company returned with its ever-welcome repertory of Gilbert and Sullivan.

Ugo Betti's strange Italian sex play, *Island of Goats*, was an immediate failure, but Samuel Beckett's *Waiting for Godot*, in which two tramps waited wistfully and in vain for an answer to life's mysteries, was well received, and there was much praise

SCENE FROM *LONG DAY'S JOURNEY INTO NIGHT* by the U.S. playwright Eugene O'Neill, who wrote the play in 1940 but forbade any production until after his death. The play opened in Stockholm, Sweden, in 1956

for Bert Lahr, who appeared as one of the talkative vagrants. The musical-comedy stage in the United States had one of the greatest hits in its history when *My Fair Lady* opened. Based on Shaw's *Pygmalion*, the book by Alan Jay Lerner managed to retain the Shavian wit and spirit, and a melodious score was supplied by Frederick Loewe, while Cecil Beaton contributed some sumptuous costumes and Oliver Smith some stunning sets. Rex Harrison as the woman-hating phonetics professor, Julie Andrews as the Covent Garden flower girl whom he transforms into a lady, and Stanley Holloway as the cockney father were perfect, and how to obtain tickets to *My Fair Lady* became a national problem.

More pretentious but less satisfying was Frank Loesser's *The Most Happy Fella*, an attempt to make a baby-grand opera out of Sidney Howard's old play *They Knew What They Wanted*; and *Pipe Dream*, a Richard Rodgers-Oscar Hammerstein II dramatic musical suggested by a John Steinbeck novel, proved a grave disappointment.

Of the off-Broadway ventures, a revival of O'Neill's *The Iceman Cometh* at the Circle-in-the-Square and a revival of Kurt Weill and Bert Brecht's *Threepenny Opera* at the Theatre de Lys were the most notable. (T. Q. C.)

Canada.—Canada's booming economy and general sense of prosperity was shared by the theatre throughout 1956, with players, producers, stagehands, musicians, landlords and all the rest enjoying the sense of well-being. Of greatest interest was the Stratford Shakespearean festival's decision to scrap the famous

3½-ton tent (to which 400,000 customers were attracted in three short summer sessions) and to build a permanent structure at a cost of \$1,500,000. A public campaign to raise the required money was well under way by the end of the year and the 1957 season (starring Christopher Plummer in *Hamlet*) was advertised for the new, uncompleted building in July. More than 140,000 people paid \$472,000 to see the Stratford presentation of *Henry V*, *Merry Wives of Windsor* and *Oedipus Rex* in 1956. Postseason work for the players included an engagement at the Edinburgh festival and tours of Canada and the U.S.

MARCEL MARCEAU, French pantomimist who enjoyed a successful tour of U.S. theatres and night clubs in 1956

Canada's other national-interest theatre activity, the Dominion Drama festival, was held at Sherbrooke, Que., in May, with eight amateur companies performing throughout a week before packed houses. The adjudicator, Madame Francoise Rosay, noted Parisian actress and director, awarded the top honours to the University of Toronto Alumni Drama society's production of Patricia Jourdray's *Teach Me How to Cry*. It was the first time a full-length play written by a Canadian had won. In October it was announced that the 1957 festival would be held in the new \$4,000,000 Jubilee auditorium in Edmonton, Alta., with Robert Speaight, London actor and producer, as adjudicator.

Summer stock theatre continued to grow in importance as a part of the Canadian scene. Newly renovated rural premises, offering well-known stars in lead roles of sure-fire hits, attracted an all-time record box office. University drama groups showed notable development during the year, with several alumni societies winning important competitive honours. The emergence of several new Canadian (post-World War II immigrant people) theatre groups, presenting plays in their mother tongues and in the English or French of their new homeland, was a matter of interest, and all the specialty theatre organizations, e.g. the Montreal Yiddish theatre and the Children's theatre in Regina, Sask., enjoyed a successful year. Vancouver's Theatre Under the Stars, a well-established west coast institution, had its best season, and live theatre in the oil-boom cities of Edmonton and Calgary, in Alberta, received wide public support. (WR. B. H.)

Great Britain.—Although a few of the provincial repertory theatres reported good business during 1956, the picture of the theatre outside London could hardly be called bright. Television had dimmed the lights everywhere. In London it was one of the least interesting winter seasons in memory and from October to February no new British play of note was mounted in the West End. *Lucky Strike*, a matinee or woman's play about factory feuds, made a poor showing beside the strident American musical comedy on a somewhat similar theme: *The Pajama Game*. *The Queen and the Rebels* by Ugo Betti made an impression as a neo-Galsworthian drama of much striking power and Irene Worth's performance in the lead was applauded.

On the other hand, a 20-yr.-old sensation from Germany, the Kurt Weill and Bert Brecht version of *The Beggar's Opera* (*Die Dreigroschenoper*), made a belated hit in London as *The Threepenny Opera*; though its nihilistic message was felt particularly inappropriate to the welfare state era, its sleazy humour and tunes ensured a transfer of the piece from the outlying Royal Court theatre to the West End. At that theatre, after a dubious start, theatrical history was once more in the making. The English stage

company, under the direction of George Devine, was promoting a "writer's theatre," on the analogy of the author's theatre which Bernard Shaw and Granville Barker had set in opposition to the dominant actor-manager's theatre at the turn of the century on the same stage. Celebrations of the Shaw centenary were thin and inadequate. Two novelists of repute, Angus Wilson with *The Mulberry Bush* and Nigel Dennis with *Cards of Identity*, scored near successes.

Arthur Miller's antiwitch-hunting play—*The Crucible*—was a third choice for this repertory company and its biggest success—or most controversial novelty—was *Look Back in Anger* by a youthful and, at the time, unemployed actor John Osborne. The piece had more in it than mere scandal value. Probably the best English comedy of this or some other years was Enid Bagnold's *The Chalk Garden* which came to England by way of the United States where it was first recognized for its high-mettled merits and lapidary dialogue. The social wit and light-fingered allegorical flourishes of the play drew from Dame Edith Evans and Dame Peggy Ashcroft, as *chatelaine* and *governess* respectively, performances of great brilliance, seen to be all the more rare when the parts passed into other hands.

Hotel Paradiso, Georges Feydeau's almost classically Parisian farce of a wild night in a low hotel, had a dazzling Chaplinesque performance by Alex Guinness, décor by Osbert Lancaster and production by Peter Glenville which had the speed of an old silent film. A strong comedy of a rather charade-like type was Peter Ustinov's *Romanoff and Juliet*, a comedy of crossed love in embassies. A revue which touched some new fields of macabre, whimsical humour was called *Cranks* after John Cranko, the choreographer. It set a vogue. Jean Anouilh's *The Waltz of the Toreadors*, a scabrous continuation of the misadventures of the lustful general which had been begun in *Ardèle* (not a success in London), caught attention with striking performances by Hugh Griffith and Beatrix Lehmann. The garrulous audacity of the writing kept it running all summer. Two U.S. plays did well in London: *The Caine Mutiny Court-Martial*, already seen on film there, and *The Rainmaker*.

Thrillers were unimportant. The Watergate Theatre club, resuscitated to get around the censor's ban on certain outspoken plays from the United States, represented the largest membership theatre ever known at the Comedy theatre where three U.S. successes, *A View From the Bridge*, *Cat on a Hot Tin Roof* and *Tea and Sympathy* were due for production.

At the Old Vic the playing and production, under Michael Benthall's direction, were on the whole thin, though both Richard Burton and John Neville enhanced their reputations. The best production was Tyrone Guthrie's audaciously witty dressing of *Troilus and Cressida* in the costumes of Europe on the eve of World War I.

Europe.—The Paris Festival of Drama brought together striking examples of current work from the Balkans, Scandinavia, the United States and many other lands, though England was none too well represented by provincial Shakespeare and the usual Theatre Workshop productions. The Milan company Il Piccolo Teatro, showing such works as Carlo Goldoni's *Arlecchino: Servant of Two Masters* and Luigi Pirandello's *Tonight We Improvise* (which were brought to the Edinburgh festival), established Giorgio Strehler as a brilliant director and put the Italian theatre back on the map of Europe.

Jean Vilar with his Théâtre National Populaire also made converts to the new French style in Europe (while Jean-Louis Barrault was touring the Marigny company across the Atlantic). Maria Casares in Victor Hugo's absurd but oddly exhilarating *Marie Tudor* was among the best offerings of the company. The most significant of theatrical peregrinations was that of the Berliner Ensemble, the state-aided theatre of Bert Brecht. The long

pantomimic version of *The Caucasian Chalk Circle* and the now no longer new *Mother Courage* had their effect. While this eastern German company had been infiltrating the west, western German theatres were being largely a clearinghouse for British and U.S. successes in translation. Among these, not without piquancy of situation, was *The Diary of Anne Frank*, with its powerful anti-Nazi, pro-Jewish line. Paris too was full of plays translated from the English. Here interest also centred on the vogue of M. E. Ionesco's "nonsense" plays which beg all the accepted conventions of the drama. Jean Anouilh's *Ornifle*, André Roussin's *L'Amour fou* and Armand Salacrou's *Histoire de Rire* were typical creations of their authors and deserve mention to preserve the perspective in any picture of the French theatre.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Curtain Time* (1950).

Thermonuclear Weapons: see ATOMIC ENERGY.

Thomas, Charles S. (1897—), U.S. secretary of the navy, was born on Sept. 28 at Independence, Mo. He studied at the University of California and at Cornell university, Ithaca, N.Y., from 1916 to 1918 but did not receive a degree. He later moved to Los Angeles, Calif., becoming a successful business executive there. Appointed under-secretary of the navy by Pres. Dwight D. Eisenhower, he was confirmed by the senate on Feb. 6, 1953, and served until August, when he took office as assistant secretary of defense for supply and logistics. In this position he assumed charge of the U.S. program of stockpiling essential defense materials. On March 11, 1954, Thomas was nominated secretary of the navy.

On Oct. 5, 1956, Thomas overruled the findings of a general court-martial ordered by him in the case of a marine staff sergeant, Matthew C. McKeon, accused of leading an unauthorized disciplinary march at Parris Island, S.C., that resulted in the drowning of six marine recruits April 8, 1956. Thomas specifically cancelled McKeon's bad-conduct dismissal from the marines, reduced his sentence from nine months to three, and revoked a \$270 fine imposed on McKeon by the military court.

Thomas, Norman (Mattoon) (1884—), six times candidate for president of the United States on the Socialist party ticket, lecturer and writer, was born at Marion, O., Nov. 20, the son of Welling Evan Thomas, a minister of the Presbyterian Church. After graduating from the Marion high school and spending a year at Bucknell university, he went to Princeton university, from which he graduated in 1905. He later attended Union Theological seminary, New York city, from which he graduated in 1911 and became pastor of the East Harlem church, in one of the city's poorer sections.

Thomas' first activity in Socialist political campaigns was in 1917, when he actively supported Morris Hillquit, Socialist candidate for mayor of New York. He was opposed to the entry of the United States into World War I, and he resigned from his pastorate in 1918 and became secretary of the Fellowship of Reconciliation and founder and first editor of the antiwar magazine the *World Tomorrow*.

In 1921 he became a member of the editorial staff of the *Nation*, and the next year was appointed co-executive director of the League for Industrial Democracy, as associate of Harry W. Laidler, which position he held until 1936, later founding and serving as chairman of the Post War World council.

During the period 1924 to 1948 Thomas ran as Socialist candidate for many offices. He was nominated as candidate for president of the United States in 1928, 1932, 1936, 1940, 1944 and 1948, and in other years ran in New York state for governor, mayor, U.S. senator, assemblyman, congressman and other of-

fices. He received his highest vote as presidential nominee—nearly 900,000—in 1932.

During all these years, Thomas lectured extensively before educational and civic groups in all parts of the country; appeared on scores of radio and television programs; was a member of many boards, among them the national board of the American Civil Liberties union; served as a newspaper columnist; and wrote numerous books, pamphlets and articles. Among his publications were *Is Conscience a Crime?*, *America's Way Out*, *What's the Matter With New York?* (coauthor), *Human Exploitation*, *A Socialist's Faith* and *The Test of Freedom*.

During his lifetime he has not held a public office. Yet, in the words of Frank P. Graham, "Many of the things for which he has steadfastly struggled in unsuccessful political campaigns are now a part of the social code and constitutional law of the land." At his 70th birthday in Nov. 1954 men and women of all political and economic faiths paid tribute to his brilliant and dedicated service to his fellow men.

(H. W. L.)

Throat: see EAR, NOSE AND THROAT, DISEASES OF.

Tibet. This is a country of central Asia, north and northeast of the Himalayas, having autonomous status within the People's Republic of China. Area: 469,413 sq.mi. Pop. (1953 census): 1,273,969. Language: Tibetan. Religion: Lamaistic Buddhism. Capital: Lhasa. Ruler, the Ling Erh ("divine child") Pamo Tontrup or Lamu Fankha, the 14th dalai lama.

History.—On April 22, 1956, a preparatory committee of 55 members was formed in Lhasa under the chairmanship of the dalai lama to prepare the constitution of the Tibetan autonomous region of China. The panchen lama was its first deputy chairman and Gen. Chang Kuo-hua, Chinese commander of the Tibetan military district, its second deputy chairman.

Besides the two highways connecting Lhasa with China proper via Lanchow and Chengtu, two others were inaugurated in 1956, one from Lhasa via Gyantse and Shigatse to Gartok in the westernmost area, and another from Gyantse to Yatung in the south,

FIRST PLANE FLIGHT of the Peking, China, to Lhasa, Tibet, air transport service established in 1956. Photograph shows the plane, similar to a U.S. DC-3, over Potala palace, Lhasa

near the Sikkim frontier.

On May 26 the first two-engine aircraft of the Peking-Lhasa air line landed at Lhasa airport, on a trial flight. Three other airfields were being built along the Lhasa-Shigatse-Gartok road.

In May reports from Kalimpong, the Indian frontier town on the main trade route to Tibet via Sikkim, alleged that an anti-Chinese rebellion had started in eastern Tibet. In July these reports were repeated and the Indian press said that about 100 Chinese tanks arrived in Lhasa "to quell any uprising" in the capital. On Aug. 7, in Peking, Liu Ke-ping, chairman of the Nationalities Affairs committee in the National People's congress, told a foreign correspondent that the reports were grossly exaggerated and apparently related to the revolt in Feb. 1956 in the Chamdo area. He admitted that military measures were necessary.

*Preliminary.

In the first half of 1956, the U.S. industry consumed 34,168 short tons of primary and 17,584 tons of secondary tin which included tin content of imported tin-base alloys. Output of tin produced at the government-owned smelter at Texas City, Tex., was 11,220 tons and pig tin produced at secondary plants was 1,577 tons. Public law 608, approved June 26, 1956, extended the government's authority to operate the Texas City smelter to Jan. 31, 1957, and authorized disposal of the plant.

Tito (JOSIP BROZ) (1892–), Yugoslav statesman and soldier, was born at Kumrovec, Croatia, May 25, the son of a blacksmith. He served as a private in the Austro-Hungarian army in World War I and was captured in March 1915 by the Russians. In 1920 he returned to Yugoslavia and was one of the organizers of the Yugoslav Communist party. He was arrested many times, and was sentenced in 1928 to six years' imprison-

"JUST MARRIED AGAIN!" a 1956 cartoon by Dobbins of the *Boston Post* (Mass.)

ment for conspiracy. On his release in 1934 he went to Moscow. In 1936 he was sent to Paris, Fr., where he helped to organize the transport to Spain of volunteers for the international brigades. In 1937 he became secretary-general of the Yugoslav Communist party. After the German attack on the U.S.S.R. he started guerrilla warfare in Yugoslavia. In the first months of 1945 all Yugoslavia was liberated and on March 7, 1945, Tito, who meanwhile had appointed himself marshal, became prime minister and commander in chief. On Jan. 14, 1953, the national assembly elected Tito president of the Yugoslav federation, chairman of the federal executive council and supreme commander of the armed forces.

Tito visited Moscow in April 1945, and during the following two years he paid state visits to the capitals of Poland, Czechoslovakia, Bulgaria, Hungary and Rumania, signing on each occasion a bilateral treaty of friendship and mutual aid. On June 28, 1948, the Cominform published a statement denouncing Tito for his "hateful policy in relation to the U.S.S.R." In June 1950 he proclaimed that Yugoslavia was the only neutral country in the contemporary world. He pursued, however, a qualified approach to the west.

On Nov. 14, 1951, the United States agreed to make available to Yugoslavia equipment, materials and other services. On Feb. 28, 1953, a Graeco-Turco-Yugoslav treaty of friendship and co-operation was signed, which on Aug. 9, 1954, was transformed into a military alliance. On March 16–21, 1953, Tito visited Great Britain. During 1954 he paid official visits to Turkey, Greece and India; in 1955 to Burma and Ethiopia; and in 1956 to Egypt, France, the U.S.S.R. and Rumania. In July 1956 he paid a private visit to King Paul of Greece on the island of Corfu.

On Sept. 27, together with N. S. Khrushchev, on a "private visit" in Yugoslavia, he flew to Yalta, Crimea. Back in Belgrade, he received Erno Gero, first secretary of the Hungarian Communist party (Oct. 15–22), and Gheorghe Gheorghiu-Dej, first secretary of the Rumanian Communist party, and (Oct. 20–28) Chivu Stoica, the Rumanian premier.

Tobacco. Tobacco consumption in the United States in 1956 by persons over 15 years of age was estimated at 11½ lb., slightly lower than in 1955 and the lowest for the post-World War II period. About 9½ lb. was in the form of cigarettes. Approximately 425,000,000,000 cigarettes were produced, 3% more than in 1955 and second only to the record manufacture of 435,500,000,000 in 1952. Domestic use amounted to 395,000,000,000 cigarettes. Cigar consumption increased to 6,300,000,000 units, a gain of 4% over 1954; consumption of smoking and chewing tobacco was the smallest on record. Exports of unmanufactured tobacco, mostly of flue cured, amounted to 576,100,000 lb. valued at \$378,900,000 in 1955-56, the highest value of record and up 25% compared with 454,598,000 lb. valued at \$303,869,000 in the previous year. Cigarettes exported numbered about 15,000,000,000. Supplementary tobacco imports, constituting about 7% of the blend used in cigarettes and 20% to 25% of the tobacco used in cigar manufacture, were a record 115,000,000 lb., 5% above the previous year.

The 1956 total tobacco crop was indicated at 2,124,767,000 lb., 3% lower as compared with 2,195,788,000 lb. in 1955 and an average 1947-51 crop of 2,082,727,000 lb. About 1,380,000 ac. were harvested as compared with 1,497,000 ac. in 1955 and a 1,726,000-ac. average for the previous decade. Tobacco growers participated in the 1956 acreage reserve of the soil bank, earning payments by reducing acreage below the allotment established for the farm; 19,994 agreements were signed covering 31,671 ac. for possible payments of \$6.618,699, based on anticipated yields established for the particular acreage diverted, at rates varying from 8 to 18 cents per pound depending on the type of tobacco. The average yield for all tobaccos was a new record of 1,540 lb. per acre, compared with the previous record 1,467 lb. of 1955 and the 1,236-lb. average for 1945-54.

The flue-cured crop, basic to cigarette manufacture and export supplies, was indicated at 1,384,450,000 lb. The yield was indicated at a new record 1,573 lb. per acre. Auction prices for the first three-fourths of the crop averaged nearly 52 cents per pound, about the same as for a comparable period in 1955, and above the official loan rate of 48.9 cents (90% of parity) per pound. About one-fifth of the crop was put under the official support program. Carry-over stocks were 2,258,000,000 lb. against domestic use of 728,000,000 lb. in 1955-56. Exports were 553,500,000 lb., 29% larger than in 1954-55 and the largest on record.

The air-cured burley crop of 1956 was a light one of 496,113,000 lb. Carry-over stocks were 1,309,000,000 lb. and domestic usage in 1955-56 was 475,000,000 lb., about 10,000,000 lb. below the previous year. The support price was 47.2 cents per pound. Southern Maryland tobacco (type 32), which was voted under acreage allocation and price support for the first time for 1956, 1957 and 1958, was indicated at 42,500,000 lb. Carry-over supplies, a record high of 77,500,000 lb. at the beginning of 1956, were slightly reduced during the year by domestic use of about 26,000,000 lb. and exports of 11,000,000 lb. The average support price on the 1956 crop was 46.2 cents per pound; the unsupported 1955 crop, sold during the early summer of 1956, averaged 50.2 cents per pound as compared with 40.3 cents for the 1954 crop.

Production of fire-cured types (class 2), largely used for snuff, was indicated at 66,907,000 lb. Disappearance in 1955-56 of 64,000,000 lb. was 8% more than in the previous year; nevertheless, carry-over stocks increased slightly to 138,000,000 lb. The support price of 35.4 cents per pound was just under the 37.3 cents per pound average price of the 1955 crop.

Production of dark air-cured and sun-cured types increased to 31,850,000 lb. from 31,068,000 lb. in 1955. Disappearance was less and carry-over stocks increased to 86,000,000 lb. against 81,000,000 lb. in 1955. Prices approximated the support level of

France	120,702	116,980	109,070

31.5 cents per pound. The total production for all cigar types was 102,792,000 lb. as compared with 110,811,000 lb. in 1955. Stocks of cigar types declined moderately and support prices, ranging between 23.4 and 52.5 cents per pound, depending on type, were generally lower than in 1955.

World tobacco production in 1956 was a new record high of 8,427,908,000 lb. as compared with 8,391,077,000 lb. in 1955 and a prewar average of 6,619,347,000 lb. The struggle for markets became even more acute as reserve stocks were developed in consuming as well as producing countries. Research on tobacco was expanded. Turkey was reported as alarmed at the reluctance of U.S. companies to bid strongly on the 1955 crop. Several trade agreements included tobacco. The United States traded tobacco for 1,500 modern housing units for service families in Great Britain. The United Kingdom, in spite of a duty of more than eight cents per pound on tobacco, continued to be the world's leading importer, and, after the U.S., a major consumer, averaging 7.7 lb. per capita for all persons over 15 years of age.

Tonga. (FRIENDLY ISLANDS). Tonga is a kingdom under British protection, exercised through the governor of Fiji and a local British agent. There are three main island groups, Vava'u, Ha'apai and Tongatapu. Total area: 270 sq.mi. (Tongatapu Island 99 sq.mi.). Pop. (Dec. 1954 est.): 54,000, mainly Tongans, racially and linguistically Polynesian with Melanesian admixture. Religion: Christian (77% belonging to three Methodist bodies, including 18% to established Free Church of Tonga). Capital, Nukualofa (pop., 1950 est., 5,500), on Tongatapu. Queen, Salote Tupou; premier in 1956, Crown Prince Tungi; British agent and consul, C. R. H. Nott.

History.—A census of population was held in Sept. 1956. H.M.S. "Telemachus" made a sounding of 34,050 ft. in the Tonga deep, 6,000 ft. lower than any depth recorded on existing charts and within 2,000 ft. of the greatest known oceanic depth. Lord Rowallan, the chief scout, visited Tonga during the year.

(D. W. F.)

Toronto. The municipality of metropolitan Toronto is situated on the north shore of Lake Ontario, almost opposite the mouth of the Niagara river, 60 mi. N. of Buffalo, N.Y. Area: about 240 sq.mi., pop. (1955 est.) 1,304,363. The metropolitan municipality is a federation of 13 smaller municipalities—three villages, four towns, five townships and the city of Toronto (pop., 1955 est., 681,857), which is the capital of the province of Ontario.

The metropolitan municipality was established Jan. 1, 1954, by the province of Ontario, to deal with certain municipal problems common to the area. Each of the subordinate municipality governments collects two sums of money from the taxpayer. One goes to the metropolitan municipality (and its size is specified in advance by the metropolitan municipality); the other is retained by the subordinate government. The metropolitan municipality has almost complete control over major services, including education, transportation, water, sewers and highways, throughout the whole area; residual powers are retained by the subordinate governments. The metropolitan municipality is governed by a 25-member metropolitan council, consisting of a permanent chairman plus 12 township reeves and village mayors and 12 officials of the city of Toronto, the most important of the subordinate municipalities. In 1956 the chairman of the metropolitan council was Frederick G. Gardiner; the mayor of the city of Toronto was Nathan Phillips.

Between the end of 1951 and the end of 1955, population increase in the Toronto metropolitan area was recorded at 222,903, more than 55,000 a year. The metropolitan municipality was established because almost all this new population was moving into the villages and townships surrounding the city of Toronto, creating demands for services which the financial reserves of these small municipalities were not sufficient to meet. During 1956 delegations from Miami, Chicago, Niagara Falls and other U.S. cities visited metropolitan Toronto to study the workings of the "supergovernment" and the division of responsibilities between it and the local governments.

Since the Toronto metropolitan area is strategically located on one of the most modern harbours of the Great Lakes and is accessible to raw materials, low-cost power and markets for its finished products, it possesses the greatest concentration of diversified industry in Canada. In 1954 there were about 4,600 manufacturing establishments employing approximately 200,000 persons and paying wages of about \$656,000,000. Gross value of production was about \$2,500,000,000.

Metropolitan council estimates for 1956 provided for a gross expenditure of \$73,920,822 (1955 gross figure \$62,528,455) with \$29,453,588 to be met by grants from the province of Ontario, water charges and sundry other revenues and \$44,467,234 to be met by levies against the member municipalities. Of the total gross expenditures the larger items were \$37,565,954 for education, \$9,162,230 for welfare and housing, \$3,665,000 for roads and \$6,468,746 for waterworks. City of Toronto estimates provided for a gross expenditure in 1956 of \$89,452,669, to be raised in part by a tax rate of 47.25 mills, 2.5 mills higher than in 1955. Total taxable assessment for 1956 was \$1,583,337,655.

(L. WN.)

ENCYCLOPEDIA BRITANNICA FILMS.—*Industrial Provinces of Canada* (1943).

Tourist Travel. In the United States, more than 80,000,000 vacationists, roughly half the population, took at least one trip during 1956; the volume of vacation travel had doubled since 1941 and had increased more than twenty-fold since the early 1920s. Leisure time in the form of annual paid vacations for approximately 42,000,000 persons, or

two-thirds of all wage and salary earners, contributed to this increase in travel.

The passenger car was the means of transportation in approximately 85% of all vacation trips; during 1956 approximately 24,000,000 automobiles, with an average of three passengers each, covered an average of 1,400 mi. in 12 days of travel. Each occupant spent an estimated average of \$165, bringing the total of automobile vacation expenditures to \$11,200,000,000.

The web of expressways and turnpikes spread out across the nation. With the opening of the Indiana turnpike, a route free of stop lights and intersections was completed from New York to Chicago, Ill. The Kentucky turnpike opened in late summer, and toll roads across Massachusetts and Kansas were scheduled for completion late in the year. Of major future significance to tourists was the enactment of federal highway legislation involving the spending of \$33,000,000,000, which would bring into being a 40,000-mi. national system of interstate highways.

The regions administered by the national park service were visited by 50,000,000 persons in 1955 and by an estimated 54,000,000 in 1956; more than 96% arrived by automobile. The most visited park in 1955 was Great Smoky mountain, Tenn.-N.C. (2,581,477), followed by Shenandoah, Va. (1,543,369), Rocky Mountain, Colo. (1,454,019), Yellowstone, Wyo.-Mont.-Ida. (1,368,515), Platt, Okla. (1,138,586) and Grand Teton, Wyo. (1,104,725).

Recreational use of the national forests in 1955 totalled 45,712,868 visits, a 13% increase over 1954, and 150% over 1946. Substantial increases were noted also in attendance at state parks, where total attendance throughout the U.S. was 183,000,000, 10% higher than in 1954 and 200% higher than 1946.

Construction of new motels, motor courts and motor hotels continued at a yearly pace of 1,500 to 2,000; along the roadsides of the U.S. approximately 53,000 motor courts offered lodging to the motorist in 1956; in 1940, by comparison, there were only 15,000 courts. On the other hand, hundreds of the nation's 19,000 hotels remodelled their lobbies, basements and adjacent property to provide convenient parking and entry. (See also HOTELS.)

Travel by means other than automobile received impetus from the installation of new equipment (streamlined rail coaches, dome cars, double-deck buses), excursion rates and the removal of the federal 10% transportation tax on trips to the Caribbean and Central America.

The trend in 1956 was toward low-cost travel. It was possible to fly from New York nonstop to Los Angeles, Calif., at reduced fares on a new air coach service, and rail coach transportation to Florida also was reduced in price. Airlines in trans-Atlantic service featured not only "fly now, pay later" plans but also offered multi-stopover and alternate route privileges at no extra cost.

Travel from the United States to other countries showed remarkable increases. An all-time high number of cars (2,524,993) visited Canada during 1955; this was 3% higher than in 1954 and 0.8% higher than the previous peak in 1953. Expenditures of visitors from all countries to Canada were estimated at \$329,000,000, an increase of 9% over 1954. Most of this, or \$304,000,000, was spent by visitors from the United States; their expenditures were 8% above 1954.

Canadians spent an estimated \$441,000,000 in other countries, an increase of \$54,000,000, or 14% over 1954.

A total of 105,011 tourist cars carrying 300,000 passengers passed from the U.S. to Mexico through the principal gateways of Laredo, El Paso and Brownsville, Tex., and through Nogales, Ariz., in 1955. The newest route, the Pacific highway from Nogales to Mexico City, became the second leading gateway, surpassed only by the traditional approach route via Laredo.

The extent of the international travel market was measured by

the department of commerce, in the first comprehensive study on the subject made by the U.S. government since 1939. It was found that total travel expenditures by U.S. residents outside the United States were \$1,500,000,000 in 1955; in 1954 they were \$1,300,000,000; and in 1939, \$376,000,000. United States visitors spent \$520,000,000 in Europe. The study showed also that people from other countries spent nearly \$650,000,000 in the United States, plus an additional \$60,000,000 on fares on U.S. international carriers. More than half came from Canada.

Europe, however, was the principal recipient of U.S. travel dollars. It earned 38.5% of the total, topping even Canada, which earned 27.8%. Following them were Mexico (19%), Bermuda, the West Indies and Central America (10%), South America (1.8%) and all others (2%).

Motoring abroad by U.S. tourists continued to boom. The A.A.A. expected to issue 50,000 international driving permits in 1956, compared with 30,000 in 1955.

(See also AMERICAN CITIZENS ABROAD; NATIONAL PARKS AND MONUMENTS; ROADS AND HIGHWAYS.) (Ml. Fe.)

Town and Regional Planning. In 1956 the rapid increase in population of urban areas continued to dominate planning in Europe and America.

United States.—In Nov. 1955, the bureau of the census issued revised population figures for the United States between 1950 and 1955. Of the 11,800,000 increase in population over the five-year period, 11,500,000 occurred in metropolitan areas. It was stated that a 1,900,000 increase took place in the central cities; 4,526,000 in urban areas outside the central cities; and 5,094,000 in the territory within the metropolitan areas classified as rural in 1950. The predictions for the future indicated that by 1975 more than 221,000,000 persons would be living in the United States. The scale of population increases had brought acute problems to city planners. During 1956 the emphasis was on metropolitan problems of planning and administration.

The New York Regional Plan association inaugurated a three-year study of the future economy and population of the New York metropolitan area, financed jointly by the Rockefeller Brothers fund and the Ford foundation, with a staff organized by the Harvard University Graduate School of Public Administration.

The county had also been used as a unit for planning and administration. In California all counties are required by law to set up planning commissions. Where the metropolitan region covers approximately a single county (as in Pulaski county around Little Rock, Ark.) the solution is simple, but when metropolitan areas extend over several counties in two or more states, the problem becomes more complicated. Some regional planning commissions had been created and regional administrative authorities were being discussed. A 21-member Northeastern Illinois Metropolitan Area Local Services commission was created by the Illinois general assembly to serve the Chicago metropolitan area, containing about 6,000,000 persons.

With the rapid growth of decentralized shopping centres, the plight of the downtown districts had become aggravated. A planning proposal which attracted nation-wide attention during the year was the plan financed by the president of an electric company in Fort Worth, Tex., and prepared by Victor Gruen and Associates, designers of the Northland shopping centre financed by the J. L. Hudson Co., of Detroit, Mich. The Fort Worth downtown plan, thus prepared under private auspices, had captured the general approval of the public, and it seemed likely that it would be adopted officially and put into effect. The plan provides for a one-way, multilaned circle around the downtown district, with no vehicular streets inside. This downtown island

is penetrated with six long parking structures, equipped with escalators and moving sidewalks. A remarkable feature of the plan is that none of the existing buildings would be torn down, except the old court house, already slated for replacement. Deliveries and taxis to hotels and shoppers' parcels to garages would move by underground tunnels. The free circulation of pedestrians in the streets freed from traffic would promote a hitherto unknown amenity for shoppers. The six garages would hold 60,000 cars when built to their full four stories. Access would be by ramps from the belt roadway. The story of this plan was told, with illustrations, in the *Architectural Forum* (May 1956).

Many cities moved during the year to revise their out-of-date zoning laws. New York city announced a second study aimed at revamping the city zoning regulations, adopted in 1916. In 1951 a zoning plan was prepared for the Planning commission, but it was never put into effect. In Washington, D.C., where the first zoning regulations were adopted in 1920, Harold M. Lewis, planning consultant, prepared a report, *Proposed Zoning Regulations for the District of Columbia*, together with a supplementary technical bulletin on *Land Use in the District of Columbia*.

The Federal Aid Highway bill of 1956 authorized the completion of the 41,000-mi. national system of interstate and defense highways, to be built on new 200-300-ft. rights of way, with limited access. During the following 13 years, 90% of highway expenditures would come from the federal government and the remaining 10% would be furnished by the states. These highways would connect the major metropolitan areas of the nation, and it was evident that up-to-date comprehensive plans based on land-use surveys would be needed if the routes into and across metropolitan areas were to serve rather than hinder local traffic.

A law was scheduled to go into effect on Jan. 1, 1957, to create a planning department in the city of Chicago, to be under the supervision of a commissioner of city planning to be appointed by the mayor. The Planning commission, with its membership reduced from 34 to 15 (9 citizens to be appointed by the mayor and 6 *ex officio* officials) would act in an advisory capacity.

Urban renewal and metropolitan and community planning received federal aid from the Housing and Home Finance agency. Under the urban planning assistance authorized by the Housing act of 1954, a total of 194 communities under 25,000 in population on Oct. 1, 1956, were receiving planning aid through federal funds allocated to state planning agencies. In addition 16 separate areas were receiving similar assistance for metropolitan and regional planning. Under the 1949 and subsequent housing acts approximately 243 communities throughout the country had inaugurated urban renewal projects which were in various stages of accomplishment. Under a federal demonstration grant from the Urban Renewal administration, under the 1954 Housing act, Cleveland planned to set up a pilot neighbourhood centre aimed to achieve voluntary neighbourhood improvement, which would develop citizen participation and support voluntary rehabilitation and conservation programs, with the assistance of city planning commissions, neighbourhood councils and other citizen groups.

Other Countries.—Most European cities continued to make progress in rebuilding devastated areas. In England a progress report on the new towns was presented in 1956. In nine years of activity a substantial part of accommodations for 55,000 people had been established. In Crawley, in March 1956, the local government of the area was consolidated by the formation of an Urban District council to serve about 6,000 ac. Also in March, the city corporation of London received Sir William Holford's notable report on rebuilding the area near St. Paul's cathedral.

In Canada on Aug. 1, 1956, a statement was made to the Cana-

dian Federation of Mayors and Municipalities outlining programs for the redevelopment of Canadian cities. Also during the year there were substantial extensions of authority for the 24-member Council of Metropolitan Toronto, which serves the city of Toronto and 12 suburban municipalities. The council, in addition to exercising traffic, school and police functions, was starting to buy parks. Thorncliffe Park, \$100,000,000 city within a city, was to be built four miles from downtown Toronto.

In Wellington, N.Z., the construction of a \$2,000,000 elevated expressway on reclaimed land along the waterfront was authorized to relieve congested traffic.

In 1956 at the International Federation for Housing and Town Planning there was presented a proposal adopted in 1955 by a transport committee for the creation of a transport board for greater Copenhagen (Den.), with the aim of stimulating collaboration and co-operation for planning and administering the transport system.

Israel, with a 1956 population of 1,600,000 people (one third concentrated in Tel Aviv) had set up a National Auxiliary Planning council.

Track and Field Sports.

The world's army of athletes, preparing for the Olympic games in Australia, went all out in their assault on the records in 1956. (The Olympic games of 1956 are treated separately in the article OLYMPIC GAMES.) Veterans and newcomers alike accounted for meet, sectional, national and world marks faster than they could be written into the books. The United States produced the brightest star of the year in David Sime, a sophomore at Duke university, but the youthful athlete who was considered a sure double winner in the Olympics was forced to the side lines by injury long before the year closed.

Sime created a stir in the indoor campaign when he tied the world standard of 6.1 sec. for 60 yd. and ran the 100 yd. in 9.5 sec., but when the outdoor drive began he became a sensation overnight. He set world records of 20 sec. for 220 yd. and 200 m. and broke the 220-yd. hurdles standard with a 22.2-sec. winning effort. In addition, he tied the long-standing mark of 9.3 sec. for 100 yd., as did several other stars during the year. Sime set a Drake relays' standard of 9.4 sec. for the 100 yd. at Des Moines, Ia., April 28, breaking a 30-year-old meet time. He set his hurdles marks on May 5 in a dual meet at Durham, N.C., and on the same day captured the 100 yd. in 9.4 sec. and the

220 yd. in 20.3 sec. In helping Duke defeat the University of North Carolina, Sime also placed second in the broad jump and third in the discus throw.

Parry O'Brien of the United States air force set some mark almost every time he threw the shot, while Harold Connolly of the Boston Athletic association and Mikhail Krivonosov of the U.S.S.R., who held the listed record, were extending each other for the honour of setting a new standard in the hammer throw. A young collegian from Kansas, Bill Nieder, moved up in the ranks of the shot-putters and gained a place on the American Olympic team with a toss of 58 ft. 1½ in. Another American, Charles Dumas of Compton (Calif.) college, became the first athlete in history to clear seven feet in the high jump when he won in the Olympic trials at 7 ft. ½ in.

The final Olympic tryouts at Los Angeles, June 29–30, and the Amateur Athletic Union of the United States outdoor championships at Bakersfield, Calif., June 22–23, were features of the long competitive season in the United States. Three world records fell in the team trials. Dumas set his high-jump mark and three men improved or tied the world record for the 400-m. hurdles: Glenn Davis, Ohio State university, did it in 49.5 sec.; Eddie Southern, University of Texas, was clocked in 49.7 sec.; and Josh Culbreath of the U.S. marines did it in 50.4 sec. The listed mark of 50.4 sec. was held by Yuri Lituyev of the U.S.S.R. Lou Jones of the U.S. army raced 400 m. in 45.2 sec. Three other standards were tied: Bobby Morrow ran 200 m. around a turn in 20.6 sec.; Thane Baker, Morrow and Ira Murchison ran 100-m. heats in 10.2 sec.; and Parry O'Brien put the shot 60 ft. 10 in. to equal his own recognized record.

In the A.A.U. outdoor games, nine championship meet marks were improved, one world record fell and another was tied. Jack Davis won his heat of the 110-m. high hurdles in 13.4 sec., the listed universal record being 13.5 sec. However, Davis finished second to Lee Calhoun in a 13.6-sec. final. Bobby Morrow won the first heat of the 100-m. dash in 10.2 sec. to tie a standard and went on to win the final in 10.3 sec. Arnold Sowell twice broke the meet mark of 1 min. 50 sec. for 800 m. that had stood since 1937. Sowell was timed at 1 min. 49.8 sec. in the first heat and took the final in 1 min. 47.6 sec. Tom Courtney shattered an A.A.U. mark with a 45.8-sec. performance in the 400-m. run. Horace Ashenfelter ran the 3,000-m. steeplechase in 9 min. 4.1 sec., which broke the former meet mark of 9 min. 13.1 sec. set in 1934. Ken Bantum of the New York Pioneer club, who moved into the front ranks of the world's shot-putters in 1956, broke O'Brien's A.A.U. standard when he won his specialty at 59 ft. 1½ in. Harold Connolly established another new standard for the meet when he captured the hammer throw at 205 ft. 10½ in.

One-Mile Run.—John Landy's world mark of 3 min. 58 sec., set on June 21, 1954, remained as the universal standard despite many brilliant efforts by the world's greatest distance men in 1956. Landy himself started the campaign off with a sparkling 3 min. 58.6 sec. mile at Melbourne on Jan. 28 for the second best time in history. It also was the first mile run under four minutes in Australia. Merv Lincoln, who placed second, was timed in 4 min. 0.6 sec. Landy visited the United States in May and twice ran the mile in less than four minutes. Jim Bailey, a comparatively unknown Australian runner attending the University of Oregon, scored the big upset of the 1956 season by defeating Landy on May 5 at Los Angeles. Running in an invitation special at the Southern California-U.C.L.A. meet, Bailey became the first to run a mile under four minutes on United States soil. The victor swept past Landy in the last 75 yd. to win by a yard in 3 min. 58.6 sec. Landy was clocked in 3 min. 58.7 sec. The former U.S. standard was 4 min. 0.5 sec. set by Wes Santee at Compton, Calif., in 1955. Completing the field were Ronald Delany of Ireland, a student at Villanova university; Bill Del-

*Date is 1956 unless otherwise indicated.

linger of Oregon; Jerome Walters of the Southern California Track and Field association; Danny Schweikart of the Los Angeles Athletic club; and Lon Spurrier of San Francisco. Competing in the west coast relays at Fresno, Calif., on May 12, Landy won a 3 min. 59.1 sec. mile, marking the sixth time he had cracked the "four-minute barrier." Landy triumphed by more than 75 yd., followed by Delany, Schweikart, Mike Stanley and Jim Terrill, the last two of the U.S. air force. A brilliant mile was recorded in the Compton meet on June 1 when Delany defeated Gunnar Nielsen of Denmark in 3 min. 59 sec. The Dane was clocked at 3 min. 59.1 sec.

Hungary's Istvan Rozsavolgyi became the tenth man to run the mile under four minutes when he scored at Budapest on Aug. 26 in 3 min. 59 sec. Rozsavolgyi had bettered the world standard for 1,500 m. three weeks before, when he was timed in 3 min. 40.6 sec. The then-recognized mark was Landy's 3 min. 40.8 sec. An unofficial list of world records improved from Oct. 1, 1955, to Oct. 1, 1956, appears in Table I.

Women's Track and Field.—Feminine athletes came in for a good share of honours in the Olympic year, accounting for a number of world marks. Featuring the U.S. season was the A.A.U. outdoor meet at Philadelphia, Pa., Aug. 17-18. National junior (14-17 years) competition was held on opening day, and six records fell. Pamela Kurrell, 17, of San Francisco was a triple victor, winning the baseball throw, javelin and discus. She set a U.S. standard of 140 ft. 11 in. in the discus. Other new women's records were as follows: shot-put, 37 ft. 10½ in., by Dixie Griffith, San Fernando, Calif.; 300-yd. relay, 32.4 sec., by Tennessee

State University club (Willie White, Darlene Scott, Martha Hudson, Willa Rudolph); broad jump, 18 ft. 56.6 in., by Willie White; high jump, 5 ft. 2 in., by Ann Marie Flynn of Brooklyn, N.Y.; 75-m. dash, 8.5 sec., by Martha Hudson, Tennessee State University club. Mae Faggs was a triple winner in the senior women's tests. Miss Faggs won the 100 m. in 11.7 sec. and the 200 m. in 24.6 sec. after tying the meet record of 24.2 sec. in a qualifying trial. She anchored the Tennessee club's 400-m. relay team that was clocked in 47.1 sec., beating a 23-year-old meet record by 0.8 sec. Earlene Brown of Compton set a U.S. standard of 45 ft. in winning the four-kilogram shot-put.

Indoor Season.—The national championships of the Amateur Athletic union, held in Madison Square Garden, New York city, on Feb. 18, 1956, featured the U.S. indoor campaign. Two world marks topped in the meet, Parry O'Brien putting the shot 61 ft. 5½ in. for the longest throw in history indoors or out, and Robert Backus of the New York Athletic club hurling the 35-lb. weight 63 ft. 10½ in. Lee Calhoun, of North Carolina college,

tied the meet record for the 60-yd. high hurdles by winning in 7.2 sec. Arnold Sowell of the University of Pittsburgh took the 1,000 yd. in 2 min. 8.4 sec. John Haines of the University of Pennsylvania gained his fourth straight victory in the 60-yd. dash, leading a star-studded field in 6.2 sec. Horace Ashenfelter, New York Athletic club, added to his long string of successes by winning the three-mile title for the fifth consecutive time. Henry Laskau of the 92nd Street Young Men's Hebrew association of New York city gained his ninth straight mile walking crown. O'Brien, one of the year's big standouts with his record-making shot-putting, broke his own mark with a toss of 59 ft. 9 in. in the New York Athletic club games of Feb. 11. Charles Jenkins set a universal standard of 56.4 sec. for the 500 yd. Bob Richards won the pole vault at 15 ft. 1 in., marking the 89th time he had cleared 15 ft. Sowell took the Halpin 880 yd. in 1 min. 51.8 sec.

Five meet marks were broken in the meet held by the Intercollegiate Association of Amateur Athletes of America at New York, Feb. 25, when the Manhattan college squad of New York city repeated as team champion. The new I.C.A.A. indoor standards set were as follows: 60 yd., 6.1 sec., by John Haines; pole vault, 15 ft. 2 in., by Donald Bragg of Villanova university; two mile, 9 min. 7 sec., by George King of New York university; 35-lb. weight throw, 62 ft. 8½ in., by Albert Hall of Cornell university; two-mile relay, 7 min. 40 sec., by the Pittsburgh team anchored by Sowell.

The indoor season was marred by the banning of Wes Santee, leading U.S. miler (4 min. 0.5 sec.), from amateur competition. The 23-year-old Kansan was declared ineligible for any further

Trinidad and Tobago. This British colony consists of two islands off the coast of Venezuela north of the Orinoco delta. Area: 1,080 sq.mi. (Tobago, 116 sq.mi.). Pop.: (1946 census) 557,970 (Tobago 27,208), including 261,485 Africans, 195,747 East Indians and 78,775 coloured (mixed); (1955 est.) 697,550 (about 5% in Tobago). Languages: English (*lingua franca*), Hindi, French, Spanish. Religion: Christian 70% (of which one-half Roman Catholic, one-third Anglican), Hindu 23%, Moslem 6%. Chief towns (pop., 1955): port of Spain (cap.) 114,150; San Fernando (port) 36,050; Scarborough (Tobago) 1,000. Governor in 1956, Sir Edward Beetham; chief minister, Eric Williams.

History.—A new constitution was announced on Feb. 13, 1956, providing for an increase in the number of ministries from five to eight including a chief minister and minister of finance; an executive council comprising the governor as president, the colonial secretary and the attorney general as ex-officio members, the chief minister and seven other elected ministers; and a legislature of two ex-officio members (colonial secretary and attorney general), 5 nominated members, 24 elected members and a speaker elected by the house from within or without. A committee was appointed on March 9 to consider redemarcation of electoral districts, and on March 23 the legislature authorized a loan of \$3,000,000 (British West Indian dollars) for operating a public housing loans scheme. Construction of an auxiliary highway east of Port of Spain was begun. In June official delegates attended discussions in London with the British government and the Texas Oil company of the United States and approved the sale of the Trinidad Oil company's interests in Trinidad to the Texas Oil company.

The Mudie commission arrived on July 9 to survey and select three alternative sites in the British West Indies for the federal capital.

At the general election on Sept. 24 the People's National Movement gained 13 seats and its leader, Eric Williams, accepted an invitation to form a government. The new legislature was inaugurated on Oct. 26.

(H. E. CN.)

Education.—Schools (1954): primary and intermediate 367, pupils 137,646; secondary 29, pupils 11,581. Teachers' training colleges 3, students 218. Vocational: East Caribbean Farm institute; San Fernando government technical college; Imperial College of Tropical Agriculture, students 84; extramural classes, in Trinidad, intermediate level, of the University College of the West Indies; board of industrial training.

Finance and Trade.—Monetary unit: British West Indian dollar, B.W.I.

\$1.7=U.S. \$1. Budget (1955): revenue £16,980,000; expenditure £17,958,000. Foreign trade (1955): imports B.W.I. \$294,023,000; exports B.W.I. \$285,939,000. Principal exports: sugar, crude oil, cocoa, asphalt, asphalt cement. Principal imports: machinery, tobacco, food, manufactured goods.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Caribbean* (1955).

Tropical Diseases. With relatively few exceptions the diseases of warm climates are preventable. A majority of these are caused by microorganisms and animal parasites. In many instances the living agents of disease are transmitted to man by insects or other arthropods such as ticks and mites. Under such circumstances modern methods of control usually consist in the elimination of the arthropod transmitter (e.g., the vector) or at least its reduction to a level where it is unable to transmit the disease-producing agent. A complementary method of approach is the administration of drugs to active or carrier cases of the infection so that the number of infected individuals is too few to provide a reservoir of disease agents for transmission by the vector. These methods of prevention are particularly applicable when only man and domestic vectors are involved. However, for several diseases prevalent in both warm and cold climates there are wild reservoir hosts which ordinarily replace man in the life cycle of the parasite, and in some instances nondomestic arthropod vectors are the usual transmitters. During 1956 special attention of epidemiologists and public health officers engaged in the prevention of diseases in the tropics was being focused on the control of arthropod vectors.

Malaria.—P. F. Russell, in his recent study *Man's Mastery of Malaria*, interprets mastery as not necessarily eradication of this disease but the knowledge and ability to control it in extensive areas of the world where more than 1,000,000,000 human beings "live in potentially or actually malarious communities," 250,000,000 still suffer attacks of malaria each year and 2,500,000 die annually from its effects. In contrast, 160,000,000 persons live in areas presently protected from malaria. As of 1956 the Pan American Sanitary bureau had just embarked on a program of malaria eradication in the western hemisphere, the Balkan countries had jointly begun a similar project, and India was conducting the most extensive antimalarial campaign in world history. All these countries were attacking the *Anopheles* mosquito by DDT residual spraying. The World Health organization (1956) urged intensive eradication efforts to avoid the possible danger that the mosquito vectors might develop resistance to this insecticide.

Yellow Fever.—Although urban yellow fever, transmitted by the domestic mosquito *Aedes aegypti*, was not reported during 1956, sylvatic foci in the tropical zones of Africa and the Americas remained unconquered and were kept under close surveillance. Of particular interest was the northward extension of sylvatic yellow fever into Central America, first recognized in eastern Panamá in 1948, then in Costa Rica (1951-52), Nicaragua (1952-53) and Honduras (1953-54). Here the disease was believed to have reached a barrier of cleared land, so that its extension into Guatemala was not generally expected. However, in Dec. 1955 and Jan. 1956 there was confirmed evidence that the disease had jumped the barrier, survived a dry season and was responsible for death of monkeys in the jungle along the Atlantic coast of Guatemala. Yellow fever vaccine prepared in the Carlos Finlay institute (Bogotá, Colom.) was being employed extensively to protect human populations living in the areas of potential exposure adjacent to the jungle type of the disease.

Typhus Fever.—This disease is produced by two closely related species of microorganisms referred to as rickettsias: one, *Rickettsia mooseri*, prevalent (enzootic) in rats and transmitted more or less sporadically to man by infected rat fleas; the other, *Rickettsia prowazeki*, causing epidemic human disease and trans-

mitted from man to man by human body lice. Characteristically epidemic typhus, which is severer and more often fatal than the murine type, occurs most frequently in louse-infested populations, among persons who wear heavy clothing and seldom bathe.

Since the discovery of the causative agent of epidemic typhus in 1916 many attempts had been made to provide a vaccine for immunization of persons exposed to the epidemic form of the disease. Two types of vaccine were developed; viz., (1) living rickettsias obtained from infected lice or experimentally infected laboratory animals and (2) killed rickettsias. The former usually provides solid immunity but at times causes disease as serious as the natural infection. Hence the killed organisms from highly virulent strains grown on chick embryos had been employed in recent years in most immunization programs. In 1943 a strain of *Rickettsia prowazeki* (strain E), grown in chick embryo yolk sac, was found to have acquired such low pathogenicity that it failed to infect guinea pigs. A large number of uncontrolled human immunizations were soon carried out in Spain. Then between 1951 and 1954 carefully controlled tests with human volunteers were conducted in the United States; these demonstrated both the usefulness and safety of employing this attenuated living rickettsia. Meanwhile field studies were undertaken among a highly exposed population in Peru, involving nearly 17,000 persons. Although these large-scale immunization tests had not been completely evaluated, no truly serious illness had resulted from administration of strain E, and a single inoculation of a quantitated number of the organisms might be expected to provide solid and lasting immunity, thus obviating the necessity of giving booster inoculations every two years.

Amoebiasis.—Human infection with the disease-producing amoeba *Entamoeba histolytica* is world-wide in its distribution. While a majority of infected persons are not seriously inconvenienced, some persons develop severe colitis, at times liver abscess and involvement of other extraintestinal organs. In 1920 only two standard antiamoebic drugs, ipecac and emetine, were available. By 1956 there were several chemically different groups of more effective, better tolerated chemotherapeutics, including compounds of iodine and arsenic, chloroquine for amoebic involvement of the liver, and several antibiotics. New preparations were being tested each year, first in experimental animals, then clinically. Some of these had relatively high antiamoebic properties, yet none of the newer drugs was superior to those which had withstood the test of many thousands of clinical trials.

Deficiency Diseases in Childhood.—In tropical countries the commonest disease of childhood after the first year of life is probably malnutrition. After the child is weaned there may be an adequate number of calories in the diet, but this is usually almost exclusively from carbohydrates, with a deficit in animal proteins, vitamins, minerals and frequently fats. Failure to provide a substitute for mother's milk results in the syndrome "kwashiorkor," which can usually be observed in any clinic for underprivileged children in warm climates. However, kwashiorkor is generally much less common than the general picture of malnutrition, with demonstration of a significant decrease in blood proteins. Almost invariably superimposed on this deficiency is hookworm disease or other intestinal helminthic infections, which further reduce the nutritional balance and produce severe anaemia or an allergic state.

Trust Territories. These include former German colonies and islands which became mandates after World War I and trust territories after World War II; South-West Africa, which remained mandated; and the former Italian Somaliland (now Somalia) which became a trust territory under Italian administration on April 1, 1950. Total area: 1,229,455 sq.mi.; total population, about 21,722,990. Certain essential information is given in the table.

Trust and Mandated Territories

Territory	Area (in sq.mi.)	Population	Administering Authority
South-West Africa*	317,725	414,601 (1951 census)	South Africa
Togoland (Br.)	13,041	429,000 (1955 est.)	United Kingdom
Togo (Fr.)	21,235	1,070,000 (1955 est.)	France
Cameroons (Br.)	34,081	1,460,000 (1954 est.)	United Kingdom
Cameroon (Fr.)	166,793	3,116,000 (1955 est.)	France
Tanganyika	362,688	8,324,000 (1955 est.)	United Kingdom
Ruanda-Urundi	20,742	4,271,000 (1954 est.)	Belgium
New Guinea†	93,050	1,206,749 (1954 est.)	Australia
Western Samoa	1,131	94,128 (1954 est.)	New Zealand
Nauru	8	3,473 (1954 census)	Australia
Pacific Islands‡	687	65,039 (1956 est.)	United States
Somalia	198,275	1,269,000 (1954 est.)	Italy

*Mandate. †Northeast New Guinea, Bismarck archipelago, certain of the Solomon Islands. ‡Marshall, Caroline and Mariana Islands, former Japanese mandates.

History.—The year 1956 marked the 10th anniversary of the establishment of the trusteeship system of the United Nations. At the opening of the 18th session of the trusteeship council the new president, Rakif Asha of Syria, stressed the "notable progress" made during the first ten years. The outstanding event of the year was the first plebiscite ever to be held in a United Nations trust territory; this was completed during May in British-administered Togoland. All the preparations were carried out under the supervision of a specially appointed UN commissioner, Eduardo Espinosa Prieto of Mexico. He was assisted by a company of UN observers who worked from 13 stations throughout Togoland. On May 9, after an intensive educational campaign to explain the object of the plebiscite, the Togolandese were asked to state whether they desired the union of their country with the neighbouring Gold Coast or continuance under a trusteeship regime pending the ultimate determination of the territory's political future. At its summer session, the trusteeship council received a full report on the plebiscite. Of the 194,230 eligible voters on the register, 160,587 had recorded valid votes. A total of 93,095 (58%) were in favour of union with the Gold Coast, and 67,492 (42%) supported separation. Without dissent, the council adopted a resolution paving the way for the United Kingdom to end its trusteeship over the territory at the same time as the Gold Coast attained its independence. Termination of the trusteeship agreement, however, would require the approval of the UN general assembly.

In accordance with established practice, the trusteeship council held two regular sessions during 1956. At the 17th session (Feb. 7 to April 6), Italy took its seat as a full member following its recent admission to the United Nations. The enlarged council consisted of Australia, Belgium, France, Italy, New Zealand, United Kingdom and United States (administering members); and Burma, China, Guatemala, Haiti, India, Syria and U.S.S.R. (nonadministering members). This "African session" examined annual reports on British-administered Tanganyika and Cameroons, Ruanda-Urundi under Belgian administration, and French Cameroun and Togoland, in conjunction with the reports of recent visiting missions. A record number of 731 petitions was examined by the council. In addition to these, the receipt of about 35,000 communications from French Cameroun created a serious problem. Most, according to the French representative, were concerned with minor personal

grievances. It was decided to establish a special committee of two (Australia and India) to study this mass of material with the aid of the UN secretariat.

The 18th session (June 7 to August 14) proved to be the longest continuous session in the history of the council. Elected members of the first Somali legislature, including the prime minister, travelled to New York for the first item on the agenda. The council commended the Italian administration for taking important steps toward self-government in Somalia nearly four years before the due date.

The visiting mission under the chairmanship of Sir John Macpherson (U.K.), which had studied conditions in trusteeship areas in the Pacific, reported that laudable political advances had taken place. Nevertheless, a number of major problems remained to be solved. One such problem in the Marshall islands concerned the displacement of islanders as a result of atomic and thermonuclear tests.

In an advisory opinion issued on June 1, the International Court of Justice at The Hague found it admissible for the UN committee on South-West Africa to receive oral petitions on matters relating to the territory. The committee itself unanimously expressed its opinion to the general assembly that the situation in South-West Africa required "close re-examination," in view of the continued failure of South Africa to co-operate in carrying out the previous advisory opinion relating to South-West Africa given by the court in 1950. (See also UNITED NATIONS.) (L. R. A.)

Trust Territory of the Pacific Islands: see MARSHALL, CAROLINE AND MARIANA ISLANDS.

Tuberculosis. Despite progress, tuberculosis remained during 1956 the most destructive infectious disease. G. J. Drolet and A. M. Lowell (New York) said that the ultimate measure of progress should be the absence of infection. Tuberculin testing in several parts of the world showed that at age 15 incidence of reactors ranged from 12% in Lebanon to 85% in Polish cities.

In 1936-37 and in 1940-41 J. D. Aronson (Philadelphia) found that 52.8% of American Indian children 5 to 19 years of age in a certain area reacted to tuberculin, but in 1954 only 23.7% reacted. Similar reductions were reported among American Indian children in other areas. In Los Angeles, Calif., in six senior and ten junior high schools 24.5% of students reacted to tuberculin in 1940-41, but only 12% in 1954-55. D. F. Loewen said that in 1935, 31% of city and 25% of rural high school students reacted to tuberculin in Macon county, Ill., but in 1955 only 4% reacted. C. E. Palmer *et al.* (Washington, D.C.) reported on tuberculin testing of 120,000 white men and women from 17 to 21 years of age. They comprised navy recruits from all parts of the United States and students entering colleges and universities in 17 states. The average incidence of reactors was 8.8%.

The number of cases of clinical tuberculosis paralleled the number of tuberculin reactors, but at a lower level. Drolet and Lowell said that 340,416 new cases were reported in 1953 in the United States, the United Kingdom, France and Germany. If previously known cases were added, the total was more than 1,000,000. In Peru 180,000 persons had clinical tuberculosis, of whom 30,000 were in the city of Lima. An estimated 50,000,000 persons were ill from tuberculosis in the world.

Diagnosis.—The tuberculin test remained the only procedure for diagnosing tuberculosis within a few weeks after the germs invade the body. This, followed by X-ray film inspection of the

chest of reactors, constituted the two best screens in selection of persons to be completely examined.

C. T. Dotter said the mass chest X-ray survey was a poor approach to tuberculosis control, inasmuch as positive radiographic findings usually lag well behind the onset of clinical disease. By means of the tuberculin test persons harbouring tubercle bacilli can be discovered. Routine chest roentgenography is indispensable in diagnostic follow-up.

L. V. Schneider, director of the United States Veterans administration tuberculosis case finding survey, stated that from 1950 through 1955, 4,035,932 chest examinations were made and 15,479 persons were found to have active tuberculosis. As of 1956 this survey program was averaging about 1,000,000 routine chest X-ray film inspections annually, and approximately 2,000 active cases were being found each year.

Importance of accuracy in diagnosis was re-emphasized, since the tuberculin test and X-ray shadows are only screens. Complete examinations were necessary to determine cause of demonstrable areas of disease.

Treatment.—Nothing was found superior to the standard methods, consisting of rest and hospitalization. Antituberculosis drugs and resectional surgery were regarded only as adjuncts. In many parts of the world there remained a serious shortage of sanatorium beds. In Peru 3,000 beds were available but 40,000 were needed. H. A. Rusk (New York) stated that for the 500,000 cases in Korea there were only 3,000 beds in 1954, with a goal of 8,000 by 1958. It was hoped that 250 tuberculosis ambulatory treatment centres might become available within five years.

Because of the decrease in the number of new cases of tuberculosis in a few parts of the world, and because antituberculosis drugs and resectional surgery were being employed and many persons were being treated at home, the demand for sanatorium beds had decreased. Three public and two private tuberculosis hospitals were closed in upstate New York. Sanatoria were also closed in other states, although many physicians regarded their closing as premature.

The Veterans administration, the army and the navy continued to issue quarterly progress reports on chemotherapy of tuberculosis. This included studies on various combinations and dosages of well-known drugs and testing of new ones. W. B. Tucker (Washington, D.C.) analyzed results of these studies and reported that isoniazid and para-aminosalicylic acid administered daily gave the best results, but isoniazid daily and streptomycin twice weekly were only slightly less effective. Other drugs, including cycloserine, were investigated.

The committee on therapy of the American Trudeau society stressed the importance of routine tuberculin testing of infants before one year of age and repeated annual testing thereafter when negative. The committee also emphasized that it would be several years before it could be determined from the carefully controlled studies which were under way whether administration of antituberculosis drugs to recent tuberculin converters was effective. However, it was suggested that infants who had recently become reactors might be treated with isoniazid to prevent the possibility of development of meningitis.

Resection of diseased areas of the lung continued to be extensively employed. J. J. Hirdes and C. I. Stegerhoek (Netherlands) reported 700 cases of lung resections performed between 1949 and 1954. Their follow-up was completed Feb. 1, 1955, by which time 3.3% of the patients had died. The total number of relapses was 7%. Ninety-two per cent of the patients were in good condition.

L. B. Brown *et al.* (Virginia) described 226 pulmonary resections ranging from pneumonectomy to wedge resections. One group consisted of 106 persons who were discharged from the sanatorium between 1949 and 1952. The other group consisted of

120 who were discharged from the sanatorium between July 1952 and June 1953. In Dec. 1953, 80.5% of all these patients had arrested disease, 6.6% were active and 3.1% were dead. The status of 9.7% was unknown. It was recommended that drug treatment be administered for 4 months before surgery and for at least 6 to 12 months after.

J. L. Robinson *et al.* (Los Angeles) did follow-up studies on 164 patients who had lung resections between 1944 and 1953. Of 150 followed by yearly examinations, 94% had been rendered noncontagious; of 161 who were followed for at least a year, 92.5% were living and well. Similar studies of 120 patients who had thoracoplasty during the same period showed 82% with reversal of contagion and 86.4% living and well. From the standpoint of survival, 96.2% of those with resection and 95.4% of those with thoracoplasty were living.

A. Falk and N. K. Jensen (Minnesota) did bilateral pulmonary resections in 60 patients between 1951 and July 1955. The initial bacteriologic conversion rate was 95%, and this was maintained.

I. Kalkvist (Sweden) performed excisional surgery between Nov. 1949 and Dec. 1954 on 36 persons more than 50 years old. The surgery was well tolerated. He concluded that age as such should not be accepted as a contraindication to pulmonary resection.

As the number of persons with contagious tuberculosis decreased, certain groups, such as recalcitrants and alcoholics became more conspicuous.

Dan Morse stated that at the Peoria municipal sanatorium from 1951 to 1955, 75 of 524 admissions were alcoholics. Of patients who left the sanatorium against medical advice, 52% were alcoholics. D. D. Deakins *et al.* examined 3,156 San Joaquin County honour farm prisoners from July 1953 to Dec. 1954 and found 17.7 cases of active tuberculosis per 1,000 persons. H. I. Meyers *et al.* reported on the first year of operation of the Los Angeles County jail chest screening program, when 6.3 per 1,000 were found to have active tuberculosis.

Prevention.—The only generally accepted method of preventing tuberculosis consisted of protecting against tubercle bacilli so as to avoid their initial invasion. This included contagious disease technique, and careful observation of tuberculin reactors and all persons with "arrested" disease to keep their tubercle bacilli controlled.

Tuberculosis is notoriously a relapsing disease. A. S. Dooneief *et al.* (New York) pointed out that treated pulmonary tuberculosis carries a high risk of relapse after apparent control. The incidence of reactivation or relapse prior to chemotherapy ranged from 24% to more than 50% in patients followed 20 years after arrest. They reported a series of 172 persons who were discharged from the hospital but continued indefinitely on drugs, with no relapse in 98.3% after 12 to 45 months.

Observations showed that tuberculosis among domestic animals and pets may be a serious threat to persons who are not protected from them. In Germany 30% to 50% of cattle and 60% to 70% of older cows were said to be infected, and one human case of tuberculosis in ten was caused by the bovine type of tubercle bacillus. The bovine type of tuberculosis was found in 80 cats (6.3%) necropsied in Zürich, Switz., after 1949.

A. Paley *et al.* pointed out that newer medical and surgical measures were changing the psychological problems of treatment and rehabilitation in tuberculosis. In their work at the National Jewish hospital in Denver, Colo., they placed patients on increasing ambulatory activity, regardless of the extent of the illness, within three to eight weeks after admission. They said, "A rehabilitation team, including psychiatrists and social workers, helps not only patients but personnel to overcome the psychological barriers to rehabilitation."

Tunisia. Tunisia is an independent *beylicat* (kingdom) in North Africa, lying between Algeria (west) and Libya (east). Area: 48,332 sq.mi. Pop.: (1946 census) 3,230,952; (1956 census) 3,782,480, 91% Moslem and Arabic-speaking (Arabs and Berbers), but including 255,332 Europeans (180,450 French citizens and 69,909 Italians) and 57,786 Jews. Chief towns (pop., 1956 census): Tunis (cap.) 410,000; Sfax 65,635; Sousse 48,172; Bizerta 44,681. Ruler, Bey Mohammed el-Amin. Prime ministers in 1956: Tahar ben Ammar and (from April) Habib Bourguiba.

History.—In Jan. 1956, Tahar ben Ammar's government which had the support of the Neo-Destour, decided to hold elections on a basis of direct universal suffrage with a view to forming a constituent assembly. Salah ben Youssef, back from Cairo, organized an agitation against Habib Bourguiba and seemed to be carrying his claims to dangerous lengths; then the party emerging in support of him was shattered by police investigations and arrests, and in Jan. 1956 Salah fled to Libya. The Old Destour party abstained from the polls, so that the only candidates were those of the Neo-Destour's National front and the Communists.

In Paris, on March 20 the Franco-Tunisian protocol was signed. France recognized the independence of Tunisia; the Bardo treaty (May 12, 1881) was annulled. The two countries went on to define their "freely effected interdependence" and to promise co-operation in defense and in foreign relations. Christian Pineau signed for France, Tahar ben Ammar for Tunisia. Pineau declared: "The agreement shows the French government's confidence in Tunisia. France's mission has now been discharged."

Six days later, the National front won all 98 seats at the elections, getting 597,000 votes against the Communist's 7,000. Of the total electorate, about 83% voted.

On April 10 the bey appointed Bourguiba prime minister. Bourguiba then formed a Neo-Destour cabinet, with two members representing the trade unions and two independents. He himself took the portfolios of foreign affairs and of defense.

Despite his declaring that Tunisia's solidarity with the Algerian people was "complete and unreserved," France negotiated further agreements with Bourguiba. By that of June 15 it was decided that France and Tunisia should exchange ambassadors and that France, on Tunisia's request, might represent Tunisia in certain countries. Roger Seydoux, the last resident general (appointed in Sept. 1955), was accredited as French ambassador in Tunisia.

Legislation passed in August was such as to revolutionize Tunisian life: polygamy was abolished; marriage was forbidden to persons under 15 years of age; women over 20 years of age were to be free to marry without the consent of third parties; and divorce by repudiation was replaced by judicial divorce.

In October relations between France and Tunisia underwent a crisis because of the arrest of the five Algerian nationalist leaders who were flying from Morocco to Tunis. (See also FRANCE.) Relations were broken off and Tunisia decided to assume control of its frontiers. Relations were resumed in December. Bourguiba congratulated himself on achieving French understanding at the United Nations, to which Tunis was admitted on Nov. 12. A new French ambassador was appointed. Two Tunisian consulates-general were created in France, in Paris and Marseilles. Four French consulates-general were set up in Tunisia,

at Tunis, Bizerta, Sfax and Susa.

The Tunisian government officially denied rumours of its adherence to the Arab league.

(See also FRENCH UNION.)

(HU. DE.)

Foreign Trade.—(1955) Monetary unit: Tunisian franc=metropolitan franc. Note circulation 28,000,000,000 fr. Imports 63,000,000,000 fr., including 47,000,000,000 fr. from France. Exports 37,000,000,000 fr., including 20,000,000,000 to France. Principal exports: phosphates 6,000,000,000 fr., wheat 5,000,000,000 fr., iron ore 4,000,000,000 fr.

ENCYCLOPEDIA BRITANNICA FILMS.—*Mediterranean Africa* (1952).

Tunnels. In 1956, hard-rock tunnellers continued to break progress records, many of which were set in 1955. Tunnelling in earth and soft rock reached new highs in technical proficiency, involving a huge boring machine; a unique method of lining; and outstanding progress on three vehicular underwater tunnels being constructed by dredging a trench and setting prefabricated sections in place, rather than by tunnelling underneath the rivers. In 1956, tunnels in connection with hydroelectric projects shared the spotlight with those in connection with water-supply and sewerage projects, reflecting emphasis by cities in going longer and longer distances for good water and in conducting area-wide sewage cleanup programs.

Asia.—The Kammon tunnel, a 2.2-mi. bore linking the Japanese islands of Honshu and Kyushu, was advanced to more than 70% of completion. It was claimed to be the first underwater two-story tube, having a 25 by 15-ft. upper level for vehicles and a 12 by 8-ft. lower level for pedestrians. Japan also completed the Sakuma hydroelectric power project near Tokyo which featured two hard-rock diversion tunnels, each 37 ft. in diameter and 2,200 ft. long.

The 8,200-ft. Bahihal tunnel between India and the Kashmir valley, comprising twin tubes of 18-ft. diameter, was completed.

Oceania.—Drillers of the 24-ft. diameter Eucumbene tunnel in Australia, key structure of the Snowy mountain water-supply project, broke their 1955 world record for daily advance through hard rock. The new mark stood at more than 90 ft. a day, compared with 67 ft. achieved in 1955.

In 1956, the Wilson tunnel in Honolulu, T.H., was finally holed through a short time after work was resumed early in the year. The 2,775-ft. vehicular tube through Koolau mountain was begun in 1954, but work ceased in August of that year because of a series of cave-ins.

Fresh ground-water floats on salt water under Oahu Island and the Hawaiians completed a unique horizontal water-collection tunnel, drilled at sea level, to skim off the fresh water without depressing it. Ordinary vertical wells tend to depress the ground-water table below sea level, causing salt water infiltration. The new tunnel, called a Maui type well, was 608 ft. long, 9 ft. wide and 7 ft. high.

Europe.—In England, work was begun on a 28-mi. tunnel that would carry water from the Thames river beneath London to the opposite side of the city. It was unique in that it was being lined by wedging together a number of curved pie-shaped concrete sections to form a cylinder 2 ft. long and 5 ft. in diameter. Each circular section of line was jacked against sections previously placed in the same manner. When the tunnel was completed the entire interior would be lined with a thin mortar layer for smoothness. Also in the London area, construction of a 4,700-ft., two-lane vehicular tunnel beneath the Thames was resumed, having been interrupted for 17 years by World War II.

In 1956 Sweden surpassed its own world record for hard-rock tunnelling at the Harresele hydroelectric project on the Ume river. In a huge 49 by 59-ft. horseshoe tunnel that would carry off water passing through the turbines, drillers removed a daily average of 31,725 cu.ft. of rock over a six-day period. The 1955 record was 29,300 cu.ft. Downstream from Harresele, progress continued on a second record-breaking tunnel, at the Stornorrfor

hydroelectric project. This tunnel, also for turbine water discharge, was the largest in cross section ever attempted, 53 ft. wide by 77 ft. high, for a total area of 3,875 sq.ft. Stornorrfor's tailrace tunnel is 2.5 mi. long.

North America.—Trouble was encountered in the 10-mi. Kemano tunnel in British Columbia which supplies water for Aluminum Company of Canada's turbines at Kitimat. Excessive pressure losses in the 25-ft.-high waterway, completed only a few years earlier, occurred in June and indicated the probability of an obstruction. Alcan officials planned to pump out the tunnel at a propitious time to accomplish repairs.

An unusual tunnel was begun from a small island in the inside passage to Alaska, between the Canadian mainland and Vancouver Island, to so-called Ripple rock, a hogsback of green basalt lying just beneath the water surface directly in the sailing lane. By means of 3,800 ft. of 7-ft.-diameter tunnel 100 ft. below ground, the Canadian government would gain access to Ripple rock to place explosive charges.

The top job of a construction boom in Cuba was an 1,800-ft. four-lane vehicular tunnel to connect Havana with undeveloped lands across the bay. For this undertaking, 360-ft. prestressed concrete-covered steel-shell sections were fabricated ashore as a twin tube then sunk in a prepared trench and linked with similar sections underwater. Each twin tube was 73 ft. wide and 24 ft. high.

Progress continued on three large vehicular tunnels in the United States. In New York, the \$100,000,000 shield-driven third tube of the Lincoln tunnel was holed through on June 28, and by the end of the year the concrete lining was well along. Digging in the last part of the 5,500-ft. bore was halted early in the year for about three weeks when 2,500,000 gal. of water burst into the tunnel through a crevice in overlying rock. The two other big tunnels were being constructed by the cut-and-cover method, similar to the Havana tunnel. One was beneath Baltimore harbour, a twin-tube four-lane structure 6,300 ft. long. The first 300-ft.-long, steel-shell concrete-covered twin tube was sunk in place on April 11. At Norfolk, Va., work continued on a single-tube, two-lane 6,900-ft. tunnel under Hampton Roads. Construction was similar to the Baltimore tunnel, even to the length of tube sections.

Work was begun on the 23-mi. Roberts tunnel (formerly called Montezuma tunnel) which would deliver west slope water across the continental divide to Denver, Colo. Completion was scheduled for 1962. Construction continued on the 44-mi., 11-ft.-diameter West Delaware tunnel, part of New York city's vast water-supply system. Upon completion, expected in 1960, it would be the second longest in the world, exceeded only by the 85-mi. Delaware Aqueduct which also supplies New York city with water.

Other major water tunnel activity included work on a 4-mi., 7-ft. horseshoe line serving New Haven, Conn.; completion of a 7-mi., 10-ft.-diameter tunnel for Boston, Mass.; 6 mi. of tunnel in Chicago; a 21-mi. supply line to San Francisco and a 1.3-mi., 10-ft.-diameter tunnel in southern California.

Activity on larger sewerage tunnels in 1956 included a 4-mi. sewage tunnel (completed) and a 7-mi. storm-water tunnel in Boston, a 4-mi. interceptor in Cincinnati, O.; construction began on a 1.3-mi. siphon beneath the Rouge river in Detroit, Mich., and on a 3.7-mi. outlook from Los Angeles' Hyperion treatment works. A 5-mi. interceptor to New York city's Bowery bay plant and an 8-mi., 13-ft.-diameter interceptor in Philadelphia were also completed.

At Oahe dam near Pierre, S.D., the upper halves of six 3,220-ft., 25-ft.-diameter slow-regulating tunnels were completed while a separate contract for the downstream portions was about 25% complete. The tunnels were excavated by a unique horizontal

boring machine that moved easily through the soft rock and clay. This drilling worked at a take greatly in excess of any previously achieved by other methods. (H. Jv.)

Turkey. A republic in the southeastern Balkans and Asia Minor, Turkey is bounded west by the Aegean sea, northwest by Greece and Bulgaria, north by the Black sea, northeast by the U.S.S.R., east by Iran and south by Iraq, Syria and the Mediterranean. Area: 303,052 sq.mi. Pop.: (1950 census) 20,947,188; (1955 preliminary) 24,111,778. Language (1950): Turkish 87.3%; Kurdish 8.8%; also Arabic, Greek, Armenian, Georgian and Jewish (Spaniol). Religion (1945): Moslem 98%; Christian 1%; Jewish 0.4%. Chief towns (pop., 1955 preliminary census): Ankara (cap.) 453,151; Istanbul 1,214,616; Izmir (Smyrna) 286,310; Adana 172,465; Bursa 131,336; Eskisehir 122,755. President of the republic in 1956, Celal Bayar; prime minister, Adnan Menderes.

History.—Home Politics.—The year 1956 began with acute tension in interparty relations. It seemed likely that the revolt among the rank and file of the Democratic party against a too centralized leadership would assert itself further, that there would be desertions to join the new Hurriyet (Freedom) party which had split off from the government party and that the three opposition parties would co-operate closely to bring about more effective parliamentary control.

However, Adnan Menderes, the prime minister, succeeded in reaffirming his authority in the party. The rebels of Nov. 29,

FORMER TURKISH PRESIDENT Ismet Inonu, 72, taking a plunge from a pier at Heybeli, a resort island near Istanbul, in Aug. 1956

1955, with few exceptions, became subdued and backed up both the economic policy of the government (which they had attacked so bitterly) and the restrictive laws against party activities and the press. The parliamentary commissions of investigation, which were set up to ascertain whether or not there had been irregularities in the handling of public business by four former ministers, came out with verdicts of acquittal against the charges. On June 20, the foreign minister, Fuad Köprülü, resigned from the government to mark his disapproval of the acquittal of one of the four former ministers involved.

The restrictions against freedom of discussion passed by parliament on June 6 and June 24 included heavy prison terms, fines up to £T100,000 and obligations to integrally publish answers in the same column of the page in the same size characters as the original story which had involved any authority or individual and caused his objection or resentment. On June 27 parliament passed a law forbidding open air meetings and party demonstrations outside of a limited period during electoral campaigns. These laws were passed by 281 votes out of a total of 540. The opposition parties left parliament after a vehement criticism of the restrictive measures and jointly kept away for several weeks. A discussion of the Cyprus problem created an occasion for them to reappear in parliament.

Nevertheless, the situation in Turkey was hardly as bad as was generally assumed in the free world. There was no censorship of the press; opposition leaders were free to speak before their party organizations and conventions, and they were usually accompanied by a large group of journalists who fully reported their speeches. Newspapers could criticize anything in moderation, including the existence of restrictions.

The general trend was toward an easing of the situation. The government on the one hand, the independent and opposition editors on the other had remained out of contact for months. On Sept. 28 they met at an elaborate lunch which took the form of a sort of peace conference between the government and the press with the participation of leading majority members in parliament, progovernment editors, leading civil servants and presidents of important banks and corporations. The prime minister gave details about a plan of radical improvements undertaken in Istanbul (mainly concerning traffic); he also promised that similar meetings would be held each month to maintain a relationship based on goodwill and to supply the press with inside information. Attempts to form an opposition coalition failed. The three parties agreed among themselves about aims, but not about methods to attain them nor about the division of seats in a new election.

Foreign Affairs.—Turkey continued its policy of moderation apropos of middle eastern affairs, making efforts to prevent a break between Great Britain and the other three Baghdad pact powers. In the Suez crisis Turkey put emphasis on the acuteness of the danger caused by the U.S.S.R.'s obtaining a foothold in the middle east and the Mediterranean, in close alliance with the pan-Arab and pan-Moslem dream of hegemony of Gamal Abdel Nasser. There was an inclination to excuse the British-French intervention, although its form was found objectionable.

The Balkan pact continued to remain paralyzed. Pres. Celal Bayar, speaking on Nov. 1, said that both Turkey and Yugoslavia wished its revival. Encouraging words were used in the same speech about attempts to be made to find solutions for the grave conflict between Turkey and Greece arising out of the Cyprus question and the resurrection (in the Turkish opinion) of the old policy of Byzantine imperialism, so dear to the Greek Orthodox Church. Relations between Turkey and Greece remained cold. (See CYPRUS; GREECE.)

Turkish reaction to the new British constitutional proposals concerning Cyprus (Dec. 19), were altogether favourable. Speak-

ing on Dec. 28 in the Grand National Assembly, Adnan Menderes insisted that Turkey paid attention not to self-government but to the island's eventual status. If the principle of self-determination was applied, it would be applied fully; that is, both the Turks and the Greeks on the island would have the right to determine their fate freely. Turkey would then favour partition of the island.

Important foreign visitors to Turkey during the year included Dag Hammarskjöld (Jan. 19), Selwyn Lloyd (March 12), the shah of Iran and the empress Soraya (May 15), the U.S. vice-president, Richard M. Nixon (July 10), the president of Pakistan, Maj. Gen. Iskander Mirza (July 15), and King Idris of Libya (Aug. 6).

Economic Position.—Hopes in Turkey that a large U.S. loan would be forthcoming did not materialize. This did not deter the government, however, from proceeding with its ambitious program of equipping Turkey, as fast as possible, with new roads, harbours, flood control and irrigation systems, power stations, new sugar, cement and textile factories, hospitals, two new universities (at Erzurum and Izmir) and public building and private housing schemes.

Drastic laws were promulgated by parliament against profiteering and high living costs. Under the threat of severe punishment, traders decided to comply with the new regulations. This often meant sales at a loss, as the former large profit margins had allowed them to import at high prices.

Although the government refused to devalue the Turkish lira, a premium of about 100% was accepted for foreign money imported by tourists. This new scheme, which already existed for air fares, was extended to other fields. Turkish tourists in foreign countries would obtain foreign exchange permits at the new tourist rate.

(A. E. Y.)

Education.—Schools (1954): primary 18,058, including 2,220 3-yr. village schools, pupils 1,749,517, teachers (state) 33,250; junior high 507, pupils 95,999; secondary 113 (34 private), pupils 32,778, teachers (state, including junior high) 6,291; vocational 190, pupils (1952-53) 38,500, excluding schools of agriculture, fine arts, hygiene and other professional schools which in 1951-52 numbered 28, with 4,400 pupils; teacher training 34, pupils 16,346, teachers 745. Institutions of higher education 16, students 24,700 (2 universities with 5,700 students).

Finance and Banking.—Monetary unit: Turkish pound or lira, with an official rate of £2.80 to the U.S. dollar. Budget: (1955-56 est.) revenue £3,091,266,397, expenditure £3,091,262,815; (1956-57 est.) revenue £3,362,800,000, expenditure £3,362,800,000. Internal debt (Dec. 1955) £2,555,108,000, external debt £1968,416,000. Currency circulation (March 1955) £11,631,480,000, (March 1956) £12,050,036,000. Deposit money (March 1955) £716,167,000, (March 1956) £859,206,000. Gold and foreign exchange, central bank (March 1954) 214,000,000 U.S. dollars, (March 1956) 218,000,000 U.S. dollars.

Foreign Trade.—(1955) Imports £11,393,400,000, exports £877,400,000. Main sources of imports: Germany 18%; other continental European Payments Union countries (E.P.U.) 16%; U.S. and Canada 22%; U.K. 8%. Main destinations of exports: Germany 16%; other continental E.P.U. 26%; U.S. and Canada 16%; U.K. 7%. Main exports: tobacco 28%; cotton 15%; hazelnuts 14%.

Transport and Communications.—Roads (1954) 45,760 km. Motor vehicles in use (Sept. 1954): passenger 28,060, commercial 34,040. Railways (1955): 7,900 km.; traffic (state railways, 1955) passenger-km. 3,917,328,000; freight, ton-km. 4,165,632,000. Shipping (July 1954): merchant vessels of 100 gross tons and over 274; total tonnage 488,000. Air transport (state air lines, 1955): passenger-km. 68,652,000; freight, ton-km. 1,236,000. Telephones (Jan. 1955) 132,465; radio receiving sets (Nov. 1955) 999,800.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 7,216,000 (5,010,000); barley 2,985,000 (2,400,000); oats 356,000 (325,000); maize 864,000 (914,000); rye 657,000 (470,000); potatoes (1954) 1,116,000, (1953) 1,000,000; millet 92,000 (88,000); tobacco 117,500 (100,000); lint cotton 157,000 (142,000); cottonseed 285,000 (260,000); linseed 16,000 (15,000); sunflower seed 135,000 (120,000); sesame 50,000 (48,000); hemp fibre 11,000 (12,100); chick peas 76,000 (75,000); dry beans 114,000 (105,000); lentils 77,000 (64,000); oranges, tangerines, etc., 149,000 (148,000); lemons, limes, etc., 30,000 (27,000); grapes 1,895,000 (2,248,000); raisins (1954) 120,000; raw beet sugar 268,000; olive oil 30,000; wool 20,000; meat (1952): beef, veal 43,614 (including buffalo meat 3,901); mutton, lamb 49,763; pork (1951) 110,000; rice (1954) 176,000, (1953) 174,000. Livestock (Sept. 1955): cattle 10,867,000; sheep 26,808,000; horses 1,214,000; mules 117,000; asses 1,710,000; buffaloes 1,071,000.

Industry.—Fuel and power (metric tons, 1955): coal 5,496,000; lignite (state mines only) 1,805,376; crude oil (1954) 59,000; electricity 1,455,600,000 kw.hr. Production (metric tons, 1955): iron ore (65% metal content, state mines) 427,200; pig iron 200,400; crude steel 188,400; blister and refined copper 23,640; sulphur (state) 11,496; cement 816,000; superphosphates 66,444; manganese (48%-50% metal content, 1954)

47,064; chrome ore (state mines) 173,148, (total, 1954) 523,632; manufactured tobacco 25,284; cotton yarn (state only) 25,816, (private, 1952) 16,728; woven cotton fabrics (state only) 145,744,000 metres, (private, 1952) 65,724,000 metres; wool yarn (state only) 4,320 metric tons (total, 1954) 10,200 metric tons.

Twining, Nathan Farragut (1897—), U.S. air force officer, was born at Monroe, Wis., on Oct. 11 and was graduated from the U.S. Military academy at West Point, N.Y., in 1919. Trained for the infantry, he later transferred to the U.S. air corps and studied at the corps's tactical school in 1935-36 and at the Command and General Staff school, Ft. Leavenworth, Kan., in 1936-37.

During World War II Twining served in the Pacific as commander of the 13th air force in the Solomon Islands in 1943, in the Mediterranean area as commander of the 15th air force in Italy in 1944-45, and again in the Pacific in 1945 as commander of the 20th air force based in the Marianas.

In 1950, after serving as commander in chief of the Alaskan military defenses, Twining was appointed vice-chief of staff, U.S. air force, and was promoted to the rank of four-star general. In 1952 he became head of the strategic air command. In 1953 Pres. Dwight D. Eisenhower named him chief of staff, U.S. air force, and he was nominated for his second term in 1955.

During his terms of office Twining repeatedly called for increases in air force appropriations, particularly for new and improved weapons. Following a limited inspection visit to the U.S.S.R. in June 1956 at the invitation of soviet leaders, he intimated that Russian production of new military planes exceeded that of the United States.

Union of Soviet Socialist Republics. This federation of soviet socialist republics is a state covering parts of eastern Europe and of northern and central Asia. Area (1939) 8,173,557 sq.mi.; (1946) 8,598,678 sq.mi., including 1,969,110 sq.mi. (23%) in Europe. Pop. (1939 census) 170,467,572; (1956 est.) 200,200,000, including 138,200,000 (69%) in Europe. Nationalities (1956 est.): Russians about 52.3% of pop.; Ukrainians 18.3%; Byelorussians 3.5%; the strongest non-Slavonic groups were the Turkic (11.3%) and Finno-Ugrian (2.7%) peoples. Religion: Russians, Ukrainians, Byelorussians and Rumanians (Moldavians) are Greek Orthodox; Lithuanians and Poles are Roman Catholic (2.3%); Latvians, Estonians, Germans and Finns are mainly Lutheran; there were about 5,000,000 Protestants of all denominations; 2,763,000 Georgians have their own autocephalous Orthodox Church; 2,662,000 Armenians are Christian; Jews were estimated (1956) at 1,902,000; the indigenous inhabitants of Azerbaijan, the five central Asian soviet socialist republics and many autonomous republics (Tatar, Bashkir, Daghestan, etc.)

are Moslem (number, 1956 est., 24,500,000); Buryats and Kalmyks are Lamaist Buddhist (about 500,000). Chief towns (pop., 1956 est.): Moscow (cap.) 4,389,000; Leningrad 2,814,000; Kiev 991,000; Kharkov 877,000; Gorky 876,000; Tashkent 778,000; Kuybyshev 760,000; Novosibirsk 731,000; Sverdlovsk 707,000; Tbilisi 635,000; Stalino 625,000; Chelyabinsk 612,000; Odessa 607,000; Baku 598,000; Dnepropetrovsk 576,000; Kazan 565,000; Riga 565,000; Rostov 552,000; Molotov 538,000; Stalingrad 525,000; Saratov 518,000; Omsk 505,000. First secretary of the Communist Party of the Soviet Union in 1956, Nikita S. Khrushchev (*q.v.*); chairman of the presidium of the supreme soviet of the U.S.S.R., Marshal K. E. Voroshilov; chairman of the council of ministers, Nikolai A. Bulganin (*q.v.*).

Union of Soviet Socialist Republics

Republic	Capital	Area (sq.mi.)	Population (1956 est.)
Russian S.F.S.R.	Moscow	6,592,443*	113,200,000
Ukraine	Kiev	232,618	40,600,000

*Excluding the Crimea, from Feb. 19, 1954, part of the Ukraine, but including Karelia, which on July 16, 1956, was included into the Russian S.F.S.R.

†Before 1940 the area of Latvia was 25,395 sq.mi.

‡Before 1940 the area of Estonia was 18,359 sq.mi.

Source: Areas are taken from the *Bolshaya Sovetskaya Entsiklopedia: Soyuz Sovetskikh Sotsialisticheskikh Respublik* (Moscow, 1948), and population estimates from *Narodnoye Khozyaistvo S.S.S.R.* (Moscow, 1956). The order, as in the originals, is according to the number of population.

History.—The Party.—The 20th congress of the Communist Party of the Soviet Union, held in Moscow from Feb. 14 to 25, 1956, was the outstanding event of the year. It marked the first serious attempt of the Soviet leaders to face up publicly to the problem of dissociating themselves completely from Stalin and his methods and of ruling the Soviet empire without him. The repercussions of the congress on the stability of the communist system inside the U.S.S.R. and beyond its borders were still being felt at the end of the year.

The first published reports of the congress did not indicate any major departure from accepted policy and the proceedings followed the normal rigid pattern established under Stalin. The principal report to the congress was delivered by Khrushchev, the first secretary, in a six-hour speech on the opening day. The greater part of this speech, which reviewed the whole of Soviet policy, contained little that was new or unexpected. The only novelties were declarations that wars were no longer "inevitable" and that socialism might be achieved in modern conditions in certain countries by parliamentary means and without resort to violence.

It was noted that, although the congress was the first to be held since Stalin's death, Khrushchev made only one passing reference to the dictator in his long speech. He made only indirect reference to Stalin's rule when he denounced the "cult of the individual" and stressed the collective nature of the Soviet leadership, which, he said, was not "a group of men bound by personal relations or mutual advantage." It was "a working collective of leaders whose relations are based on ideas and principles permitting of neither mutual forgiveness nor personal antagonism." But other members of the party presidium who spoke later, notably M. A. Suslov and A. I. Mikoyan, made outspoken criticisms of Stalin by name. It was not until the middle of March that news leaked out to the western press that, at a closed session at the end of the congress, Khrushchev had made a violent denunciation of Stalin and the later years of his rule. The text of

this speech was never published in the U.S.S.R., though it was reported to have been read out at party meetings throughout the country. A version made available in the west by the U.S. state department was generally accepted as an accurate account of the speech and was never questioned by the Soviet authorities.

The speech was a denunciation of Stalin's autocratic and brutal methods of ruling, especially after the 17th congress of the party in 1934. Khrushchev began by recalling the doubts that Lenin had expressed on the eve of his death about Stalin's suitability for the post of general secretary and his criticism of his "rudeness." (The full text of Lenin's political "testament" and of other documents throwing light on Lenin's relations with Stalin was distributed to delegates at the congress.) He described Stalin's demand for "absolute submission" to his opinions and his "moral and physical destruction" of all who opposed him. He revealed that 98 of the 139 members of the party central committee elected at the 17th congress were later arrested and shot. He said that Stalin had carried out "purges" on the basis of lists of potential victims drawn up arbitrarily by the secret police, that he had extracted confessions from the victims by means of torture and that he had later ordered the deportation of whole national minorities. He ridiculed Stalin's claim to be a great military leader and said he had been responsible for the initial Soviet defeats in World War II and for large and unnecessary losses of men. He said Stalin was responsible for the breach of Soviet-Yugoslav relations in 1948. It was on Stalin's orders that the "doctors' plot" had been fabricated in 1953. He gave many examples of Stalin's extraordinary personal vanity. In conclusion he indicated that Stalin had intended in the last year of his life to destroy the senior members of the party leadership and said that, had Stalin lived a few more months, V. M. Molotov and Mikoyan might have been among the victims.

Apart from its bitter and highly personal denunciation of Stalin the speech contained little in the way of reasoned argument and bore many signs of having been put together hastily. This supported the view that it was only during the congress that the decision to make a complete break with Stalinism was taken. It was noted, however, that Khrushchev approved Stalin's suppression of the political opposition associated with L. D. Trotsky, G. E. Zinoviev and N. I. Bukharin, his collectivization of Soviet agriculture in the early 1930s and his policy of rapid industrialization.

Despite the disturbing effects of this speech in other communist countries (see POLAND; HUNGARY) the process of "de-Stalinization" in the Soviet Union was not noticeably accelerated. The worst aspects of the Stalinist terror had already been abated before 1956; the powers of the security services had been curtailed and the population of the concentration camps reduced. Thus an announcement in Feb. 1956 revealed that the so-called "troika"—the secret tribunal of the ministry of internal affairs which had arbitrary powers to punish political offenders—had been abolished in 1953. Though there were no direct references to the exodus from the camps in the Soviet press, there were reliable reports that the number of persons released ran into millions.

But there was little evidence of positive de-Stalinization in the sense of greater democratic freedom. The Communist party remained as rigidly disciplined as ever. The press remained the mouthpiece only of the party and government. Nor was there any relaxation of economic policy in favour of the consumer; concentration on heavy industry remained the main slogan and the pressure for the collective system in agriculture was unabated. Toward the end of the year there were some small signs of protest among the students of Moscow and Leningrad and evidences of discontent among writers in the Ukraine.

The elections at the end of the congress produced no major

"COLLECTIVE LEADERSHIP AT WORK," a 1956 cartoon from *Die Weltwoche*, Zürich, Switz.

changes in the party leadership. The 11 "full" members of the governing presidium were all re-elected, with no additions. They were: Bulganin, Voroshilov, L. M. Kaganovich, A. I. Kirichenko, G. M. Malenkov, Mikoyan, Molotov, M. G. Pervukhin, M. Z. Saburov, Suslov and Khrushchev. The most significant innovation was the appointment of Marshal G. K. Zhukov, the minister of defense, as first of the "candidate" members of the presidium. This was the first time a purely military figure had been admitted to the political leadership. Four further candidate members were appointed: L. I. Brezhnev, N. A. Mukhitdinov, D. T. Shepilov and Ekaterina A. Furtseva. Brezhnev and Mrs. Furtseva were also made members of the eight-man secretariat of the central committee. Khrushchev remained first secretary. The new central committee, consisting of 133 full members and 122 candidate members, contained 102 entirely new names. More than a third of the members elected in 1952 were removed. The overwhelming majority of the members were full-time party officials; representation of the armed forces and security organizations showed a slight decline.

Immediately after the congress the creation of a special party bureau for the affairs of the Russian federation of the U.S.S.R. was announced. Khrushchev was made chairman of the bureau, which was to ensure "more efficient management of economic and cultural questions in the R.S.F.S.R." The bureau later began publication of a new daily newspaper, *Sovietskaya Rossiya*.

The Government.—In July a reorganization of certain branches of the economic administration was made with the avowed purpose of giving the constituent republics greater influence over the planning and management of their economies. Branches principally affected were those connected with the production and distribution of food, light manufactured goods and textiles.

The main change in the composition of the government of the U.S.S.R. was the release in June of Molotov from his duties as minister of foreign affairs. He had been directly concerned with the formulation and conduct of Soviet policy for 15 years. His removal was believed to be connected with the restoration of Soviet-Yugoslav relations, to which Molotov was known to have been opposed. Despite his removal from the ministry Molotov was a member of the delegation which visited Warsaw in October and was rebuffed by Wladyslaw Gomulka. Shortly after this event Molotov was made minister of state control, a gesture apparently intended to signify his complete detachment from the conduct of foreign affairs. He was succeeded as foreign minister by D. T. Shepilov (*q.v.*), former editor of *Pravda* and a party secretary.

The more important governmental appointments during the year were: N. P. Dudorov, a party official, replaced Gen. S. N. Kruglov as minister of internal affairs; N. M. Shvernik was re-

placed as chairman of the central council of trade unions by V. V. Grishin, but remained a candidate member of the party presidium; L. M. Kaganovich ceased to head the committee on labour and wages but took over the duties of minister of the building materials industry. Three new deputy foreign ministers were appointed, V. A. Zorin, N. S. Patolichev and A. V. Zakharov.

On July 16 the presidium of the supreme soviet announced the abolition of the Karelo-Finnish soviet socialist republic and its conversion to the status of Soviet autonomous republic forming part of the Russian federation.

There were no major "purges" during the year. But on May 27 it was revealed in a Baku newspaper that M. D. Baghirov, for 20 years leader of the Azerbaijani Communist party, had been tried and condemned to death for alleged complicity with L. P. Beria, the former secret police chief. He was shot along with three other men.

The Armed Forces.—The principal military appointments during the year were those of Army-Gen. A. I. Antonov as secretary-general of the Political Consultative committee of the Warsaw treaty powers; of Marshal R. Malinovsky as commander in chief of the Soviet land forces in succession to Marshal Ivan Koniev; and of Marshal K. K. Rokossovsky as deputy minister of defense. Admiral of the Fleet N. G. Kuznetsov, the former minister of the navy and subsequently its commander in chief, was not re-elected to the central committee of the Communist party in February and disappeared from public life. His position as commander in chief appeared to have been taken by Adm. S. G. Gorshkov, the only naval representative on the central committee.

In May the government announced a further reduction in the size of the armed forces by 1,200,000 men by May 1957. It was said that 63 divisions would be disbanded, including about 30,000 men stationed in the German Democratic Republic. Exchanges between Bulganin and Pres. Dwight D. Eisenhower on disarmament continued, without producing any practical results.

National Economy.—Several measures calculated to alleviate slightly the lot of the industrial workers were introduced. The working week was reduced from 48 to 46 hours and a six-hour day introduced for young workers between the ages of 16 and 18; maternity leave was increased from 77 to 112 days; a new law was passed regulating pensions which would now range from 300 to 1,200 roubles a month; and the minimum monthly wage was raised from 260 to 370 roubles, a measure estimated to affect more than 8,000,000 people, or one-sixth of the labour force.

The targets set for agriculture by the sixth five-year plan, which the supreme soviet adopted in February, included the reclamation and cultivation of 75,000,000 ac. of new agricultural land begun in 1955, the raising of the gross grain harvests to 180,000,000 tons by 1960 and the doubling of the output of meat and dairy produce by the same date. An important part in achieving these targets was to be played by the new areas in Siberia and Kazakhstan, where Khrushchev attended conferences of agricultural specialists during the summer. Soviet authorities claimed that, despite delays resulting from bad weather in the east and north, the 1956 grain harvest was the richest in Soviet history. This claim suggested that the gross harvest was in the region of 110,000,000 tons. About 220,000 young Communists were sent from the towns to help in the harvest.

In August the government announced plans to irrigate, in the course of the five-year period 1956-62, 741,000 ac. of the region known as the Hungry steppe in the Uzbek and Kazakh republics. This was expected to raise the annual output of cotton from the area by about 330,000 tons.

No improvement in the efficiency of the collective farm system was recorded and in March a move was made to reverse the conciliatory attitude toward the peasants that followed Stalin's death

in 1953. The managers of the farms were empowered to fix the size of the members' private plots in proportion to the amount of work performed for the collective and to reduce the size of the plots at their own discretion.

Foreign Affairs.—The Soviet Union's relations with its eastern European satellites suffered serious deterioration during the year, and the purely military nature of Soviet control of the area was exposed. The less certain direction provided by the "collective" leadership in Moscow led to a reduction in the prestige and authority of the communist leaders of eastern Europe. Revolts broke out in Poland in June and in Hungary in October. In both cases the Soviet leaders resorted to military force. Soviet tanks were used to quell the rioters in Poznan and a large number of Soviet armoured divisions were sent to Hungary to enforce Soviet control. In Poland an alternative communist leadership was found, under Gomulka, to resist Soviet demands while preserving the Soviet alliance. In Hungary no such alternative was available.

There were reports of discontent in the other satellite countries, but no serious disturbances. On Oct. 30, on the eve of the second entry of Soviet troops into Hungary, the Soviet government issued a declaration admitting errors committed in its relations with its allies and promising to revise them in future. In the sense of this declaration Poland received the promise of substantial economic aid after negotiations in November. The dissolution of the Cominform and the cessation of its journal were announced in April.

Despite the setback to Soviet positions in eastern Europe, Soviet foreign policy became increasingly active in the middle east. The supply of arms to Egypt, which was one of the main sources of the Suez crisis, was followed by the threat to dispatch "volunteers" following the British-French action there. There was evidence of Soviet penetration of other middle eastern countries, notably Syria. Shepilov, the foreign minister, made an extensive tour of the middle east in June.

The Soviet government handed the Porkkala naval base back to Finland in January. In April Bulganin and Khrushchev paid a state visit to Great Britain, where they were received by the queen. Malenkov also visited Great Britain in his capacity as minister of power stations. Marshal Tito, president of Yugoslavia, was received on a state visit in Moscow in June. His talks with the Soviet leaders resulted in their grudging and imprecise acceptance of the right of other Communist parties and countries to pursue their specific paths to "Socialism." When the crisis in eastern Europe developed, Khrushchev visited Yugoslavia privately to consult Tito, who accompanied him to the Crimea for further talks. The Yugoslav leader later exposed the nature of the conflicts of opinion among the Soviet leaders and was severely criticized by the official newspaper *Pravda*.

The Soviet Union established diplomatic relations with Cambodia, the Sudan and the Yemen, and reached agreement on their establishment with Liberia, Ceylon and Japan. It recognized Moroccan and Tunisian sovereignty. The Soviet ambassador to Israel was recalled in November. Soviet consulates in South Africa were closed at the request of the South African government.

(See also ANTARCTICA; ATOMIC ENERGY; COMMUNISM; RUSSIAN LITERATURE; UNITED NATIONS.) (D. Fd.)

Education.—Schools (1955-56): primary 179,000, secondary 34,000, all pupils 30,070,000, all teachers 1,733,000; vocational 3,757, pupils 1,961,000; institutions of higher education 765 (including 31 universities), students 1,867,000, including 1,228,000 taking correspondence courses.

Finance.—Budget: (1955 est.) revenue 590,192,622.000 roubles; expenditure 563,482,491.000 roubles; (1956 est.) revenue 592,761,156.000 roubles; expenditure 569,634,972.000 roubles. Investments from the state budget in the national economy in 1956 amounted to 237,325,529.000 roubles, and in addition, from the enterprises' and economic organizations' own funds, 109,658,670.000 roubles. External value of the rouble, high and fictitious: U.S. \$1 = 4 roubles.

Foreign Trade.—(UN Economic Commission for Europe's estimates, in U.S. dollars, 1954.) Trade turnover with all countries \$6,250,000,000. Trade with the countries of the Communist group \$4,900,000,000, including \$1,100,000,000 with the German Democratic Republic, \$720,000,000 with Czechoslovakia, \$660,000,000 with Poland, \$330,000,000 with Rumania, \$280,000,000 with Hungary and \$200,000,000 with Bulgaria. Trade with China, Mongolia and Northern Korea amounted to \$1,610,000,000.

Transport and Communications.—Railways (1955): 120,700 km., including 5,400 km. electrified; passenger traffic 1,641,400,000 persons and 141,400,000,000 passenger-km.; freight carried 1,267,000,000 metric tons and 970,900,000,000 ton-km. Highways (1955, hard surface only) 206,900 km. Motor vehicles in use (1955): cars 350,000, commercial 2,525,000. Shipping (July 1954): vessels of 100 gross tons and over 1,113, gross tonnage 2,381,000. Telephones (1936, last figure published) 861,200. Radio receiving sets (1955) 6,100,000; television sets 820,000.

Agriculture.—Main crops (metric tons, 1950; 1955 estimates or plan in parentheses): grain 99,700,000 (129,000,000); sugar beets 21,400,000 (31,400,000); potatoes 87,000,000 (plan: 147,800,000); cotton, unspinned, 3,400,000 (3,700,000). Livestock (1950; 1955 estimates in parentheses): cattle 57,200,000 (67,100,000); pigs 24,100,000 (52,200,000); sheep and goats 99,000,000 (124,900,000, sheep only); horses 13,700,000 (1955 plan: 16,400,000).

Industry.—Production (metric tons if not otherwise stated, 1950; 1956 est. in parentheses): coal, including lignite, 261,000,000 (430,000,000); crude petroleum 37,800,000 (84,000,000); electricity 91,000,000,000 (192,000,000,000) kw.hr.; pig iron 19,400,000 (1955: 34,000,000); steel 27,300,000 (49,000,000); cement 10,100,000 (1955: 22,700,000). Light engineering (1955, units): bicycles 2,880,000; sewing machines 1,610,000; washing machines 87,000; refrigerators 151,000; radio sets 3,530,000; television sets 490,000; cameras 1,020,000; clocks and watches 19,700,000. Textile and shoe production (1955): cotton fabrics 5,904,000,000 m.; linen fabrics 305,000,000 m.; woollen fabrics 251,000,000 m.; silk fabrics 526,000,000 m.; leather shoes 299,000,000 pairs. Foodstuffs production (1955): meat 2,219,000 metric tons; sausage products 83,000 tons; fish, catch, 2,675,000 tons; butter 436,000 tons, cheese 105,300 tons, margarine 364,000 tons; vegetable oil 1,115,000 tons; sugar 3,419,000 tons; wine 3,450,000 hl.

Unitarian Church. During 1956 the membership of the Unitarian churches and fellowships in the United States passed 100,000. One hundred and ninety fellowships had been organized and would become churches when they numbered 65 families each and had the ability to support a minister. The church school enrolment was almost seven times that for adults. Funds raised during the year represented an increase of 12% over the previous year.

Without prior arrangement, the theme of the annual meetings of Unitarian organizations in Boston, Mass., in May proved to be the matter of brotherhood (race relations), as it had come to a crisis in American life. Distinguished Negro Americans were among the speakers. Martin Luther King Jr., of Montgomery, Ala., was given the award of the Unitarian Fellowship for Social Justice. Resolutions urging the findings of ways to abolish segregation in its various forms were passed by the several organizations. Of churches responding to a questionnaire, 52% reported Negroes attending and participating as church members, members of governing bodies, church school teachers, ushers, hostesses, etc.

Other social concerns resulted in resolutions for the repeal of the Walter-McCarran act, abolition of the death penalty for federal offenses, greater emphasis on working through the United Nations as a national policy, urging the U.S. to take the initiative through the UN for a universal pact against the testing of atomic and hydrogen weapons, furthering international exchange of ideas and visits with peoples of other nations, increased allocations by all levels of government for the support of public schools, and commending the Freedom Agenda project for its study of American constitutional liberties.

Of outstanding concern was a report already adopted by the Universalist Church of America authorizing the appointment of a merger commission to draw up plans for merger, with other possible alternatives. This report was adopted with an overwhelming (469-65) vote; also a resolution that an independent research firm make an investigation of the operation of all the organizations that would participate in such a merger and the results to be distributed to the churches before any plebiscite.

H. Clay Burkholder of Lancaster, Pa., was elected moderator of the denomination. The climax to the meetings was the anni-

versary banquet, at which John Howland Lathrop of Brooklyn, N.Y., was given the eighth Unitarian award for distinguished service to the cause of liberal religion, the first active Unitarian minister to receive it.

(J. H. L.)

United Church of Canada. The United Church of Canada, which in 1925 united the Presbyterian Church in Canada, the Methodist Church (Canada) and the Congregational Churches in Canada, had under pastoral care during 1956, 2,265,585 persons. The membership reported for 1954 was 894,556, and 37,536 members were added during 1955 on profession of faith. There were 5,289 Sunday schools with 658,633 enrolled scholars in 1956, and a Sunday School in the Home—by Mail and Air, with 2,382 families enrolled. The total value of local church property was \$246,175.936, with liabilities of \$12,905,624.

In addition to seven theological colleges and three universities, there was in 1956 a training school for full-time women workers and nine residential secondary schools (junior colleges). In all 9,047 students were in attendance, 632 of whom were candidates for the ministry. There were four residential training schools for lay workers.

Givings to the missionary and maintenance fund (unified budget for missions and benevolences) were \$4,608,866 in 1955. The Woman's Missionary society raised for its work \$1,237,706, and \$4,604,862 was raised by the woman's associations. The total giving for all purposes was \$39,445,516, or \$2,707,875 above the previous year.

The United Church of Canada added 3 new homes for senior citizens in 1955, making 15 in all; maintained 6 homes for girls; completed the second stage and laid plans for the final stage of the National Evangelistic mission; received a delegation of representatives from the Russian Orthodox Church, and sent a delegation in return. The church opened a new modern radio, television and film studio, with complete technical staff and equipment.

During 1955 the United Church gave \$137,837 for interchurch aid and overseas relief, and sent 165 tons of clothing to Korea and Lebanon. The United Church maintained 95 missionaries and 10 other workers in seven countries; published an official paper, 5 weekly story papers and 20 quarterlies; owned and operated the Ryerson Press, oldest and largest book publishing house in Canada; carried on religious work in defense areas, construction and logging camps; owned and operated seven hospitals and a fleet of five mission boats.

United Nations. Sec.-Gen. Dag Hammarskjöld expressed hope in 1955 "that solid progress can be made in the coming years in developing new forms of contact, new methods of deliberation and new techniques of reconciliation" to settle international issues. As outbreaks of violence seriously disturbed both the communist and noncommunist worlds during 1956, the United Nations was increasingly called upon to utilize all facilities at its disposal to maintain peace. A new trend in the organization toward quiet diplomacy, mediation and good offices to supplement voting procedures and sharp debate asserted itself clearly. Major problems endangering peace and security were increasingly brought for settlement to the general assembly. Although unrestricted faith in the organization's ability to preserve peace was not upheld by all members, it nevertheless seemed evident that the UN carried a moral force in the

international community that no power could wholly ignore. Attention was focused primarily on questions of colonialism and peaceful change; matters bearing on east-west relations seemed to necessitate less immediate consideration.

Membership and Representation.—On Dec. 14, 1955, 16 new members were admitted into the United Nations by the general assembly: Albania, Jordan, Ireland, Portugal, Hungary, Italy, Austria, Rumania, Bulgaria, Finland, Ceylon, Nepal, Libya, Cambodia, Laos and Spain. During 1956 the Security council also recommended the admission of the Republic of the Sudan, Morocco, Tunisia and Japan to the UN. Final confirmation of the membership of these countries was made by the general assembly at its 11th session.

Although a number of governments continued to oppose the representation of the Republic of China in the UN by the nationalist government, a majority of states in the assembly voted not to consider any proposals on the matter during the tenth session.

Organization and Meetings.—The tenth session of the general assembly, which convened at UN headquarters on Sept. 20, 1955, adjourned on Dec. 20, 1955. The assembly's 11th session opened on Nov. 12, 1956. Important issues on the assembly's provisional agenda included the Hungarian and Egyptian situations, the question of disarmament, the problem of race relations in the Union of South Africa and the question of self-determination in Cyprus. Among new questions inscribed on the provisional agenda were the following: an Indian request for consideration of "peaceful utilization of Antarctica"; a request by the government of Greece for discussion of interim measures on human rights, pending the entry into force of the United Nations covenants; and proposals by a number of Latin-American nations and Spain for increasing the membership of the Security council, the Economic and Social council, the International Court of Justice and the International Law commission.

Until the end of Dec. 1955 the membership of the Security council consisted of five permanent members (China, France, the U.S.S.R., the United Kingdom and the United States) and six nonpermanent members (Belgium, Brazil, Iran, Peru, Turkey and New Zealand). At its tenth session, the general assembly elected Cuba, Australia and Yugoslavia to take the places of Brazil, New Zealand and Turkey on the council for two-year terms beginning Jan. 1, 1956. Yugoslavia was named after a long period of deadlock in which the U.S.S.R. sponsored the membership of Poland and the U.S. backed the election of the Philippines. At the initiative of the president of the assembly, a compromise was arranged and Yugoslavia was elected to replace Turkey. Under a "gentleman's agreement" Yugoslavia was to resign its seat after one year and the assembly would then elect the Philippines for the remainder of the term.

The concluding portion of the Economic and Social council's 20th session took place at UN headquarters from Dec. 5 to Dec. 15, 1955. Meetings of the council's 21st session were held between April 17 and May 4, 1956. The council met for its 22nd session—July 9–Aug. 10—in Geneva, Switz. Brazil, Canada, Greece and Indonesia were elected by the tenth general assembly for three-year terms to replace Australia, India, Turkey and Venezuela. The United States and Yugoslavia were re-elected for another term. Other members of ECOSOC during 1956 were as follows: with terms ending Dec. 31, 1956—Czechoslovakia, Ecuador, Norway, Pakistan, the U.S.S.R. and the United Kingdom; with terms ending Dec. 31, 1957—Argentina, China, Dominican Republic, Egypt, France and the Netherlands.

At its 17th session from Feb. 7 to March 23, 1956, the Trusteeship council considered the annual reports of the administering authorities, the reports of visiting missions and the question of administrative unions affecting Tanganyika, Ruanda-

Urundi, the Cameroons and the Togolands. Progress toward self-government in the Pacific trust territories occupied central attention at the 18th meeting of the council, June 7 to Aug. 3. Membership in the council during 1956 was as follows: members administering trust territories—Australia, Belgium, France, New Zealand, the United Kingdom and the United States; members by virtue of permanent membership in the Security Council—China and the U.S.S.R.; members elected by the general assembly—India and Haiti until Dec. 31, 1959, and Guatemala and Syria until Dec. 31, 1958. Since Italy administers the trust territory of Somaliland, the admission of Italy to the UN on Dec. 14, 1955, entailed automatic membership in the Trusteeship council. This in turn necessitated the addition of a nonadministering country, and Burma was elected to serve.

Cases pending before the International Court of Justice during 1956 were the case of the Norwegian loans issued in France (*France v. Norway*) and right of passage through Indian territory (*Portugal v. India*). On June 1, 1956, the court delivered its advisory opinion on the admissibility of hearing of petitioners by the Committee on South-West Africa. The court held that it would not be inconsistent with its judgment of July 1950 for the assembly to authorize a procedure for granting these hearings providing that the assembly was convinced of the necessity of such a course for the maintenance of effective international supervision of the territory. An advisory opinion on judgments of the administrative tribunal of the International Labour organization upon complaints made against UNESCO was delivered by the court on Oct. 23, 1956. The court was of the opinion that the administrative tribunal was competent, under article ii of its statute, to hear the complaints introduced against UNESCO by Duberny, Leff, Wilcox and Bernstein. Furthermore, the court held that the validity of the decisions given by the administrative tribunal in the four cases in question was no longer open to challenge. By order of March 16, 1956, the court removed the two Antarctica cases (*U.K. v. Chile* and *U.K. v. Argentina*) from its list. The Aerial Incident of Oct. 7, 1952 (*U.S. v. U.S.S.R.*), and the Aerial Incident of March 10, 1953 (*U.S. v. Czechoslovakia*), were removed from the court's list on March 14, 1956. On June 28 a vacancy was created in the court by the death of Judge Hsu Mo of China who was to hold office until Feb. 5, 1958. Under the court's statute, the chair would be filled after an absolute majority vote of the general assembly and the Security council.

Administration and Finance.—At its ninth session the general assembly voted appropriations for 1955 of \$46,963,800. This amount was increased to \$50,228,000 when the tenth assembly on Dec. 16, 1955, appropriated an additional \$3,264,200 as a supplement to the 1955 budget. At the same time, a budget of \$48,566,350 for the expenses of the organization during 1956 was approved. The secretary-general estimated that a sum of \$48,250,700 would be necessary to cover UN operating expenses during 1957.

Assessments for 1956 were made on the basis of the scale of assessment adopted by the general assembly for the years 1956, 1957 and 1958 in its resolution of Dec. 15, 1955. This resolution grants the secretary-general authority to accept a portion of the contributions of member states for the financial year 1956 in currencies other than U.S. dollars. Members were advised that 17.65% of their 1956 contributions could be paid in Swiss francs, 10.50% in pounds sterling and 6.30% in a group of other non-U.S. dollar currencies. Twenty-two states decided to avail themselves of the option to pay in one or more of these currencies. The assessment of the 16 new members of the UN was deferred until the 11th session of the general assembly.

Political and Security Questions.—*Disarmament.*—Generally viewed as the leading issue before the assembly, the disarmament question received lengthy consideration at the 10th

session. In a resolution which many delegates estimated the most significant yet approved on the subject, the general assembly on Dec. 15, 1955, called upon the members of the United Nations, particularly those on the Disarmament commission's subcommittee (Canada, France, U.S.S.R., United Kingdom, United States), to continue their attempts to reach agreement on a comprehensive disarmament plan. In particular, the goals unanimously adopted by the assembly in 1954 were recalled, and it was suggested that priority be given to early agreement on and implementation of Pres. Dwight D. Eisenhower's "open sky" plan and Prime Minister Nikolai Bulganin's proposal for ground control posts.

The assembly's resolution of Nov. 4, 1954, had urged agreement on a collective system of disarmament to be embodied in a draft international disarmament convention. The convention was to provide for: (1) the regulation, limitation and major reduction of all armed forces and all conventional armaments; (2) the total prohibition of use and manufacture of nuclear weapons of mass destruction together with conversion of existing stocks of nuclear weapons for peaceful purposes; (3) the establishment of effective international controls through a responsible and efficient control organ.

On July 21, 1955, Pres. Dwight D. Eisenhower had suggested that the U.S. and the Soviet Union exchange complete blueprints of their military establishments and permit aerial photography within their territories. The U.S.S.R., however, rejected the Eisenhower plan and endorsed the establishment of control posts at strategic points on the territory of all states in order to prevent any dangerous concentration of forces or any surprise attack.

In the course of its meetings, between March 19 and May 4, 1956, the Disarmament subcommittee (Canada, France, U.S.S.R., United Kingdom, United States) received a four-power western proposal which listed certain prerequisites to disarmament and a formal statement from the U.S.S.R. which represented a new approach to the solution of the disarmament problem. The western powers insisted that disarmament proceed by stages with progress from one stage to another dependent on the development of confidence through the settlement of major political problems; that the program must operate under effective international control with inspection rights including aerial reconnaissance; that, under proper safeguards, the program must provide for stopping the build-up of nuclear stockpiles and devoting all future production of nuclear material to peaceful purposes; that preliminary inspection methods be demonstrated on a limited scale; and that provision be made for the suspension of the program if a major state failed to carry out its obligations.

The U.S.S.R. statement upheld the Soviet proposals of May 10, 1955, calling for implementation of a disarmament convention by stages. But, since it had not been possible to agree on nuclear disarmament, in order to attempt to reach some realizable agreement, the Soviet Union urged the reduction of conventional arms and the establishment of suitable controls, such reduction not to be made conditional on the prohibition of atomic weapons.

Further negotiations in the subcommittee and later in the Disarmament commission's meetings from July 3 to July 16 indicated that differences between the great powers had been somewhat narrowed. Thus, for example, the Soviet Union consented to an international inspection and control system which would be effective before any disarmament began. Furthermore, it agreed with the western powers on a reduction of forces to 2,500,000 men each for the U.S., the U.S.S.R. and China and 750,000 men for France and the United Kingdom. On the other hand, minor disarmament cuts in conventional forces before the solution of such political questions as the unification of Germany and of Korea were agreed to by the western powers. The United States

also offered to begin control of nuclear as well as conventional arms in the first phase of a disarmament program.

Basic disagreements nevertheless prevented the drafting of an international treaty on disarmament. The western powers continued to insist upon stringent controls, including aerial surveys, before starting any arms reductions, while the Soviet Union maintained its demand for ground controls only. On the question of staging, the U.S. favoured a preliminary phase in which conventional arms would be cut under stringent controls and in which some control over nuclear weapons would be initiated. A pause would follow to determine whether international conditions permitted further nuclear disarmament. But the U.S.S.R., while desirous of complete prohibition and elimination of nuclear weapons as proposed in its plan of May 10, 1955, submitted a proposal for purely conventional disarmament which would ease agreement on nuclear disarmament. Furthermore, the U.S. was reluctant to begin any disarmament without assurances of Soviet co-operation in the settlement of major political issues. The U.S.S.R. failed to see the necessity of awaiting the solution of other political problems before agreement on disarmament. In view of these continuing differences between the two sides, the Disarmament commission on July 16 requested its subcommittee to continue its efforts to reach agreement.

Peaceful Use of Atomic Energy.—A proposal for an International Atomic Energy agency, under the aegis of the UN, was first proposed by President Eisenhower in Dec. 1953. Subsequently, a 12-nation working group prepared a draft statute for the agency and invited more than 80 states to attend an atomic energy conference to discuss and adopt the text. The conference opened at UN headquarters on Sept. 20, 1956, and adjourned on Oct. 27.

In order to attain its primary objective of accelerating and enlarging the contribution of atomic energy to the peace, health and prosperity of the world, the new agency was to (1) encourage and assist research on, and development and practical application of, atomic energy for peaceful uses; (2) make provision for materials, services, equipment and facilities; (3) foster the exchange of scientific and technical information; (4) encourage the exchange of scientists and experts in the field; (5) establish and administer safeguards to ensure that all aspects of the agency's work would not further any military purpose; (6) adopt standards of health and caution to provide for safe operation of the agency's tests.

A board of governors of 21 to 25 nations would manage the agency's daily affairs, reporting regularly to an advisory council of all member nations. The agency, operating like a bank, would receive deposits of fissionable materials and nuclear equipment. Those members lacking these atomic materials would draw on the deposits for approved atomic energy projects. In a crucial article dealing with agency safeguards, the statute gave the agency power to send inspectors to recipient states to observe operation of reactors and ensure that programs were kept strictly nonmilitary in nature.

On Oct. 26, 1956, 70 states signed the statute of the agency. President Eisenhower pledged the United States as the first depositor of the bank with an initial contribution of 11,000 lb. of U^{235} , plus as much as all other nations would contribute until 1960. The task of organizing the agency was passed to a preparatory commission of 18 nations which would name a secretary-general. The unit would report to the general assembly and to the Security council.

Effects of Atomic Radiation.—Acting upon requests by India and the United States that the United Nations consider this matter, the general assembly by unanimous vote on Dec. 3 established a 15-member scientific committee to collect, evaluate and disseminate information on the effects of atomic radiation on man

CORRIDOR CONFERENCE of Egyptian officials at the United Nations headquarters, New York city, between meetings of the Security council on the issue of Suez in Oct. 1956. From left to right: Omar Loutfi, permanent representative to the United Nations; centre, Mahmoud Fawzi, foreign minister; right, Mohamed Riad, Egyptian first secretary at the United Nations

and his environment. Argentina, Australia, Belgium, Brazil, Canada, Czechoslovakia, Egypt, France, India, Japan, Mexico, Sweden, the U.S.S.R., the United Kingdom and the United States were designated as members of the committee.

The assembly specified that the main task of the committee was to recommend and assemble reports on observed levels of ionizing radiation and radioactivity in the environment. Reports on experiments and observations under way were also to be studied. In addition, the committee was to recommend uniform standards for sample collection and radiation-counting procedures. Evaluation and documentation of this data would be transmitted to the secretary-general for publication and dissemination.

The first session of the Scientific Committee on the Effects of Atomic Radiation was held at UN headquarters from March 14 to 23. C. E. Eddy of Australia was elected chairman. The committee discussed the scope and organization of its work and received reports on genetics, the effects of irradiation by internally absorbed isotopes and the effects of external radiation, natural radiation background, exposures during medical procedures and occupational exposure and environmental contamination.

Questions Involving National Independence and Self-Determination.—**Algeria.**—The situation in Algeria continued to occupy the attention of a number of African and Asian states. In June 1956, 13 of these nations requested the Security council to consider the matter under article 35, paragraph 1 of the charter. They stated that council action was essential in view of the nature and scope of recent French military actions in the area and the failure of the French government to negotiate with Algerian representatives. A majority of council members, however, expressed doubt that the UN could assist in the solution of the problem at that time. These states questioned the legal competence of the Security council to consider the question, in

view of article 2, paragraph 7 of the charter. It was therefore decided on June 26 not to place the item on the council's agenda.

Cyprus.—The general assembly decided in Sept. 1955 not to consider the dispute between Greece and the United Kingdom over self-determination in Cyprus. Subsequently, however, negotiations between the British governor of Cyprus and Archbishop Makarios broke down, and the representative of Greece, in a letter dated March 13, 1956, requested that the problem be inscribed in the provisional agenda of the 11th session.

Other incidents in Cyprus, following Egypt's nationalization of the Suez canal, were cause of concern to several Arab states during the summer of 1956. In communications to the president of the Security council on Sept. 17 the representatives of Lebanon and Syria protested the assembling of French forces on the island and requested their immediate withdrawal.

Suez.—The incident engendered by Egypt's nationalization of the Suez canal on July 26, 1956, came before the Security council after two months of lengthy discussion and negotiation between the parties concerned. The United Kingdom and France, fearful of their interests in the middle east and dependent on the canal for transport of middle eastern oil, were insistent upon international operation of the canal to assure free passage through the waterway for all ships at all times. As an ally and canal user, the United States shared the Anglo-French interest in international control of the canal but, unlike the other two states, was unwilling to utilize forceful means to achieve this purpose.

At two London conferences, proposals providing for an International Suez Canal board to operate and develop the canal and for an association of canal users to take ships of member countries through the canal were adopted by the majority of nations at these meetings. Egypt rejected both propositions.

On Sept. 23-24 Britain and France, followed by Egypt, carried the Suez canal dispute to the Security council. In the debate that ensued, the foreign ministers of France, Britain, the United States, the U.S.S.R. and Egypt were, however, unable to reach agreement. On Oct. 9 direct high-level negotiations between Egypt, Britain and France began in the secretary-general's office. The atmosphere was one of conciliation and deep secrecy.

The council met in closed session on Oct. 12 to hear the results of the talks from the secretary-general, who revealed that all parties were agreed upon six principles regarding the canal: (1) guarantee of free and open transit through the canal without discrimination; (2) respect for Egypt's sovereignty; (3) insulation of canal operation from the politics of any country; (4) agreement between Egypt and the users as to the manner of fixing tolls; (5) allotment of a fair proportion of the dues to canal development; (6) settlement by arbitration of unresolved affairs between the dispossessed Suez Canal company and the Egyptian government. In further debate on the question, Britain and France remained concerned about implementation of the agreed principles. On Nov. 13 they submitted a resolution which endorsed the proposals of the first London conference. It invited Egypt to submit a counterproposal "not less effective" than the London recommendations. When the Soviet Union vetoed the resolution during the roll call, the council adjourned without setting a new meeting date.

However, on Oct. 29 the situation in regard to Suez changed considerably and assumed still graver and more serious dimensions. When on that day Israeli forces invaded the Sinai peninsula of Egypt and reached within 20 mi. of the Suez canal, Britain and France immediately issued an ultimatum calling upon Israel and Egypt to stop all hostilities and to withdraw their military forces to a distance of 10 mi. from the canal. Egypt rejected the ultimatum whereupon the British and French governments made known their decision to send troops to Egypt for the purpose of protecting their interests in the region and restoring order

in the middle east.

During an emergency meeting of the Security council on Oct. 30, the United States introduced a resolution which not only called upon Israel to withdraw its forces behind the established armistice lines, but also requested all states to refrain from the use of force or threat of force in the area and to assist the UN in assuring the integrity of the armistice agreements. Defending their decision to rush troops to the Suez canal on the ground that the Security council could not act quickly enough, the United Kingdom and France vetoed the U.S. resolution. The next day British bombers began an attack on military targets in Egypt. The raids were carried out to force compliance with the British and French ultimatum to Egypt to withdraw Egyptian forces from the Suez canal area.

On Oct. 31 the Security council called an emergency session of the general assembly to make recommendations on the "actions undertaken against Egypt." A U.S. proposal calling for a cease fire in the Egyptian fighting was approved by a vote of 64 to 5. Britain, France, Israel, Australia and New Zealand rejected the resolution. However, four days later, the United Kingdom and France announced that they were ready to stop military operations on three conditions: (1) that Israel and Egypt accept a UN force to preserve peace between them; (2) that the UN create such a force and maintain it until Israel and the Arab states agreed on a peaceful settlement and until satisfactory arrangements were made in respect to the canal; (3) that, pending creation of a UN force, Israel and Egypt agree to Anglo-French occupation, in the name of the UN, of a zone between the Israeli and Egyptian forces.

The assembly acted with decision and determination on Nov. 5. In a vote of 57 to 0 with 18 abstentions, it created an international UN command force, with the duty of supervising the cessation of fighting in the middle east. Maj. Gen. E. L. M. Burns of Canada was named chief of staff of the new unit. On the same day, British and French forces invaded Egypt by air. On Nov. 7, however, the two western allies ceased fire in Egypt and halted their advance against Egyptian forces in the Suez canal zone. Egypt and Israel also assured the UN of their willingness to observe the cease fire. Fighting in Egypt therefore came to a halt, with the United Nations international police force prepared to begin operations, and the UN anxious to promote a permanent settlement of outstanding issues in the middle east.

Palestine.—From Dec. 16, 1955, through Jan. 19, 1956, the council discussed an incident which had taken place on the eastern shore of Lake Tiberias on the night of Dec. 11-12. Syria accused Israel's armed forces of launching a concentrated large-scale attack in this area in violation of the Syrian-Israel general armistice agreement of July 20, 1949, and of committing an act of open aggression and provocation contrary to the provisions of the United Nations charter. Syria, therefore, called upon the Security council to adopt economic sanctions against Israel and to recommend the expulsion of Israel from the United Nations.

The representative of Israel alleged that the clash in question was the index and result of tensions which had long prevailed between Syria and Israel; that Syrian artillery posts on the borders of Lake Tiberias had constantly harassed Israel's fishing and police boats; that evidence discovered on Syrian prisoners showed that Syrian outposts off the northeastern shore of Lake Tiberias had been instructed to fire upon Israeli boats approaching within 250-400 m. of the shore; that Lake Tiberias was entirely within Israeli territory.

Gen. E. L. M. Burns, chief of staff of the UN Truce Supervision organization in Palestine, in a report to the council, stated that although Syrian interference with Israel's activity on the lake had taken place, the disparity between the retaliation and the provocation was immense.

The Security council in a resolution of Jan. 19 noted interference by Syrian authorities in Israeli activities on Lake Tiberias in contravention of the general armistice agreement between Israel and Syria, but held that this interference in no way justified the Israeli action. It termed the attack a flagrant violation of the cease-fire provisions of the council's resolution of July 15, 1948, of the terms of the armistice agreement and of Israel's obligations under the charter. Israel was called upon to comply with its obligations in the future, in default of which the council would have to consider what further measures were required by the charter.

Further incidents of violence and hostility on either side of the armistice demarcation lines, coupled with the persistent build-up of armed forces, led the United States on March 20, 1956, to request a meeting of the Security council for renewed consideration of the Palestine question. A resolution drafted by the United States was unanimously adopted by the council on April 14. By the terms of this resolution, Sec.-Gen. Dag Hammarskjöld was requested to undertake a survey of various aspects of enforcement of and compliance with the armistice agreements between Israel and its four Arab neighbours. Hammarskjöld's immediate task was to arrange and negotiate with Israel, Jordan, Syria, Lebanon and Egypt for the adoption of any measures which would lessen tensions along the demarcation lines.

After a month of discussions with the leaders of the parties concerned, the secretary-general, on May 9 gave a full account of the outcome of his mission. He asserted that unconditional cease-fire agreements between Israel and the four Arab states had been re-established and that a general will to peace was prevalent in the middle east.

Nevertheless serious incidents along the cease-fire line continued to occur throughout the month of September. A series of Arab forays into Israeli territory, succeeded by large-scale reprisal attacks, began to follow a persistent pattern. But on Oct. 29 Israeli armour and paratroops were thrust deep into Egypt's Sinai peninsula in a move that constituted much wider proportions than a reprisal raid. One day later, Israel agreed to accept the Anglo-French ultimatum to withdraw its troops from the canal area and permit British and French occupation of key canal points. The proposal was, however, unconditionally rejected by the Egyptians. The United Kingdom and France then vetoed the resolution in the Security council calling upon Israel immediately to withdraw its armed forces behind the armistice lines. Israel, Britain, France, Australia and New Zealand likewise rejected the assembly's resolution of Nov. 1 calling for a cease fire in the middle east and withdrawal of Israeli forces from Egyptian territory.

Meanwhile, Anglo-French landing forces moved toward Suez and the entire Gaza strip fell into the hands of Israeli forces. By Nov. 2 Israel commanded the entire Sinai peninsula to within 13 mi. of the canal. Nevertheless, on Nov. 4, the representative of Israel made known that his government would accept a UN cease fire provided that the Egyptians did likewise and provided that Israel's borders were firmly guaranteed against violation.

On Nov. 4 the assembly accepted a proposal for the creation of a UN police force to obtain and supervise a cease fire in the Suez canal area. Shortly thereafter, Egypt and Israel made known their intention to observe the cease fire and the United States submitted a plan to the assembly calling for establishment of a new committee of five nations which would seek an end to recurrent Arab-Israeli border clashes by obtaining a permanent peace settlement.

Question of Hungary.—The news of Poland's demonstration of defiance against Soviet domination during the week of Oct. 20–27 touched off a similar rebellion in Hungary. In a demand for the restoration to the premiership of Imre Nagy, a dedicated

Hungarian nationalist, and the withdrawal of Erno Gero, Soviet puppet ruler, thousands of persons rioted in the streets of Budapest on October 23. Although the Communist party's central committee proceeded to install Nagy as premier, Gero was retained as party chief and the Hungarians remained rebellious. On Oct. 24 about 10,000 Soviet troops, equipped with tanks, artillery and armoured cars, marched into Budapest "to liquidate the rebels." The major revolt was soon quelled, but several hundred students and workers, staging a peaceful demonstration in Budapest to demand Gero's dismissal, were massacred by Soviet tank crews. This incident precipitated war throughout the Hungarian countryside.

On Oct. 27 the United States, Britain and France requested the Security council to consider the Hungarian situation. By a vote of 9 to 1, with Yugoslavia abstaining, the question was placed on the council's agenda on Oct. 28. The vote came after most of the council members had strongly denounced the use of Soviet troops in an attempt to put down the rebellion against the Hungarian communist government. The Soviet Union contended that the uprising was of domestic concern only and that therefore a western resolution on the matter would be vetoed.

Soviet troops nevertheless remained in control of Budapest and Hungarian rebels refused to lay down their arms until all Soviet forces had evacuated the city. On Nov. 2 Premier Nagy cabled the secretary-general of the UN, asking that Hungary's case be presented before the "forthcoming general assembly." Nagy also asked Hammarskjöld to "call upon the great powers to recognize the neutrality of Hungary and ask the Security council to instruct the Soviet and Hungarian governments to start negotiations immediately."

The general assembly voted on Nov. 4 for a UN investigation in Hungary by representatives of the secretary-general. In a resolution introduced by the United States and approved by 50 nations, the assembly deplored the use of force by the Soviet Union to crush the Hungarian revolt and asked the Soviet government to withdraw its forces without delay.

Racial Policies of the Union of South Africa.—The question of the treatment of persons of Indian origin in the Union of South Africa had been before the general assembly since 1946. Little progress toward agreement between the governments of India, Pakistan and the Union of South Africa had been achieved, however, despite persistent council resolution on the matter. The Union government consistently maintained that the South African question was one of domestic jurisdiction and therefore outside the competence of the United Nations.

When on Nov. 9, 1955, the assembly's political committee adopted a resolution expressing concern at the Union of South Africa's policies of apartheid and calling upon the UN Commission on the Racial Situation in the Union to keep the matter under review, the Union government withdrew its delegation from the assembly. On Dec. 14 the assembly urged the parties to pursue negotiations with a view to attaining a settlement of the question. But in Sept. 1956 India and Pakistan, voicing regret that the South African government had not heeded the assembly's appeal, requested the general assembly to give renewed consideration to the problem at its 11th session.

Economic and Social Co-operation.—*Economic Development.*—In accordance with a recommendation of the eighth assembly, the United Nations and the International Bank for Reconstruction and Development elaborated machinery for channelling private capital into productive investments in underdeveloped countries. In April 1955 the bank submitted to its members the charter of the International Finance corporation to come into operation as soon as it had been ratified by 30 states and 75% of \$100,000,000 capital had been subscribed. The charter went into effect on July 20, 1956, with a membership of

31 countries and capital subscriptions of \$78,366,000. Closely affiliated with the International bank, the International Finance corporation was to make direct loans to private enterprise without government guarantees and would be allowed to make loans for other than fixed returns.

Technical Assistance.—At the sixth United Nations Technical Assistance conference on Oct. 26, 1955, 61 states pledged amounts equivalent to \$28,031,536 for the 1956 program. This sum was made possible because 23 countries increased their pledged amounts over the 1955 contributions and because two countries, Spain and Rumania, pledged for the first time. The U.S. promised to contribute \$15,500,000 for 1956, providing that the pledges of all other participating countries were equivalent to that amount.

Refugees.—Under the mandate of the UN high commissioner for refugees, the UN continued to have responsibilities for about 350,000 unassimilated refugees outside of Korea and Palestine. A program designed to achieve a permanent solution to the problem by the end of 1958 was approved by the ninth general assembly and was initiated in June 1955. The new program sought integration of refugees into permanent occupations and their resettlement. In 1955 governmental contributions to the UN Refugee fund were received in the amount of \$2,653,697 while about \$955,000 was contributed from nongovernmental sources.

Trusteeship and Nonsself-governing Territories.—*Trusteeship System.*—The promotion of political, economic, social and educational advancement of the inhabitants of the trust territories, and their progressive development toward self-government or independence, again provided the principal matters of interest in the operation of the international trusteeship system during 1956. The scope of the system remained limited to 11 territories—3 in east Africa (Ruanda-Urundi, Tanganyika and Somaliland), 4 in west Africa (British Cameroons and French Cameroun and British and French Togoland) and 4 in the Pacific (Pacific Islands, Western Samoa, New Guinea and Nauru). These territories contain more than 20,000,000 people.

At the meetings of the Trusteeship council in 1956, attention was particularly brought to bear on an event unprecedented in the history of the trusteeship system—the plebiscite held in British Togoland to ascertain the wishes of the population as to their political future. The question of British Togoland's future status was raised by the United Kingdom in 1954 when it asked the UN to consider what alternative arrangement should be made for the territory when the Gold Coast attained independence in 1957. For more than 35 years the trust territory had been administered by the U.K. as an integral part of the adjacent Gold Coast, a British nonsself-governing territory. Upon the recommendation of the visiting mission to British Togoland in 1955, the general assembly at its tenth session asked Britain to organize and conduct a plebiscite in the area, under the supervision of the UN, in order to determine the political wishes of the inhabitants. On May 9, 1956, the Togolandese went to the polls to decide whether they wished union of the territory with an independent Gold Coast or separation of the territory from the Gold Coast and its continuance under trusteeship pending the ultimate determination of its future. In a decision which it was believed would probably change the map of west Africa, 93,365 voters favoured integration with the Gold Coast, while 67,422 balloted in favour of continuing the existing trusteeship arrangements. Support of this decision was evinced at the Trusteeship council's 18th session. Termination of the trust agreement for British Togoland, however, required the final approval of the general assembly.

At its tenth session the assembly also discussed the future of Togoland under French administration and endorsed the conclusion of a visiting mission that the implementation of contem-

plated reforms by France would be helpful in enabling the political wishes of the inhabitants to be ascertained. It requested the Trusteeship council to undertake a special study of the matter and to report thereon at the assembly's 11th session.

Nonsself-governing Territories.—Under article 73e of the charter, the secretary-general in 1955 received information from seven administering members on 58 territories, as compared with 59 in 1954. The reduction was a consequence of the cessation of information by Denmark in respect of Greenland. The attainment of autonomy by two former nonsself-governing territories in the western hemisphere—Surinam and the Netherlands Antilles—was recognized by the general assembly on Dec. 15, 1955.

On Nov. 8, 1955, the assembly called for a ten-year retrospective report on the progress achieved in the nonsself-governing territories to be prepared for review in 1959. Such a survey was intended to disclose to what extent the world's 50,000,000 dependent peoples were now advancing toward the goals set in chapter xi of the charter.

Specialized Agencies.—In addition to the work of the UN itself in the social and economic fields, a great deal of important work is done by the specialized agencies, international organizations operating under their own constitutions for special purposes and brought into relationship with the UN by agreement. During 1956 the following agencies were in actual operation.

Food and Agriculture Organization (FAO).—Headquarters in Rome, It.; Binay R. Sen, director-general; 72 members.

International Labour Organization (ILO).—Headquarters in Geneva, Switz.; David A. Morse, director-general; 76 members. (See separate article.)

International Bank for Reconstruction and Development.—Headquarters in Washington, D.C.; Eugene R. Black, president; 59 members. (See separate article.)

International Monetary Fund.—Headquarters in Washington, D.C.; Per Jacobsson, managing director; 59 members. (See separate article.)

International Civil Aviation Organization (ICAO).—Headquarters in Montreal, Que.; Carl Ljungberg, secretary-general; 69 members. (See AVIATION, CIVIL.)

International Telecommunication Union (ITU).—Headquarters in Geneva, Switz.; Marco Andrada, secretary-general; 91 members.

United Nations Educational, Scientific and Cultural Organization (UNESCO).—Headquarters in Paris, Fr.; Luther H. Evans, director-general; 76 members plus 4 associate members.

Universal Postal Union (UPU).—Headquarters in Berne, Switz.; Fritz Hess, director of the international bureau; 96 members.

World Health Organization (WHO).—Headquarters in Geneva, Switz.; Marcolino C. Candau, director-general; 84 members plus 4 associate members. (See separate article.)

World Meteorological Organization (WMO).—Headquarters in Geneva, Switz.; D. A. Danes, secretary-general; 94 members. (See METEOROLOGY.)

United States. This federal republic in North America, bounded north by Canada, south by Mexico, east by the Atlantic ocean and west by the Pacific ocean, has an area of 3,022,387 sq.mi., including 47,662 sq.mi. of inland water. Its population was 150,697,361 by the 1950 census and 167,191,000 by the July 1, 1956, estimate. Territories and possessions are shown in Table I and chief cities in Table II:

(See also BIRTH STATISTICS; CENSUS DATA, U.S.; CHURCH MEMBERSHIP; DEATH STATISTICS; INDIANS, AMERICAN; NE-

Table I.—Territories and Possessions of the United States

Territory or Possession	Area (sq.mi.)	Population, 1955 est.	Territory or Possession	Area (sq.mi.)	Population, 1955 est.
Alaska	586,400	213,000	Hawaii	6,423	523,359*

GROES [AMERICAN]; also articles on the separate states, territories and possessions.)

President in 1956: Dwight D. Eisenhower (*q.v.*), whose cabinet was composed as follows:

Post	Name	State
Secretary of state	John Foster Dulles	New York
Secretary of the treasury	George M. Humphrey	Ohio
Attorney general	Herbert Brownell, Jr.	New York
Postmaster general	Arthur E. Summerfield	Michigan
Secretary of the interior	Frederick A. Seaton	Nebraska
Secretary of agriculture	Ezra Taft Benson	Utah
Secretary of commerce	Sinclair Weeks	Massachusetts
Secretary of labour	James P. Mitchell	New Jersey
Secretary of defense	Charles Erwin Wilson	Michigan
Secretary of health, education and welfare	Marion B. Folsom	New York

History.—*The State of the Union.*—At all levels of government, 1956 was an election year. That the rest of the world would show an interest in the U.S. election proceedings was inevitable, for at midyear it was reported that, with 6% of the world's people, the United States was producing about 40% of the world's goods and services, or almost twice that of the United Kingdom, France, west Germany and Italy combined. Purchasing 15% of the world's imports, the nation accounted for 20% of its exports. There was no question that 1956 was a time when more citizens in all 48 states enjoyed more prosperity than ever before. Neither the national elections nor events abroad seemed to disturb the economy in any important respect.

In his state of the union message in January, Pres. Dwight D. Eisenhower listed five objectives of the nation. These were: to discharge its world responsibility, improve its national security, maintain its fiscal integrity, foster an ever-expanding economy and respond to its own human needs. There would continue to be reliance on collective security, even though armament reduction "under effective inspection and control" was a national objective. The struggles of the nations of Asia to maintain their freedom would be aided. The European alliance would be increased in strength, he anticipated, and a fair solution of problems in the middle east attained. The administration sought highway and flood disaster legislation, higher postal rates, a five-year program of federal aid to increase school construction, expansion of social security, some amendment of the Taft-Hartley labour law, some public housing for slum areas, statehood for Hawaii and progress toward that status for Alaska, and amendment of immigration laws. The reaction to the message was divided on party lines.

Congress.—Among the major laws passed by congress were 16 intended to improve governmental organization, 16 designed

to strengthen the defense and security of the nation, 9 treating international affairs, 19 relating to the economy, 11 affecting veterans and servicemen, 15 on agricultural matters (in addition to a farm price support bill vetoed by the president), 19 on natural resources (3 of which were vetoed) and 24 relating to social security, health and welfare.

Congress authorized many expenditures for national defense, including \$1,400,000,000 for new naval construction and modification of existing vessels and \$295,000,000 for capital expenditures by the Atomic Energy commission. Expenditure of \$33,500,000,000 for a 13-year program of highway construction was authorized, together with increased excise taxes to finance perhaps \$14,800,000,000 in 16 years. A 41,000-mi. interstate highway system as a result would be 90% federally financed. "In God We Trust" was made the official national motto. The federal debt limit was raised from \$275,000,000,000 to \$278,000,000,000. An atomic-powered merchant ship was to be built. Several bills providing for greatly liberalized pensions for veterans failed of passage by the senate, but all military personnel were put under social security and a new government-financed private hospitalization program for their dependents was inaugurated.

Social Welfare.—Congress amended the 21-year-old Social Security act in August, increasing public assistance payments (\$4 per aged recipient), broadening the coverage of old-age and survivors' insurance (leaving physicians the only major group not covered), lowering the benefit eligibility age for certain women to 62, and creating a new program of disability insurance with its own trust fund. The O.A.S.I. program had 32,000,000 permanently insured workers in 1956 (1950: 14,900,000). Beneficiaries numbered 8,400,000, an increase of nearly 2,000,000 in two years. Public assistance, meanwhile, had almost stabilized; the number of old-age assistance recipients, 2,580,000 in June 1954, was 2,520,000 two years later. Expenditures by the larger social welfare programs financed by government, federal, state and county, in the nation in 1954-55 were, in order, social insurance programs \$12,600,000,000, public assistance \$2,900,000,000, health and medical services \$4,000,000,000 and other programs \$1,100,000,000. (See also SOCIAL SECURITY.)

Foreign Affairs.—Reporting to congress on the Mutual Security program, the president stated that it had "further advanced the security, the economic progress, and the well-being of the United States and our partners in the free world." Since 1950 U.S. military aid in equipment and supplies had come to \$14,200,000,000. (See also FOREIGN AID PROGRAMS, U.S.)

The ebb and flow of events in 1956 left relations between the United States and the U.S.S.R. fundamentally little changed. While Soviet emphasis on economic and trade rivalry had attracted official notice late in 1955, events a year later showed that there had been a change in tactics but not in strategy. The sharp contrast between the basic approaches of the United States and the Soviet Union toward small powers had been made clear by events in Hungary and the middle east.

The position of the government toward the United Nations continued to be one of maximum participation in debate, in activities and in financing. By 1956 the balance on the initial U.S. loan to the UN stood at \$58,000,000. The nation provided a third of governmental contributions to the central UN budget. Of \$141,200,000 pledged the UN Korean Reconstruction agency from its origin to June 30, 1956, the U.S. had supplied \$92,900,000, or 66%. In 1956 the nation provided 56% of UN Children's fund receipts and 38% of those of the Refugee fund. Additional sums were given the United Nations Educational, Scientific and Cultural organization, the World Health organization and other UN groups. In all this, the attitude of the government was that "in practice, the United Nations had acquired major significance as an agency for influencing world opinion and for openly com-

BODY OF ALBEN WILLIAM BARKLEY, senator from Kentucky and former vice-president, lying in state, guarded by cadets from Virginia Military Institute, at Lexington, Va. Barkley died April 30, 1956

bating the political warfare and propaganda of world communism . . . [and it has] proved to be a significant center for diplomatic negotiation." Not all U.S. citizens saw the UN in this light, however, and some were calling for the exodus of the U.S. from the UN and the UN from the U.S., while others wanted the U.S.S.R. and its puppet states expelled. Nevertheless, the administration made full use of the Security council and general assembly as a forum during the Suez canal crisis, while the ordinary citizen seemed relieved that U.S. troops would not be included in the UN police force. (See also UNITED NATIONS.)

U.S. policy in 1956 was to maintain if possible what Secretary of State John Foster Dulles called "friendly impartiality toward both the Israelis and the Arabs." The administration did not arm the former, not through enmity but because, as the president put it, the 1,700,000 Israeli could never absorb arms in such quantity as the 40,000,000 Arabs. An announced intention to begin the financing of a high dam at Aswan in Egypt was abruptly withdrawn later. Some thought this made the U.S. partly responsible for the later troubles of the western powers.

In January-February British Prime Minister Sir Anthony Eden visited Washington, D.C., and signed a "declaration of Washington" after three days of talks. The document noted that in Europe ten formerly independent nations were being "compelled, against their will, to work for the glorification of the Soviet Communist state." But "we reject any thought that the cleavage we have described should be resolved by force. We shall never initiate violence." An accompanying statement indicated that an Israeli-Arab settlement was vital. Eden told the congress that unity of purpose ought to be declared whenever possible in areas of acute danger. In the Israeli-Arab situation, "we have done well to make clear that we are to discuss together what action we should take." On Feb. 6 he told the Canadian parliament that never before had there been so full a measure of agreement between his country and the U.S. White House Press Secretary James C. Hagerty released in April with the "full approval" of the president a statement that the nation would observe its UN charter commitments "within constitutional means" to oppose any aggression in the middle east. The U.S. was determined "to support and assist any nation which might be subjected

to such aggression." Earlier, the president had said that U.S. troops would not be sent into "anything that can be interpreted as war" until congress should direct such a step. These were all policy statements for the thoughtful citizen to ponder later in the year.

Events in the middle east and in Hungary in the autumn were viewed with great alarm. Few voices were raised in support of the British and French military action and none in favour of the Soviet. Frustration felt as the Hungarian revolution was crushed was only partially alleviated by prompt aid for the Hungarians who fled. Extension of economic aid to Great Britain and Europe to offset the loss of oil that resulted from blocking of the Suez canal was a near certainty, even though neither the people nor their leaders showed any sign of approving Anglo-French conduct. Neither Israel nor Egypt could be said to have gained many American friends by their actions in 1956, while the British lost much ground. Still, leaders of thought and persons in high office recognized that the true interests of the nation rested with the western powers; immoderate criticism was receding at year's end.

The Election.—The winter months of 1955-56 were spent in speculation about a second term for President Eisenhower. Urged to run by Republican leaders, he was attacked as a "part-time" president by opponents because of his coronary thrombosis of Sept. 24, 1955. All speculation ended Feb. 29 when he announced an affirmative decision. As a "recovered heart patient," he said, doctors felt that he could "continue to carry the burdens of the presidency," although a regime of ordered work activity would have to be mixed with regular amounts of exercise, recreation and rest. Interest in the future of Vice-Pres. Richard M. Nixon thereupon became intense. A controversial figure because of his unusually vigorous but effective campaigning in 1952 and 1954, Nixon had been energetic in office, visiting many countries, making policy speeches and participating fully in cabinet and National Security council meetings. He announced his candidacy April 26, and the president said that he was delighted.

Passing a physical examination May 12, the president was suddenly stricken in June with ileitis. After a 113-minute operation on June 9, full details were given unusually complete reporting in the press. Convalescence was normal, but the fact of two such dangerous illnesses in nine months and the vigorous Democratic attacks on Nixon guaranteed that the health of the president would be a campaign issue.

Meanwhile, Adlai E. Stevenson and Sen. Estes Kefauver were engaged in a struggle in Democratic state primaries. Victory by the latter in Minnesota made it look bad for the 1952 standard bearer. Both candidates wooed party leaders and voters aggressively and offered alternative solutions to national problems, but increasingly bitter personal references marred their campaigning. Stevenson finally accused his opponent of a policy of "destroy if you can't win" and of "wanting to win too much." Stevenson finally won in three major state primaries.

At the Democratic convention in Chicago, Ill., however, former Pres. Harry S. Truman, proclaiming himself no elder statesman, since "a statesman is just a dead politician, and I'm a very lively politician," announced himself for Gov. Averell Harriman of New York. Stevenson could not carry more than nine states, he said. Nevertheless, Stevenson handily won the nomination. In a dramatic announcement the victor told the delegates that the "free processes" of the convention should decide on his running mate, and they chose Kefauver over Sen. John F. Kennedy of Massachusetts.

The Democratic platform contained a compromise plank on civil rights. The national government, it promised, would be returned "to its rightful owners, the people of the United States." In general, the administration had "confused timidity with cour-

age and blindness with enlightenment." Paucity of ideas, impaired unity of the free world and "resentment rising against U.S. leadership everywhere" were the platform's attempted indictment against the incumbent leadership. Yet the party was not fundamentally opposed to many major U.S. policies. It favoured participation in the North Atlantic Treaty organization, opposed admission of Red China into the UN, desired continuation, after "realistic reappraisal," of the foreign aid program and was concerned over the plight of nations dominated by the Soviet Union even though not in favour of liberation by force. The platform agreed with earlier Stevenson-Kefauver pleas for supplying or selling arms to Israel. The Taft-Hartley law should be repealed and much new social security legislation enacted.

Meeting in San Francisco, Calif., the Republicans heard an inspirational address from former Pres. Herbert C. Hoover and quickly renominated the ticket of 1952, audible opposition to Nixon proving nonexistent. In his acceptance speech, Eisenhower warned that taking "the centralization short-cut every time something is to be done" would result in "a swollen, bureaucratic, monster Government in Washington, in whose shadow our state and local governments will ultimately wither and die." Both nominees admitted that there were still injustices in the land,

Nixon stating, "we believe in human welfare but not the welfare state"; still, "pockets of poverty" would have to be rooted out.

In the ensuing campaign, television was relied on by both parties, so that all four candidates campaigned in people's living rooms as never before and a new "homey" touch became the thing toward which to strive. Both Democratic candidates and Nixon stumped the country. Stevenson led the attack on the administration and called for "a New America," but he found himself engaged often in front-page debate with the vice-president. The issue of communism in government, so prominent in 1952, was insignificant in 1956. Stevenson outlined a major federal program on behalf of the country's aging citizens. He criticized the draft as fast becoming an obsolete way of maintaining the armed forces, but encountered quick opposition from both his opponents and little support elsewhere. Urging an end to H-bomb testing while contending that such tests could not really be kept secret from the world's scientists, he found the president unyielding and former President Truman had "no comment." On Oct. 17 Soviet Premier N. A. Bulganin wrote the president, "we fully share the opinion recently expressed by certain prominent figures in the United States concerning the necessity and the possibility of concluding an agreement on the matter of prohibiting atomic

Table III.—Major Legislation Passed by U.S. Congress in 1956

Act	House vote	Senate vote	Date of enactment
Tax Rate Extension Act of 1956 (Extended to April 1, 1957, corporate income tax and excise tax rates due to expire March 31, 1956)	366-4 Yeas: D. 198, R. 168 Nays: D. 1, R. 3 (March 13)	Passed by voice vote (March 26)	Signed March 29
Colorado River Storage Projects (Authorized expenditure of \$760,000,000 for the construction of a series of dams and related facilities in the upper Colorado river basin)	Passed by voice vote (March 28)	Passed by voice vote (March 28)	Signed April 11
Bank Holding Company Act of 1956 (Restricted acquisition by bank holding companies of stock in other banks and control over their directors)	Passed by voice vote (April 26)	Passed by voice vote (April 25)	Signed May 9
Agricultural Act of 1956 (Provided for acreage reserve and conservation reserve [soil bank] programs with voluntary and limited participation by farmers)	305-59 Yeas: D. 173, R. 132 Nays: D. 12, R. 47 (May 23)	Passed by voice vote (May 22)	Signed May 28
Federal-Aid Highway Act of 1956 (Authorized construction with federal aid of roads and highways to cost \$33,480,000,000 and to be financed in part by highway user taxes)	Passed by voice vote (June 26)	89-1 Yeas: D. 47, R. 42 Nays: D. 1, R. 0 (June 26)	Signed June 29
Defense Production Act—Extension (Extended until June 30, 1958, the authority of the president to allocate and fix priorities of critical and strategic materials and grant defense loans and subsidies under the Defense Production Act of 1950)	200-197 Yeas: D. 135, R. 65 Nays: D. 76, R. 121 (June 28)	Passed by voice vote (June 27)	Signed June 29
Department of Defense Appropriation Act, 1957 (Appropriated \$34,650,000,000 for U.S. armed forces in period July 1, 1956–June 30, 1957)	79-57 Ayes: 79 Nays: 57 (June 29)	Passed by voice vote (June 29)	Signed July 2
Public Debt Limit—Increase (Authorized extension for one year through June 30, 1957, of a temporary increase of \$3,000,000,000 in the public debt)	Passed by voice vote (June 21)	Passed by voice vote (July 3)	Signed July 9
Mutual Security Act of 1956 (Authorized appropriation of \$4,027,500,000 for U.S. economic, military and technical aid to foreign countries in period July 1, 1956–June 30, 1957)	Passed by voice vote (July 9)	Passed by voice vote (July 9)	Signed July 18
Narcotic Control Act of 1956 (Stiffened penalties for the illegal possession and sale of narcotics and permitted death penalty upon jury recommendation for sale to minors)	Passed by voice vote (July 9)	Passed by voice vote (July 9)	Signed July 18
Transportation Tax Exemption (Exempted from U.S. transportation tax, with some exceptions, travel from the U.S. to points in neighbouring countries and to the Caribbean and Central America)	Passed by voice vote (July 21)	Passed by voice vote (July 17)	Signed July 25
Federal Executive Pay Act of 1956 (Adjusted rates of compensation for heads of departments and other federal officials)	Passed by voice vote (July 26)	Passed by voice vote (July 26)	Signed July 31
Budgeting and Accounting Reforms (Provided for improvement of federal budgeting and accounting methods and procedures as recommended by the Commission on Organization of the Executive Branch of the Government)	Passed by voice vote (July 23)	Passed by voice vote (July 25)	Signed Aug. 1
Social Security Amendments of 1956 (Permitted women to receive benefits at age 62; provided for benefits to totally disabled persons over the age of 50; extended coverage to additional self-employed persons)	Passed by voice vote (July 26)	Passed by voice vote (July 27)	Signed Aug. 1
Customs Simplification Act of 1956 (Provided a single basis for valuation of imports in determination of customs duties and repealed obsolete requirements in customs procedures)	Passed by voice vote (July 21)	Passed by voice vote (July 25)	Signed Aug. 2
Kidnapping—F.B.I. Jurisdiction (Authorized F.B.I. to initiate investigation of any kidnapping in which the victim had not been released within 24 hours instead of seven days as provided under prior law)	Passed by voice vote (July 23)	Passed by voice vote (July 27)	Signed Aug. 6
Federal Flood Insurance Act of 1956 (Provided for a federal flood insurance program)	Passed by voice vote (July 27)	Passed by voice vote (July 27)	Signed Aug. 7
Housing Act of 1956 (Liberalized rules for the guarantee of mortgages and other means of home financing; authorized 35,000 public housing units a year for two years)	Passed by voice vote (July 27)	Passed by voice vote (July 27)	Signed Aug. 7
Automobile Dealers Act (Gave automobile dealers a new cause of action against manufacturers who terminate dealer franchises without good faith)	146-45 Ayes: 146 Nays: 45 (July 23)	Passed by voice vote (July 25)	Signed Aug. 8 (J. W. Mw.)

PRESS CONFERENCE held at the Pentagon, Washington, D.C., in May 1956 by Secretary of Defense Charles E. Wilson (centre) and the leaders of the U.S. military services as the nation became concerned over reports of quarrels among military leaders. Shown in the photograph (from left to right): Gen. Nathan F. Twining, air force chief of staff; Donald A. Quarles, air force secretary; Gen. Maxwell D. Taylor, army chief of staff; Charles C. Finucane, undersecretary of the army; Wilson; Adm. Arthur W. Radford, chairman of the joint chiefs of staff; Charles S. Thomas, navy secretary; Adm. Arleigh A. Burke, chief of naval operations; and Gen. Randolph McC. Pate, marine corps commandant

weapon tests. . . ." The statement embarrassed the Democrats, and Eisenhower bluntly termed it an interference by a foreign nation in U.S. internal affairs.

It was reported that 62% of 1,760 newspapers supported Eisenhower editorially, while 15% backed Stevenson.

Much campaign oratory was devoted to such issues as inflation, price supports for farm crops, the soil bank program, the influence of big business on government, federal aid to education, assignment of credit for the Social Security act amendments and for ending the war in Korea, and other issues real or contrived. To the Republicans, the cost of living had been "remarkably stabilized"; to the Democrats, it was at "the highest point in history."

Despite partisanship in the campaign, on vital matters the parties stood together. Both stood for peace, for a strong and secure nation, for considerable reliance on the UN, for continuing close and friendly relations with Great Britain, France, Japan and peoples to the south, and for measures calculated to diminish Soviet influence.

The repudiation of the two Democratic candidates at the polls was overwhelming. They won only seven states with 73 electoral votes, and the final vote stood at 35,584,135 to 26,036,080. After several days of indecision, the senate stabilized at 49 Democrats and 47 Republicans, and the house of representatives seemed likely to have 234 Democrats to 201 Republicans. Democrats won half of 30 governorships, gaining five formerly Republican seats, while the Republicans gained in three. Only once before in American history (1848) had the presidential office been won by a party that did not achieve a majority in either house of congress. (See also ELECTIONS, U.S.; POLITICAL PARTIES, U.S.)

The postelection statements and conduct of victorious and defeated candidates for offices throughout the land particularly heartened Americans at a time when it was so clear that in many lands popular will was not to be accepted as final. After his second defeat for the presidency, Stevenson, still much admired by many, wryly termed himself "the foremost authority on unsuccessful presidential campaigns" and said he would not run again. He said he had tried "to set forth a philosophy, a faith and even suggest a program for modern liberalism. I think that I have done that . . . and . . . I have no doubt at all that many of the views and ideas I have tried to express will ultimately

prevail." The augmented stature of Nixon was evident when he made a major foreign policy address in December.

Economic Developments.—Annual personal income in the nation continued to increase during 1956. From \$78,600,000,000 in 1940, it had grown to \$306,000,000,000 in 1955 and \$324,200,000,000 in fiscal 1955-56. The consumer price index for all items rose from 114.8 to 116.2 in the two years following June 1954. Money became hard to borrow during the year, as the federal reserve board sought to control inflation by repeatedly increasing the discount rate. Financing of homes became difficult, and the Federal Housing administration's interest rate was raised 0.5%. Interest paid investors by many banks and savings and loan institutions also increased.

The federal government collected \$75,100,000,000 in taxes in 1955-56, an increase of 13% in a year. Corporate taxes were \$21,300,000,000 of this, and individual payments were \$42,600,000,000. To the federal tax burden were added the taxes of states, counties, school districts and other jurisdictions. If services by government were greater than ever before, so was the annual cost to the taxpayer.

A steel strike and a longshoremen's strike made news in 1956. The ratio of private to public building construction seemed stabilized at about two to one. Average wages went up somewhat, although irregularly among occupations. The peculiarities of the stock market worried amateur investors and puzzled others, but the former were comforted by their outright ownership of shares in most cases, and professionals were convinced that annual inflation would make the long trend upward. (See also BUDGET, NATIONAL; BUILDING AND CONSTRUCTION INDUSTRY; DEBT, NATIONAL; HOUSING; INCOME AND PRODUCT, U.S.; PRICES; TAXATION; WAGES AND HOURS.)

(V. D. B.)

Foreign Credits of the U.S. Government.—U.S. government foreign credit programs are more important than they appear to be from the figures on net foreign lending in recent years. The volume of offsetting new outflows and principal repayments has continued to approximate \$500,000,000 annually, but with significant shifts in the geographical distribution of the new money made available. New disbursements of \$472,000,000 in the fiscal year ended June 30, 1956, were an important component of the assistance given by the United States in the development of productive economies in underdeveloped countries. These credit disbursements represented more than one-fifth of the gross non-military grant and credit transfers under U.S. government foreign assistance programs in the fiscal year. Recent congressional actions clearly indicated the increased use of repayable assistance—particularly when for productive development—wherever possible.

Annual disbursement increased 6% in fiscal 1956. Although

*Does not include \$1,611,653,000 authorized by legislation but not committed by the Export-Import bank as of June 30, 1956, nor indeterminate amounts authorized by legislation but not committed for mutual security program loans and loans under the Agricultural Trade Development and Assistance act.

Source: Office of Business Economics, U.S. Department of Commerce.

Export-Import bank loan disbursements were off \$76,000,000, utilization of mutual security program loans increased \$28,000,000, and \$85,000,000 was disbursed abroad for multilateral trade and economic development from foreign currencies obtained through the sale of farm products under the Agricultural Trade Development and Assistance act.

Principal collections in fiscal year 1956 exceeded \$511,000,000, an increase of 11% over the preceding 12-month period. Significant factors in this rise were the increased returns of lend-lease silver borrowed during and immediately after World War II and scheduled for return in 1957, and the accelerated repayment by France in Dec. 1955 of \$26,000,000 on the balance of merchant ship sales credits extended in the early postwar period. The rise in principal collections decreased the outstanding long-term indebtedness of foreign governments and other foreign entities to the U.S. government—excluding World War I debts—to \$11,755,000,000 at the end of June 1956. Approximately \$75,000,000 of this outstanding principal indebtedness had been due and unpaid for 90 days or more. Repayment of the rest of the indebtedness was scheduled throughout the remainder of the 20th century.

On the outstanding credits, the U.S. government collected \$271,000,000 in interest in fiscal year 1956, approximately 2.3% on the average amount outstanding. Although interest rates on

new loans extended exceeded 3%, average interest collections were off in the year because many of the new mutual security loans did not require interest payments for an initial period of up to four years. Also, the decline in indebtedness to the Export-Import bank reflected repayment of loans generally earning higher than average rates. Accelerated principal repayments, such as that made by France, were on outstanding credits with interest rates above average.

More than half the fiscal year 1956 repayments were made by European countries, with major repayments from France (\$92,000,000) and the United Kingdom (\$72,000,000). Significant disbursements in Europe included \$32,000,000 to Spain, \$25,000,000 to Turkey and \$23,000,000 to Greece, all economically underdeveloped countries.

Large repayments were also made by Brazil (\$72,000,000) and Japan (\$60,000,000). During the year these two countries were the principal recipients of new disbursements, which aggregated \$39,000,000 and \$117,000,000, respectively. The utilizations and repayments by Japan each continued to include about \$60,000,000 in activity on relatively short-term credits extended by the Export-Import bank (and disbursed by the bank and its commercial agent banks) for the purchase of U.S. cotton.

The geographical shift in new disbursements toward increasing economic development was evident during the fiscal year

"TOKYO ROSE," Mrs. Iva D'Aquino, being interviewed after release from the federal women's reformatory, Alderson, W.Va., Jan. 28, 1956. She had served a six-year term for treasonable acts during World War II when she broadcast propaganda from Japan urging U.S. troops in the Pacific area to surrender to the Japanese

in the new disbursements to Israel (\$27,000,000), Vietnam (\$25,000,000), India (\$22,000,000) and Formosa (China) (\$18,000,000).

In fiscal year 1956, new foreign loan commitments by the U.S. government aggregated \$631,000,000, one-eighth less than in the previous 12-month period. Expirations and cancellations of unutilized commitments totalled \$52,000,000 in the year. Noteworthy annual increases in unutilized commitments resulted from such widespread new commitments for industrial or economic development as \$77,000,000 to the Philippines, \$56,000,000 to Mexico and \$24,000,000 to Ethiopia.

Uranium. All uranium ore mined in the United States is purchased by the U.S. Atomic Energy commission. Statistics on output and consumption of uranium are not available for publication. The Colorado plateau continued during 1956 as the main area of operations.

In 1956, in co-operation with the Union Carbide and Carbon Corp. and with the technical assistance of the A.E.C., the federal bureau of mines produced a motion picture in all-colour film titled *The Petrified River—The Story of Uranium*. The film shows the metal that becomes the fuel for atomic reactors, and its service for other humanitarian purposes. It depicts prospectors with Geiger counters and other instruments trying to locate uranium. It also shows drilling, mining and milling operations; the uranium reactor at Oak Ridge, Tenn.; and the preparation of radioisotopes and their use at hospitals and research centres in diagnosing and treating diseases.

A simplified handbook, *Facts Concerning Uranium and Exploration Production*, was published in Nov. 1956. It describes prospecting on private and public lands and ways of staking claims, and gives data on mining, milling and refining uranium ore.

Belgian Congo.—A new agreement signed in June 1955 covering the shipment of uranium to the United States and Great Britain, replaced the 1944 agreement, which was due to expire in 1956. Under the new agreement, which was to remain in force until July 31, 1965, the Belgian government would take necessary measures to give the Combined Development agency (combined U.S.-British purchasing organization) a purchase option on 90% of Congo production of uranium and thorium ores and concentrates during 1956 and 1957, and on 75% of this production in 1958-60. Negotiations to set the percentage for the remainder of the period of validity of the agreement were scheduled for 1960.

Brazil.—The United States and Brazil agreed on Aug. 3, 1955, to establish a co-operative uranium prospecting program.

Japan.—According to official sources, production of uranium ore in Japan was expected to begin in 1956. Basic surveys of the most important deposits were completed in 1955.

(See ATOMIC ENERGY; METALLURGY.)

(F. E. H.)

Urban Redevelopment: see BUILDING AND CONSTRUCTION INDUSTRY; HOUSING; MUNICIPAL GOVERNMENT; TOWN AND REGIONAL PLANNING; URBAN TRANSPORTATION, U.S.

Urban Transportation, U.S. As of Jan. 1, 1956, the urban transit industry in the United States was composed of 1,483 operating companies. This total included 1,399 companies engaged exclusively in the operation of motorbuses; 52 companies having composite fleets including motorbuses, electric railway cars or trolley coaches or both; 26 companies engaged exclusively in electric railway freight and switching service; and 6 companies using railway facilities exclusively in passenger service. There were 6 rapid transit systems (elevated and subway operations) included in the foregoing.

The transit industry in the United States carried 7,272,000 passengers during the first 8 months of 1956, or 4.98% less than the number carried during the corresponding period of 1955. Operating revenues for the first 8 months of 1956 totalled \$943,700,000, up nearly $\frac{1}{4}$ of 1% from the same period in 1955. Higher fares were wholly responsible for this increase in revenue.

Approximately 154 transit companies in U.S. cities of more than 25,000 population were granted fare increases during the 12-month period ended Dec. 31, 1955. During the first 8 months of 1956, there were 123 additional increases granted.

As of June 1, 1956, more than 20% of all U.S. cities having a

NEW TERMINAL BUILDING for the Staten Island ferry, N.Y., opened in 1956

universal city-wide fare had rates that ranged more than 15 cents and up to 21 cents; 57% were at 15 cents; 2% at 13 cents; 7½% at 12 cents; 13% at 10 cents, and less than ½ of 1% were less than 10 cents. The top rate of 21 cents was found in a few communities in the Chicago (Ill.) suburban area. Only one city of more than 25,000 population had a city-wide transit fare of 5 cents.

The declining trend in traffic levelled off during the year and the slightly improved financial condition of the transit industry

stimulated community leaders and public officials to give their support to transit companies in their efforts to furnish an improved service.

To persuade people to continue using its service, the transit industry endeavoured to improve operations and offer a better, more dependable and faster ride. A faster ride seemed to be the first requirement of the public, and to offer it transit companies had to have community co-operation. Municipalities showed increasing inclination to adopt specific suggestions for giving transit a better opportunity to play its full role in moving people.

Some of these steps were: providing separate streets, or separate

exclusive lanes, for the transit vehicle; routing transit vehicles more directly to cut travel time; allowing for transit lanes in expressway construction; establishing fringe parking lots to ease traffic; restricting on-street parking, stopping, loading and delivery where they interfered with transit, not only downtown, but during rush hours for considerable distances along principal arterial streets.

Many transit operations accomplished important advances in service, economy, public relations, advertising, tax relief and regulatory assistance. One important development during the year was the appointment of an industry committee on new bus design. The committee's general objective was to develop a radically new type of transit bus with sufficient attraction in appearance and perform-

U.S. Urban Transportation Statistics, 1955

Item	Amount	Item	Amount
Miles of line and miles of route operated (Dec. 31)		Vehicle miles operated (calendar year), total	2,447,500,000

ance to make the public want to ride it in preference to using their own automobiles. The specific objectives included more eye appeal, less weight, faster loading and unloading, more comfortable seats, less noise and improved ventilation. The committee was being actively supported by bus manufacturers. There was considerable support of the drive toward air conditioning in transit buses. Air conditioning of the mass transit bus was not completely new. One company had put 50 air-conditioned buses in operation in 1947 and they were still in regular service. During 1956 four more companies had placed air conditioning units in regular or experimental service.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Arteries of New York City* (1952); *Development of Transportation* (1931).

Uruguay. A republic in southeastern South America, Uruguay is bounded on the north by Brazil, on the south by the Río de la Plata, on the east by the Atlantic ocean and on the west by Argentina. It is the smallest country in South America, with an area of 68,369 sq.mi. It has a population of 2,800,924 (1954 est.), mostly of European extraction. Montevideo, the capital, has 810,969 inhabitants (1954 est.). Other leading cities (pop., 1954 est.) are Mercedes 44,900; Salto 44,900; Paysandú 44,000; Minas 36,700; Melo 36,000; Florida 34,200; Rocha 34,000. Religion: Christian, mostly Roman Catholic. President of the governing national council in 1956: Alberto F. Zubiria.

History.—Uruguay's nine-member national council of government found itself challenged by severe economic and political problems during 1956. There were a number of cabinet resignations in May, mostly arising out of disagreements over whether an income tax should be imposed and out of the frustration of trying to function under a reputedly indecisive and cumbersome plural executive. Dissatisfaction with the government reached a climax in July when various Colorado party factions as well as the Herrerista sector of the Nationalist party began campaigning for restoration of a single executive.

Critics especially scored the national council's ineffectiveness in handling critical economic and financial problems. The treasury was being heavily overburdened by the large bureaucracy and the many socialized activities of the nation. The price of staples rose rapidly. The export trade in wool, beef and wheat was sluggish, causing foreign exchange earnings to fall drastically and the value of the peso to decline sharply by May to a low of four to the dollar. The currency was stabilized in August when the government decreed various complicated exchange modifications representing a mild devaluation and a relaxation of trade restrictions. Uruguay's failure to find markets for many of its commodities led to some friction with the United States which it accused of violating hemisphere agreements by dumping surplus commodities such as wheat, cotton and corn on the world market.

Economic problems were aggravated in mid-1956 by strikes of railroad and packing workers who sought wage increases and other benefits. Operations were paralyzed in all packing plants, halting exports of frozen meat. Uruguay even found it necessary to import large quantities of beef from Argentina. Because of the delay in shipments, the German Federal Republic decided not to buy Uruguayan meat in the future. There was also a shortage of animals for slaughtering, caused in part by the constant problem of livestock being smuggled into Brazil, which allegedly cost Uruguay about \$30,000,000 in customs charges.

In February the national council invited the presidents of Argentina and Brazil to confer some time in mid-1956 on economic and cultural matters, such as the establishment of mutual trade benefits and deciding on means of raising their standards of living. In September this initiative was diverted by Argentina's proposal that the three nations should meet to discuss set-

ting up a South Atlantic Treaty organization modeled after NATO. Despite opposition in Uruguay to such a defense pact, the national council agreed to participate in discussions. (R. Hn.)

Education.—In 1953 there were 1,827 primary schools with 272,721 pupils and 8,337 teachers and (in 1952) 115 secondary schools with 37,858 students. The University of Montevideo had 11,603 students in 1951.

Finance.—The monetary unit is the peso, valued on Nov. 23, 1956, at 47.62 cents U.S. currency, basic rate; 24.39 cents, free certificate rate; and 25 cents, free rate. Ordinary government expenditure in 1955 (preliminary) was 505,700,000 pesos; revenue, 473,200,000 pesos. The public debt on July 31, 1956, was 1,212,715,000 pesos, of which 98,470,000 pesos represented the external debt. Currency in circulation (June 30, 1956) totalled 508,000,000 pesos; demand deposits, 365,000,000 pesos. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$74,000,000, of which manufacturing investments accounted for \$36,000,000. The cost-of-living index (Montevideo) stood at 128 in Aug. 1956 (1953=100).

Trade and Communications.—Exports in 1955 totalled \$183,678,000; imports, \$225,958,000. Leading exports were wool (40%), grain (26%), textiles (19%), hides (8%) and meat and products (4%); leading imports, raw materials, including sugar, iron and steel and cotton (32%), fuel and lubricants (12%), construction materials (9%), motor vehicles (8%) and machinery and parts (4%). Leading customers were the Netherlands (23%), Brazil (14%), the U.K. (14%), the U.S. (9%) and France (5%); leading suppliers, the U.S. (19%), Brazil (17%), the U.K. (13%), Germany (8%) and France (6%).

Railways (1954) totalled 1,928 mi.; highways (1955) totalled about 26,000 mi., of which 3,100 mi. were paved national roads. On Jan. 1, 1954, there were 48,012 automobiles, 40,100 trucks and 1,523 buses. According to *Lloyd's Register of Shipping*, the merchant marine had 41 vessels (100 tons and over) aggregating 65,846 gross tons on June 30, 1955. Telephones (Jan. 1, 1955) numbered 109,300, of which 75% were automatic and located in Montevideo.

Agriculture.—Official preliminary production estimates for major crops in the crop year 1955-56 (in metric tons) were as follows: wheat 797,000; linseed 56,019; oats 35,882; barley 11,002; malt barley 29,598; birdseed 2,151; (calendar year 1955) maize 197,049; rice 68,000; sunflower seed 84,314; peanuts 5,104. The 1951 agricultural census showed 23,408,642 sheep, 8,154,109 cattle, 511,547 milk cows, 667,251 horses and 258,980 pigs. Wool exports in the calendar year 1955 amounted to 49,424 metric tons. Meat exports in 1955 included only 3,520 metric tons of frozen beef, 4,994 tons of canned beef and 373 tons of frozen mutton.

Manufactures.—In 1954 there were an estimated 25,000 industrial establishments with invested capital of 1,005,000,000 pesos and production valued at 1,202,000,000 pesos. Industrial workers totalled 180,185 in 1951. Production estimates for 1955 included cement 296,000 metric tons; rolled steel products 22,000 tons; sulphuric acid 8,300 tons; tires 149,000 units, inner tubes 68,000 units. Installed electric energy capacity (Dec. 31, 1955) was 290,000 kw. (J. W. Mw.)

U.S.S.R.: see UNION OF SOVIET SOCIALIST REPUBLICS.

Utah. A Rocky mountain state of the United States, admitted to the union in 1896, Utah is popularly known as the "Beehive state." Area: 84,916 sq.mi. (82,346 sq.mi. land, 2,570 sq.mi. water). Pop.: (1950 census) 688,862; (1956 provisional est.) 812,000; urban pop. 65.3% of total (1950 census), foreign-born 4.3%, nonwhite 1.7%. Capital: Salt Lake City, pop. (1956 est.) 205,000; other principal cities (1956 est.) pop.: Ogden (65,800), Provo (34,100), Logan (18,000).

History.—The major event of the year for Utah was the enactment of public law 485 by the 84th congress of the United States creating the Colorado River Storage project. When Pres. Dwight D. Eisenhower signed the bill into law on April 11, 1956, he brought to fruition about 36 years of work to get this much needed program for Utah. In 1922, the Colorado River compact was negotiated among the seven states served by the Colorado river. This compact provides for division of river water between the Upper and Lower basins, with each basin granted 7,500,000 acre-feet each year. Upper basin states are Colorado, New Mexico, Utah and Wyoming. Lower basin states are Arizona, Nevada and California.

In 1948 the Upper Basin states negotiated a compact dividing the water allocated to them. The pact also created the Upper Colorado River commission made up of representatives from the four states and the federal government. Plans for the Upper Basin Colorado River Storage project were completed in 1950 and after six years of intensive work the United States congress passed the law which President Eisenhower had made part of his legislative program.

Conservation interests in the nation and California opposition led to the elimination of Echo dam from the program, which left the Glen Canyon dam as the project of major significance to Utah. This unit was to be a 580-ft. high dam, 1,400 ft. in length, with a cost estimated at \$379,143,000. It would form a reservoir with a capacity of 26,000,000 acre-feet of water and it would extend 186 mi. up the Colorado river and 71 mi. up the San Juan river. It would have installed capacity to generate 800,000 kw., and an average power output of nearly 4,000,000,000 kw.hr. each year.

With \$13,000,000 appropriated by congress, preliminary construction started late in 1956 on certain phases of the Colorado River Storage project and on Oct. 15, 1956, President Eisenhower signalled the start of the tremendous project by pressing a button which ignited explosions at the Glen Canyon and Flaming Gorge dam sites.

In the presidential election year, Utah interest centred around the primary contests for the governorship. Incumbent Gov. J. Bracken Lee was defeated in a close race for the Republican nomination by George D. Clyde, a leader in the fight for the Colorado River project. L. C. Romney, Salt Lake City commissioner, defeated John S. Boyden for the Democratic nomination. On Oct. 13 Governor Lee injected further interest in this race by announcing his candidacy as an independent candidate.

In the general election of Nov. 6, 1956, Utah voters by a large majority voted for the re-election of Pres. Dwight D. Eisenhower. In the gubernatorial contest, the regular Republican candidate, George D. Clyde, won in a close contest over the Democratic opponent, L. C. Romney, and incumbent J. Bracken Lee who ran as an Independent. Incumbent U.S. Sen. Wallace F. Bennett (Rep.) retained his seat, defeating Alonzo F. Hopkin (Dem.).

In the congressional races, incumbent H. Aldous Dixon (Rep.) defeated Carlyle F. Gronning (Dem.) in the first congressional district. The second district race was won by incumbent William A. Dawson (Rep.) over Oscar W. McConkie (Dem.).

The Republican party made a clean sweep of state offices, returning the following candidates in addition to the governor: Lamont F. Totonto, secretary of state; E. R. Callister, attorney general; Sid Lambourne, auditor; and Sherman J. Preece, treasurer.

As a result of the election, Republicans in Utah had comfortable working margins in both houses of the state legislature.

Education.—For the 1954-55 school year there were 119,476 full-time elementary students enrolled in 380 elementary schools and 71,976 full-time secondary students enrolled in 141 secondary schools. This total of 191,452 was an increase of 8,288 over the 1953-54 figure. With principals and supervisors the total instructional staff for the state reached 6,894, an increase of 689 over the previous year.

Funds available for education totalled \$69,821,249.24. Disbursements \$65,251,571.68. E. Allen Bateman was superintendent of public instruction in Utah during 1956.

Social Insurance and Assistance, Public Welfare and Related Programs.—Total expenditures for public assistance during the fiscal year July 1955 to June 1956 amounted to \$14,889,374.36 (for 25,486 persons), which was a decrease of \$362,557.50 from the 1954-55 figure. The funds were distributed (excluding administrative expense) as follows: old-age assistance \$6,756,867.61 (9,535 persons); aid to dependent children \$3,945,449.51 (10,733 persons); aid to the blind \$187,946.73 (265 persons); aid to the disabled \$1,408,149.39 (1,959 persons); aid to unemployables \$680,541.59 (1,052 persons); aid to employables \$499,699.69 (1,506 persons); foster care \$286,932.72 (436 persons); medical care and sight conservation \$35,325.59 (131 persons); welfare services \$223,087.69. Increased payments over the preceding year were noted in the following categories: administration and services, disabled, foster care, medical care and blind. Decreased payments were made to dependent children, employables, unemployables, and people of old age.

For the year July 1955 to June 1956 the four Utah welfare institutions reported the following expenditures and populations: industrial school at Ogden, \$400,000 and 173 students; mental hospital at Provo, \$1,784,700 (plus \$300,000 for new buildings) with 1,277 patients; training school at American Fork, \$717,800 (plus \$450,000 for new buildings) with 871 students; tuberculosis sanatorium at Ogden, \$211,724.31 with 75 patients.

Communications.—All highways and roads in the state totalled 31,415.6 mi. Of that amount 16,378.9 mi. were surfaced roads. State and federal funds disbursed for highways amounted to \$21,588,119 for the fiscal year ending June 30, 1956. New or rebuilt roads completed during the fiscal year totalled 425 mi. Total registered motor vehicles as of Dec. 31, 1955,

numbered 336,948. All railroads operating in the state numbered nine in 1956, with track mileage (within the state) of 2,924.99 and line mileage of 1,791.96 (as of Dec. 31, 1955); the track mileage included 95.51 mi. owned by three terminal companies in the state. Airports and airfields in 1956 numbered: commercial and municipal, 48; military, 5; private, 12; emergency strips, 38; mining strips, 37; other, 5. Regularly scheduled air lines operating in the state numbered three in 1956. Operating radio stations in 1956 numbered 21 AM stations and 4 FM stations. There were three operating television stations in 1956.

Banking and Finance.—As of June 30, 1956, the 43 state banks had resources totalling \$486,432,924.18 and the 7 national banks \$360,715,537.56 for a combined total of \$847,148,461.74, an increase of \$36,239,656.01 over 1955. Deposits for the 43 state banks reached \$447,740,322.20, while the 7 national banks noted deposits of \$336,599,321.84 for a combined total of \$784,339,644.04. There were 16 state-chartered savings and loan associations with total resources of \$115,838,783.13, an increase of \$24,217,000.50 over the total assets of the 15 such companies as of June 30, 1955.

State receipts for the fiscal year ending June 30, 1956, were \$125,466,713.28; disbursements amounted to \$117,891,178.26. There was no bonded indebtedness for the state as a whole.

Table I.—Principal Agricultural Products of Utah

Agriculture.—For Utah, 1955 cash receipts from livestock and livestock products totalled \$107,194,000, down 3% from 1954 and the lowest since 1949; cash receipts from crops, at \$36,841,000 were down 5%, the lowest since 1944; total cash receipts amounted to \$146,721,000, down 3% from 1954. The total value of livestock on Utah farms as of Jan. 1, 1956, amounted to \$100,120,000.

Manufacturing.—Total wages for 1955 showed an increase of \$68,139,548 over 1954. The average monthly wage was \$303. (B. D. M.)

Table II.—Principal Industries of Utah

Industry	Av. workers per month	Total wages 1955
Mining	14,022	\$ 68,975,398

Mineral Production.—Table III shows the tonnage and value of those minerals produced in Utah in 1953 and 1954 whose values exceeded \$100,000, except for fluorspar, in 1954. Utah was second in output of copper, gold, molybdenum and silver in 1954, third in lead and selenium output, fifth in crude iron ore and sixth in zinc. It ranked 16th among the states in value of its mineral output, with 1.83% of the U.S. total.

Vatican City State. This sovereign, independent state was established by the Lateran treaty between the Holy See and the Italian government on Feb. 11, 1929. The treaty was recognized in international law with the reigning pope as sovereign and was made an integral part of the constitution of Italy on March 26, 1947. The pope has full executive, legislative and judicial powers which he delegates to a commission of cardinals. The legal system is based on canon law; in the rare cases where this law does not apply the laws of Italy prevail.

Diplomatic representatives of 45 nations are accredited to the Vatican. The Holy See in its diplomatic relations with other governments is represented by 40 nuncios and internuncios.

The area of Vatican City is 108.7 ac. To this are added the following extraterritorial possessions: the basilicas of St. John Lateran, St. Mary Major and St. Paul, with the buildings attached; the edifice of San Callisto near Santa Maria in Trastevere; the papal palace and domain of Castel Gandolfo, the summer residence of the popes, 14 mi. S.E. of Rome; the property sites on the Janiculan hill of the Congregation for the Propagation of the Faith; the ex-convent buildings annexed to the Basilica of the Twelve Apostles and to the churches of Sant'Andrea della Valle and San Carlo ai Catanari; the palaces of the Dataria, the Cancellaria, the Propagation of the Faith in the Piazza di Spagna, the Holy Office, the Convertendi and the palaces of the Vicariate; about 160 ac. in all.

The normal population of Vatican City is approximately 1,000, most of whom are ecclesiastics. A total of 750 lay persons are enrolled in the pontifical armed corps: 500 Palatine guards of honour, 120 Swiss guards, 80 papal gendarmes and 50 noble guards. On May 6, 1956, the Swiss guards, oldest of the Vatican's four armed services and widely renowned for its brilliant 16th-century uniform of sky blue, orange and yellow, celebrated the 450th anniversary of its foundation.

The Vatican library ranks among the great libraries of the world. Its importance can be measured by the quality of its collection of more than 60,000 manuscripts. The collections were recently enriched by the acquisition of material bearing on biblical sources found near the Dead sea.

The Vatican contains an abundance of works of art that represent in their entirety an irreplaceable treasure. The paintings, sculptures and objects are grouped in specialized museums. These are the Museo Pio-Clementino, the Galleria Chiaramonti, the Braccio Nuovo, the Egyptian museum and the Etruscan museum.

Vegetable Oils and Animal Fats. The record soybean crop of 1956 almost alone maintained U.S. food fats and oils at approximately record levels. The more inclusive index of 1956 oilseed production stood at 155 (1947-49=100) as compared with 129 in 1955; included were 457,394,000 bu. of soybeans, 5,495,000 tons of

cottonseed, 1,488,575,000 lb. of peanuts and 51,948,000 bu. of flaxseed.

Prices to producers of oil-bearing crops in Oct. 1956 were 240% of the 1910-14 average, as compared with 227% in Oct. 1955 and an average of 318% for 1947-49. In Oct. 1956 prices to producers were: soybeans, \$2.07 per bushel (\$2.08 per bushel in 1955); cottonseed, \$54.10 per ton (\$43.50 in 1955); flaxseed, \$2.92 per bushel (\$2.76 in 1955); and peanuts, 11.6 cents per pound as compared with 11.8 cents per pound in 1955.

In line with record milk production, butter production was forecast at 1,600,000,000 lb. as compared with 1,566,000,000 lb. in 1955; consumption was 9 lb. per person. Consumption of margarine, largely from refined and hydrogenated soybean and cottonseed oils, of which about 1,350,000,000 lb. were produced in 1956, was 8 lb. per person. In addition an indicated 10 lb. of lard, 11 lb. of shortening and 10.1 lb. of "other edible fats and oils" were consumed.

Production of sesame seed, source of a high grade edible oil, expanded in the south, especially in Texas, to a level well above the 5,000,000 lb. of 1955.

Exports from the U.S. of fats and oils, including the oil equivalent of oilseeds, was a new record of about 2,700,000,000 lb. during 1955-56; the outmovement during 1956-57 was expected to approximate that of the previous year.

Table II.—World Exports of Fats, Oils, and Oilseeds

(In thousands of short tons)

Commodity	1955*	1954†	Average 1945-49	Average 1935-39

Source: Foreign Agricultural Service, U.S. Department of Agriculture, Foreign Crops and Markets (Aug. 29, 1955).

With most of the major producers reporting new record crops of one or more of the vegetable oils and with most types of livestock at record levels, world production was expected in 1956-57 to rise by about 7,000,000 tons to a new record of 27,300,000 metric tons of which liquid edible oils would be 9,330,000 tons, animal fats 10,380,000 tons and the several palm products, 3,550,000 tons. Exports were forecast to exceed the record 6,830,000 tons of 1955.

World production of flaxseed was estimated at 173,500,000 bu. for 1956, of which the U.S. accounted for 51,948,000 bu. and Canada 37,300,000 bu.

Total world production of olive oil for 1956-57 increased to 986,000,000 tons (from 752,000,000 tons in 1955-56), of which the Spanish crop was estimated at about 390,000,000 tons, that of Italy at 150,000,000 tons and Greece and Tunisia at 100,000,000 tons. World production of whale and sperm oils was forecast at 425,000 and 105,000 tons, somewhat above that of 1955.

(See also COTTON.)

(J. K. R.)

Vegetables. Substantially larger amounts of most types of vegetables were available in the United States in 1956, for use fresh, for processing and, for a few types, for export. Consumption per capita was indicated at 148 lb. of fresh vegetables, 3% above 1955 but only 6% more than prewar. The canned product amounted to 42.1 lb. per capita, 1% more than 1955 and 42% more than prewar. Indicated consumption of frozen vegetables was 7.2 lb., 9% above 1955. The canned and frozen product accounted for about 44% of total consumption.

In the first seven months of 1956, U.S. exports of fresh vegetables, largely cabbage, carrots, celery, lettuce and tomatoes

*Includes processing.

to Canada, were 553,000,000 lb., 6% more than for the same months of 1955. U.S. fresh vegetable imports, mostly from Cuba and Mexico, and largely tomatoes, cucumbers, peppers and melons, were 321,000,000 lb. in the period January through July 1956, 18% more than in the corresponding period of 1955.

The price index for commercial vegetables in October (not adjusted for season of year) was 203 (1910-14=100), as compared with 208 a year earlier.

Commercial Truck Crops for the Fresh Market.—Season by season, 1956 production exceeded that of 1955 and the 1949-54 average. Total tonnage was indicated at 11,041,700 tons, as compared with 10,682,700 tons in 1955 and 10,095,900 tons average. Higher yields rather than expanded acreage gave the increase; indicated area was 2,215,010 ac., as compared with 2,253,540 ac. the previous year and 2,205,010 ac. for 1949-54.

The U.S. department of agriculture proposed revision of fresh tomato standards. Acreage marketing guides for 1957 covering 18 major winter vegetables recommended a total acreage 5% below 1956. Beginning with the 1957 crops, official yield and production statistics for fresh market vegetables were to be published on a weight basis.

Commercial Truck Crops for Processing.—Early reports on nine of the 11 major processing vegetables, usually representing about 96% of the total tonnage, indicated a crop of 8,080,000 tons, as compared with 5,910,000 tons in 1955 and 5,750,000 tons average for 1945-54. Snap beans, beets for canning, kraut cabbage grown on contract, sweet corn, green peas and tomatoes for processing were highest of record, and most or all the others were near record. The canned pack was at record high levels for snap beans, tomatoes and sweet corn, the latter with carry-over stocks amounting to 45,000,000 cases.

Table II.—U.S. Production of 11 Vegetables for Processing
(In tons)

Crop	Indicated 1956	1955	Average, 1945-54
Asparagus	117,500	129,400	99,800
Beans, lima	108,000	88,600	78,400

‡Average for 1949-54.

Dry Edible Peas and Beans.—The dry edible bean crop of 16,977,000 bags (of 100 lb. each) approximated the 1955 crop and was about 5% above average. Michigan, with nearly one-

third the total crop (5,522,000 bags), was the leading producing state, followed by California (3,744,000 bags) and Idaho (2,052,000 bags). Prices to producers in October averaged \$6.67 per hundredweight against \$7.04 per hundredweight a year earlier and a national average support price of \$6.31 per hundredweight. Carry-over stocks of less than 2,000,000 bags were the smallest in eight years. U.S. exports of beans during the year ending Aug. 31, 1956, were 2,226,000 bags, as compared with 1,739,000 bags in the previous year.

The northwest dry pea harvest of 4,885,000 bags was the largest since 1947, very large as compared with 2,525,000 bags in 1955 and a 10-year average of 3,868,000 bags. Prices to producers declined sharply to \$4.67 per hundredweight, as compared with \$6.41 per hundredweight a year earlier. Exports of dry peas in 1955-56 were only 408,000 bags, the smallest in 15 years and comparable to 1,200,000 bags in the previous year.

Early indications were that the bean crop of Mexico would be as large as the record high production of about 8,000,000 bags in 1954 and 1955. Nevertheless, imports exceeded exports in those years. Chile's harvest in early 1956 provided 590,000 bags for export in addition to large domestic consumption. Dry bean production in France was estimated at 2,700,000 bags, 17% larger than the 1955 crop and the largest since the 2,800,000 bags of 1939.

ENCYCLOPEDIA BRITANNICA FILMS.—*Corn Farmer* (1939); *Irrigation Farming*, 2nd ed. (1951); *Story of Potatoes* (1952); *Story of Rice* (1952); *The Truck Farmer*, 2nd ed. (1954).

Venereal Diseases. The outlook for the control of syphilis in the United States was still encouraging in 1956, although a trend downward since 1947 in the number of reported cases was reversed. More cases of primary and secondary syphilis—the most infectious stages of the disease—were reported throughout the United States than in 1955. Of a total 371,224 cases of venereal diseases reported by state and territorial health departments during 1956, the total number of cases of syphilis in all stages numbered 126,700, a significant departure from the established downward trend. In the infectious stages, 6,769 cases of primary and secondary syphilis were reported.

The incidence of syphilis in the United States is about 86,800 cases per year. It was estimated that there were more than 1,921,000 persons in the United States in 1956 requiring treatment for syphilis. These persons must be found and treated to prevent further transmission of the disease and to reduce disability and untimely death.

As of 1956, 38,000 persons were institutionalized for syphilitic insanity, and the cost of maintaining these persons was \$43,376,000 per year. Mortality data indicated that syphilis was exceeded only by the respiratory diseases and tuberculosis as the principal cause of death from infectious diseases in the United States.

The 240,819 cases of gonorrhoea reported in the United States and territories during 1956 was slightly lower than in 1955. However, the first significant increase in the nation's total number of cases reported by state health departments occurred in 1955. It was estimated that at least 1,000,000 cases of gonorrhoea occurred in the United States each year.

Other venereal diseases, chancroid, lymphogranuloma venereum and granuloma inguinale, accounted for 3,705 cases, of which chancroid comprised about two-thirds. The number of cases of these diseases was slightly less than the total of 1955.

The emphasis placed on case finding by state health departments was reflected in the number of diagnostic observations completed in public clinics during the year. Clinic personnel examined approximately 1,750,000 persons suspected of infections, and 16% or 28,000 were found to be infected. An addi-

tional 90,000 were given protective therapy, that is, treatment to halt the disease in the incubation period before the patient showed any signs or symptoms of the disease.

Interviewing patients and investigating their contacts continued as major case-finding activities of public health clinics. A total of 215,300 case-finding investigations were completed by the staffs of these clinics, and as a result 85,000 persons were given treatment. While private physicians provided diagnostic and treatment services, almost all of the interviewing of patients and investigation of their contacts were carried on by the health department clinics.

In addition, more than 2,000 venereal disease clinics in the 48 states and 4 U.S. territories provided diagnostic and treatment services to persons suspected of having a venereal infection.

Selective surveys in areas where the prevalence of syphilis was known to be high had continued; the number of states doing this type of testing had increased from 23 in 1954 to 29 in 1956, and 450,000 blood specimens were taken in 1956.

The migrant worker posed problems of venereal disease control. During 1956, of 65,000 migrant workers who were given blood tests, 7,300 reacted to the tests as being potentially in need of treatment for syphilis.

The Venereal Disease Research laboratory, Chamblee, Ga., and the Venereal Disease Experimental laboratory, Chapel Hill, N.C., provided the research, laboratory, teaching and evaluation services needed to aid the states in detecting and diagnosing venereal diseases. These two institutions helped to maintain uniformly high standards of serologic test performance, to promote use of efficient tests, to train laboratory personnel and to evaluate and interpret serologic test results. A total of 72,027 tests were performed in these laboratories on 15,679 blood and spinal fluid specimens; serologic reagents were sent to 31 state and 24 public health service laboratories. The Venereal Disease Research laboratory served as control or co-control in 21 intrastate serologic evaluation studies and one army regional laboratory study, and also served as a reference laboratory for the World Health organization. (C. A. S.)

Venezuela. The republic of Venezuela, with an area of 352,142 sq.mi., had an estimated population of 5,949,000 in 1956, not including indigenous tribes living outside of cities (which had 56,705 members in 1950). The capital is Caracas, with a population of 611,048 in 1953. The populations of the other principal cities were: (1953 est.) Maracaibo 304,313; Barquisimeto 132,123; Valencia 105,315; Maracay 77,049; San Cristóbal 64,970; Cumaná 56,604; Ciudad Bolívar 36,278; Puerto la Cruz 36,000 and Puerto Cabello 35,000.

History.—General Marcos Pérez Jiménez was president throughout 1956. Relations with other American republics were unchanged during the year. The president attended the meeting of American presidents at Panamá in July, where he proposed that the participating governments contribute to a fund for the aid of countries in economic difficulty a small percentage of their respective budgets, and offered more than \$30,000,000 on behalf of Venezuela for this purpose.

During 1956, new petroleum concessions were granted by the government, resulting in a large increase in revenue. Oil production continued at close to capacity through the year, and exploration was resumed. The production of iron ore, nearly all exported, which exceeded 8,320,000 tons in 1955, was expected to exceed 10,000,000 tons in 1956. The government's petrochemical plants were begun, and were expected to be in operation by 1957. A new pipeline was projected to Puerto Cabello. The preliminary work for the hydroelectric plant on the Caroní river, eventually expected to produce 1,000,000 kw. or more, was under way. The metallurgical plant producing more than

400,000 tons of iron and steel products was begun. In August, the president inaugurated the new water supply of Caracas, bringing to the reservoirs of the capital water from the Tuy river; the total project would cost, when finished, in excess of \$60,000,000. Progress was made on the 109 mi. railroad from Barquisimeto to Puerto Cabello, and on a short line in the east, out of the coal mines of Naricual.

Diversification of industry continued to increase the number of textile mills and other enterprises designed to cultivate the domestic market for manufactured products. Employment continued at a high level, although immigration tended to fall off, and some immigrants of earlier years returned to Europe.

The first ships went through the deepened channel of the Maracaibo bay in May, and it was hoped that the entire task would be completed early in 1957. The oil companies purchased \$13,000,000 of 4.5% bonds of the commission which had the task in hand. Plans for the construction of a bridge over the entrance to Lake Maracaibo were studied and bids invited. The program of active development of the network of roads connecting the southern end of the lake with Colombia and the inland states of Venezuela was carried forward.

The total direct and guaranteed public debt at the end of the fiscal year (June 30) amounted to \$187,000,000; to which must be added floating debt incurred by the several autonomous agencies, with a debt service of approximately \$13,000,000; this floating debt was expected to be funded. There were also foreign dollar obligations arising from the Tuy water project (about \$30,000,000), the metallurgical plant project (\$157,577,573), and housing loans of the Export-Import Bank of Washington, reduced by 1956 to \$4,457,639. These three sets of foreign dollar loans were made to autonomous agencies, but were guaranteed by the Venezuelan government.

(See also FOREIGN INVESTMENTS; ORGANIZATION OF AMERICAN STATES.) (C. E. Mc.)

Education.—At the end of 1954 there were 7,014 primary schools, public and private, with 608,976 pupils and 16,944 teachers, and 197 secondary and special schools with 33,481 students. University education was available at three public and two private universities with total attendance of 7,645 in 1954. Education was allotted 6.4% of the 1956-57 budget. According to the 1950 census, 48.7% of those 10 years of age and over were illiterate.

Finance.—The monetary unit is the bolívar, valued at 29.85 cents U.S. currency during 1956. The 1956-57 budget (July 1-June 30) was balanced initially at Bs. 2,670,000,000. There was no external debt; the total government and government-guaranteed debt was Bs. 496,532,000 on Dec. 31, 1954. Currency in circulation (May 31, 1956) totalled Bs. 942,000,000; demand deposits, Bs. 1,436,000,000. The U.S. department of commerce estimated U.S. direct private investments in 1955 at \$1,424,000,000, of which petroleum investments accounted for \$1,056,000,000. The cost-of-living index (Caracas) stood at 101 in May 1956 (1953=100).

Trade and Communications.—Exports in 1955 totalled Bs. 6,408,674,615; imports, Bs. 2,959,633,695. Chief exports were crude petroleum and petroleum products (94%), iron ore (3%) and coffee (2%); leading imports, machinery, instruments and apparatus (33%), metals and manufactures (18%), foodstuffs and beverages (15%), chemicals and drugs (5%) and textiles (5%). Leading suppliers were the U.S. (about 60%), Germany, the U.K., Canada and France; leading customers, the Netherlands Antilles, the U.S. and Canada.

Public railways (1955) totalled about 544 mi. divided among a number of disconnected lines of varying gauges. In 1953 there were 10,243 mi. of all-weather roads and in Sept. 1955, 120,000 passenger cars and 86,000 commercial vehicles. Airlines carried 661,870 passengers within Venezuela in 1955. According to *Lloyd's Register of Shipping*, the merchant marine had 94 vessels (100 tons and over) aggregating 216,264 gross tons on June 30, 1955. Telephones (Jan. 1, 1955) numbered 97,982.

Agriculture.—Production estimates for the 1955-56 crop year (preliminary figures) included coffee 720,000 bags of 132 lb. each; cacao 39,000,000 lb.; maize (1954-55) 330,000 metric tons. In 1955, 144,046 metric tons of sugar, 26,799 tons of rice (milled), 1,091 tons of cotton and 11,629,000 lb. of tobacco were produced and 628,000 bags of coffee were exported. According to U.S. department of agriculture estimates, there were 6,100,000 cattle in 1955.

Manufactures.—Production estimates for 1955 included cement 1,282,295 metric tons; soap 16,354 tons; cigarettes 3,277,724,000 units; tires 417,204 units; beer 146,935,000 l.; cotton cloth 16,242,836 m. Installed electric energy capacity totalled 500,000 kw. on Dec. 31, 1955; production for public use (1955) was 1,151,000,000 kw.hr.

Minerals.—Production of crude petroleum in 1955 totalled 787,382,000 bbl.; natural gas, 24,308,061,000 cu.m. Crude petroleum exports totalled 590,815,000 bbl.; refinery throughput, 195,900,000 bbl.; exports of refined products, 147,800,000 bbl. At the end of 1955 proven reserves totalled 12,435,000,000 bbl. Production of other minerals in 1955 included iron ore (metal content 65%) 8,439,451 metric tons; gold 61,000 troy

diamonds 141,147 carats; coal 30,476 tons.

Vermont. A north Atlantic state of the United States, the only one of the New England states without a seacoast. Vermont is popularly known as the "Green Mountain State"; it was admitted to the union in 1791. Area: 9,609 sq.mi., of which 331 sq.mi. are water. Population (1950) 377,747 (including 240,135 rural, 137,612 urban; 348,435 native white, 443 Negro, 28,753 foreign born). The U.S. bureau of the census estimated the population of the state to be 370,000 as of July 1, 1956. The chief cities are Montpelier (cap., pop., 1950 census) 8,599, Burlington 33,155 and Rutland 17,659.

History.—The general assembly did not meet in 1956. Gov. Joseph B. Johnson in Plainfield, N.J., on July 4, 1956, led the dedication of a memorial marker, financed from funds provided by the Vermont legislature, placed on the grave of Civil War hero and artist, Julian A. Scott, first Vermonter to receive the Congressional Medal of Honor. On Aug. 15, a plaque of Barre granite was placed on Scott's painting of the "Battle of Cedar Creek" in the reception room of the Vermont state house in Montpelier.

A log cabin in Grand Isle, believed to be the oldest in the state, built in 1783 by Jedediah Hyde, a soldier of the Revolution, property of the Vermont Historic Sites commission, was transferred to the Grand Isle Historical society, formally opened as a public shrine, and dedicated on July 17.

The Historic Sites commission also, on July 27, erected a roadside marker in Pittsford Village Green to mark the granting of the first U.S. patent, which was signed by George Washington, and issued in 1790 to Samuel Hopkins, native of Pittsford, then stopping in Philadelphia, Pa., for his "new and improved" method of making potash.

The Strafford Historical society, Aug. 12, co-operating with the Vermont Historic Sites commission, unveiled an official state site marker in Strafford at the birthplace of U.S. Senator Justin Smith Morrill, author of the Morrill (Land-Grant College) act, signed by Abraham Lincoln in 1862.

Chief state officers elected Nov. 6, 1956, to take office in Jan. 1957 were: George D. Aiken, U.S. senator; Winston L. Prouty, U.S. representative to congress; Joseph B. Johnson, governor; Robert T. Stafford, lieutenant governor; George H. Amidon, state treasurer; Howard E. Armstrong, secretary of state; David V. Anderson, auditor of accounts; Frederick M. Reed, attorney general. The Dwight D. Eisenhower-Richard M. Nixon ticket received 72.2% of the presidential vote in Vermont, compared with 71.5% in 1952.

Education.—The number of elementary schools in the state on June 30, 1955, was 614. The elementary school enrolment in 1955-56 was 52,394 and the teaching staff 2,056. There were 81 public high schools in the state in 1954-55. The enrolment in these high schools in 1955-56 was 18,786 and the teaching staff 871. Total current expenditures for education, exclusive of capital outlay, were \$16,676,249.55, of which \$3,505,396.94 (21%) was paid by the state to the local school districts for general state aid. Aid approved by the 1953 and 1955 general assemblies to local school districts for the construction and alteration of buildings, for constructions started since July 1, 1947, by June 30, 1956, had reached a total of \$4,117,855.10. The state superintendent of schools was the commissioner of education, A. John Holden.

Social Insurance and Assistance, Public Welfare and Related Programs.—Relief in general was administered by the overseer of the poor in each town. An average number of 6,823 persons a month received old-age assistance from state funds amounting to \$3,965,349.09 during the year ended June 30, 1956. Aid to dependent children was distributed to an average number of 1,182 recipients monthly, from funds amounting to \$928,052.06. Blind assistance funds amounting to \$87,434 were distributed to about 161 persons a month. Aid to the disabled was paid to about 531 persons a month, and amounted to \$298,597.50.

Unemployment compensation payments made under the Vermont law numbered 87,808 and amounted to \$1,917,148 for the year ended June 30, 1956. The three state correctional institutions during the year ended June 30, 1956, had an average 417 inmates; their total expenses were \$826,555.72.

Communications.—The total mileage of the public highway system (state, state-aid and town highways) as of June 30, 1956, was 13,715 of which

1,914 mi. were in the state system and 2,733 mi. in the state-aid system. Total expenditures during the fiscal year ended June 30, 1956, amounted to \$16,649,449.15. There were 853.3 mi. of railways in the state in the year ended Dec. 31, 1955; telephone subscribers were estimated at 82,500. Airports numbered 20, seaplane landing area 1 and airways 4, with a total mileage of about 300 during the year ended June 30, 1956 (official Civil Aeronautics administration figure of 250 mi., to which was added 50 mi. for the airway established between Montpelier and Newport in 1955).

Banking and Finance.—The number of state and national banks as of June 30, 1956, was 71 of which 37 were state banks with total deposits of \$271,711,394.23. The seven state co-operative building, savings and loan associations had assets of \$6,183,272.88.

Total receipts of the state as of June 30, 1956, were \$51,856,738.07; total disbursements \$55,217,599.91; there was no unappropriated surplus but rather a deficit of \$1,163,828.80; total debt outstanding \$6,626,000.

Agriculture.—Vermont cash receipts from farm marketing for the year 1955, according to the agricultural marketing service of the U.S. department of agriculture, totalled \$108,500,000 compared with \$103,800,000 in 1954.

Cool weather at blossom time in 1956 limited bee activity, affecting the pollination of apples, which blossomed late, according to the U.S. agricultural marketing service. Corn was slow in starting, but indicated production, while below that of 1955, was well above average. Cold weather also limited the growth of the potato crop.

Honey produced in Vermont in 1955 amounted to 410,000 lb., compared with 506,000 lb. in 1954.

There were 469,000 head of cattle on Vermont farms Jan. 1, 1956, of which 326,000 were cows and heifers kept for milk production, compared with 474,000 head in 1955, of which 317,000 were kept for milk production. There were 109,000 turkeys raised on Vermont farms in 1956, compared with 115,000 in 1955.

Table I.—Principal Crops of Vermont

Crop	Indicated 1956	1955	Average, 1945-54
Corn, bu.	2,989,000	3,224,000	2,738,000
Hay, tons	1,133,000	1,197,000	1,310,000
Apples, commercial, bu.	580,000	1,100,000	782,000
Oats, bu.	432,000	490,000	895,000
Potatoes, cwt.	390,000	465,000	596,000
Maple syrup, gal.	623,000	673,000	661,000

Manufacturing.—The Vermont unemployment compensation commission reported for the year ended June 30, 1956, an average of 35,062 persons a month in manufacturing industries covered by the state unemployment compensation law (all industries 63,030); wages paid to such workers in manufacturing industries \$126,579,040 (all industries \$214,908,645). (C. E. FE.)

Table II.—Principal Industries of Vermont

Industry	All employees 1954	Salaries and wages 1954 (in 000s)	Value added by manufacture 1954 (in 000s)	Value added by manufacture 1953 (in 000s)
Textile mill products	2,279	\$ 7,297	\$ 7,581	\$ *
Paper and allied products	1,959	8,122	14,363	12,939
Stone, clay and glass products	4,191	14,670	21,804	21,926
Machinery (except electrical)	7,811	34,012	63,727	84,946

*Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

Table III.—Mineral Production of Vermont
(In short tons)

Mineral	Quantity 1953	Value 1953	Quantity 1954	Value 1954
Total	4,000	\$20,302,000	4,000	\$20,483,000
Copper	?	2,266,000	?	2,568,000
Lime	?	690,000	1,482,000	1,111,000
Sand and gravel	1,114,000	8,860,000	437,000	8,178,000
Stone	527,000	241,000	66,000	199,000
Talc	80,000	8,245,000	...	8,427,000
Other minerals

*Value included with other minerals.
Source: U.S. Bureau of Mines.

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Vermont in 1953 and 1954 whose value exceeded \$100,000. In 1954 Vermont was first among the states in the production of asbestos and slate, fourth in talc and fifth in pyrite, and ranked 40th in the value of its mineral output, with 0.15% of the U.S. total.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Northeastern States*, 2nd ed. (1955); *Vermont* (1955).

Veterans Administration (U.S.). Benefits for the nation's 22,510,000 veterans and their families are administered by the Veterans administration, an independent agency of the United States government. Nearly 70% of all veterans, or 15,361,000, served in World War II; 4,853,000 served during the Korean conflict, of whom 872,000 also were World War II veterans; 3,040,000 saw

service during World War I and the other 128,000 were veterans of earlier wars and of peacetime service.

Veterans' Training.—During 1956, one veterans' training program reached its end, while another climbed to what probably was its peak. The World War II G.I. bill ended for virtually all veterans on July 25, 1956. During the 12 years it had been in effect, more than 7,800,000 World War II veterans, or one-half of all who served in World War II, received educational benefits. Of the total, 2,200,000 attended college, 3,500,000 went to schools below the college level, 1,400,000 took on-the-job training and 700,000 enrolled in institutional on-the-farm training. The total cost of the program was \$14,500,000,000, with 80% of the money paid directly to veterans in the form of monthly subsistence allowances. Most of the remainder was paid to schools and colleges for tuition, books and supplies. Only five cents out of every dollar was spent for administration of the program.

At the close of 1956 only a handful of veterans were still eligible for World War II G.I. bill training—those who enlisted under the Armed Forces Voluntary Recruitment act in 1945 and 1946. They had nine years from the end of their enlistment period to complete their G.I. courses.

The Korean G.I. bill, in effect since Aug. 20, 1952, probably reached its peak at the end of 1956, with 750,000 young veterans in training; 60% were enrolled in colleges and universities and the rest were training in schools below the college level, on-the-job and on-the-farm. The Korean G.I. bill program was expected to come to an end about 1965. Cumulatively, more than 1,600,000 Korea veterans, or one out of every three who served during the Korean conflict, had received training during the four years the program had been in effect.

Veterans training under the Korean G.I. bill received a government allowance covering each month of training. Rates for veterans in school full time were \$110 if they had no dependents; \$135 with one dependent; and \$160 with more than one dependent. Rates for part-time training, as well as on-the-job and on-the-farm training, were lower. Veterans might be entitled to one and one-half days of G.I. training for each day of military service during the Korean conflict period, up to a maximum of 36 months at school.

Vocational Training for the Disabled.—Special vocational rehabilitation training is available to service-disabled veterans of the Korean conflict. While in training and for two months afterward, they may receive a subsistence allowance from the government, in addition to their monthly disability compensation payments. By the end of 1956, a total of 42,000 veterans had received rehabilitation training under this program. A Veterans administration study disclosed that 40% had trained for occupations in the professions and managerial field, 33% in the skilled trades, and the rest in a variety of other fields.

Another vocational training program, for disabled World War II veterans, virtually ended on July 25, 1956; only certain "hardship" cases still were permitted to pursue their training. Under this 13-year-old program, 610,000 disabled veterans were given the opportunity to overcome their handicaps through training, so that they might learn to lead self-sufficient, productive lives.

War Orphans Schooling.—A new educational program was authorized by congress in the summer of 1956. This was not for veterans, but for sons and daughters of deceased war veterans who died of service-connected conditions. Young men and women generally must be between the ages of 18 and 23 to receive the 36 months of schooling to which they are entitled by law. While in school, they may receive a monthly allowance of \$110 if enrolled full-time; \$80 if three-quarters time, and \$50 if half-time. As a rule, education must be taken in a college or

university; below-college-level schooling is permitted, however, if it leads to a definite vocational goal. Job training and farm training are prohibited.

About 150,000 young men and women were expected to be eligible for the War Orphans education program.

Medical and Hospital Benefits.—At the close of 1956, VA was operating a network of 173 hospitals for the treatment of ill and disabled veterans. It also was utilizing some beds in civil, state and other federal hospitals on a contract basis. At that time, a total of nearly 114,000 veterans were receiving VA hospital care. More than half were being treated for mental illness.

War veterans, including those with service during the Korean conflict period, are entitled to VA hospitalization under the following priority system authorized by law: first, the service-connected, those suffering from injuries or diseases incurred in or aggravated by wartime military service; and second, those with nonservice-connected ailments who state under oath that they are unable to pay for private treatment. Veterans in the latter group must submit a financial statement listing assets and liabilities, and must wait until beds are available for them.

During 1956, congress authorized a \$10,000,000 appropriation for an intensified VA medical research program. Most of the increased research was to be directed in the areas of mental and nervous diseases, heart and artery diseases, cancer and leukemia, and problems of the aging.

G.I. Loans.—The G.I. loan program was extended another year for World War II veterans, under a law passed by congress in the summer of 1956. The original deadline called for World War II veterans to complete all G.I. loan arrangements by July 25, 1957. The new law allowed them until July 25, 1958, to apply for G.I. loans, and up to a year afterward to close their deals. The G.I. loan deadline for Korea veterans remained unchanged at Jan. 31, 1965.

Another provision of the new law allowed G.I. homeowners to be relieved from liability to the government if they sold their homes and permitted the buyers to assume their G.I. loans. Previously, the veterans themselves continued to be liable for payment of the loan, even though payments were being made by the purchasers of their homes. For a veteran to be relieved of liability, the purchaser must assume full liability on the loan, the VA must approve him from a credit standpoint and the loan must be current. Cumulatively, about 5,000,000 World War II and Korea veterans had obtained G.I. loans for homes, farms and businesses by the end of 1956. The total value of the loans approached \$40,000,000,000, while VA's guaranteed portion exceeded \$20,000,000,000. Ninety per cent of all loans were for the purchase of homes.

Insurance.—During the year, VA was administering three systems of G.I. insurance: U.S. Government Life insurance for World War I veterans; National Service Life insurance for World War II veterans; and the Indemnity and Insurance acts of 1951 for Korea veterans.

When the year drew to a close, more than 5,300,000 World War II veterans were holding National Service Life Insurance policies; 370,000 World War I veterans held U.S. Government Life policies; and 600,000 Korea veterans had obtained Korean G.I. term insurance policies.

Under the Survivor Benefits act, passed by congress during the year, the automatic servicemen's indemnity against death in active service, sometimes called "free insurance," ended Dec. 31, 1956. The indemnity was replaced by liberalized benefits for survivors of those who might die after Jan. 1, 1957, as a result of service.

Also ended on Dec. 31, 1956, was the right of Korea veterans to obtain Korean G.I. term insurance. Disabled Korea veterans, however, still might apply for special policies available to them.

Compensation and Pension.—Veterans with service-connected disabilities resulting either from wartime or peacetime service may qualify for monthly compensation payments from VA. Rates range from \$17 to \$181 for wartime service; peacetime veterans receive 80% of these amounts. Additional statutory awards are payable to veterans with certain severe disabilities such as blindness and amputations.

Pensions are paid to veterans of World War I, World War II or the Korean conflict, who are totally and permanently disabled for reasons not connected with their service and whose annual incomes do not exceed \$1,400 if single or \$2,700 if married or with a minor child. Rates are \$66.15 a month, increased to \$78.75 after ten years or when the veteran reaches age 65. Those who need constant aid and attendance may get \$135.45 a month. At the end of 1956, more than 2,700,000 veterans were receiving disability compensation and pensions. Included were nearly 200,000 veterans disabled since the Korean conflict.

Other benefits.—VA administers a number of other benefits for veterans and their dependents. Among these are programs providing cars for the seriously disabled, "wheelchair housing" grants for other disabled veterans, a guardianship service, a program of death benefits and still others.

(See also BUDGET, NATIONAL.)

(H. V. H.)

Veterans' Organizations, U.S. Total membership in 1956 for major veterans' organizations was reported at 4,500,000, about 300,000 less than the previous year.

American Legion.—The American Legion's 38th annual convention, held in Los Angeles, Calif., elected W. C. "Dan" Daniel of Danville, Va., as national commander, to replace J. Addington Wagner of Battle Creek, Mich. The Legion reported its membership at approximately 2,800,000.

The organization's national headquarters are at Indianapolis, Ind. Its official publication is the *American Legion Monthly*. Although the organization's primary emphasis is on veterans' benefits, it was also concerned during 1956 with its "New Glory for Old Glory" campaign, increased display of the United States flag as the symbol of liberty, and its "back to God" program designed to help reaffirm traditional moral and spiritual values.

Veterans of Foreign Wars.—The V.F.W.'s 57th national encampment was held in Dallas, Tex., in Aug. 1956. Cooper T. Holt of Chattanooga, Tenn., was elected national commander, to succeed Timothy J. Murphy of Boston, Mass. At 32, Commander Holt was the youngest V.F.W. commander in its history. The organization reported an increase of membership to 1,300,000, or about 100,000 more than the previous year. Objectives of the V.F.W. continued to be: to expand Veterans administration hospital and medical programs; to strengthen veteran preference in federal employment; to adopt universal military training; to concern itself with the construction of highways, schools, hospitals and other projects in the public interest; to use vigilance in combating communist infiltration and subversion in all areas of American life.

Disabled American Veterans.—This group is devoted exclusively to the care of the war disabled, whether or not they are members of the D.A.V. In 1956 it reported a life membership of more than 70,000 and a total membership of 210,000. At its 1956 convention, held in San Antonio, Tex., Joseph F. Burke, World War II amputee, was elected national commander. The D.A.V.'s traditional national program is one of "advancing the interests of America's war disabled and their dependents."

American Veterans of World War II and Korea (Amvets).—The 1956 convention of Amvets was held in Milwaukee, Wis., in August. Domenick L. Strada of West New York, N.J., was elected commander, to replace Rudy Pesata of Berwyn, Ill. Mem-

bership was reported at 130,000. Amvets continued its policy, through resolutions passed at the 1956 meeting, of support of the United Nations and of recommendations that court-marital board hearings be liberalized by the addition of qualified psychiatrists and former prisoners of war to help in decisions. Amvets is the largest of veteran groups organized since World War II.

American Veterans Committee.—A.V.C. reported its 1956 membership at about 25,000. Mickey Levine of Yonkers, N.Y., was elected chairman, to replace Bill Mauldin, at the 10th annual convention held in Atlantic City, N.J.

A.V.C.'s slogan is "Citizens First, Veterans Second," and its major themes include active concern for civil liberties and civil rights in the United States and for international co-operation.

Other Organizations.—Among the 30 or more veterans' or veteran-related organizations active in the United States in 1956 were the Catholic War Veterans of the United States with a membership of 217,000 and the Jewish War Veterans of the United States of America with a membership of 100,000. The latter reported that it was now the oldest active veterans' organization in the United States since the death in 1956 of the last member of the G.A.R.

The World Veterans federation increased its membership in 1956 to 19,000,000, representing 136 organizations in 35 countries. The 1956 convention was held in Brussels, Belg., in May. United States groups associated with the World Veterans federation were the Amvets, the American Veterans committee, the Blinded Veterans association, the Disabled American Veterans, the Military Order of the Purple Heart and the Paralyzed Veterans association. The W.V.F.'s 1955 convention was held in Copenhagen, Den. Among major resolutions adopted were those urging the great powers of the world to create a pattern of international co-operation in the use of nuclear energy; urging the four leading powers to abstain from violent means in settling disputes; to include Asian representation in the United Nations Security council; to continue and extend UN technical assistance to underdeveloped countries; to continue the W.V.F.'s unalterable opposition to discrimination on grounds of race, religion or national origin.

(Mo. Pr.)

Veterinary Medicine. During 1956, federal officials succeeded in preventing the entrance into the United States of any important infectious disease of animals. However, to increase the vigilance against all exotic diseases, veterinary officials of the agricultural research service, U.S. department of agriculture, sponsored six regional meetings throughout the nation to discuss means of recognizing and controlling dangerous foreign diseases such as rinderpest, African swine fever and fowl plague, should they appear. More than 1,000 veterinarians, including federal and state officials and practitioners, attended.

Vesicular Stomatitis.—This least known of three similar blister-forming virus diseases of animals affects horses, cattle and hogs. Unlike foot-and-mouth disease (aftosa) and vesicular exanthema of swine, both of which are extremely contagious, vesicular stomatitis seems to be spread only by biting insects. Investigation in Georgia, where it had reappeared each summer in recent years, revealed evidence of infection in a high percentage of raccoons, deer and feral (wild) swine. These, and possibly other animals, may act as reservoirs for the disease.

Leptospirosis.—This widespread disease which affects many species of animals, including man, is caused by a spirochaete, a small spiral organism that thrives in water. There are several species of leptospira, each especially infective for certain species of animals. Affected calves often die in a day or two but the disease usually takes a chronic form in older cattle. Abortion frequently results and this may be the only symptom noticed. In

the state of Washington, 12% of 34,718 cattle tested showed evidence of present or past infection. Ponds and streams used for drinking water and muddy corrals seemed to be important factors in spreading the disease.

Swine seldom show any symptoms except abortion. In most species, including the dog, the kidneys frequently become chronically infected. This explains the difficulty in controlling the disease since animals which appear to be healthy may be spreading organisms in their urine. Satisfactory vaccines were produced for cattle and hogs. Some antibiotics were effective in clearing up chronic infection of the kidneys. Rodents seemed to be the chief source of infection in man.

Erysipelas.—This bacterial disease, which is most destructive in swine and turkeys, also affects man and sheep and has occasionally been diagnosed in cattle, chickens, pheasants and other species. Fish are not susceptible, but acute erysipelas had recently caused the death of four captive porpoises (sea-going mammals) in Marineland, Fla. This may explain why the germ is often found on fish, resulting in frequent local infections (erysipeloid) of the hands of fishermen. Apparently this germ lives in the sea as well as in the soil of many lands.

Hog Cholera.—Steps were recently taken which it was hoped might eventually lead to the eradication of this highly contagious, fatal disease of swine. Except for contact with affected swine, the only known sources of infection were the virulent virus which had long been used with immune serum in vaccination, and the virus which may persist in uncooked garbage. Most states require that all garbage fed to swine be sterilized by cooking. Furthermore, since the early 1950s modified and killed virus vaccines, neither of which could cause cholera, had replaced virulent virus in 80% of pig vaccinations. Several southeastern states had banned the use of virulent virus, and recently a national movement was inaugurated to ban its use in all states. Therefore, unless the virus could live in some wild species or some lower forms of animals, the eventual eradication of this costly swine disease seemed possible.

The Mucosal Disease Complex.—In recent years several new diseases of cattle had appeared, each affecting chiefly the mucous membranes of some organs. Two diseases, upper respiratory disease of California and necrotic rhinotracheitis of Colorado, were found to be caused by a single virus. The name infectious bovine rhinotracheitis was proposed for this disease.

The other diseases in this group affect mainly the digestive tract. They are transmissible, but the causative agents had not been isolated. One form, mucosal disease (Iowa variety), usually affects only a few animals in a herd, but 90% of these may die. Virus diarrhoea (New York or Indiana variety) is quite contagious, but most affected animals survive. These diseases had been reported from about half of the states, from Canada and recently from Great Britain.

Poisonings.—Ergot poisoning, once common in man and animals, had rarely been reported in recent years. The chronic form results in drying and sloughing of the extremities. A similar condition in cattle, called fescue lameness, was reported in Colorado and Kentucky after about 1952. Tests revealed that ergot alkaloids, in an unusual form, were present on the incriminated mature fescue grass.

Cornstalks poisoning, believed by some to be due to excessive nitrites or nitrates in the dried plants, killed many cattle in Missouri, Wisconsin and other drought-stricken states in the fall of 1955. Other cattle in Missouri were reported to have been poisoned by eating smut, the black fungus on corn.

Other reported poisonings were caused by: bracken fern (cattle); coal tar and clay pigeons (pigs); lead paint (calves); lead absorbed from a swallowed drapery weight (a dog); benzene hexachloride (a horse); arsenic solution which leaked from a con-

tainer onto the feed (milk cows); and sedative pills carelessly exposed (a pup).

Chlorpromazine.—This tranquilizing agent was reported to have been effective in correcting nervousness and aggressiveness in dogs and horses, as a preanaesthetic sedative and in preventing restlessness during recovery from anaesthesia. It also seemed to relieve vomiting in dogs. A horse with tetanus was given chlorpromazine injections daily for seven days, producing sufficient relaxation to allow it to eat and drink and to prevent fatal exhaustion from involuntary tenseness.

Distemper Immunity.—Many methods had been used for vaccinating dogs for distemper, but none seemed fully satisfactory. It was demonstrated that regardless of the method used the immunity was seldom permanent unless periodically boosted by exposure or by revaccination.

(See also AGRICULTURAL RESEARCH SERVICE; BACTERIOLOGY.)
(W. A. A.)

Vietnam. A country forming the easternmost part of the Indo-chinese peninsula. Until World War II it was divided into two French colonies and the French protectorate of Annam. After an eight-year war, civil, local and international at the same time, on July 21, 1954, Vietnam was *de facto* divided into two independent republics. Areas and populations are:

	Area (sq. mi.) 1955 (est.)	Population 1955 (est.)
Republic of Vietnam (south)	65,726	11,500,000
Democratic Republic of Vietnam (north)	63,360	12,500,000

Three-quarters of the total population live on coastal plains, i.e., on 10% of the total territory, the Makong delta (south Vietnam) and the Red river delta (north Vietnam) being among the world's most densely populated areas. Religion: mainly Confucian, with three sects (Cao-Dai, Hoa-Hao and Binh-Xuyen) and a Roman Catholic minority.

Republic of Vietnam.—This comprises the former French colony of Cochinchina and the southern part of the empire of Annam with its old capital Hué. It is bounded on the north by the Democratic Republic of Vietnam (along the 17th parallel), on the west by Laos, Cambodia and the Gulf of Siam, and on the southeast and east by the South China sea. Chief towns (pop. 1953 est.): Saigon (cap.), including the port of Cholon, 1,614,200; Hué 96,388; Tourane 57,395. President of the republic and premier in 1956, Ngo Dinh Diem.

Democratic Republic of Vietnam.—This comprises the former

VIETNAMESE CHILDREN opening gift boxes collected by the Junior American Red Cross in 1956

French colony of Tongking and the northern part of the empire of Annam. It is bounded on the north by China, on the west by Laos, on the south by the Republic of Vietnam and on the east by the South China sea. Chief towns (pop. 1953 est.): Hanoi (cap.) 297,900, Haiphong (chief port) 188,600. President of the republic in 1956 and first secretary of the Lao Dong (Communist) party, Ho Chi Minh; chairman of the council of ministers, Pham Van Dong.

History.—*Republic of Vietnam.*—President Diem withdrew his country's representatives from the assembly of the French Union. On July 21, 1956, the post of French high commissioner was abolished and Jean Payart was accredited French ambassador to Vietnam.

In the elections held on March 4, Diem's party, the National Revolution movement, won 66 out of 123 seats, with 99% of the electorate voting. The constituent assembly adopted on July 7 the new constitution. The president of the republic, elected by direct popular vote for a six-year term, was to be the head of government; the parliamentary control was to be exercised by the legislative assembly, whose deputies were to be elected for four-year terms.

The forces of the rebelling sects were defeated and Gen. Le Quang Vinh, who fought the government for 18 months under the name of Bacut, leader of the Hoa-Hao, was captured and executed (July 12). In central Vietnam strong measures were taken against communist agitation. Trade with Cambodia was suspended. On Aug. 27 a naval unit hoisted the Vietnamese flag in the Spratly Islands, to which both China and the Philippine Republic laid claim.

The economic situation was marked by a considerable fall in exports. The instability of the currency and the atmosphere of political uncertainty discouraged the export of rice, the country's principal product; and the fall in the price of rubber was another cause of despondency. Imports from France were also reduced (from 68% of the total to 27%), though France remained the leading supplier, followed by the United States, Japan and Germany. France was by far the leading customer country (71%).

An agreement signed on May 8 between the United Kingdom and the U.S.S.R., the co-chairmen of the 1954 Geneva conference on Indochina, authorized the postponement of the general elections that were to reunify the two Vietnams; and, consequently, the maintenance in being of the armistice commission composed of the representatives of Canada, India and Poland. It was, of course, idle to imagine joint elections while the northern regime was communist and the southern staunchly anticommunist. In April more than 100,000 French troops under Gen. Pierre Jacquot left Saigon. The national Vietnamese army had been cut by 50,000 to about 200,000 men. (Hu. DE.)

Democratic Republic of Vietnam.—On April 2 the first vice-chairman of the Soviet council of ministers, A. I. Mikoyan, arrived at Hanoi. The following day, addressing a meeting of 150,000 people, he insisted on the necessity of a peaceful reunification of Vietnam and expressed the hope that none of the states of the former Indochina would join the "aggressive" Southeast Asia Treaty organization.

It was believed that between July 1954 and June 1956 the army of the Democratic republic had grown from 7 to 20 divisions totalling about 350,000 men. On June 21, however, the north Vietnamese government announced the reduction of the size of its army by 80,000 men. (X.)

Foreign Trade.—*Republic of Vietnam:* Monetary unit: 1 Vietnamese piastre = 10 metropolitan French francs, U.S. \$1 = 350 metropolitan francs. Note circulation 11,000,000 piastres. Imports 92,000,000 fr., including 46,000,000 fr. from France. Exports 24,000,000 fr., including 7,600,000 fr. to France, 5,600,000 fr. to the U.S. Principal exports: rubber 14,000,000 fr., rice 3,000,000 fr.

HORSE-DRAWN CAISSON carrying the body of Sen. Harley M. Kilgore of West Virginia through Arlington, Va., for burial in the national cemetery. Kilgore died Feb. 28, 1956; as a veteran of World War I and a member of the West Virginia national guard, he was given full military honours

Virginia. One of the 13 original states of the United States, Virginia was admitted to the union June 26, 1788. It is known as the "Old Dominion" and the "Mother of Presidents." Its development dates from 1607, when the first permanent English settlement in the new world was established at Jamestown. The event was to be commemorated in 1957 by state and federal commissions planning a year-long 350th anniversary celebration centred at restored sections of Jamestown, at Williamsburg, the second capital, and at Yorktown.

Southernmost among the middle Atlantic states, Virginia has an area of 40,815 sq.mi., including 922 sq.mi. of water. Pop. (July 1, 1956, est.) was 3,651,000; 1950 census 3,318,680. Principal urban areas include Richmond, pop. (1950) 230,310; Norfolk, 213,513; Arlington county, 135,449; Roanoke, 91,921, and Portsmouth, 80,039. Farm population dropped from 983,746 or 36.7% in 1940 to 732,000 or 22.2% in 1950. Since that time, the trend from a rural, agricultural economy to an urban, industrialized one has continued at a steady pace.

History.—During 1956 a regular and a special session of the general assembly, as well as a constitutional convention, were held in Richmond as the state struggled to devise some lawful means to continue public education on a racially segregated basis. The regular session of the legislature appropriated \$62,000,000 as the initial phase of a projected \$109,000,000 building program to meet the deferred capital needs of state agencies and institutions. It also amended the state's tax laws to move payment deadlines forward and thus collect taxes for two calendar years in fiscal 1957. This move was calculated to provide a one-time "windfall" of about \$40,000,000 to help get the capital expansion program under way.

Both the constitutional convention and the special legislative session were called to deal with the school segregation issue. The convention changed the state's basic law to permit the payment of public funds as private school tuition grants to parents unwilling to send their children to mixed public schools. The legislature passed about 30 school laws, including measures to withhold state funds from localities that integrate their schools, laws to permit the governor to operate schools at his own discretion on an emergency basis, provisions for assigning pupils to classes through a central assignment board and acts to authorize public grants for private tuition where schools cease to function. Appeals from lawsuits already adjudicated in favour of Negro plaintiffs seeking desegregation injunctions promised to put the new laws to an early test.

In the November general elections, Virginia's 12 electoral votes were won by Pres. Dwight D. Eisenhower, who carried nine of the state's ten congressional districts. All incumbent congressmen, eight Democrats and two Republicans, were returned to the house of representatives. Principal state officials, all of whose terms were to expire in Jan. 1958, were governor, Thomas Bahn-

son Stanley; lieutenant governor, A. E. S. Stephens; and attorney general, J. Lindsay Almond, Jr.

Education.—In 1955-56 elementary school enrolment was 553,319, including 411,698 whites and 141,621 Negroes. Secondary enrolment was 199,756, made up of 153,120 whites and 46,636 Negroes. The elementary school teaching staff included 16,341 positions, the secondary and vocational staff 9,163 positions. In addition, there were 2,404 principals, head teachers and supervisors. Dowell J. Howard was state superintendent of public instruction.

Social Insurance and Assistance, Public Welfare and Related Programs.—For the year ended June 30, 1956, general relief payments went to 9,560 persons and totalled \$1,020,963; old-age assistance payments amounting to \$6,245,380 went to 20,047 persons; 13,001 families with 39,248 dependent children received \$7,067,263; the foster care program provided \$1,805,371 for 7,252 children; 6,412 totally and permanently disabled persons were paid \$2,267,089; and 1,499 blind persons got \$583,133. For the first 10 months of 1956 unemployment compensation payments totalling \$7,561,560 were disbursed in 411,789 weekly payments. Average daily population of six penal institutions for adults was 5,924 and of four industrial schools for juveniles 798 at the close of the fiscal year June 30, 1956.

Communications.—As of June 30, 1956, Virginia had 7,938.75 mi. of primary highways and 40,980.26 mi. of secondary roads. During the June 30, 1956, fiscal year, the state spent \$102,348,568 for construction, maintenance and operation of its highway systems, compared with \$90,216,792 for this purpose in the preceding 12-month period. Total railway mileage in the state on Jan. 1, 1956, was 4,108.09. The 1,000,000th telephone to be put into commercial use in Virginia was installed Nov. 14, 1956.

Banking and Finance.—On June 30, 1956, Virginia had 183 state banks with deposits of \$1,107,129,531 and assets of \$1,219,369,852. As of the same date, 131 national banks in the state had deposits of \$1,482,962,515 and assets of 1,625,896,242. Resources on Dec. 31, 1955, of 20 industrial loan associations were \$35,879,383; of 42 building and loan associations, \$118,502,622, and of 79 credit unions, \$7,264,571.

For the fiscal year ended June 30, 1956, the state treasurer received revenues of \$444,444,422, compared with \$415,285,633 for the year before. Expenditures of the treasurer were \$435,578,615. The gross debt on June 30, 1956, was \$10,411,335; a sinking fund of \$4,708,997 left a net debt of \$5,702,338. The fiscal year ended with cash in the general fund amounting to \$46,405,605, along with investments valued at \$1,754,800.

Table I.—Principal Crops of Virginia

Crop	Indicated 1956	1955	Average, 1945-54
Corn, bu.	38,208,000	32,870,000	37,575,000

Agriculture.—The state department of agriculture reported in 1956 that the number of farms had dropped nearly 10% in five years to a total of 136,416. The amount of land under cultivation had declined steadily in the past 20 years, reaching a low of 14,686,000 ac. During this period, the department reported a marked change in the use to which the land was being put, with more and more acreage shifting from cultivated crops to hay and pasture. These changes were accompanied by rapid growth of commercial broiler and turkey production, as well as by increased output of beef, pork, eggs and milk. The department reported 1955 production of milk at 1,990,000,000 lb., eggs at 72,667,000 doz., broilers at 171,055,000 lb., turkeys at 66,216,000 lb., cattle and calves at 317,760,000 lb., hogs at 204,561,000 lb. and sheep and lambs at 21,705,000 lb. Production of other farm crops is summarized in Table I.

Manufacturing.—The value of products manufactured in Virginia in 1955 totalled \$4,599,388,000, according to a preliminary survey of the state department of labour and industry. Its study covered 1,900 of the state's 4,400 manufacturing establishments, a group accounting for 80% of the total manufacturing employment in Virginia. The final tally of the preceding year showed the value of manufactured products in 1954 to be \$4,370,866,000. The number of persons engaged in manufacturing in 1955 totalled 249,000; their salaries and wages totalled \$843,041,000. Within these totals, 214,000 persons were classed as production workers, who were paid \$647,046,000 in wages. (W. B. F.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Virginia in 1953 and 1954 whose value exceeded \$100,000. In 1954 Virginia was first among the states in ilmenite output and one of two states that produced kyanite (a refractory material), was second in output of pyrite and third in manganese. It ranked 23rd in value of its mineral output, with 0.93% of the U.S. total.

ENCYCLOPEDIA BRITANNICA FILMS.—*Southeastern States*, 2nd ed. (1956).

The Virgin Islands have the status of an organized but unincorporated territory of the United States, located 1,400 mi. S.E. of New York city and 40 mi. E. of Puerto Rico. The three largest islands, with a total area of 133 sq.mi., are St. Croix (pop. 12,103, census of 1950), St. Thomas (13,813) and St. John (749). The chief cities are Charlotte Amalie, the capital (11,469), on St. Thomas, and Christiansted (4,112) and Frederiksted (1,961) on St. Croix. On July 1, 1955, the U.S. census bureau estimated the total population at 24,000.

History.—Appointed by Pres. Dwight D. Eisenhower on Aug. 19, 1955, Walter A. Gordon of Berkeley, Calif., was inaugurated as governor of the Virgin Islands on Oct. 17, 1955. Other officials in 1956 were: government secretary, Charles K. Claunch of Chicago, Ill.; U.S. attorney, Leon P. Miller; and judge of the district court, Herman E. Moore.

Since the enactment of the Revised Organic Act of the Virgin Islands on July 22, 1954, legislative power has been vested in a unicameral legislature composed of 11 senators elected for two years, 5 representing three electoral districts and 6 elected at large. The islands are under the jurisdiction of the U.S. department of the interior. The government is composed of nine executive departments, each headed by a commissioner appointed by the governor and confirmed by the legislature.

Education.—Education is compulsory for all children between the ages of 5½ and 15. In the three islands there were 28 public schools in 1956, consisting of 5 kindergartens, 13 rural schools, 7 city elementary schools, 1 junior high school and 2 junior-senior high schools. Total enrolment in public schools was 5,886 at a per capita cost (exclusive of school lunches, adult education and community services) of \$141. The department of education budget for the fiscal year was \$1,050,642.30.

Banking and Finance.—Total revenue for the fiscal year ending June 30, 1956, from real property taxes, income taxes, matching funds and grant-in-aid funds, and miscellaneous federal contributions amounted to \$6,658,925.43. There are two banks in the Virgin Islands. The Virgin Islands National bank had assets of \$10,385,445.71 as of June 30, 1956, and on the same date the West Indies Bank and Trust company had assets of \$6,941,817.46.

Trade and Communications.—For the fiscal year ending June 30, 1956, the value of exports was \$5,431,329; imports were \$12,506,509. Income from tourists was estimated at \$14,000,000. In 1956 there were in St. Thomas and St. John: highways, 90 mi.; motor vehicles, 2,044; airports, 1; air lines, 3; telephones, 1,700. In St. Croix there were: highways, 150 mi.; motor vehicles, 2,551; airports, 1; air lines, 2; telephones, 688. There were four newspapers and two radio stations in the Virgin Islands. There were daily air mail and passenger service between St. Thomas and St. Croix; daily boat mail and passenger service between St. Thomas and St. John; and cable offices in St. Thomas and St. Croix.

Social Services.—Total public assistance payments for the fiscal year 1955-56 amounted to \$305,170.37. This included old-age assistance \$154,686.09; aid to dependent children \$91,612.58; aid to the blind \$7,540.76; aid to the disabled \$23,791.96; general assistance \$26,570.98; trust funds (monthly grants) \$968. The average monthly payments per recipient were: for old-age assistance \$18.54; aid to dependent children \$9.60 per person, in families with children; aid to the blind \$19.35; aid to the disabled

\$19.47; general assistance \$18.72.

Three homes were maintained for the aged and indigent, and there was one training school for boys.

The principal industries in the Virgin Islands are: tourism; sugar-cane cultivation; manufacture of rum and bay rum; meat packing; manufacture of concrete blocks; bunkering and other servicing of ships; transshipment of bauxite; passenger transportation; cattle and hog raising; truck gardening; poultry raising; construction; deep-sea and commercial fishing; manufacture of plastic buttons and wearing apparel; assembling of jewelry and ball-point pens; banking, insurance and real estate.

During the fiscal year 1955-56 a total of 96,442 tons of sugar cane and 10,220 tons of sugar were produced.

Vitamins and Nutrition. **Vitamin Deficiencies and Heart Action.**—Degenerative changes in the heart may be induced by a diet deficient in the B-complex vitamins. Many studies have implicated thiamine, one of the B-complex vitamins, as the basic deficiency involved in beriberi, a disease characterized by heart symptoms.

The effect of a deficiency of thiamine and another B-complex vitamin, pantothenic acid, on heart action, was studied by A. Beznák and G. van Alphen. A deficiency of these vitamins decreases a certain metabolic process (choline acetylation). These researchers proposed that the cardiac symptoms resulting from vitamin deficiencies was the result of decreased choline acetylation. These workers, therefore, observed the results of vitamin-deficient diets on three groups of rats. For six months the animals were maintained on diets that were adequate in all respects but lacking in thiamine for group I, pantothenic acid for group II and both thiamine and pantothenic acid for group III.

Electrocardiograms were taken when symptoms of vitamin deficiency became apparent and the animals were sacrificed for enzyme studies. The deficiency symptoms exhibited by the thiamine-deficient animals were apathy, curved back and avoidance of movement. The pantothenic acid-deficient animals, however, showed no deficiency symptoms and grew almost normally. Thiamine-deficiency symptoms were delayed and lessened in animals deficient in both thiamine and pantothenic acid. This group of animals and the animals deficient in thiamine became bradycardic (abnormal slowness of the heart beat) and exhibited other cardiac changes found in rats on a multideficient diet. The heart symptoms developed in 20 days in the thiamine-deficient animals and in 50 days in the animals deficient in both thiamine and pantothenic acid. In contrast, in addition to exhibiting no gross deficiency symptoms, the animals deficient in pantothenic acid only, had normal heart action. Furthermore, choline acetylation was apparently normal in all three groups of animals.

The original hypothesis that heart symptoms ascribed to these vitamin deficiencies were caused directly by decreased choline acetylation was not supported by the results of this experiment. However, the unexpected result that a pantothenic acid deficiency would lessen and retard cardiac symptoms associated with a thiamine deficiency was a worthwhile and interesting observation.

Disease Resistance and High Vitamin Intakes.—Most of the research conducted on the effect of vitamins on resistance to disease was concerned with a deficiency of vitamins. Little attention was given to the possibility that high levels of certain vitamins in the diet might actually decrease resistance to infectious organisms.

C. H. Hill and H. W. Garren tested the effect of all the known required vitamins on the resistance of newly hatched chicks to fowl typhoid. The experimental period was divided into two

parts, a preinoculation period of four weeks and a postinoculation period of approximately three weeks. The birds were inoculated with a culture of chick typhoid at four weeks of age. The typhoid disease was allowed to run its natural course.

The first experiment was designed to determine the effect of high levels of all the known vitamins (ten times the minimum daily requirement) on the resistance of chicks to fowl typhoid. This high-vitamin diet not only increased the average survival time, but also increased the number of animals who survived, from 10% to 40%.

Studies were then undertaken to decide whether the enhanced resistance resulting from high-vitamin levels was the result of a single vitamin or of a group of vitamins. The vitamins were divided into three groups, the fat-soluble group (A,D,E and K), the water-soluble B-vitamin group and ascorbic acid. Chicks were fed diets high in one of the three groups of vitamins. No beneficial effects were observed in any of these groups; in fact, high levels of the fat-soluble vitamins actually decreased both the total and average survival time.

To determine which of the vitamins were necessary, unnecessary or harmful, these investigators conducted studies using the high-vitamin supplement of all vitamins except the one under test. The vitamin being tested was present at the same level as in the basal diet. The absence of high levels of thiamine, biotin, folacin or pantothenic acid apparently increased the resistance of the chicks while high levels of ascorbic acid, vitamin B₁₂, pyridoxine and all of the fat-soluble vitamins were needed in the vitamin mixture.

A study was made to test the possibility that the level of vitamin supplement used in previous studies was too high for maximum resistance. Chicks were given 2½, 5, 7½ and 10 times the level of all vitamins present in the basal diet. It was found that a vitamin supplement five times greater than that of the basal diet resulted in maximum survival and greatest average survival time.

The results of these studies demonstrated that high levels of certain vitamins increase the resistance of chicks to fowl typhoid. To what extent the increased resistance resulted from the effects of vitamin supplement on the chicks and how much from effects on the typhoid organism awaited further study.

Vitamin B₆ (Pyridoxine) in Heated Milk.—Vitamin B₆ deficiency had been observed in man. In addition, it was known that convulsive seizures in infants could be alleviated by pyridoxine administration. It was of interest, therefore, when it was shown that heat processing of canned liquid milk resulted in some destruction of pyridoxine.

R. M. Tomarelli and coworkers studied the growth response of rats fed a purified basal diet (formulated to simulate milk) deficient in vitamin B₆ which was supplemented by canned evaporated milk or spray-dried fresh milk. The activity of the vitamin in the milks was also determined by growth of microorganisms.

The growth of the rats fed canned milk indicated that the milk had only about one-half the pyridoxine content indicated by growth of microorganisms. For example, 22 grams of heated milk solids supplied 60 micrograms of microbiologically active pyridoxine, but had a biologic activity of only 30 micrograms for the rat.

Spray-dried fresh milk, however, gave the same activity for the rat as for microorganisms. It was of interest that the pyridoxine-deficiency syndrome had not been observed in infants fed formulas marketed as a spray-dried powder. The researchers did not have an explanation for the decrease in biologic activity of pyridoxine for rats as a result of heat sterilization of milk. The vitamin may be converted to a form still usable by microorganisms but limited for the rat, or the pyridoxine requirement might be increased in an indirect manner by changes in other milk components. The results of these studies indicated that micro-

biologic assay is not adequate for the proper assessment of the available pyridoxine in infant formulas.

Dietary Fat and Thiamine Requirement.—It had been generally accepted that the need for thiamine is related primarily to the nonfat calories in the diet. Dietary fat has a sparing action on thiamine and experiments had established a biochemical role for this vitamin as a component in intermediary carbohydrate metabolism. The factors involved in the thiamine-sparing action of dietary fat were not entirely known, but some possibilities were suggested. For example, the organism may use less thiamine in its metabolism when fat is fed than when carbohydrate is fed. On the other hand, a high fat diet may operate in an unknown manner to delay thiamine-deficiency symptoms. Still another possibility may be that deficiency symptoms may be induced by a toxic substance formed and not removed when an animal is fed a high carbohydrate diet deficient in thiamine.

Evidence concerning this problem was presented by L. E. Holt and S. E. Snyderman. They reported two studies designed to determine the thiamine requirement of infants. Two infants were fed purified formulas consisting of vitamin-free casein, hydrogenated cottonseed oil, vitamin-free dextrimaltose, salts and a vitamin supplement. The formulas varied in their content of fat and carbohydrate. The infants were first placed on a formula containing high fat and low carbohydrate content. Their thiamine intake was then adjusted until thiamine excretion in the urine reached a constant value (control level). The formula was then altered by increasing the carbohydrate and decreasing the fat. The effect on the amount of thiamine excreted in the urine was observed and the dietary intake of thiamine was again altered to bring the urinary excretion of thiamine back to the control level.

In one study a normal infant of eight months was fed a formula providing 15% of the calories as protein, 35% as fat and 50% as carbohydrate. To maintain the urinary output of thiamine at the control level, 0.20 mg. of dietary thiamine per day was required. The formula was then changed so that protein supplied 10% of the total calories, fat 10% and carbohydrate intake was increased to supply 80% of the total calories. The increase in carbohydrate decreased the urinary thiamine. Dietary thiamine had to be increased 40% (0.28 mg.) to return the urinary thiamine to its control level.

A second child 18 months old was studied in a similar manner. When he was given a diet composed of 40% protein, 30% carbohydrate and 30% fat, he needed 0.24 mg. of thiamine to maintain his urinary thiamine output at a control level. When fat was omitted from his formula and the carbohydrate was raised to supply 60% of the total calories, his thiamine excretion fell. An increase to 0.28 mg. thiamine per day was required to restore thiamine excretion to the control level. Dietary fat was then raised and excess thiamine appeared in the urine. Thiamine intake was lowered to 0.20 mg. per day to return thiamine excretion to the control level.

The researchers concluded on the basis of these experiments, that more thiamine is required in the metabolism of dietary carbohydrate than in the metabolism of dietary fat. This phenomenon, they felt, accounted for the thiamine-sparing action of dietary fat.

Wages and Hours.

Real wages in the U.S. for the first eight months of 1956 were from 1.0% to 12.1% above those for the corresponding months of 1955, with the exception of July, which showed a decline of 1.9% from the previous year (see Table I).

Table I.—U.S. Real Wage Indexes

(1947—1949=100)

Months	Consumers' price index		Index of average weekly manufacturing wages		Index of real wages	
	1956	1955	1956	1955	1956	1955
Jan.	114.6	114.3	159.1	141.5	138.8	123.8
Feb.	114.6	114.3	157.7	144.4	137.6	126.3

The level of business operations remained stable as compared with 1955, as indicated by a drop of 1.1% in manufacturing employment, accompanied by an increase of .01% in manufacturing payrolls (July figures). During the same period, however, total civilian employment increased 2.6%. Total wage and salary payments in July 1956 were 5.0% above those for July 1955.

Average weekly earnings for all manufacturing industries increased 3.2%, while the cost-of-living (consumers' price index) moved from a 1955 high of 115.0 to a 1956 high of 118.0, representing a rise of 2.6%. The only industries showing declines in average weekly earnings were iron and steel (5.4%), automobiles (6.3%) and transportation equipment (less than .1%).

Building construction						

Source: Survey of Current Business, United States Department of Commerce.

The greatest increase in weekly take-home pay was in production of nonferrous metals, where the average went up by 8.8% over 1955. The next highest increase, 8.0% was in tobacco manufacturing, followed by a 7.8% increase in leather and leather products. Smallest increases in average weekly earnings were in rubber products (less than .1%) and textile mill products and printing and publishing (each with 2.7%).

Reversing the previous year's trend, earnings in nondurable goods manufacturing rose by 5.1%, while those in durable goods manufacturing increased only 2.2%.

For the first time, earnings exceeded \$100 per week. This occurred in three industries: products of coal and petroleum, bituminous coal mining and building construction. This was true for 8 out of the preceding 12 months in bituminous coal mining, as compared with 6 out of 12 months in products of coal and petroleum, and 4 out of 12 months for building construction. In addition, average weekly earnings exceeded \$100 in iron and steel for five out of the preceding 12 months, although the figure as of July 1956 was \$93.37.

Earnings exceeded \$90 per week in 12 industries in 1956, compared with 8 in 1955. Nineteen industries paid average weekly earnings exceeding \$80 (against fourteen the prior year), and 6 industries less than \$60, in 1956.

The length of the average work week dropped in 20 industries, was increased in 9 industries and remained unchanged in 2. In 19 cases, however, the net change was less than 1%. The greatest change was a decline of 7% in the length of the work week, in the automobile industry. The longest work week in 1956 was in street railways and buses, followed closely by paper and allied products. Workers in 16 industries worked more than 40 hours per week, compared with 19 industries for 1955.

Bituminous coal mining and general merchandise stores had the shortest work week (35.7 hours), followed by the apparel industry (35.8) and anthracite coal mining (35.9).

Highest average hourly earnings were paid in bituminous coal mining (\$2.83), followed by \$2.79 in building construction and \$2.58 in anthracite coal mining. Sixteen industries paid average hourly rates in excess of \$2.00 compared with 14 in 1955.

Hourly rates of pay increased in all industries reported in 1956. The greatest proportionate gains in hourly rates were in bituminous coal mining (13.2%), apparel (8.2%), and food and food products (8.1%). The lowest monetary rate was \$1.03 in hotels (not including tips, board, room or uniforms), but this was four cents higher than in 1955. For manufacturing as a whole, the increase in hourly rates was 4.2%, compared with 5.0% in 1955 and 1.7% in 1954.

Table III shows a five-year climb of 23.4% in hourly earnings for all manufacturing industries. The greatest improvement over the five-year span was one of 31.6% in iron and steel. The industry showing the weakest increase over the five-year period was textile products (9.8%), followed by anthracite coal mining, which increased 16.0% from 1951 to 1956.

Table III.—*Rise in Hourly U.S. Earnings Rates*

Industry	July figures†			Index, 1956			(1947-49 =100)

Common labour in July 1956 received an average hourly rate of \$2.187, compared with \$2.073 in 1955. This represents an increase of 5.5%. Farm wages were up three cents per hour to 91 cents, which was 3.4% higher than for the preceding year. Reported farm wages do not include a monetary evaluation of room

and board, which normally are furnished in addition to cash payment.

In summary, wage payments in 1956 reflected the stability experienced in general business activity. This also was true in sustained high-level employment as well as in average hourly and weekly earnings.

Washington. A state in the extreme northwestern United States, popularly known as the "Evergreen state," Washington was admitted to the union Nov. 11, 1889. Total area: 68,192 sq.mi., of which 66,786 sq.mi. is land. Pop. (1950) 2,378,963; native white 2,125,495, foreign-born white 191,001, Negro 30,691 and other races 31,776. According to the state bureau of the census estimate, the state's total population on July 1, 1956, was 2,600,000. In 1950 the urban population was 1,503,166 or 63.2% of the total population. The population of the five largest cities, according to April 1, 1956, estimates (1950 figures in parentheses) were respectively: Seattle 561,000 (467,591); Spokane 185,000 (161,721); Tacoma 156,200 (143,673); Yakima 44,200 (38,486); Vancouver 42,300 (41,664). State capital, Olympia 17,300 (15,819).

History.—Because of the narrow division between the two parties in the United States senate, both major parties featured at their national conventions in 1956 the candidates contesting for the seat from Washington. At the Democratic convention at Chicago, Ill., Warren G. Magnuson, Democratic senator from Washington seeking re-election, was given a favourite-son nomination for president. His Republican opponent, incumbent Gov. Arthur B. Langlie, keynoted the convention of his party at San Francisco, Calif. In the primary election both men were unopposed in their parties. Magnuson received 422,761 votes and Langlie 289,302.

In the Nov. 6 election, Pres. Dwight D. Eisenhower carried the state by a smaller vote than in 1952. Warren Magnuson's margin over Langlie was larger than in the primary. Don Magnuson, no relative to the above, and incumbent congressman at large, defeated Philip Evans, Republican. Of the six Republican incumbent congressmen, five were renominated and elected by substantial votes compared with those of their Democratic opponents. However, Hal Holmes, Republican, seeking his eighth term in the 4th district, held only a slight edge over the combined votes for the two Democratic aspirants in the primary, and in the final election, he trailed Frank Le Roux, Democrat, by more than 1,200 votes before the absentee ballots were counted, but finally won the election by a small margin.

With respect to the eight state partisan elective executive offices, the Democrats made a complete sweep by substantial majorities. For the nonpartisan office of superintendent of public instruction, incumbent Pearl A. Wanamaker received only a plurality in the primary and lost to second place Lloyd J. Andrews in the final election.

The Democrats would control both houses of the state legislature during its 35th session, the senate by a 31-15 count and the house of representatives by a 56-43 margin.

Two initiative measures and five constitutional amendments

were on the 1956 ballot. A right to work initiative, which met favour with only one gubernatorial aspirant in the primary, was defeated by a ratio of 2 to 1. Another initiative, sponsored by the state League of Women Voters, was designed to reorganize the state's legislative districts. This had not been done since 1930 despite the state constitution's mandate that there be redistricting after each federal census. The measure was challenged in the courts, but the state supreme court by unanimous decision ordered it placed on the ballot and held that its constitutionality could be determined only if it were enacted into law. The voters approved this initiative. An amendment to permit the increase of pensions of public officers during their term of office was defeated as was an amendment to permit the state, upon filing an eminent domain action proceeding, to take possession of the property after payment into court, before trial, of such amount as provided by law. Its purpose had been announced to be the facilitating of the state's highway construction program. By safe margins three amendments were accepted. One increased the number of signatures required on initiative and referendum petitions to 8% and 4% respectively of the number of registered voters who voted for governor at the last election. Another removed the prohibition of election of the state treasurer for more than one successive term. A third required the filling of vacancies in the state legislature by persons of the same party as the legislators whose offices had been vacated.

On April 26, 1956, the state supreme court declared unconstitutional the so-called Ryder act, enacted by the 1955 state legislature and designed to bring the assessed valuation of real property within school districts into conformity with state constitutional requirements.

The chief officers of the state for 1957 were: governor, Albert D. Rosellini; lieutenant governor, John A. Cherberg; secretary of state, Victor A. Meyers; treasurer, Tom Martin; state auditor, Cliff Yelle; attorney general, John O'Connell; state superintendent of public instruction, Lloyd J. Andrews (elected on nonpartisan basis); commissioner of public lands, Bert Cole; state insurance commissioner, William A. Sullivan; and chief justice of state supreme court, Matthew W. Hill.

Education.—On Oct. 1, 1955, the enrolment in the public elementary schools was 320,547, in secondary schools 103,028 and junior high schools 68,897, and the average daily attendance during the school year 1954-55 in these schools was 299,711, 86,815 and 68,033 respectively. The total number of teachers was 21,672 and the average salaries of all certified personnel was \$4,603.29. Total current expenditures were \$149,603,511.99 and the cost per pupil in attendance was \$309.

Full-time student enrolment during the fall term of 1955 was 13,967 at the University of Washington and 5,864 at the State College of Washington. During that term three teachers' colleges had a total enrolment of 4,462, nine junior colleges integrated with the secondary school program but operated with state funds had a total of 4,908 students and 13 privately endowed universities and colleges in the state had 10,719 students.

Social Insurance and Assistance, Public Welfare and Related Programs.—During the period Sept. 1, 1955, to Aug. 31, 1956, inclusive, public assistance in the state, including federal expenditures and state aid, cost \$78,073,568.38. An average of 120,659 persons received assistance to the amount of \$70,484,760.08. An average of 21,209 persons received a total of \$8,464,519.73 in general assistance. An average of 59,091 old persons received a total of \$42,962,278.26. An average of 30,601 dependent children received a total of \$11,335,980.76. A total of \$2,194,294.64 was provided for the foster care of an average of 3,546 children. An average of 837 blind persons received a total of \$740,457.13. A total of \$4,785,537 in disability payments was paid to an average of 5,759 persons. A total amount of \$872,658.88 was provided for public assistance service, of which \$147,937.47 was extended to the blind and \$730,721.41 was provided for burials. Administration of the entire program cost \$6,710,169.74.

On June 30, 1955, ten state charitable institutions had a total population of 11,362 and eight correctional institutions had a total of 2,822. The total appropriations for both programs for the fiscal biennium July 1, 1955, to June 30, 1957, amounted to \$38,571,557 and total expenditures for the fiscal year ending June 30, 1956, were \$17,610,579.15.

Communications.—Railroads in the state during 1955 carried freight to a total of 8,589,406.689 ton-miles and passengers to a total of 316,954,860 passenger-miles. There were 5,939 mi. of track.

On Jan. 1, 1956, the total mileage of highways in Washington was 45,888 of which 12,377 mi. were federal-aid highways. Total state expenditures for state highways during the period Feb. 1, 1955, to Jan. 31, 1956, were \$55,719,228. There were 915,007 telephone instruments in service Dec. 31, 1955.

In 1956 the state was served by nine air lines; there was a total of 117 airports and 15 seaplane bases, and 84 privately owned but restricted-use airports.

Banking and Finance.—In 1955 the state board of equalization placed the value of real and personal property at \$7,199,220,326 and equalized it for the purposes of taxation at \$3,559,610,163. The bonded indebtedness was \$49,506,000 and outstanding warrants amounted to \$58,219,351.22. For the year ending June 30, 1956, receipts, including cash and warrant transfers, were \$863,918,925.23 and disbursements, including cash and warrants redeemed, were \$869,718,415.68. The treasurer's cash balance was \$68,423,919.51 on June 30, 1956.

On that day there were 98 banks, including four mutual savings banks, reporting a total capital of \$56,803,000; capital surpluses, undivided profits and reserves of \$210,558,000; deposits of \$2,603,342,000 and total assets of \$2,848,087,000.

Agriculture.—In 1956 the total value of farmland and buildings in the state was placed at \$2,079,000,000 and the average value per acre at \$117.82. Cropland harvested in 1954 was reported as 4,343,000 ac. In 1955 the total value of farm production was \$585,634,000, of which \$218,348,000 represented field crops, \$194,280,000 livestock and products, \$121,510,000 fruit, nut and berry crops, \$31,785,000 specialty crops and \$19,711,000 vegetable crops. Cash receipts from farming totalled \$534,489,000, of which total farm marketings amounted to \$530,707,000, from livestock and products \$181,280,000, and from crops \$349,427,000. Government payments were \$3,782,000.

Table I.—Principal Crops of Washington

Crop	Estimated 1956	1955	Average, 1945-54
Wheat, bu.	59,963,000	55,832,000	72,626,000

Manufacturing and Trade.—In 1954 the value added by manufacture was \$1,589,159,000, the total number of employees in manufacturing throughout the year was 194,758 and the total payroll amounted to \$852,049,000. The average annual labour force during 1955 was 1,007,500, of which an average of 957,200 were employed. Domestic workers numbered 17,300; agricultural workers 85,400 and nonagricultural workers 871,800. Manufacturing establishments employed 201,400, the wholesale and retail trade 172,000 and service industries 84,100, the transportation companies and utilities 62,700 and government 147,000.

The output of lumber in 1955 was 3,666,000,000 bd.ft. (estimated); pulp production 2,579,000 tons; and plywood production for the Pacific northwest was 4,911,000,000 sq.ft.

The salmon pack for the Puget sound and the Columbia river districts was 803,000 cases in 1955 compared with 935,000 cases in 1954.

For the year 1955 the Washington customs district reported total exports of \$306,396,258 and total imports of \$291,780,971 (H. J. DE.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Washington in 1953 and 1954 whose value exceeded \$100,000. In 1954 Washington was the leading aluminum-producing state and was first in peat output, fourth in diatomite and fifth in chromite; it ranked 33rd in the value of mineral output, with 0.38% of the U.S. total.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Far Western States*, 2nd ed. (1956); *Mt. Rainier* (1955); *Washington* (1955).

Washington, DISTRICT OF COLUMBIA, the capital of the United States, was estimated by the bureau of the census on Jan. 1, 1956, to have 859,000 inhabitants within the fixed boundaries of the District of Columbia, and 1,884,000 people in the surrounding metropolitan areas in Maryland and Virginia.

Within the District of Columbia, the General Services administration of the federal government began in 1956 the demolition of many temporary buildings erected during and after World War I. This was a part of a ten-year program for new federal buildings, to be located in or near Washington. It was generally reported that the Old Patent Office, designed by Robert Mills, would be sold by the federal government and replaced with downtown garages. Protests by the Commission of Fine Arts, the Committee of 100 on the Federal City and others brought a statement from the General Services administration that the building would be preserved, probably as a national portrait gallery.

On Oct. 9 Rock Creek Park day was again celebrated through the co-operation of official and citizen organizations in the district and nearby Maryland. The public interest in Rock Creek park would seem to make it unlikely that any arterial expressway would be permitted to invade its borders.

The Washington chapter of the American Institute of Architects protested the congressionally authorized changes in the Capitol building, which would push out the east wall and provide additional space in the building.

In February the American Planning and Civic association presented a federal city program, with accounts of 30 years of planning by Charles W. Eliot and John Nolen, Jr., successively planners for the Planning commission, and a forecast of the future by John T. Howard, then president of the American Institute of Planners, and consultant to the Planning commission. The association's Committee of 100 on the Federal City presented in November a comprehensive revised program of principles and objectives to guide the future of the federal city.

Wealth and Income, Distribution of. The 1956 *Survey of Consumer Finances* in the United States, published by the board of governors of the federal reserve system, supplied information on the distribution of income for 1955 and liquid assets in early 1956. Previous surveys had made information available for the period 1945–54. The surveys were based on small field canvasses of consumer spending units, defined as all persons living in the same dwelling and related by blood, marriage or adoption who pooled their incomes for their major items of expense.

Survey data on the percentage distribution of spending units according to size of holdings of liquid assets—U.S. government securities, deposits in savings and checking accounts at banks and shares in savings and loan associations—are provided in Table I. In early 1956, 72% of spending units owned liquid assets, as compared with the high of 76% reached in 1946. The median holding of all spending units rose from \$250 in 1955 to \$300 in 1956, while the median holding of those that held some liquid assets increased from \$760 to \$800 over the same interval.

Table I.—Distribution of Spending Units by Size of Liquid Asset Holdings

Amounts of liquid assets held*	1946	1950	1954	1955	1956

Table II summarizes data provided by the surveys on the distribution of spending units and total money income (before taxes) according to size of income. From 1954 to 1955, as in most previous years of the post-World War II period, there was an upward movement in the distribution of income. The expansion of total money income in the postwar years resulted in a shifting of many consumers to higher income levels. This shifting pervaded the income distribution. When the nation's spending units were ranked into tenths by size of income, it was found that the proportionate shares of total money income received by all but the highest tenth in 1955 were quite similar to those in 1946. The share accounted for by the highest tenth declined from 32% to 29% over the period.

A longer-term comparison of changes in the distribution of income is afforded by Table III. This shows for selected years of the period from 1935–36 to 1954 the percentage of all income going to each fifth of the total number of consumer units (families and unattached individuals), ranging from those with the lowest incomes to those with the highest.

Table III.—Percentage of Family Personal Income Received by Each Fifth of Consumer Units*

Consumer units ranked from lowest to highest income	1935–36	1941	1944	1950	1954
Lowest fifth	4.1%	4.1%	4.9%	4.8%	4.9%
Second fifth	9.2	9.5	10.9	10.9	11.4
Third fifth	14.1	15.3	16.2	16.1	16.6
Fourth fifth	20.9	22.3	22.2	22.1	22.4
Highest fifth	51.7	48.8	45.8	46.1	44.7
All groups	100.0%	100.0%	100.0%	100.0%	100.0%
Top 5%	26.5%	24.0%	20.7%	21.4%	20.5%

*Family personal income represents the current income (before income taxes) received by the civilian noninstitutional population. It includes income in kind as well as money income. Source: Data for 1935–36 and 1941: Selma Goldsmith, George Jaszi, Hyman Kaitz and Maurice Liebenberg, "Size Distribution of Income Since the Mid-thirties," *The Review of Economics and Statistics* (Feb. 1954); data for later years: *Survey of Current Business* Office of Business Economics, U.S. Department of Commerce (March 1955 and June 1956).

The data indicate a distinct reduction in relative income differences. From 1935–36 to 1954 the share of total income received by the highest income bracket declined from 52% to 45%, whereas all four of the other brackets improved their relative positions. The loss of the highest quintile affected mainly the top 5% and was heaviest for the top 1%.

State Distribution of Income.—New highs in personal income were established in every region and in 43 states and the District of Columbia in 1955, the latest year for which department of commerce estimates were available in 1956. For the continental United States as a whole, personal income totalled

\$303,000,000,000—about \$19,000,000,000 or 7% more than in 1954.

Income gains from 1954 to 1955 were relatively highest—8%—in the southeast and far west. They amounted to 6% in the New England, middle east, southwest and central regions. In the northwest the rise in aggregate income was limited to 3%, chiefly because drought conditions caused farm income in Kansas, Nebraska and South Dakota to fall sharply.

On a nation-wide basis, per capita personal income (total personal income divided by total population) was \$1,847 in 1955. Among states, per capita incomes ranged from \$946 in Mississippi to \$2,513 in Delaware. Others in the top rank, all with per capita incomes of more than \$2,250 in 1955, were Connecticut, Nevada, District of Columbia, New Jersey, California, New York and Illinois.

Table IV reveals clearly the relatively high income levels of the northern and far western parts of the country. Despite the

Table V.—Distribution of Personal Income in the United Kingdom, 1955*

Range of income (in £)	Number of Incomes (in thousands)	Amount of income before tax (in million £)	Amount of income after income tax and surtax (in million £)
Under 250	8,000	1,450	1,447
250—500	7,900	2,990	2,880
500—750	6,500	3,980	3,750
750—1,000	2,350	1,990	1,820
1,000—1,500	875	1,050	895
1,500—2,000	240	410	323
2,000—5,000	274	800	537
5,000—10,000	48	320	154
Over 10,000	13	215	59
Total	26,200	13,205	11,865

*No account is taken of £2,558,000,000 accruing to persons which, for lack of information, could not be allocated to particular ranges of income.

†A married couple is for this purpose counted as a single income recipient.

Source: Central Statistical Office, National Income and Expenditure 1956 (H.M.S.O., London, 1956).

substantial progress they had made over the past quarter of a century, the 11 southeastern states in 1955 had a composite per capita income 35% below the average for all other states.

From 1929 to 1955, a period of tremendous economic growth, there was a pronounced relative shift of total income from the New England and middle east regions to the south and far west. As shown in Table IV, the rates of income expansion in the far west, southeast and southwest substantially exceeded the nationwide rise of 254%, whereas the gains in New England and the middle east fell far short of it. The combined proportionate share of the nation's total income received by the south and far west increased 38% from 1929 to 1955, while that of the northeastern area (New England and middle east) declined 20%. However, aggregate income in the populous, high average-income northeast in 1955 still accounted for one-third of the national total.

Weather: see METEOROLOGY.

Weeks, Sinclair (1893—), U.S. cabinet member, was born at West Newton, Mass., on June 15. His father was John W. Weeks, secretary of war under Pres. Warren G. Harding. After graduating from Harvard university, Cambridge, Mass., in 1914, he worked for the First National bank of Boston, Mass., until 1923, except for a period during World War I when he served overseas as a captain with the 101st field artillery. He later became a successful manufacturer, was president of Reed and Barton, silversmith company of Taunton, Mass., and director of a number of large corporations.

Long active in Republican politics, he became a national committeeman for Massachusetts in 1940. He was treasurer of the Republican national committee from 1941 to 1944, and in the latter year served some months in the U.S. senate, on appointment to fill a vacancy.

In 1949 Weeks was chosen national finance committee chairman of the Republican party. On Jan. 21, 1953, he was sworn into office as secretary of commerce in Pres. Dwight D. Eisenhower's cabinet.

Weeks was involved in a dispute with the U.S. house of representatives' judiciary subcommittee in the summer of 1955 over his refusal to divulge records of the department of commerce's business advisory council. On April 26, 1956, he freed about 700 nonstrategic U.S. products for export to the U.S.S.R. and the "iron curtain" nations.

Weight Lifting. Paul Anderson, of Toccoa, Ga., representing the Whitfield Health club, broke three universal weight-lifting records as he retained his national Amateur Athletic union heavyweight title in 1956. Competing in the championships at the University of Pennsylvania's Palestra in Philadelphia, June 1-2, he also was awarded the title as Best

National Senior A.A.U. Championships

Class	Winners	Pounds lifted
123 lb.	Charles Vinci, York, Pa.	690
132 lb.	Isaac Berger, York	720
148 lb.	Joe Pitman, York	785
165 lb.	Clement Warner, Bethpage, N.Y.	835
181 lb.	Jim George, Akron, O.	875
198 lb.	Clyde Emrich, York	955
Heavyweight	Paul Anderson, Toccoa, Ga.	1,175

Lifter of the tournament. He hoisted 335 lb. snatching and 440 lb. in the clean and jerk test, each a world mark. These weights combined with a 400-lb. press gave him a total of 1,175 lb., a new world record. Anderson held the previous records of 1,145 lb. (total) and the 435-lb. clean and jerk set in the 1955 nationals.

Joe Pitman of Vero Beach, Fla., won the light-heavyweight title for the 10th time in succession, lifting 785 lb. Clement Warner of Bethpage, N.Y., won the 165-lb. crown. The team championship was captured by the York (Pa.) Barbell club for the 24th consecutive time.

Tommy Kono of Sacramento, Calif., and Hawaii, broke two light-heavyweight marks on March 9 in Honolulu while competing in the Hawaiian A.A.U. title meet. He pressed 317½ lb. to better the mark of 315¼ lb. set by the Russian, Gregory Novak, in 1949, then lifted a total of 977½ lb., bettering his own standard of 958¾ lb. Kono broke a world record for 181-lb. weight lifters on Oct. 12 in Honolulu with a clean and jerk lift of 382½ lb. Russians were reported to have set a number of new world standards during the year. E. Minayev, featherweight, hoisted 251.33 lb. in the two-hand press, bettering the 250.23 lb. made by Victor Korzh, also of the U.S.S.R. R. Vihabutdimor bettered his own lightweight standard by about a pound when he pressed 271.83 lb. V. Stogob, a flyweight, scored at 236.5 lb. in the press to beat his own mark by ½ kg. Kono's world mark of 902 lb. for middleweights was eclipsed in April when Fedor Bogdanovsky lifted a total of 913 lb. In June, Bogdanovsky had 293 lb. in the two-hand press for middleweights, to surpass a record held by Kono, and Nikolaj Kostilev bettered his own standard of 271 lb. for the lightweights' snatch when he lifted 275½ lb. Kono regained an international record in August when he pressed 295 lb. for a middleweight mark.

In Olympic trials at San Jose, Calif., in October the following were picked for the U.S. squad: Charles T. Vinci and Isaac Berger of York, Pa.; Pete and Jim George of Akron, O.; Tommy Kono; Dave Sheppard, Van Nuys, Calif., and Paul Anderson. (See also OLYMPIC GAMES.)

Ohio State won the team championship in the national collegiate tourney at Columbus, O., in April. The George brothers starred for the victors, Pete winning middleweight honours and Jim taking the light-heavyweight title. Ralph Brehm gave Ohio its third division prize by winning the featherweight championship. (T. V. H.)

West Virginia. West Virginia was admitted to conditional statehood on Dec. 31, 1862, and proclaimed a state on April 20, 1863. It has an area of 24,282.45 sq.mi., including about 150 sq.mi. water surface. Pop. (July 1, 1956, provisional est.) 1,983,000; (1950 census) 2,005,552. In 1950 the urban population was 34.8% of the total. There were 113,735 Negroes and 33,640 foreign-born whites. Charleston, the capital city, had a population of 73,501. Other cities with 10,000 or more inhabitants in 1950 were: Huntington, 86,353; Wheel-

ing 58,891; Clarksburg, 32,014; Parkersburg, 29,684; Fairmont, 29,346; Morgantown, 25,525; Weirton, 24,005; Bluefield, 21,506; Beckley, 19,397; South Charleston, 16,686; Martinsburg, 15,621; and Moundsville, 14,772. Unincorporated South Parkersburg had a population of 10,808.

History.—In the face of a 250,000 majority of registered Democratic voters, Pres. Dwight D. Eisenhower, Republican, received about a 65,000 majority for re-election in West Virginia in 1956, and by slightly lesser majorities Chapman Revercomb (Rep.) was elected to the U.S. senate to complete the unexpired term of Harley M. Kilgore (deceased), and Cecil H. Underwood (Rep.) was elected governor. At the same time the Republicans took two of the state's six representatives in congress, but the state legislature remained with the Democrats—the senate 21 to 11 and the house of delegates 58 to 42. Other members of the board of public works elected in 1956 were: secretary of state, D. Pitt O'Brien; auditor, Edgar B. Sims; treasurer, Orel J. Skeen; attorney general, W. W. Barron; commissioner of agriculture, John T. Johnson, all Democrats; and state superintendent of free schools, R. Virgil Rohrbough (Rep.).

In the first budget session (Jan. 11–Feb. 10, 1956) under a new constitutional amendment, the 52nd legislature did much to make amends for its session of 1955. To provide overdue salaries to teachers on all levels and other state employees, the 1956–57 budget was increased about \$5,000,000, raising the total to about \$99,000,000. Revenue bills for these purposes included one to increase the tax on corporations and insurance agencies. By an act, later declared constitutional, the university was authorized to sell self-liquidating bonds in the sum of \$10,000,000 to be used for the construction of agricultural and mechanical engineering buildings, and Marshall college was authorized to sell \$950,000 worth of such bonds for the construction of a gymnasium. The legislature also appropriated \$60,000 to be used to make a study of proposed turnpike extensions. The study was made, but, awaiting the allocation of federal funds under the \$33,000,000-000 act of congress of 1956, no action was taken in the one-day extra session (Aug. 10) of the state legislature. The session did, however, approve an emergency appropriation for the purchase of equipment to replace part of that destroyed by fire in the mechanical engineering building at the university, and it authorized the National Science foundation to use a site near Green Bank, Pocahontas county, for the erection of telescopes for a proposed new "Window to the Universe." Except in the oil and timber industries, the state experienced an expanding economy. There was comparatively little industrial unrest; the opening of a forestry camp in Tucker county for youthful offenders was a new approach in dealing with juvenile delinquents. The public school desegregation program moved forward with little friction, except in two or three of the heavily Negro populated counties.

Education.—The total enrolment in the 3,090 elementary schools in 1955–56 was 295,905. In the 380 secondary schools (junior and senior) it was 162,003. Total receipts for the public school program were \$82,910,051.21, of which \$49,668,327 were regular state aid; \$1,672,214.60 were federal aid; \$29,952,683.61 were local collection; and \$457,959.57 were miscellaneous receipts.

There were nine state-supported institutions of higher learning under control of a state board of education, which, as of Sept. 30, 1956, had a total full-time enrolment of 9,274 and a total part-time enrolment of 2,842. The state also supported the board of governors-controlled university at Morgantown and Potomac State college at Keyser with respective total enrolments of 5,454 and 537 full-time and 635 and 44 part-time students. There were also nine senior and junior private and denominational colleges with a total full-time enrolment of 3,751 and a total part-time enrolment of 1,923.

Social Insurance and Assistance, Public Welfare and Related Programs.—In the year ending June 30, 1956, the state department of health supervised the expenditure of \$2,052,741, of which \$526,621 were federal grants; \$626,663 were state funds; \$871,509 were local funds; and \$27,948 came from private agencies. Public assistance departmental expenditures for the year totalled \$32,394,474.54 or \$2,064,360 less than for the year 1954–55. Items for 1955–56 were: aid to dependent children, \$15,615,798.88; old-age assistance, \$7,743,108.25; aid to permanently or totally disabled, \$3,154,326.00; personal service, \$1,413,960.56; general medical and hospitalization, \$1,278,924.71; boarding care, \$902,109.80; general assistance,

\$884,955.25; aid to crippled children, \$455,207.29; aid to the blind, \$445,161.00; current expenses, \$355,172.77; child welfare, \$92,231.61; prevention of blindness, \$37,188.70; and equipment, \$16,329.70.

Transportation and Communication.—As of Jan. 1, 1956, there were about 31,000 mi. of state road, of which about 5,000 mi. were primary and about 26,000 mi. were secondary. Including those in national forests, 1,682 mi. rural, and 2,400 mi. city streets, there were about 4,600 mi. not in the state system. There were 429,260 passenger motor vehicles and 111,290 trucks of various kinds registered in the year ending June 30, 1956. There were 35 radio stations and 4 functioning television stations.

Banking and Finance.—The total state receipts, including a gross cash balance of \$44,440,522.71 as of June 30, 1955, for the fiscal year ending June 30, 1956, was \$405,639,548.18, and the total disbursements were \$356,833,759.24, leaving a cash balance of \$48,805,788.94. The net cash balance was, however, only \$5,755,703.13, of which \$3,531,565.03 were encumbered. The chief sources of state income were: gross sales tax, \$42,870,770; federal aid, \$34,024,652; consumers sales tax, \$28,185,207; gasoline tax, \$26,587,226; and auto licence tax \$15,156,787. The largest state expenditures were: \$69,352,065, or 36.13%, for schools; \$48,122,283, or 25.07%, for highways; and \$42,000,516, or 21.89%, for health and welfare. As of June 30, 1956, the total bonded indebtedness of the state was \$135,212,000, of which \$79,052,000 was for roads and \$56,160,000 was for veterans.

As of June 30, 1956, the total resources of 76 national banks were \$602,109,000 and of 105 state banks and trust companies, \$579,509,019.24. The respective resources of 22 federal and savings loan companies, 15 state banking and loan associations, and 31 industrial savings and loan companies were: \$105,542,961, \$25,428,715.38, and \$23,010,991.99. There were 180 small loan companies with total resources of \$37,698,934.58 and 24 state chartered credit unions with total resources of \$2,123,614.61.

Agriculture.—The total cash farm income for 1955 was \$112,303,000, or \$6,929,000 less than for 1954. Of the total cash income for 1955, \$1,704,000 was government payments; \$86,600,000 was for livestock and livestock products; and \$23,999,000 was for crops. The value of products consumed on the farms where produced was \$39,442,000, making a total gross farm income of \$151,745,000, or \$9,681,000 less than for 1954.

The estimated number of cattle on farms, 593,000, as of January 1, 1956, was about the same as for the corresponding date for 1955. The 170,000 hogs were about 30,000 more; the 314,000 sheep were about the same;

Table I.—Principal Agricultural Products of West Virginia

Crop	Indicated 1956	1955	Average, 1945-54
Apples, commercial, bu.	4,050,000	4,346,000	3,832,000
Barley, bu.	562,000	462,000	358,000
Corn, bu.	7,990,000	7,293,000	9,889,000
Hay, all, tons	988,000	986,000	994,000
Oats, bu.	1,332,000	1,520,000	1,511,000
Peaches, bu.	650,000	800,000	578,000
Potatoes, cwt.	780,000	1,053,000	952,000
Tobacco, lb.	3,938,000	4,000,000	4,070,000
Wheat, bu.	888,000	851,000	1,333,000

working stock, horses and mules, continued its downward trend, 62,000 to 58,000; and the 2,823,000 chickens were 3% less; but the number of turkeys, 71,000, was 3,000 more than on Jan. 1, 1955. The farm value of the livestock was \$42,636,000; chickens \$3,246,000 and turkeys, \$370,000.

Manufacturing.—1955 was the peak year in the total value of manufactured products, \$2,106,000,000, or \$231,000,000 more than for 1951, the previous peak year. The average monthly employment for 1955, 128,700, was however 9,700 less than for 1951, indicating that the 1955 total was due to increased production per worker and to higher prices rather than to manufacturing expansion. The average monthly employment for 1951 was

Table II.—Principal Industries of West Virginia

Source: U.S. Department of Commerce, 1954 Census of Manufactures, preliminary report.

138,400. The 37,875 employees (1956) in chemical and related industries were 1,259 more than in 1955 and their total annual wage, \$168,074,274, was \$14,723,937 more, but chief interest centred in a rehabilitation of the coal industry. By improved organization and mechanization the total production for 1955 was increased 20% to 142,000,000 tons which was 34,000,000 less than for 1947, the record production year, when the average monthly employment was 38,000 more. The estimated average monthly employees for 1956 was 76,130 and the total estimated annual payroll was \$374,173,813, or only about \$4,000,000 less than in 1947. Average monthly employees and total annual payroll in other industries were: iron and steel, 41,145 and \$204,646,847; glass, pottery, brick and tile, 27,051 and \$103,901,405; oil and gas, 12,027 and \$42,620,577; and lumber, 9,858 and \$21,846,824. (C. H. A.)

Mineral Production.—Table III shows the tonnage and value of those minerals produced in West Virginia in 1953 and 1954 whose value was \$100,000 or more. In 1954, West Virginia led all the states in coal production, had a large output of natural gas, and ranked sixth in the value of its mineral output, with 4.56% of the U.S. total.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Northeastern States*, 2nd ed. (1955).

Wheat. Once again the enduring U.S. wheat crop surmounted a diversity of unfavourable situations, some local, some widespread, to mature an abundant harvest of 975,517,000 bu. in 1956, 4% larger than in 1955, but 15% less than the 1945-54 average. Total harvested acreage was 50,466,000 ac., nearly 7% more than in 1955, but far less than the 67,192,000-ac. average for 1945-54. Yields averaged 19.3 bu. per acre, as compared with 19.8 bu. in 1955 and the 17.1 bu. per acre average for the previous decade.

The fall sown winter wheat crop was seeded on 45,203,000 ac., 2% more than a year earlier, but about 20% less than the ten-year average. Early estimates were for about 735,438,000 bu. for harvest in 1956. By June the official forecast was for only about 670,000,000 bu. However, timely rains at filling time resulted in unexpectedly good yields, and the semifinal estimate of the 1956 winter wheat crop was 721,946,000 bu., as compared with 703,047,000 bu. in 1955 and the 873,690,000-bu. average for 1945-54.

An excellent harvest of durum wheat did much to restore depleted supplies of this macaroni grain. The U.S. crop of 39,114,000 bu. was nearly double the 20,070,000 bu. of 1955 and one-fourth larger than average. North Dakota was the leading producer with 20,848,000 bu., but Montana, with 16,071,000 bu., had the biggest increase as compared with 1955.

An increase in hard red winter wheat to 436,298,000 bu. from 418,603,000 bu. in 1955 practically equalized a decline in hard red spring wheat to 169,463,000 bu. from 187,112,000 bu. in 1955. Soft wheats increased, soft red to 177,342,000 bu. (168,400,000 bu. in 1955) and white to 153,292,000 bu. from 142,565,000 bu. in 1955.

The U.S. supply of wheat for the 1956-57 marketing year was indicated at 2,015,000,000 bu. a new all-time record. Included were 1,030,000,000 bu. of carry-over stocks (mostly held by the Commodity Credit corporation), four times as large as in 1952 and made up predominantly of hard red winter wheat desirable for breadmaking. Domestic disappearance was ex-

Table I.—U.S. Wheat Production by Leading States

(In 000 bu.)

State	Indicated 1956	1955	Average, 1945-54
Kansas	144,600	128,395	202,873
North Dakota	117,600	112,942	122,990
Montana	74,749	109,350	80,798
Oklahoma	64,272	24,160	77,872
Nebraska	60,211	78,255	80,211
Washington	59,963	55,832	72,626
Illinois	58,108	52,008	36,561
Missouri	49,320	48,081	27,976
Ohio	39,286	43,384	52,243
Idaho	38,980	38,165	38,985
Indiana	35,220	34,394	35,555
Michigan	30,474	27,966	32,105
Texas	28,275	14,326	50,722
Oregon	25,828	21,899	26,804
South Dakota	17,986	27,461	42,288
Colorado	17,119	17,257	42,984
Minnesota	16,599	12,186	18,579
Pennsylvania	15,903	15,964	19,832

pected to continue at about 600,000,000 bu., including 483,000,000 bu. used for food, 55,000,000 bu. for seed and 60,000,000 bu. for feed. Exports were forecast at 415,000,000 bu., as compared with 345,000,000 bu. in the year ending July 1, 1956. Thus, it appeared that carry-over supplies on July 1, 1957, might be moderately reduced, after increasing since 1952.

As regards the 1956 wheat acreage participation in the acreage reserve of the soil bank, wheat farmers signed 162,574 agreements covering 5,654,507 ac. for possible payments of more than \$44,000,000. Marketing quotas were again favoured, for the third year, by 87.4% of the farmers voting in July in all commercial wheat states. The acreage allotment for 1957 was again based on 55,000,000 ac. and the average support price set at \$2 per bushel.

In October, producers of wheat received \$1.98 per bushel, slightly above the \$1.94 per bushel of Oct. 1955, but slightly less than the average support price of \$2 per bushel (84% of parity), changed from \$1.81 per bushel or 76% of parity as first announced. In November it appeared that perhaps not more than 250,000,000 bu. of the 1956 crop wheat would seek shelter under the support program, as compared with 321,000,000 bu. from the 1955 crop.

U.S. exports of wheat and flour in 1955-56 amounted to 341,000,000 bu., valued at \$573,089,000, as compared with 274,000,000 bu. valued at \$492,195,000 in 1954-55. Much of that total moved under the International Wheat agreement or under other subsidy programs. A large deal with India involved about 3,500,000 tons of wheat, one-fifth to be shipped in 1956-57.

Table II.—World Production of Wheat for Selected Areas

Country	(in 000,000 of bu.)				
	Est. 1956	1955	1954	Average, 1945-49	Average, 1935-39

Australia	130	196	169	178	170
U.S.S.R.				885	1,240
World total	7,545	7,405	7,010	5,911	6,102

The world wheat crop of 1956-57 was preliminarily forecast at 7,510,000,000 bu., a new record high, comparable with 7,380,000,000 bu. in 1955-56, a 1945-49 average of 5,910,000,000 bu., and a pre-World War II average crop of 6,100,000,000 bu. The important Canadian export crop was 535,000,000 bu.—a good outturn, but far below the record. The western European crop, hard hit by a winter freeze and plagued with a wet harvest period, was nearly 200,000,000 bu. short of the 1955 level as well as lower in quality. Increased imports were indicated. The situation in eastern Europe and the U.S.S.R. was not fully known, but the crop was announced as a record one with 56,000,000 tons delivered to the state by early October. Instead of the substantial purchases made by the Soviet bloc countries early in 1956, wheat deals were announced by the U.S.S.R. with Egypt and Poland.

World wheat trade in 1955-56 was about 1,020,000,000 bu., 6% above 1954-55, 11% more than the average for the previous decade, and only 4% below the record of 1,066,000,000 bu. in 1951-52. Larger exports were anticipated in 1956-57, partly because of pressure of stocks and partly because of the reduced 1956 crop in western Europe.

The Third International Wheat agreement after prolonged discussion became effective on Aug. 1, 1956, to extend through July 31, 1959. It followed the same general pattern as the two

earlier agreements. Argentina and Sweden joined as exporters, bringing the number to six, with the following export quotas: United States, 132,100,000 bu. (as compared with 196,500,000 bu. under the previous agreement); Australia, 30,300,000 bu. (45,000,000 bu. previously); Canada, 102,900,000 bu. (153,100,000 bu.); France, 16,500,000 bu. (344,000 bu.); Sweden, 6,400,000 bu.; and Argentina, 14,700,000 bu.

Thus, countries which supply about 90% of the wheat moving in world trade contracted for about one-third of the total anticipated trade.

The United Kingdom again refrained from joining, but 34 importing countries signed and 32 ratified promptly. The minimum price, at which importing countries are obliged to take up their quota, was lowered to \$1.50 per bushel from \$1.55 under the preceding contract. The maximum price, at which exporters are obligated to sell their annual quotas, was also reduced by 5 cents, to \$2 per bushel.

Flour.—U.S. consumption of wheat flour, including white, whole wheat and semolina, was 119 lb. per capita, about 2% less than in 1955 and only about three-fourths as much as prewar. Use of rye flour declined to 1.3 lb. per person, 59% of the 1935-39 average. Breakfast cereals required an additional 2.8 lb. per capita of processed wheaten substance, but even that was 15% below prewar.

Flour exports in 1955-56 were 21,564,000 cwt. wheat equivalent, valued at \$91,466,000, as compared with 19,884,000 cwt., valued at \$86,990,000 in the previous year.

A study of costs of marketing breads found consumers paying 70% more than ten years before, with charges for processing and distributing up 87%, and returns to farmers for wheat and other bread ingredients up 20%.

The ending of the U.K. bread subsidy in September was followed by severe price wars with respect to bread and flour.

ENCYCLOPEDIA BRITANNICA FILMS.—*The Wheat Farmer*, 2nd ed. (1956).

Wildlife Conservation. Interest in wildlife in the United States in 1956 was especially in evidence in efforts to provide better protection for refuge areas, to rescue from threatened extinction the rare whooping crane, to establish a sound federal governmental organization and to relate wildlife conservation to the farm programs encouraged in congressional legislation.

Writing on soil bank legislation in *The Living Wilderness*, Charles Callison, conservation director of the National Wildlife federation, pointed out that "for the first time in general farm legislation the inseparable relationship of wildlife to land use, and the importance of wildlife resources, were recognized." "Congress," Callison explained, "took a plan designed to whittle down problem crop surpluses by paying farmers for taking croplands out of production and wrote a law that spelled out comprehensive objectives in 'soil, water, forest, and wildlife conservation,' " authorizing the use of "practices to enhance wildlife and forest resources, along with soil and water conservation practices on the 'conservation reserve' lands."

At the same time special attention was being paid to the organization of the executive department agencies that deal with the federal wildlife program. Under public law 1024, which became effective on Nov. 6, 1956, two bureaus—one for commercial fisheries and the other a bureau of sport fisheries and wildlife—were established within a reorganized fish and wildlife service. The service was to be administered by a commissioner of fish and wildlife. Within the department of the interior, where these agencies are administered, there was established a new position of assistant secretary for fish and wildlife.

HERDING BY HELICOPTER, members of the Washington state game department directing elk over snowy hills to feeding grounds in Jan. 1956

On Dec. 16 Secretary of the Interior Fred A. Seaton announced that the reorganized fish and wildlife service had been asked to "develop a blueprint for a greatly broadened conservation program," on which a special task force was shortly to begin work. Two goals emphasized by the secretary in his announcement were "to solve problems of destructive drainage threatening marshes and wetlands for migratory waterfowl, and to initiate a planned program of land acquisition to meet federal and state needs in wildlife management."

Bills to provide for the acquisition of waterfowl areas by using for the purpose 40% of the receipts from the sale of the federal migratory bird hunting stamps—the so-called "duck stamps" required of all wildfowl hunters over 16 years of age—had been introduced in the 84th congress and discussed at hearings. In the face of opposition by the executive agencies, however, these bills had not been enacted and in reintroduced forms were looked upon by conservation leaders as among the important considerations for the 85th congress.

Threats to the federal refuges from demands for commercial use were increasingly alarming as permits for oil and gas leases were issued under a severely criticized policy of the department of the interior. Refuge threats from the encroachments of the expanding military organization were also exposed and opposed by conservation organizations. Notable was a plan to take part of the Wichita Mountains Wildlife refuge as an addition to Fort Sill near Lawton, Okla., a plan that had successfully gone through the 1955 session of congress in a military public works bill but was frustrated by Secretary of the Interior Douglas McKay, who refused to transfer custody of the wildlife lands to the army. A 1956 bill that would have forced the secretary to make the transfer failed after hearings had been held by the house of representatives.

Approximately 20 of the national wildlife refuges and ranges containing extensive areas of wilderness were included in a proposed national wilderness preservation system advocated by Sen. Hubert Humphrey and Rep. John P. Saylor and other legislators and conservation leaders. Proposed legislation to create the wilderness system—which would comprise in all about 163 areas, including also units within the national park system and the national forests—was introduced in June in both senate and house of representatives and was widely circulated and discussed as a major concern for the 85th congress.

Determination to prevent the extinction of any more of the continent's wildlife species was demonstrated in efforts to preserve the whooping crane, a magnificent white bird that by about 1940 had dwindled to a total of only 15 known individuals on the continent. The principal remaining wintering ground of these birds on the Aransas (Gulf coast) peninsula in Texas was established as a federal refuge in 1937, and special efforts through

the years had been made to protect the birds during their migration between wintering grounds and their nesting areas in the remote Canadian wilderness. An increase to 34 birds by 1950 had been followed by decreases and fluctuations, between totals of 21 and 28. By mid-Dec. 1956 only about two dozen of the birds had returned south, but fish and wildlife service officials were confident that others would still be noted. Canadian and U.S. officials and conservation leaders and biologists met at a special conference in Washington, D.C., on Oct. 29, 1956, to consider the whooping crane restoration program.

A fish and wildlife service national survey carried out by Crossley, S-D Surveys, Inc., of New York concluded that approximately 11,784,000 persons in the United States had hunted in 1955 for a total calculated at 169,423,000 man-days, travelling 6,072,296,000 mi. and spending about \$936,687,000.

Other estimates indicated that hunters annually take about 12,500,000 ducks, 900,000 geese, 900,000 coots and nearly 1,400,000 big-game animals, in addition to millions of rabbits, squirrels, pheasants, quails, doves and grouse.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Conservation of Natural Resources* (1937); *Deer Live With Danger* (1954).

Wilson, Charles Erwin (1890–), U.S. business executive and government official, was born on July 18 at Minerva, O. After graduating from the Carnegie Institute of Technology, Pittsburgh, Pa., in 1909, he went to work as an electrical engineer for the Westinghouse Electric and Manufacturing company, where he designed the first automobile self-starting motor produced by that company. He joined General Motors corporation in 1919 as an executive of one of the subsidiary companies; in 1929 he became a vice-president of the corporation and in 1941 president. Both during and after the war period he continuously pointed to the need for a permanent U.S. defense program that could be diverted speedily to war or peace production with a minimum of economic dislocation.

Wilson (sometimes confused with Charles Edward Wilson, president of General Electric company and director of defense mobilization from 1950 to 1952) was chosen for the post of secretary of defense by Pres. Dwight D. Eisenhower and was confirmed in that office by the U.S. senate in Jan. 1953 after he had agreed to sell his stock in General Motors Corp.

His major concern during 1953–56 was to attain economy in defense expenditures without materially impairing the national security; a related problem was to keep the relative strengths of the three armed services in balance. The political and economic delicacy of both problems, plus Wilson's famed inclination to forthright, colourful and often blunt comment, led him into several public controversies. Thus, on June 21, 1956, he de-

scribed as "phony" the efforts of some senators to appropriate more money for the air force than had been requested by President Eisenhower for the fiscal year 1957. This comment (like his famous "bird dog" and "kennel-fed dog" contrast between types of unemployed workers in 1954) brought denunciation from a number of Democratic and some Republican leaders, but Wilson was consistently backed up by President Eisenhower.

Windward Islands. The British colonies of Grenada, St. Vincent, St. Lucia and Dominica, forming the southern part of the Lesser Antilles in the Caribbean, constitute the British Windward Islands. The colonies have in common governor and (with Leewards) supreme court, but separate legislatures. Pop. (1955 est.) 308,000; 95% Negro and

Colony	Area (sq.mi.)	Population (1946 census)	Population (1954 est.)	Capital (with pop., 1954 est.)

mixed, some Caribs on St. Vincent and Dominica. Language: English; on Dominica and St. Lucia also French patois. Religion: Christian. Governor in 1956: C. M. Devereil. Administrators: (Grenada) W. Macmillan; (St. Vincent) A. F. Giles; (St. Lucia) J. K. R. Thorp; (Dominica) H. L. Lindo.

History.—With the introduction of a ministerial system of government in March 1956, another milestone in the constitutional advancement of the islands was reached. The inaugural meeting of the newly formed Federal Labour party, under Norman Manley of Jamaica, was held in St. Lucia and was attended by James Griffith of the United Kingdom Labour party.

Dominica continued to make good progress not only in the banana and citrus industries but also in the development of roads and buildings. The newly built Princess Margaret hospital satisfied a long-felt and pressing need. The Grenada rehabilitation program, especially in the field of agriculture, also made good progress, and regular shipments of bananas were again being made. Everywhere there were signs of recovery from the effects of the hurricane of 1955.

Colony	Budget (1956 est.)	External Trade (1955)
	Revenue* Expenditure*	Imports Exports
Grenada	B.W.I. \$4,367,641 B.W.I. \$4,085,879	B.W.I. \$10,339,920 B.W.I. \$8,746,845

(L. C.-LA.)

Education.—Schools (1955) *Grenada*: primary 53, pupils 18,445; secondary 6. *St. Vincent*: primary 41, pupils 16,249; secondary 2, pupils 478. *St. Lucia*: primary 49, pupils 15,290; secondary 2, pupils 623. *Dominica*: primary 58, pupils 11,732; secondary 4. One teacher training school.

Finance and Trade.—Monetary unit: British West Indian dollar: (B.W.I. \$4.80=£1 sterling. B.W.I. \$1.7=£1 U.S.).

Main exports: arrowroot, bananas, citrus products, cocoa, copra, sea island cotton, mace and nutmeg, sugar, vanilla.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Caribbean* (1955).

Wines. Total world wine production during 1956 amounted to 5,864,800,000 gal. according to official reports and estimates, compared with 6,077,200,000 gal. during 1955 (a more accurate figure), an approximate 3½% decrease. Some figures, notably those from Soviet-influenced countries, were pure estimates.

During the winter of 1955-56 persistent and extreme cold which spread over western Europe, extending as far south as the Mediterranean, severely damaged the vines and curtailed production. As a result, for the first time in many years, France's wine production was second to that of Italy. Austria, Germany

World Production of Wine

(Millions of gallons)

Country	1956	1955	1951-1955 Average	1956 quality

Total	5,864.8	6,077.2	5,497.9	

Countries such as the United States, marked "No variation" in the above table, produce uniform wines from year to year because of stable climatic conditions and methods of production used.

*Provisional figure, same as previous year.

and Switzerland also suffered greatly.

In addition, the summer months were cool and damp so that in general the quality of the vintage was inferior to that of 1955.

Bordeaux produced a total of 143,000,000 gal. in 1955, of which 48,300,000 gal. white and 33,900,000 gal. red were famous growths (*appellation contrôlée*). The forecast for 1956 was a total of 100,000,000 gal. of fair quality. Many vines were frozen to the extent that they had to be uprooted so that future production was expected to suffer for at least five years. In 1955 Burgundy produced 56,800,000 gal. of which 5,600,000 gal. white and 23,900,000 gal. red were famous growths. The 1956 estimate was for approximately 20,000,000 gal. of good quality. Although frost curtailed production the vines were basically undamaged. Alsace produced 21,200,000 gal. of which 15,100,000 gal. were fine growths in 1955. The 1956 estimate was for only 11,500,000 gal. of medium quality. Champagne was down from the 20-year high of 15,400,000 gal. in 1955 to 7,500,000 gal. of fair quality in 1956. As a result of the extremely small yield of these world-famous areas, prices doubled.

Italy produced somewhat more wine than in 1955 but of mediocre quality. In Spain the Jerez district produced 13,200,000 gal. of excellent quality sherry, 25% more than 1955. Production of port wine, controlled to world demand in Portugal, was held to 6,900,000 gal. of fine wines as against 5,700,000 gal. in 1955, and Madeira produced 2,200,000 gal. of satisfactory quality compared with 3,100,000 gal. the previous year.

Germany also suffered from the prolonged freezing weather, experiencing a 45% decline in production. However, the quality greatly surpassed expectations. United States production was down 10% from 1955, but was still higher than the five-year average.

(J. WE.)

Wisconsin. One of the north central states of the United States, Wisconsin, popularly called the "Badger state," entered the union as the 30th state in 1848. Area: 56,154 sq.mi., of which 1,449 sq.mi. is water. Pop.: (1950 census) 3,434,575; (July 1, 1956, provisional est.) 3,764,000; of the 1950

population, 57.8% was defined as urban. Capital, Madison (1950 census), 96,056. Milwaukee, 637,392, is the largest city. Other large cities are Racine, 71,193; Kenosha, 54,368; Green Bay, 52,735; and La Crosse, 47,535.

History.—Many important measures approved by the 1955 legislature took effect during 1956. The new criminal code, representing the first complete revision of the substantive criminal law of Wisconsin since it became a state, became effective July 1, 1956. Louisiana was the only other state which had revised its code; Wisconsin was the only state to make such a change in recent years. Two other significant events also took place on July 1, 1956. The completely revised and modernized children's code became effective—the first revision since 1931—and the former Wisconsin State college and the University of Wisconsin extension division in Milwaukee were merged and became a full-fledged university branch with a new name, the University of Wisconsin—Milwaukee. Day enrolment for its first semester of operation in the fall of 1956 totalled 4,481.

Wisconsin had a lively political year. After the Republican convention refused to endorse Sen. Alexander Wiley for reelection, and Robert C. Zimmerman for secretary of state, a hotly contested primary battle developed with Rep. Glenn Davis failing to unseat Senator Wiley and the incumbent, Mrs. Glenn A. Wise, failing to win the nomination from Zimmerman. On the Democratic side, Robert LaFollette Sucher, grandson of old "Fightin' Bob" LaFollette, won the nomination for attorney general over party regular Frank Nikolay. Shortly before the deadline for filing candidacies for the general election, William Proxmire, Democratic candidate for governor, denounced Sucher and gathered enough signatures on petitions to place Nikolay on the November ballot as an Independent.

Despite the splits within both parties, the Republicans swept all state offices in the November election: Atty. Gen. Vernon Thomson won the gubernatorial race, Lieut. Gov. Warren P. Knowles and Treas. Warren R. Smith were re-elected. Stewart Honeck was elected attorney general and Robert C. Zimmerman, like his father before him, led the state ticket in number of votes as he won the office of secretary of state. Senator Wiley, six Republican and three Democratic representatives were re-elected. Donald Tewes, a Republican, won Congressman Glenn Davis' seat in the house. The Democrats gained two seats in the state senate; the Republicans gained three seats in the assembly, leaving both houses with approximately a two-thirds Republican majority. In the voting for president, more than 900,000 Wisconsin voters cast their ballots for Pres. Dwight D. Eisenhower, while Adlai E. Stevenson polled somewhat more than 550,000 votes.

Education.—In the school year 1954-55, there were 5,131 elementary schools, 448 secondary schools, and 23 county teachers colleges. Enrolment in the elementary schools totalled 431,546; secondary schools, 169,676; county teachers' colleges, 1,255. Elementary schools employed 16,347 teachers; secondary schools, 7,592; county teachers' colleges, 111. State aids to education for 1954-55 were \$28,514,627. Expenditures in elementary and secondary schools amounted to \$201,695,259. The 11 state colleges employed 790 faculty members to teach 12,252 college and 2,327 training school students.

Social Insurance and Assistance, Public Welfare and Related Programs.—Cases receiving public assistance as of June 30, 1956, with expenditures for the fiscal year ending on that date in parentheses, were as follows: general relief, 7,467 (\$8,277,731); old-age assistance, 41,400 (\$33,352,789); aid to the blind, 1,112 (\$954,459); totally and permanently disabled, 1,210 (\$1,379,795); dependent children in their own or a relative's home, 8,097 (\$13,856,832); dependent children in foster homes, 1,645 (\$1,091,031); a total of 60,931 households (\$58,912,637). Civilian unemployment benefits for the fiscal year 1955-56 were \$21,365,152; contributions collected totalled \$24,254,450.

The cost of operating Wisconsin's 12 charitable, correctional and mental institutions for the year ending June 30, 1956, was \$15,267,213 appropriated from the general fund, plus \$5,560,627 for postwar construction and development. The average daily population for June 1956 was 6,272.

Communications and Transportation.—Public highways as of Jan. 1, 1956, totalled 95,754 mi. divided as follows: 85,784 (towns), 2,725 (villages), 7,245 (cities). Expenditures by the highway commission during the fiscal year 1955-56 amounted to \$118,365,224. Railway mileage (steam and electric) as of Dec. 31, 1955, was 6,402.83 with 69.02 mi. of trolley

MOVING AN ISLAND, power boats push and pull a three-acre land mass which broke away from the shore of Moraine lake near Fond du Lac, Wis., in May 1956. The unwanted island was blocking the beach of a resort until the extraordinary effort was made to move it to another spot on the lake

(trackless) route in Milwaukee. On Jan. 1, 1956, there were 1,218,268 telephones; on Oct. 1, 1956, there were 64 publicly owned airports and seven seaplane bases. Total marine tonnage for 1955 amounted to 92,929,760 short tons.

Banking and Finance.—As of June 30, 1956, the 95 national banks had deposits of \$1,649,289,000 and assets of \$1,786,000,000. At the end of the calendar year 1955, 462 state banks (one less than in the previous year) reported deposits of \$2,022,109,458. Assets amounted to \$2,184,249,509. Credit unions increased from 680 in 1954 to 696 in 1955. Assets amounted to \$120,562,491 which was an increase of 17.5%. The 114 savings and loan associations listed assets of \$666,777,759.

State receipts for the fiscal year 1955-56 were \$308,851,039; disbursements \$295,890,961. Taxes collected and returned to local subdivisions totalled \$91,598,469; agency collections returned to localities were \$3,095,549; state aids totalled \$85,717,927; moneys transferred from the general fund to other funds amounted to \$17,187,123.

Agriculture.—The total acreage harvested in 1955 was 10,124,000. Cash receipts amounted to \$974,276,000, consisting of \$855,444,000 from livestock and livestock products and \$118,832,000 from crops. Total acreage harvested dropped slightly below that for 1954. Crop values declined because of lower farm prices. Wisconsin's commercial onion crop had the highest per acre value of any crop in the state; rye had the lowest value per acre.

Table 1.—Principal Crops of Wisconsin

Crop	Indicated 1956	1955	Average, 1945-54
Corn (bu.)	160,486,000	137,000,000	126,847,000
Oats (bu.)	129,122,000	138,915,000	130,537,000
Tobacco (lb.)	27,748,000	32,221,000	46,722,000
Potatoes (cw.)	7,105,000	6,552,000	7,548,000
Barley (bu.)	2,482,000	2,590,000	5,447,000
Wheat (bu.)	1,350,000	1,419,000	2,164,000
Flaxseed (bu.)	69,000	62,000	145,000
Soybeans (bu.)	1,302,000	975,000	558,000
All hay (tons)	8,036,000	8,401,000	7,197,000
All clover and timothy (tons)	2,327,000	2,718,000	3,479,000
Alfalfa (tons)	5,528,000	5,499,000	3,389,000
Cherries (tons)	14,000	21,700	14,120
Cranberries (bbl.)	280,000	315,000	199,200
Apples (bu.)	1,230,000	1,380,000	1,072,000

Manufacturing.—The total value of manufactured products in Wisconsin dropped from \$3,635,768,000 in 1953 to \$3,314,109,000 in 1954. In 1955 the estimated average number of wage earners in Wisconsin manufacturing establishments was 450,000 as compared with 432,900 in 1954 and 472,500 in 1953. The average weekly gross earnings per capita were \$80.61 in

1955 as against \$74.79 in 1954. Wisconsin's second largest industry, the tourist business, brought more than \$15,000,000 into the state as thousands of tourists visited its 8,676 lakes. (C. L. L.)

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Wisconsin in 1953 and 1954 whose value exceeded \$100,000. In 1954, Wisconsin was seventh among the states in sand and gravel output and ranked 33rd in the value of its mineral output with 0.39% of the U.S. total.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Middle States*, 2nd ed. (1955).

Woman's Christian Temperance Union, National: see SOCIETIES AND ASSOCIATIONS, U.S.

Women's Clubs, General Federation of: see SOCIETIES AND ASSOCIATIONS, U.S.

Women's Fashions. The year 1956 was characterized by what might be termed a "romantic revival" in women's fashions in the United States. Both in dress and in home decoration there was a shift away from stark simplicity to a more elaborate, intricate and individualized mood.

Although there were important changes in the silhouette, the most significant differences lay in greater formality; sweet feminine colourings, mingled with candy-box abandon; the stress on softly clinging or floating fabrics such as thin silk, satin and chiffon; and a strong return of delicate feminine froufrou: ribbons, roses, feathers, jabot frills and fur trimming.

Of major influence on U.S. designers was the Broadway play *My Fair Lady*, a musical version of George Bernard Shaw's *Pygmalion*, with décor and costumes of the late Edwardian era 1906-12 designed by Cecil Beaton. Beaton's visualization of the opulent, perfumed period just preceding World War I influenced women's fashions, men's wear, children's clothes, millinery, shoes, coiffures and cosmetics. The peaches-and-cream complexion and the upswept hairdo with a pompadour or chignon became the beauty ideal, balancing the stately effect of large hats, longer and narrower skirts and wrapped coats.

Counterpointing soft, patrician prettiness, was the chic of the alluring "lady spy" costume of slinky dead black, long-sleeved and low-necked dress with an alluring big plumed hat or jeweled turban.

In the realm of style "catchwords," designers retired two venerable and worn-out terms: "look" and "sheath." As Adele

Simpson explained it, "the fashion-minded woman replaced a 'look' with a presentation of her own good looks, counting her personality, her posture, grace and loveliness as vital means of self-expression in dress."

In the construction of clothes, there was a change from "cut" to "drape" as a basis of the silhouette. The taut Empire sheath and the boned bodice were banished in favour of softness of line achieved through long shallow drapery. The long-legged figure line was emphasized by a retention of the high waistline, kept "small" by wide sashes, under-bosom belts or drapery caught by bows or bouquets of roses. Full skirts remained in fashion, but lost their solid underpinnings of interfacing and petticoats in favour of deep pleats, side folds or multiple airy layers of sheer fabric.

The bloused back and low-backed bodice gave a new graceful "slouch" to the profile. Wrapped-and-tied effects were important in both construction and in trimming. Most coats stressed the luxurious effect of large collar, deep armholes and a deeply wrapped front.

The oriental splendour which pervaded 1955 fashion was heightened in 1956. Harem hemlines on satin and chiffon evening dresses, coloured jewel embroidery on opulent metal brocades, evening turbans of tulle, brocade and satin, exotic colour combinations such as emerald green and sapphire blue, flame with orange, and red and yellow were part of this oriental renaissance.

A trend toward capes, first noted in the U.S. collections of such designers as Norman Norell and Ben Zuckerman and later strongly sponsored by Parisian couturiers Balenciaga and Christian Dior, brought quick acceptance. Short capes, barrel capes and full length capes were shown in place of jackets for daytime and cocktails, and evening capes came into prominence. While the coat silhouette was amplified, the suit silhouette contracted with a much shorter, more fitted jacket coming into vogue.

The softening influence throughout fashion had its effect on daytime and sports clothes. Slender suit skirts had double tunic hemlines, wrap-around drapery or "Dutch boy" pegtop hielines (the latter introduced by Christian Dior) for ease and grace. The ultra-feminine overblouse of silk crepe, thin satin or silk chiffon was seen with daytime suits. The delicate blouse appeared in every phase of fashion from sport clothes to ball gowns. The "little boy" aspect in sports clothes changed to a girlishly decorative effect, which combined freedom and ease with great prettiness.

The year 1956 was a vintage year in fabrics. There were velvety-surfaced woollens, tweeds reduced to featherweight and woven in elegant small patterns, suitings of pure cashmere or vicuna and supple chiffon broadcloth. Afternoon and evening fabrics saw the return of charmeuse satin, silk georgette, flat crepe, double and triple chiffon, crepe mystère, shadow lace, metal thread lace, French lamé, gold tissue, point d'esprit and silk tulle, with oriental brocades, panne and Florentine velvets and Edwardian cut velvets. The return to favour of the silk crepe daytime dress and the revival of chiffon as an evening fabric were milestones of the year.

The "clinging" theme brought a new interest in knits, from ribbed cardigan bands and knit sleeves on wool dresses to fine-textured knit cocktail dresses. The bulky knit coat-sweater and knitted full-length coat became popular daytime and sports fashion.

Fur was a recurring note in fashion's new luxury mood. Mink collars appeared on tailored suits and street dresses and on evening costumes. Black or white fox and natural lynx made great "glamour girl" collars on tweed day clothes and evening clothes, the latter often with hems of fur. The sable-collared cloth coat or dinner suit struck an important note of elegance. American broadtail was handled like fabric to make daytime jackets, lined

Wool. World production totals for 1955 were substantially higher than had been anticipated, primarily because of revised figures for production in the Soviet Union and the satellite countries, as new data from these countries became available during 1956. Other countries with notable increases were the Union of South Africa, where production increased about 3% more than anticipated, and the United States, where a correction was made because of previous error in converting pulled production to greasy shorn basis. Latest estimates of world production for 1956 indicated a further increase of about 4% over 1955. The largest single wool producer, Australia, continued to show the greatest increase, with an 8% gain over 1955 production, while smaller gains were shown by New Zealand and South Africa. Argentina, Uruguay, the United States and the combined

October prices had levelled and appeared to have reached a trading plateau which was expected to hold for the balance of 1956. The United States, despite increased consumption and greatly reduced stocks, was unable to compete in world markets for purchase of wool, relying on its government-owned wools. The world price for apparel wool in September was about \$1.50 per clean pound as compared with \$1.40 per clean pound a year previously and \$1.60 per clean pound in 1954.

Words and Meanings, New. English adds many new words to its vocabulary every year, some destined to live long, others to die soon. The words listed below, pertaining largely to 1955–56, are but a small residue of those collected by the committee preparing this article.

Attention may be called to several groups of the coinages below. As usual, scientific and technological advances were well represented among the new words and meanings: witness “ACLS,” “aerocycle,” “bubble chamber,” “missilry,” “optical amplifier,” “pantobase,” “scatter transmission.” New terms such as “anti-missile missile,” “brinkmanship,” “destalinization,” “enosis,” “open sky,” “Poujadism,” and “redefection” reflected the international scene. The U.S. scene was represented by a number of interesting coinages in a variety of fields: for example, “Americade,” “archesum,” “automatic,” “bait switch,” “exurbanite,” “motelery,” “postdebutante,” “soil bank,” and “squirrel.”

The words listed below became prominent or were seemingly used for the first time during 1955 and 1956. Dates within the parentheses following a word or definition indicate the first recorded use of the new word or meaning in the files of the committee.

A hyphen preceding the date means that the word or meaning is suspected of being older than the date given. If no date is given, the first record on file is 1956.

- accommodation sale.** The sale of a commodity to another dealer for resale.
- ACLS, Automatic Carrier Landing System,** a device designed to bring an aeroplane down automatically. (1955)
- actual, n.** A motion picture, radio or television program based on a story of something that actually happened. (1955)
- aerocycle, n.** A small helicopter under test by the U.S. army for use by combat infantrymen. (1955)
- aerothermochemistry, n.** The study of the behaviour of burning fuels in gas streams moving at high speed. (1955)
- afterburner, n.** A device for burning gas that passes through to the exhaust pipe of an automobile.
- agribusiness, n.** The various enterprises concerned with farming as a business. (1955)
- air curtain.** A partition of air formed by blowers, which can serve as a door. (1955)
- Air Traffic Control Transponder.** A radar device for spotting and identifying aeroplanes. (1955)
- Americade, n.** An exhibition on wheels which shows the economic future of America. (1955)
- analog correlator.** A computing machine that works with brain waves. (1955)
- anti-missile missile.** A proposed weapon for intercepting guided missiles. (1955)
- anti-proton, n.** The recently discovered negative proton, whose existence long had been suspected. (1951)
- archesum, n.** Term coined by Solomon R. Guggenheim and Frank Lloyd Wright for “a building in which to see the highest.”
- automatic, n.** Football. A sudden change in signals after a line-up. (1955)
- awardee, v.t. Humorous.** To give (one) an award.
- bait switch. Commercial.** The attempt to sell a more expensive product than the one advertised. **bait ad.** (1954)
- barganza, n.** A bargain sale; a group of bargains.
- bounce block stutter.** The repetition of the initial syllable of a word to promote intelligibility (as in aeroplane communication). (1955)
- brainstorming, n.** The co-operative contributing of ideas on a special problem. **brainstorm, v. brainstorm, adj.** (1953)
- brain-washee, n.** One who has been brainwashed. (1955)
- BRANE, Bombing Radar Navigation Equipment,** an electronic device to direct an aeroplane to its target with great accuracy.
- brinkmanship, n.** (By analogy with **gamesmanship**). A policy in international affairs of allowing differences to go to the brink of war before they are resolved.
- brushpicker, n. Commercial.** One who searches in forests for the kind of greenery used by florists in wreaths, sprays and the like. (1955)
- bubble chamber.** A device for detecting and studying high-speed particles;

Estimated World Wool Production

(In greasy shorn pounds)		
Country	1956	1955
Australia	1,399,000,000	1,283,000,000
New Zealand	462,000,000	455,000,000
Argentina	363,000,000	364,000,000
Uruguay	200,000,000	198,000,000
South Africa	313,000,000	306,000,000
United States	302,000,000	304,000,000
Total	3,039,000,000	2,910,000,000
Others	1,761,000,000	1,701,000,000
Grand total	4,800,000,000	4,611,000,000*

*Revised.

Source: Computed by the New York Wool Exchange from data released by the U.S. Department of Commerce and the International Wool Secretariat.

minor producing countries showed very little change from 1955. Consumption of wool in the world continued to make steady gains throughout 1955 and the first half of 1956, tending to increase in the same proportion as production. The United States continued to lead the way during the first half of 1956 with an approximate 8% gain in consumption over the corresponding period of 1955, while France, the United Kingdom and Japan also showed considerable gains.

Prices in the dominion auctions maintained a firm trend from mid-Oct. 1955 to the closing sales in July 1956, and stability of wool prices was a significant feature of the season. The end of the season showed Merino prices approximately 20%–25% above the level of the opening sales, while crossbreds were slightly more than 4% higher. The steady level of prices plus improved consumption were factors in the excellent clearances of wool from all markets, despite various stoppages occasioned by labour disputes. Strengthened world prices along with increased consumption were helpful in reducing stocks of South American wools which had accumulated the previous year. By taking approximately the same total as a year before, the British Commonwealth remained the largest purchaser of dominion wools, while Japan increased its purchases by 60% and the U.S.S.R. more than doubled the amount taken during the previous season. The United States took 5% less from the dominion but increased purchases from South America.

The dominion auctions reopened in late August and early September approximately 5% above the June closing levels and continued to show considerable firmness through the first month of sales. This strengthening move appeared to have been brought about by several temporary factors contributing to the reduced stocks and increased consumption in several of the major consuming countries. The Suez canal crisis together with Australian floods and shearing disputes caused considerable concern over early availability of Australian wools, thus encouraging and crystallizing earlier buying activity in that market. By mid-

it uses a super-heated liquid instead of vapour, as does the cloud chamber. (1954)

- canyoneer, n.** One who runs western rivers in various types of small boats.
- canyoneering, n.**
- channelize, v.t. Specif.** To control traffic turns by curbs and dividers.
- channelization, n.** (1950)
- cinematogenic, adj.** Suitable for filming. (1955)
- combustology, n.** The study of combustion. (1955)
- cool, adj.** Not radioactive; not contaminated. (1955)
- coronarian, n.** One who has suffered a coronary thrombosis. (1955)
- cytoanalyzer, n.** An electronic device for detecting diseased cells. (1955)
- destalinization, n.** The systematic deflation of the reputation of Soviet marshal Joseph V. Stalin. **de-Stalinize, v.** (1952)
- discounter, n.** A discount house. (1954)
- enosis, n.** Union, specif., of Greece and Cyprus. (1954)
- ES, Enhancing Substance, a natural body chemical.**
- Euratom, n.** A projected European atomic pool.
- exurb, n.** Short for **exurbia** (which see).
- exurban, n.** An **exurbanite** (which see).
- exurbanite, n.** A person who, having abandoned living in a city, keeps his city ways in his new abode. (1955)
- exurbia, n.** A country or suburban area where most city ways are maintained.
- fishyback, n. as adj.** The moving of a trailer-truck by ship. (1954)
- frigate, n.** A ship for launching guided missiles. (1955)
- frontage road.** On a limited access highway, a turnout road usually for a filling station or restaurant.
- greylisted, adj.** Partly, not completely, blacklisted.
- ground cushion.** A buoyant cushion of air between an aeroplane and the ground which helps the aeroplane to rise. (1954)
- head shrinker. Slang.** A psychiatrist. (1953)
- heart-cast, n.** A "broadcast" record of heart action. (1955)
- heat barrier.** The barrier set up by the heat generated by air friction on aeroplane surfaces at very high speeds, as a result of which materials tend to break down and lose their strength. (1955) Also **thermal barrier.** (1953)
- hero sandwich.** A sandwich made with a whole loaf of bread. (1955)
- industrial park.** A commercial-industrial area, out of the centre of a city, well landscaped, having good parking space, and not clashing architecturally with neighbouring residential areas. Also **industrial district.** (1953)
- lay-off pay.** Guaranteed annual wage. (1955)
- majoritarian, adj.** Ruled by the beliefs of the majority. (1955)
- master speech. Politics.** A document outlining campaign arguments, prepared by the central agency of a party. (1954)
- microcopy, n.** A copy of a document in microscopic form: microcard, microfilm or microprint. (-1955)
- missilry, n.** Guided missiles considered collectively.
- mortgage warehousing.** The use of commercial bank credit on an interim basis by mortgage lenders.
- motelery, n.** A huge, luxurious hotel designed for leisurely modern living, with some of the advantages of motels.
- open sky, n. as adj.** Descriptive of a plan for mutual aeroplane inspection of the military installations of two or more countries. (1955)
- optical amplifier.** An electronic device for seeing in the dark, used by the U.S. air force. (1955)
- orphan virus.** An unidentified virus.
- overage, n.** The excess of cost over estimate or contract price. (1955)
- Palouse, n.** A breed of hog.
- pantobase, n.** An aeroplane capable of using either land or water as a base. (1955)
- parentectomy, n.** The separation of an ill child from his home environment. (1955)
- partial wall.** An incomplete wall (in height or width) between two "activity areas" in a house. (1955)
- peace of mind drugs.** Drugs for mental ills. (1955)
- Pentamic Army.** A U.S. army fighting force with five battle groups to a division.
- philanthropoid, n.** One who disburses the money of a foundation. (-1955)
- philanthropoidal, adj.** (1955) -ally, adv. (1955)
- phonic, adj.** Powered by light. (1955)
- postdebutante, n.** A young unmarried woman who has had her debut. (-1956)
- Poujadism, n.** In France, resistance to taxes. **Poujadist, n.**
- ramped stage.** A stage sloping up at the rear, to give better perspective.
- redefection, n.** The returning of exiles to their native country. (1955)
- roll on, roll off, n. & adj.** The system of shipping via water in which large loaded crates, trucks and railroad cars are rolled onto a ship at a port and rolled off at another.
- rollout, n.** The rolling of an aeroplane from a production line.
- SAGE, Semi-Automatic Ground Environment, an air defense system.** (1955)
- sateloid, n.** A vehicle combining the features of an aeroplane and a space ship. (1955)
- scatter transmission.** The transmitting of very short radio waves to distances beyond the range of normal reception by virtue of scattering from irregularities in the high atmosphere. (-1955)
- sew-off, n.** (By analogy with **play-off**) A final contest among home-seamstresses.
- snowcat, n.** A snow tractor. (1952)
- soil bank.** Acreage taken out of production and improved in one way or another under government subsidy. (1955)
- solifosis, n. (solitude + neurosis)** Science-fiction term for hallucinations. (1955)
- split-time, n.** A daylight-saving time using a half-hour rather than an hour advance.
- SQ, survival quotient, the factors that promote long life.** (1954)
- squalorologist, n.** A writer stressing unpleasant matters. (1955)
- squirrel, n.** An irresponsible hotrodder. (1954)
- steel band.** A band using instruments made from oil drums. (-1955)
- stereosonic, adj. Brit.** Descriptive of three-dimensional tape recording. (1955)
- storm tracker.** A device for gathering weather data.
- strap, n. Slang.** A bundle of hundred-dollar bills. (1955)
- taxmanship, n.** The strategy of avoiding taxes through legal means. (1955)

tear-away jersey. A football jersey that tears easily and cannot be used to keep a player from running when grasped by an opponent.

- tele-census, n.** Census of television owners' interests. (1955)
- thermal barrier, thermal thicket. See heat barrier.**
- traffic separator.** A strip between two directions of traffic. (1955)
- tranquillizer, n. Specif.** A drug designed to reduce tensions. (1953)
- voice-tap, n. as adj.** The electronic recording of talk. (1955) **voice-tapping, n.** (1955)
- VTOL, vertical take-off and landing aircraft.**
- wine-mobile, n.** An automobile that dispenses wines.
- wolf-whistle, v.t.** To whistle in a certain manner to indicate high approval of the physical attributes of a young woman. (1955) **n.** (1940)
- zigzag eating.** The shifting of the fork from one hand to the other in eating. (I. W. R.)

World Assembly for Moral Re-Armament.

"This Is The Future" was the theme of World Assemblies for Moral Re-Armament held at Mackinac Island, Mich., and Caux, Switz., in 1956. A world ideological mission of more than 300 persons travelled through Scandinavia, France, Germany, Switzerland, Italy, the Netherlands and Great Britain at the invitation of national leaders. Accompanying the mission was the musical play *The Vanishing Island*, which had played to 418,000 people, the leadership of 1,000,000,000 people, in 26 countries of Asia, Africa and Europe in 14 months since its launching from Washington, D.C., in June 1955.

In inviting the mission to west Germany, Chancellor Konrad Adenauer welcomed "an ideology which can bring clarity and a moral force to shape international relations." In Paris, Fr., the Catholic philosopher, Gabriel Marcel, wrote: "It is a hope; perhaps even *the* hope." The Sultan of Morocco urged that a Moral Re-Armament assembly be held in his country to bring to all North Africa the unity which had been initiated in Morocco. He said, "Moral Re-Armament brings an answer to all the problems that divide men and nations."

Frank N. D. Buchman, initiator of Moral Re-Armament, returned to the U.S. to open the Mackinac assembly at the invitation of 62 members of congress. The all-African play *Freedom* had its U.S. *première* at the Mackinac assembly. Written and produced by 27 Africans from all parts of that continent, it had been seen by 30,000 persons in eight capitals of Europe. The Mackinac assembly drew more than 1,500 delegates from 45 countries, including parliament members, diplomats and official government representatives from 15 nations of Asia, Africa, Europe, and North and South America.

The World assembly at Caux, which had drawn 90,000 persons from 121 nations since 1946, marked its 10th anniversary in July 1956. There, leaders from every continent gave evidence of the answers Moral Re-Armament brought to class, racial, industrial and international conflicts. (F. N. D. B.)

World Health Organization.

The World Health organization (WHO) became a specialized agency of the United Nations on Sept. 1, 1948, when 26 countries had ratified its constitution, and by 1956 comprised 84 full member states and 4 associate members.

The work of WHO on communicable diseases reached a stage in 1956 at which it became possible to review the activities of the last several years with a sense of perspective and to look into the future with the hope that, by using similar methods of approach, results could be obtained in the fight against many communicable diseases as important as those achieved against malaria, the endemic treponematoses and smallpox. For these

infections there were available public health techniques of eradication.

In the case of most other communicable diseases, knowledge had not reached a point where eradication could be considered, but a beginning had been made toward their control. In recent years the most dramatic achievement in this field had been the development of a vaccine against poliomyelitis. It was clear that, for countries with a high incidence of the paralytic form of this disease, the vaccine presented an effective means of reducing the serious consequences of infection. Equally, it had been confirmed that BCG vaccination had a real effect in reducing the extent of tuberculosis, although it must be combined with a program of case finding and treatment to bring tuberculosis under control. In the fight against trachoma, it had been established that both the frequency and duration of treatment could be reduced and that, by suitable training for school teachers and others, mass treatment was a practical proposition. Equally, the discovery of sulphone drugs effective against leprosy had favourably changed the prospects for control of that disease.

During the first year after the eighth World Health assembly resolved to recommend malaria eradication, many governments accepted the policy and were attempting to reach this goal. The new policy was confirmed by the ninth World Health assembly (1956) and a number of meetings were organized in many parts of the world to implement it.

During the year, WHO personnel were engaged in malaria projects in 34 areas in all the WHO regions, except Europe, including new projects in Ethiopia and the Sudan.

Mass campaigns against endemic treponematoses (endemic syphilis and yaws) assisted by WHO and UNICEF had reached 55,000,000 people examined and 16,000,000 treated by the end of 1956, in a number of countries in the Americas, the eastern Mediterranean, southeast Asia, Africa and the western Pacific. Several new antiyaws projects were started during the year.

It was becoming clear that the elimination of syphilis and other venereal infections in the more developed countries could not be regarded as really accomplished if important reservoirs remained in other parts of the world. This situation called for the maintenance and close integration of a co-operative, international, long-range control program of venereal diseases and treponematoses, as resolved by the International Symposium on Venereal Diseases and Treponematoses at Washington, D.C., organized jointly by the U.S. public health service and WHO in May 1956 and attended by about 500 medical officers.

WHO was actively assisting member countries to develop public mental health services. In Jordan a psychiatric hospital was being reorganized on modern lines with the assistance of a WHO psychiatric consultant. In Thailand a WHO expert had inaugurated training programs in the field of child psychiatry and assisted the government in improving its mental health services. WHO was assisting the All-India Institute of Mental Health in extending training programs.

A tremendous expansion took place during 1956 in maternal and child health work, often with assistance from UNICEF, with the object of including health programs for mothers and children within the broader scope of general health services. Latin America was leading in this field. In India a wide range of maternal and child health activities, including training, had been incorporated in nine state public health programs, with two additional ones in the planning stage. These programs were expected to reach 260,000,000 people, equal to more than 70% of the total population of India. Forty-six WHO personnel were participating in this work.

Technical discussions at the 9th World Health assembly were concerned with nurses, their education and their role in health programs. Delegations of 21 member states to the assembly in-

cluded nursing experts. It was the first occasion on which doctors, health administrators and nurses jointly considered problems of nursing on an international basis. Assistance to governments in the training of nurses and midwives was expanded and during 1956 there were 191 WHO nurses thus occupied in 43 countries. A consultant on psychiatric nursing was made available to five countries. Three regional nursing conferences were held during the year.

A dental health officer was also appointed during the year.

Increasing attention was being paid by WHO to the health problems raised by the use of atomic energy. WHO's program in the field of atomic energy was established under the following principal heads: (1) training of specialists for protection work in atomic energy laboratories or plants, of public health administrators in the disposal of radioactive wastes and the siting of reactors and of medical personnel in the uses of radioisotopes; (2) establishing an interchange of information service on medical problems of atomic energy and medical use of isotopes; (3) determining the extent of health problems raised by building reactors and the disposal of radioactive wastes from factories, laboratories and hospitals; (4) standardization of radiation units and radioisotopes for medical use; and (5) stimulation and co-ordination of research on health aspects of radiation, including its genetic effects.

By the end of 1956 the number of fellowships awarded by WHO, mostly for postgraduate or other specialist training in medical and allied subjects, had reached 6,000 since its inception in 1947. Visiting professors, teaching special subjects, spent 335 months during 1956 in 17 different countries under WHO's auspices.

The ninth World Health assembly met in Geneva, Switz., during May 1956 and adopted an effective working budget of \$10,700,000 for 1957. While the expected contribution to WHO's work from the UN expanded program of technical assistance fell somewhat short of the anticipated amount of \$5,000,000, the assembly was informed that the financial position of WHO was better than ever before so far as payment of contributions due under the regular budget was concerned. Full membership in the organization was accorded by the assembly to three newly independent states, Morocco, Sudan and Tunisia, which had previously been associate members. In addition, three new associate members were admitted: Gold Coast, Nigeria and Sierra Leone.

Because the quarantine station at Jedda (Saudi Arabia), created with WHO assistance, was now equipped to handle pilgrim traffic satisfactorily, the special regulations for sanitary control of the traffic were unanimously abolished by the assembly.

The tenth World Health assembly was to be held in Geneva during May 1957.

Wrestling. Dan Hodge of the Sooner Athletic club of Oklahoma and Bill Kerslake of the Case club of Cleveland, O., starred in the 1956 Amateur Athletic union's na-

Free-Style Champions

114.5 lb.—Richard Delgado, San Diego, Calif.
125.5 lb.—Bill Carter, Tulsa Y.M.C.A.
136.5 lb.—Allan Rice, New York A.C.
147.5 lb.—Tommy Evans, Tulsa Y.M.C.A.
160.5 lb.—Bill Fisher, Sooner A.C.
174 lb.—Dan Hodge, Sooner A.C.
191 lb.—Pete Blair, Navy.
Heavyweight—Bill Kerslake, Case A.C.
Team—Sooner A.C.

Graeco-Roman Champions

114.5 lb.—Ray Osborne, San Francisco (Calif.) Olympic club.
125.5 lb.—Jack Blubaugh, Tulsa Y.M.C.A.
136.5 lb.—Allan Rice, New York A.C.
147.5 lb.—Jerry Maurey, Sooner A.C.
160.5 lb.—Khalil Toha, Ford Wrestling club.
174 lb.—Dan Hodge, Sooner A.C.
191 lb.—Ken Maidlow, Michigan State (E. Lansing, Mich.)
Heavyweight—Bill Kerslake, Case A.C.
Team—Tulsa Y.M.C.A.

tional championships held in March at Tulsa, Okla. Hodge, the Oklahoma university (Norman, Okla.) grappler, won 174-lb. titles in both the free-style and Graeco-Roman divisions of wrestling and was chosen to receive the trophy as the outstanding wrestler of the tournament. Kerslake retained heavyweight laurels in both styles of wrestling in addition to winning trophies for the quickest fall and for being the top matman in the Graeco-Roman division. Allan Rice of the New York Athletic club was the only other double winner of the tourney. He triumphed in the 136.5-lb. groups in both divisions.

Olympic Trials.—A record field of 283 competed in national Olympic tryouts at the Hollywood Legion stadium at Los Angeles, Calif., April 29–May 5. Kerslake, Hodge and Rice again were among the leading winners. Kerslake captured the heavyweight berth at free-style and was alternate to Ralph Bartleman of Fort Carson, Colo., in Graeco-Roman. Hodge was the top 174-pounder and Rice the 136.5-lb. leader in the Graeco-Roman group. Bill Smith, New York A.C. 1952 Olympic champion at 160.5 lb., returned to competition and won in the 174-lb. free-style division. Smith was chosen U.S. team captain.

College Wrestling.—Oklahoma A. and M. college (Stillwater, Okla.) won its third consecutive National Collegiate Athletic association team championship at Stillwater in March. Pittsburgh (Pa.) won its third straight title in the Eastern Inter-collegiate Wrestling association while Michigan (Ann Arbor) carried off team honours in the Western (Big Ten) conference. N.C.A.A. victors follow:

115 lb.—Terry McCann, Iowa.
123 lb.—Ed Peery, Pittsburgh.
130 lb.—Myron Roderick, Oklahoma A. and M.
137 lb.—Jim Sinadinos, Michigan State.
147 lb.—Ed Eichelberger, Lehigh.
157 lb.—Larry Tempas, Illinois.
167 lb.—Ed DeWitt, Pittsburgh.
177 lb.—Dan Hodge, Oklahoma.
191 lb.—Ken Lever, Iowa.
Heavyweight—Gordon Roesler, Oklahoma.
Team—Oklahoma A. and M.

(T. V. H.)

Wyoming.

A Rocky mountain state of the United States, 1890, as the 44th state. The name of the state, which means "the end of the plains," was derived from the Delaware Indian language and the Wyoming valley in Pennsylvania. The motto of Wyoming, "Equality state," came from the fact that the state played an important part in the development of woman suffrage in the United States. Wyoming is also known as the "Cowboy state" and the "Sagebrush state." Wyoming ranks 8th in size and 47th in population among the states. The land area is 97,506 sq.mi.; water area, 408 sq.mi. The 1950 census, which gave a total population of 290,529, listed rural inhabitants at 145,911, or 50.2% of the population of the state, and urban at 144,618, or 49.8%. Of the total inhabitants, 270,719 were listed as native white, 2,557 as Negro, 13,290 as foreign-born and 3,963 as non-white. The July 1, 1956, population estimate was 312,000 of which 301,000 was civilian population. The capital is Cheyenne, with a population (1956 estimate) of 35,040. Other cities in Wyoming with populations of 10,000 or more, according to the 1956 estimate, were: Casper, 32,200; Laramie, 15,581; Sheridan, 11,700; and Rock Springs, 11,400.

History.—In the federal legislature, the state of Wyoming was represented in 1956 by a Democratic senator, Joseph C. O'Mahoney, and a Republican senator, Frank A. Barrett. E. Keith Thomson, a Republican representative, was re-elected in the Nov. 1956 election to represent the state in the federal house of representatives. Elected in 1954 to state offices for the term 1955–59 were Milward L. Simpson, governor; Everett T. Copenhaver, secretary of state; Minnie A. Mitchell, auditor; Charles B. Morgan, treasurer; and Velma Linford, state superintendent of

public instruction. The Nov. 1956 elections saw the Republicans lose to the Democrats three seats in the state senate and two seats in the state house of representatives. The state senate was to be composed of 16 Republicans and 11 Democrats, and the state house of 30 Republicans and 26 Democrats, for the period 1956–57.

In the presidential contest, the Republican ticket of Dwight D. Eisenhower and Richard M. Nixon received 60.1% of the votes, as compared with 39.9% to the Democratic candidates, Adlai E. Stevenson and Estes Kefauver. The count was about 74,500 to 49,500 votes.

Education.—In 1955–56 there were 543 elementary and rural schools in Wyoming, with 1,678 elementary teachers and 385 rural teachers and a total enrolment of 53,823. There were 85 accredited high schools with 1,078 teachers and an enrolment of 16,188. State operating expenditures for education in 1955–56 were approximately \$21,850,219. A total of 150 school administrators were employed in the state during this period.

Social Insurance and Assistance, Public Welfare and Related Programs.—Funds spent on public welfare for the period Oct. 1, 1955, to Sept. 30, 1956, were as follows: old-age assistance, \$2,756,346; aid to dependent children, \$779,822; aid to the blind, \$50,742; general welfare, \$347,722; aid to the permanently and totally disabled, \$341,865; and general welfare health, \$476,932. Unemployment insurance payments amounted to \$1,816,176, state unemployment insurance fund; unemployment compensation, veterans, \$80,825; and unemployment compensation, federal employees, \$90,911, making a total of \$1,987,912 for the fiscal year ended June 30, 1956.

Correctional institutions had 377 inmates and operating budgets (for the period July 1, 1955, to June 30, 1957) as follows: state penitentiary at Rawlins, 266 inmates, budget \$515,500, capital outlay \$25,000; penitentiary farm at Riverton, budget \$97,914, capital outlay \$25,000; girls' school at Sheridan, 51 inmates, budget \$225,800, capital outlay \$5,200; industrial institute at Worland, 60 inmates, budget \$249,337, capital outlay, \$104,600.

A home and hospital for the aged, known as the Pioneer Home at Thermopolis, the only state-owned and state-operated home of this type in the United States, was granted a budget of \$239,337, capital outlay \$218,500.

Communications.—During the period July 1, 1955, to June 30, 1956, the Wyoming highway department let approximately 239 contracts amounting to 1,409 mi. for an expenditure of \$31,264,004, of which 74 contracts amounting to \$3,687,325 for a total of 575.1 mi. were for state-county co-operative projects. The highway system in Wyoming consisted of 4,934 mi., of which 1,650.4 mi. were secondary routes. The maintenance budget for the period July 1, 1956, to June 30, 1957, was set at \$3,300,000. There were seven railroads in the state in 1955 with main track mileage (within the state) of 2,385.56. There were 42 commercial and municipal airports and airfields in the state in 1956, of which 2 were used jointly by the military, and 100 private strips. There were 100,000 telephones.

Banking and Finance.—On June 30, 1956, there were 28 state banks with deposits of \$84,080,108 and resources of \$93,654,948. There were 25 na-

Table I.—Principal Crops of Wyoming

tional banks with deposits of \$228,692,121 and resources of \$247,213,154. On Nov. 30, 1956, there were ten savings and loan companies with resources of \$46,500,000. Total state receipts for the period of July 1, 1955, to June 30, 1956, were \$71,982,868. Total disbursements for the same period were \$65,299,397. As of June 30, 1956, the state was obligated for \$3,869,000 worth of revenue bonds (not guaranteed). The state had no general obligation bonds.

Agriculture.—Cash receipts from marketings of crops and livestock and livestock products in 1955 amounted to \$114,796,000. Livestock and livestock products accounted for 77.1% of this total. Cash receipts the first seven months of 1956 were slightly less than those during the same period in 1955.

Drought was again a serious problem in southern and central Wyoming during 1956. Range feed in these areas was in short supply and crop production was below average. Feed supplies for wintering livestock were short, and a large area in southern and central Wyoming was declared a disaster area.

Manufacturing.—According to the 1954 survey of manufactures made by the U.S. bureau of the census, the preliminary report of which was released in 1956, there were in Wyoming in 1954 a total of 329 manufacturing establishments, employing 6,100 workers who received \$26,000,000 in wages during the year. The value added by manufacture was \$50,400,000. The major industry groups were food and kindred products, lumber and wood products, printing and publishing, petroleum and coal products and stone, clay and glass products.

Mineral Production.—Table III shows the tonnage and value of those mineral commodities produced in Wyoming in 1953 and 1954 whose value exceeded \$100,000. In 1954 Wyoming was first among the states in bentonite, with 58% of the U.S. output; third in pumice; and fifth in crude petroleum and phosphate rock. Wyoming ranked 13th in value of its mineral output, with 2.02% of the U.S. total.

ENCYCLOPÆDIA BRITANNICA FILMS.—*Northwestern States*, 2nd ed. (1956); *Wyoming* (1955).

X-Ray and Radiology. L. Lusted and E. Miller described in Aug. 1956 an electronic spot film timer in which the fluoroscopic table top and the fluoroscopic screen mounting were used as calipers to measure the patient's thickness and thus obtained an optimum spot film exposure time. A simple electronic timer and rack were attached to the nonmovable fluoroscopic screen tower. A potentiometer and pinion gear were mounted on the movable fluoroscopic screen support. A gear whose circumference was equal to a distance of travel between 19 and 30 cm. was chosen so that in one rotation of the gear the spot film exposure time varied from 0.1 to 2.0 seconds. The authors believed that the spot film background density thus obtained was more constant than that obtained with phototiming or conventional time exposure techniques. In their hospital, prior to the use of this electronic timer, a large percentage of the spot films were discarded as unsatisfactory as a result of improper exposure. After installation no films were discarded for this reason.

The determination of the individual dosage of the radioactive isotope I^{131} , used in the treatment of hyperthyroidism, depends on a clinical estimate of the weight of the thyroid gland. This had led, in a number of cases, to subtherapeutic effects and, in others, to overdosage. V. Franco and M. Quina presented a new method for determining the volume and mass of the thyroid gland by radiographic methods. Oxygen was insufflated by skin puncture of the infrahyoid region of the neck and after the needle had passed through the fascial planes. Approximately 150 c.c. of oxygen were used. This outlined the thyroid gland on radiographs of the neck taken in the anteroposterior and lateral projections. Using a geometric method, the authors determined the weight of the thyroid gland and in no case was the error greater than 10%. No complications were observed in treating 60 patients with the use of pneumothroid. This procedure was not used in patients with evident signs of cardiac insufficiency.

N. Leone *et al.* reported the X-ray findings and bone changes in 237 persons, approximately one-half (116) of whom resided in a high fluoride area (8 parts fluoride per 1,000,000 parts water), and the other half (121) of whom resided in a low fluoride area (0.4 parts fluoride per 1,000,000 parts water). X-rays of the thoracic, lumbosacral spine and pelvis, to include the upper third of each femur, were made of each participant in 1943. Similar studies were again made in 1953. The authors concluded that excessive fluorides in a water supply (8 parts

X-RAY OF A GASOLINE ENGINE, believed to be the first ever made of machined equipment, accomplished by a stroboscopy process developed by General Electric company in 1956. Using radiation pulses of a 5,000,000 to 15,000,000-volt betatron, engineers were able to obtain slow-motion and stop-motion photographs of the two-horsepower, four-cycle engine in action

per 1,000,000), may have produced roentgenographic evidence of bone change; however, these changes only occurred in a select few (approximately 10% to 15%) and were then slight, difficult to recognize and in most instances were equivocal in degree. These changes were not associated with other physical findings, except for dental mottling in those persons who had resided in the high fluoride area during the tooth-formation period (up to 8 years of age). Also, these changes could not be ascribed to excessive fluorides alone.

R. Fishman and L. Citrin developed a new technique for implantation of radium needles which not only avoided excessive exposures but also allowed for more accurate placement. They used a plastic sheath with dummy needles made of stainless steel Kirschner wire of the same length and diameter as the radium needles. These were inserted into the lesion and then their location was carefully checked by X-ray films. After corrections were made and the dummy implant considered satisfactory, the radium needles were brought into the room and each dummy needle was rapidly replaced by its corresponding radium needle, leaving the plastic sheath in place.

Radiation therapy for peptic ulcer had been used at The University of Chicago since 1937. The rationale was that a depression of the acid secretions by the stomach would facilitate healing of the ulcer. This had been used in addition to the routine medical program of hospitalization, diet, milk, cream and antacids. Two groups of patients were observed and followed—one large group who had stomach ulcers and the other large group who had duodenal ulcers. Both groups, prior to radiation therapy, had one or more recurrences of ulcer symptoms. Following radiation therapy, the results showed that in the gastric ulcer group 53% had no recurrences and in the duodenal ulcer group 66% had no recurrences. In 79% of the patients there was an immediate reduction of the acid secretion by 50% or more. In no instance

did an ulcer fail to heal where there was an acidity for three months or longer. The authors concluded that radiation therapy to the stomach was a safe and useful adjunct to the medical management of peptic ulcer.

Recurrent cancer of the cervix was a concern of many physicians. Once a patient with cervical cancer had received an initial intensive course of radium and X-ray therapy, it had been thought that further radiation was contraindicated because of the disastrous complications. W. Murphy and A. Schmitz reported a series of 46 patients who had been reirradiated between the years 1946 to 1950 for recurrent carcinoma of the cervix. Some had been treated with external irradiation only, some with radium and the remainder with a combination of radium and external irradiation. They found that of the 46 patients, 9 were alive and without evidence of cancer more than six years following retreatment. They felt that retreatment was an indicated and hopeful procedure, particularly where recurrent pelvic involvement was limited. The complications, which were calculated risks, were minimized by prompt and adequate medical and nursing care. All the surviving patients, at the time of the report, were active and relatively comfortable. One patient had chronic proctitis, one had chronic cystitis, one had chronic cystitis and proctitis and two patients had rectovaginal fistula.

Yachting. Carleton Mitchell's 38 ft. 7½ in. centreboard yawl "Finisterre" from Annapolis, Md., made a remarkable ocean racing record during 1956. Starting in Florida waters early in the year, "Finisterre" won first places in the St. Petersburg-Havana, Lipton cup and Nassau cup races; finished second to Luis H. Vidana's big Cuban yawl "Criollo," in the Miami-Nassau race; and fourth in the Ft. Lauderdale-Bimini race, which was won by "Comanche," John W. Price, of Miami.

Coming north, "Finisterre," one of the smallest of the record fleet of 89 starters in the race from Newport, R.I., to Bermuda—top event of the year in ocean racing—won the over-all Bermuda trophy as well as the Class D prize.

Other class winners in the Bermuda race were DeCoursey Fales' 28-year-old schooner "Niña" in Class A and two new centreboard yawls, Richard S. Nye's "Carina" in Class B and William T. Snaith's "Figaro" in Class C. A new record for the 635-mi. Bermuda course was made by the first boat to finish, the 73-ft. yawl "Bolero," sailing under the Swedish colours of Sven Salen. Her time was 70 hr. 11 min. 37 sec. bettering by 1 hr. 24 min. 6 sec. the mark set by "Highland Light" in 1932.

Big fleets were the order of the season in distance races, topped by 198 sail in the Newport Harbor, Calif., to Acapulco, Mex., race in May 1956. Winners were "Cynjo," Gordon Alles, in the heavy displacement division; "Altamar," Rux Smith, light displacement; "Jinker," Clark Sweet, arbitrary handicap; and "Sirius," Howard Ahmanson, first to finish.

Other major distance races off the west coast were the 1,430-mi., 24-boat race from San Diego, Calif., to Acapulco, Mex., won by the 37-ft. "Eventide," Stephen M. Newmark, of Los Angeles, Calif.; the 3,671-mi. race from Los Angeles to Tahiti, won by "Jada," William Sturgess of Los Angeles, among five

starters; and in the northwest the Swiftsure Lightship race won by "Adios," Carl Jensen of Seattle, Wash., and the Tri-Island series in Seattle waters, won by "Rebel," Douglas Sherwood.

Among many ocean races on the east coast were the Storm Trysail club's Block Island race, won by the 40-ft. yawl "Golliwogg," Colin E. Ratsey; the Stamford-Vineyard race, won by Walter H. Wheeler, Jr.'s 30-year-old, 71-ft. British-built yawl "Cotton Blossom IV"; and the Portland (Me.)-Monhegan race won for the fifth time by Edmund S. Kelley in the sloop "Departure."

Three yachts from the U.S. were among 26 starters in the Buenos Aires-Rio de Janeiro 1,200-mi. South Atlantic race, but none placed well and the Argentine Naval academy's big yawl "Fortuna" was the winner.

The Great Lakes'-Mackinac races drew good fleets, that from Port Huron, Mich., being won by the sloop "Gypsy," Joseph Schoendorf, Jr., of Milwaukee, Wis., and that from Chicago, Ill., by Nick Geib's yawl "Fleetwood."

An outstanding deep-sea event was the Tall Ships race from Torquay, Eng., to Lisbon, Port., which brought out a fleet of big square-rigged and fore-and-aft sail training vessels of various nations. However, the winner was a smaller craft, a 90-ft. British ketch, "Moyana," which was lost in a Channel gale on the way home from Lisbon.

An outstanding east coast yacht which stood out in the annual cruises of the New York and Eastern Yacht clubs was Bradley P. Noyes' centreboard yawl "Tioga." She took the Eastern's historic Puritan cup and on the New York cruise was a winner in several port-to-port races and took the Astor and Una cups. "Niña" won the Queens cup.

Individual sailing championships, conducted under North American Yacht Racing union auspices, were well distributed geographically. Mrs. Glenn H. Lattimore's Ft. Worth, Tex., crew took the Mrs. C. F. Adams (women's title) trophy away from the northeast coastal area for the first time. Ted Hood's Marblehead crew captured the Mallory (men's) trophy from Seattle, Wash., but a Seattle Corinthian Yacht club crew steered by Alan Holt took the Sears (junior) cup back to Seattle to replace it.

U.S. intercollegiate sailing competition reached a climax in the spring regatta in which a team from the Pacific coast I-C.Y.R.A. won the Lipton team race trophy and the Naval academy crews broke a 14-year reign of New England colleges in taking the Morss trophy, emblematic of national college sailing championship.

The supremacy of Canada in the North American affairs of the international six-meter class was demonstrated on Long Island sound when "Buzzy III," a new boat from Toronto sailed by William Gooderham, won the North American championship series; then led a three-boat Royal Canadian Yacht club team that beat the U.S. in a team series. Following that, Gooderham switched to the helm of "Titia," another Toronto boat, and took the 61-year-old Seawanbaka cup back to Canada for the first time since 1905.

The class that it was believed might supplant the sixes in international racing, the smaller and less costly 5.5-meters, of which Prince Olaf's "Norna VIII" won the Scandinavian Gold cup competition in European waters, was active in America. Its outstanding boat was the Swedish-built "Rush IV," owned by Victor F. Sheronas of Philadelphia, Pa., and steered in most of her races by Ensign Andy Schoettle, U.S. navy. She dominated class competition from its opening series in Bermuda in April through the U.S. Olympic trials in August, although one of the new American-built boats, the Hunt-designed "Quixotic," out-sailed her at times.

National and international competition in leading one-design classes produced the following champion skippers in 1956: Star

class—world champion, Capt. Agostino Straulino of the Italian navy (first three-time world champion of Stars); North American champion, Howard Lippincott of New Jersey. Lightning class—William S. Cox, Darien, Conn., international; Julio Cesar Goldie, Uruguay, Pan-American. Comet class—Wayne Diller, of Stone Harbor, N.J. Snipe class (U.S.)—Clark King, of Los Angeles. 110 class—Malcolm MacNaught, Hingham, Mass. 210 class—F. Gregg Bemis, Cohasset, Mass. Thistle class—Gordon Douglass, Mentor Harbor, O. Raven class—Robert Polhemus, Noroton, Conn. L-16 class—G. Shelby Friedrichs, New Orleans, La. Highlander class—Ray McLeod, Mentor Harbor. Y Flyer class—William Perry, Atlanta, Ga. (international); Hugh Carmichael, Deep River, Que. (Canadian). Flatties—John L. Williams, Portland, Ore.

Yellow Fever: see TROPICAL DISEASES.

Yemen. An Arab kingdom in the southwestern coastal region of the Arabian peninsula, Yemen lies between Saudi Arabia (northwest and northeast), Aden (southeast) and the Red sea (southwest). Area: 75,290 sq.mi. Pop. (1953 est.) 4,500,000. Language: Arabic. Religion: Moslem. Chief towns (pop., est.): Sana (cap.) 50,000; Taiz (seat of Imam) 12,000; Hodeida (port) 30,000. Imam (king): Ahmed ibn Yehya Hamid ed-Din; prime minister in 1956, Crown Prince Seif ul-Islam el-Badr.

History.—The renewal of Yemen's treaty of friendship with the U.S.S.R. in Nov. 1955 was followed in 1956 by the ostentatious development of relations between the two countries. Soviet and Czechoslovak trade missions visited Yemen, and the crown prince of Yemen visited Moscow—the first visit to be paid to the Soviet capital by any Arab leader. Diplomatic representation was established between the U.S.S.R. and Yemen and a trade agreement was concluded, by the terms of which the U.S.S.R. undertook to supply Yemen with agricultural machinery, oil products, wheat and rice, and to finance certain economic projects in Yemen. In return Yemen agreed to supply the U.S.S.R. with various agricultural products and was said to have agreed to keep out of middle east defensive alliances. However, on April 21 such a pact was signed with Egypt and Saudi Arabia.

While the rapprochement with the U.S.S.R. was going on, relations between Yemen and Great Britain were deteriorating. In addition to differences over the Aden protectorate, a dispute arose concerning the island of Kamaran in the Red sea, which had been under British control since 1915 and had been formally administered by the governor of Aden since 1949. When the British government granted an oil concession in the island to a British company Yemen protested on the grounds that Kamaran was Yemeni territory. Great Britain rejected the protest.

(E. S. AH.)

Agriculture.—Main crops: coffee (metric tons, 1954) 4,200, (1953) 4,800; wheat, barley and millet.

Finance.—Monetary unit, Maria Theresa dollar, called the riyal, nominally equal to 1 Indian rupee with an exchange rate of 4.76 riyals to the U.S.\$1.

Foreign Trade.—Trade with the U.K. (1954; 1955 in parentheses): imports £4,000 (£8,000).

Yiddish Literature: see JEWISH LITERATURE.

START OF THE RACE from Torquay, Eng., to Lisbon, Port., July 7, 1956

Young Women's Christian Association: see SOCIETIES AND ASSOCIATIONS, U.S.

Yugoslavia. A federal people's republic of southeastern Europe, Yugoslavia is bounded north by Austria, north and northeast by Hungary and Rumania, east by Bulgaria, south by Greece and west by Albania, the Adriatic sea and Italy. Area: 98,766 sq.mi. Pop.: (1953 census) 16,989,164; (1956 est.) 17,853,000.

Federal republics	Population (1953 census)	Capital	Population (1953 census)
Serbia*	6,983,544	Belgrade	469,988
Croatia	3,936,642	Zagreb	350,452
Slovenia	1,501,961	Ljubljana	138,211
Bosnia-Herzegovina	2,843,486	Sarajevo	135,657
Macedonia	1,303,906	Skopje	121,551
Montenegro (Crnagora)	419,625	Titograd	16,333

*Including the autonomous province of Vojvodina (1,713,905) and the autonomous region of Kosovo-Metohija (809,234).

Other towns (pop. 1953 census): Subotica 115,402; Novi Sad 83,223; Maribor 77,124; Split 75,377; Rijeka 75,112; Nis 60,677; Osijek 57,320. Nationalities (1953 census): Serb 41.7%, Croat 23.5%, Slovene 8.8%, Macedonian 5.3%, Montenegrin 2.8%, undefined (Bosnian, Istrian, etc.) 5.9%, other (national minorities) 12%. Religion (1948 est.): Greek Orthodox 49.53%, Roman Catholic 36.7%, other Christian 1.14%, Moslem 12.52%, other 0.11%; at the 1953 census 13.6% replied "no religion." President of the republic, chairman of the federal executive council (government) and supreme commander of the armed forces in 1956, Marshal Tito (Josip Broz) (q.v.).

History.—The most important problem of the year 1956 was that of Yugoslavia's relations with the Soviet Union. In 1955 Tito had accepted the overtures of the Soviet leaders in their capacity as representatives of the Soviet state, but had declined to establish special relations between his party and the Communist party of the Soviet Union. His first departure from this principle was at the time of the 20th congress of the C.P.S.U., in Feb. 1956, when he sent a letter of greetings to the party. A further step came with Tito's official visit to the Soviet Union from June 2 to 23. At the end of the visit two statements were issued. The first was a general declaration on the friendly relations between the two governments. The second was an agreement between the two parties. The two most interesting passages stated that it was "indispensable that the existing contacts between the two parties should develop with a view to co-operation in the

international workers' movement"; and that "holding the view that roads to and conditions of socialist development are different in different countries . . . [they] agreed that co-operation should be based on complete freedom of will and equality."

Relations did not however develop entirely satisfactorily. It is true that the resignation of V. M. Molotov from the Soviet foreign ministry was a welcome gesture to Tito, as was the resignation on July 18 of Matyas Rakosi in Hungary. But during the autumn it transpired that a letter had been circulated from Moscow among the eastern European Communist parties warning them against Tito's example. Ill feeling caused in Belgrade by knowledge of this letter, and possibly also disagreements at the highest political level in Moscow, probably explain the sudden visit of N. S. Khrushchev to Yugoslavia on Sept. 19, and Tito's flight back with him to the Crimea on Sept. 27. At Yalta Tito met also Erno Gero, Rakosi's successor as first secretary of the Hungarian Communist party. Tito was back in Belgrade on Oct. 5, and *Borba* announced on the 12th that the matter of the circular letter "has now been settled." A week later Gero visited Belgrade, and returned to Budapest just before the outbreak of the revolution.

The Yugoslav leaders at first welcomed the Hungarian revolution. They had for some time regarded Imre Nagy with favour. Its later development alarmed them, however, both because it showed that Communist dictatorships can be overthrown by their subjects and because it brought large numbers of Soviet troops close to Yugoslavia's frontiers. On Nov. 4 the Yugoslav government recognized Janos Kadar's "government." That Tito was not happy was revealed when the press published the text of a speech which he had delivered at Pula on Nov. 11. In this he had condemned the first Soviet military intervention in Hungary (Oct. 24), though he accepted the need for the second intervention (Nov. 4). He also stated that the "cult of personality" was a product of the Soviet system. This provoked an angry reply in *Pravda* on Nov. 19, which claimed that some of Tito's remarks were "a repetition of the previous attacks on the Soviet Union which were fashionable in the past when relations between the U.S.S.R. and Yugoslavia had deteriorated." The kidnapping of Imre Nagy by Soviet forces when he left the Yugoslav embassy in Budapest (Nov. 23) increased tension, though official Yugoslav spokesmen blamed the Kadar "government." Yugoslavia's abstention in the various votes on Hungary in the United Nations and its return of about 100 Hungarian refugees were gestures of appeasement to Moscow. That relations were tense, however, was shown by a speech by Edvard Kardelj (Dec. 8) which said that the second Soviet intervention was justifiable only if it truly united all Socialist forces in Hungary, and truly assured the rights of the working class, "otherwise the act of intervention will be historically condemned."

During 1956 Yugoslavia continued to show great interest in the affairs of the "uncommitted" Asian and African nations. In Dec. 1955 Tito had paid a state visit to Ethiopia, and on his return he visited Pres. Gamal Abdel Nasser in Egypt. A communiqué issued by Tito and Nasser invoked the principles of the 1955 Bandung conference, denounced colonialism and ignored the Arab-Israel issue. In a press interview in Cairo Tito denounced the Baghdad pact. During his state visit to Paris in May, Tito showed interest in French North African affairs. Tito was visited in Brioni by Nasser on July 13-14, and on July 18-19 the two were joined by Jawaharlal Nehru. While they were conferring, a four-man delegation of Algerian nationalists headed by Ferhat Abbas visited near-by Pula. They were received by a Yugoslav foreign ministry official, who promised to hand their memorandum to the three statesmen. The visit ended with a communiqué which repeated the usual Bandung platitudes, but had a special passage on Algeria. In the opinion of the three

statesmen, "colonial domination is wholly undesirable"; they felt "sympathy for the desire of the people of Algeria for freedom"; they recognized that there were in Algeria "considerable numbers of persons of European descent whose interests should be protected, but this should not obstruct recognition of the legitimate rights of the Algerians."

In the Suez canal dispute Yugoslavia strongly supported the point of view of the Soviet and Afro-Asian groups.

(See also HUNGARY; RUMANIA; UNION OF SOVIET SOCIALIST REPUBLICS.) (H. S.-W.)

Education.—Schools (1954-55): primary 14,044, pupils 1,401,608, teachers 36,040; middle and secondary 2,106, pupils 523,076, teachers 21,749; vocational (junior and intermediate) 1,074, pupils 139,825, teachers 12,002; fine arts 159, pupils 17,007, teachers 1,954; teacher training colleges 79, students 20,762, teachers 1,499. Institutions of higher education (1954, including fine arts and physical training) 100 with 59,571 students, out of which 84 university colleges with 57,937 students, 5,195 professors and lecturers. Schools for national minorities (including some of the above with special classes): primary 1,562; middle and secondary 312; teacher training schools 8.

Finance and Banking.—Monetary unit: dinar, with an official exchange rate of 300 dinars to the U.S. dollar. Budget: (1955) balanced at 234,410,000,000 dinars; (1956 est.) balanced at 212,500,000,000 dinars. Currency circulation: (Dec. 1953) 68,050,000,000 dinars; (Dec. 1954) 88,211,000,000 dinars. Bank deposits: (Dec. 1953) 75,730,000,000 dinars; (March 1954) 58,190,000,000 dinars. Foreign exchange holdings: (Dec. 1954) U.S. \$7,930,000; (Dec. 1955) U.S. \$12,580,000.

Foreign Trade.—(1955) Imports 132,287,761,000 dinars; exports 76,976,338,000 dinars. Main sources of imports: U.S. and Canada 33%; Germany 13%; Italy 10%; other continental E.P.U. (European Payments union countries) 18%; sterling area 9%. Main destinations of exports: Germany 13%; Italy 16%; other continental E.P.U. 25%; U.S. and Canada 11%; sterling area 9%. Main exports (1953): lumber 23%; lead 8%; copper 5%; corn 2%.

Transport and Communications.—Roads (1954) 81,619 km. Motor vehicles in use (1954): passenger 11,290, commercial 20,260. Railways (1954) 11,622 km.; passenger-km. (1955) 7,432,000,000; freight, ton-km. (1955) 11,376,000,000. Shipping (July 1955): merchant vessels of 100 gross tons and over 166; total tonnage 300,412. Air transport (1955): passenger-km. 49,644,000; cargo, ton-km. 688,800. Telephones (Jan. 1955) 153,000. Radio receiving sets (1954) 496,811.

Agriculture.—Production (metric tons, 1955; 1954 in parentheses): wheat 2,438,000 (1,385,000); barley 391,000 (253,000); oats 278,000 (233,000); rye 263,000 (191,000); maize 3,900,000 (3,004,000); rice 26,000 (26,000); hemp fibre 53,000 (42,200); potatoes 2,260,000 (1,876,000); sunflower seed 102,000 (125,000); dry peas 11,000 (9,000); beet sugar, raw 154,000 (146,000); tobacco (1954) 29,000, (1953) 30,000; dry beans (1954) 173,000, (1953) 149,000; onions (1954) 147,000, (1953) 152,000. Livestock (Jan. 1956): cattle 5,220,000; sheep 11,518,000; pigs 4,699,000; horses 1,311,000; poultry 26,198,000; goats (Sept. 1953) 621,000. Wine (1954) 2,850,000 hl.

Industry.—Fuel and power (metric tons, 1955): coal 1,137,600; lignite 14,028,000; crude oil 256,200; electricity 4,344,000,000 kw.hr.; natural gas 55,080,000 cu.m.; manufactured gas 25,920,000 cu.m. Production (metric tons, 1955): iron ore (45% metal content) 1,398,000; pig iron 530,400; crude steel 805,200; bauxite 791,017; copper ore 1,476,863; lead-zinc ore 1,650,178; pyrites (concentrate) 226,682; antimony ore 80,474; chrome ore 126,207; manganese 10,955; copper 53,097; lead 75,612; zinc 13,767; aluminum blocks 11,499; cement 1,560,000; cotton yarn 38,167; wool yarn 11,127; wood pulp (mechanical) 27,187, (chemical) 54,948; sawn timber 1,873,000 cu.m.

Yukon Territory. The Yukon Territory, most northerly political division of Canada, was constituted a separate territory by act of parliament in June 1898. The area of the territory is 207,076 sq.mi. (205,346 sq.mi. land and 1,730 sq.mi. water). Population (1951 census) 9,096 (including whites 7,533; Indians and Eskimos 1,563); principal centres (1951 census): Whitehorse (capital), 2,594; Dawson, 783; Mayo, 241. Commissioner in 1956, F. H. Collins.

History.—This area remained a centre of interest during 1956, following plans made by the Frobisher-Ventures interests in 1954 to establish a metallurgical and electrochemical industry in northern British Columbia, which included a plan to divert the water of the Yukon through a chain of storage lakes, making it flow southward into Taku river, British Columbia. The Aluminum Company of America (Alcoa) had already spent millions of dollars surveying a scheme that would dam the Yukon's headwaters and turn part of them through the Alaskan panhandle by tunnel to the sea at Taiya, near Skagway, where the largest aluminum industry in the world would be built on U.S. territory. Alcoa expected Canada to allow the alienation of the Yukon river, but the Canadian government rejected the ambitious scheme and the projected development of the panhandle as a great industrial area.

collapsed. At the same time the Frobisher-Ventures project was deadlocked until such a time as the United States and Canadian governments could arrive at some mutual agreement regarding the diversion of Yukon waters and a possible amendment of the Boundary Waters treaty of 1909.

Education.—In 1955 the territory had 16 public schools with 59 teachers and 1,554 pupils. The amount spent on education in 1955-56 was \$482,608.

Communications.—There were 58 mi. of railway in 1956. The Yukon river is 1,979 mi. long, of which 1,777 mi. are navigable (570 mi. within Yukon Territory), offering communication from the end of the railway at Whitehorse to Dawson, but commercial river transportation is no longer available. There were (1955) 1,675 mi. of motor roads and secondary roads, in addition to the Alaska highway, which enters Yukon Territory at Mile 620 and crosses the international boundary into Alaska at Mile 1,221. Commercial air lines provide passenger and express services daily between Vancouver and Whitehorse, and Edmonton and Whitehorse. These services, which extend to Fairbanks, Alsk., connect with transcontinental air lines at Edmonton and Vancouver. A twice-weekly service is maintained from Whitehorse to Mayo and Dawson.

Finance.—Territorial expenditures during 1955 (in Canadian dollars) amounted to \$1,753,660; revenue, \$2,073,062.

Production and Industry.—Mining is the principal occupation. Output in 1955 was: gold, 74,380 fine oz. valued at \$2,567,895; silver, 5,523,165 fine oz., \$4,963,005; lead, 25,760,986 lb., \$3,704,430. The total value of mineral production in 1955 was \$14,406,158, including cadmium and zinc.

Furs and Game.—The fur yield for the year ending June 30, 1955, totalled 213,515 pelts valued at \$242,944. Squirrel, muskrat, beaver and marten constituted the major part of the catch. (P. H. GL.)

ENCYCLOPEDIA BRITANNICA FILMS.—*Pacific Canada* (1943).

Zanzibar: see BRITISH EAST AFRICA.

Zinc. The data on zinc were compiled from U.S. bureau of mines reports. Table I gives the chief producers of world supplies of smelter zinc for the years 1949-55.

United States.—In 1955 the U.S. continued as the world's largest producer and consumer of zinc. Although output of domestic recoverable zinc, as shown in Table II, was considerably greater than in 1954, it was still below the 1946-55 average of 592,000 tons. Slab zinc output and consumption attained an all-time high. Imports of slab zinc were 15% greater than in 1954, and imports of zinc in ore and concentrates were 4% greater. The recoverable zinc was mined in the following areas: western states, 55%; states east of the Mississippi, 32%; and west central states, 12%.

Zoology. Animal biology encompasses a large number of independent or semi-independent disciplines. When viewing a broad topic such as zoology one must keep in mind that the really important advances, with application to this subject, may have occurred in quite distant fields. The nature of zoology is such that sudden changes seldom occur; rather, there are periods of shifting emphasis and reorganization of subject matter. The year 1956 was characterized more by the indications of the need for changes than by any actual change. The emphasis was on function rather than structure, on experimental analysis rather than description.

Morphology.—There was a steady growth of knowledge concerning the comparative anatomy of vertebrates. This growth had resulted mainly from the efforts of a few Scandinavians over the preceding ten years and was centred around the study of fossil forms. To interpret and understand the fossils, living forms received renewed attention. Important contributions to existing knowledge of the origin of the vertebrates resulted from detailed studies by Stensiö, Säve-Söderberg, Nielson and Jarvik. The latter described the branchial skeleton of *Eusthenopteron*, thus greatly increasing the knowledge of the Crossopterygii, an important group as regards the origin of the tetrapods. It was hoped that studies of the chondrocranium of the ichthyostegids, perhaps the earliest amphibians, would be forthcoming.

The results of anatomical study of the several specimens of coelacanths (*Latimeria*) in the possession of Millot of Paris were awaited by the zoological world. This was the first time that a "fossil" had been studied in the flesh (at least one that was 50,000,000 years old). The prevalent feeling of excitement stemmed not from the assumption that this fish was close to the tetrapod stem but rather from the hope that expansion of general knowledge would indicate more about this stem. The preliminary account by J. L. B. Smith (*The Search Beneath the Sea*, New York, 1956) indicated that this creature, like the teleosts, has a high level of aquatic specialization and has abandoned or converted many of its primitive features to specialized ones.

Palaeontology again made an important contribution to morphology with the publication of A. S. Romer's *The Osteology of the Reptiles*. Some of the controversy regarding the homology of

VETERINARIAN OF CINCINNATI, O., ZOO attempting to inject wounded tiger with hypodermic as the animal superintendent holds the animal's tail. The tiger, a Bengal male, was attacked by two females in Sept. 1956 and, despite efforts of the zoo officials, died

skull bones was eliminated with a review of the skull in this group. Twenty years had passed since the publication of Westoll's association of the pineal eye with the parietal bones, yet a workable solution to this problem had not been forthcoming.

Worthy of note was Sir Gavin de Beer's summary of knowledge concerning *Archaeopteryx lithographica* (London, 1954). Views concerning the origin of birds seemed to be crystallizing. There was a certain reluctance to view this feathered reptile as anything other than a bird (if lost to the ornithologist, what fossil could replace it?). Somewhat in contradiction to the assumed avian character of these remains is the idea that feathers are associated with maintenance of a high body temperature, as is also the four-chambered heart, and that these must have preceded the acquisition of flight.

Zoologists also contributed to morphology. The new serial publication by Marinelli and Strenger titled *Vergleichende Anatomie und Morphologie* (Vienna) planned to cover in detail the anatomy and development of representative species (12 in all) of the different classes of vertebrates. Many short articles on various anatomical details appeared during the year in the various journals. One of the unfortunate aspects of this type of publication is the scattering of the various contributions. The bibliographic effort required to locate accounts too frequently exceeds their real value.

Not only had existing knowledge of the anatomy of key vertebrates grown, but also that concerning certain invertebrate groups. The translation of Ivanov's description of the Pogonophora, by Petrunkevitch (1955), can be cited along with the, as yet, not realized reaction to Hadzi's conclusions that the Coelenterata are not primitive stem types but rather secondarily developed sessile forms.

The Pogonophora are close to the Enteropneusta and represent another very simple prechordate or chordate group. Use of the term "simple" here brings up the controversy of whether simplicity in many organisms (Protozoa, Coelenterata, Archiannelida) is degeneration or retention of a primitive plan. Resort to degeneration is much too common (carried so far as to say that viruses are disassociated genes and rickettsias are mitochondria with associated deoxyribonucleic acid). The use of life histories to prove degeneration is not particularly satisfying unless the evidence is very clear; in any case, there has been a general feeling of rejection of the biogenetic law (we now talk about palaeogenesis). The present decurrently branched tree of invertebrates no longer seems to be consistent with the central importance of a flatwormlike ancestor for all Eumetazoa.

Embryology.—The development of animals frequently gives important aid in the determination of interrelationships between groups as well as supplying information on mechanisms of growth and differentiation. Both lines of study are pursued with the latter receiving the greater attention. The lack of information available to the morphologist or taxonomist on the development of some of the more critical vertebrate or invertebrate types is surprising. For example, it has been suggested that the phylum Brachiopoda is made up of two unrelated types, yet the developmental picture is not really adequate to support strong argument. Filling gaps in the information concerning the invertebrates were the developmental studies by Sachs (gastrotrichs) and Rattenbury (phoronid). The fertilization process of a sponge was finally worked out in detail by Odette Tuzet.

The vertebrates were recipients of the attention of Emil Witschi (*Development of Vertebrates*, Philadelphia, 1956). Work with marsupials in Australia indicated that some of the usual textbook information relative to reproductive physiology is not generally applicable to all mammals. The development of the skull in various fishes, fundamentally the relationship between dermal plates and sensory organs of the lateral line system, at-

tracted some attention and posed many problems. The embryology of the hagfishes was still known only superficially and was in need of detailed study.

Ecology and Behaviour.—A new dimension was given ecological research by Howard T. Odum's application of the entropy concept. Entropy had been used in the physical sciences and its application to life was followed by rapid adoption. However, its relationship to "primary productivity" and "efficiency" in communities may be somewhat difficult to grasp. An older, simpler topic of ecological investigation involved populations. B. P. Uvarov (Locust Control centre, Oxford) studied the sequential nature of population build-ups in locusts which lead to changes in form and behaviour of the animals and in the outpouring of hordes from the area of origin.

The population growth of man again received attention from Karl Sax in *Standing Room Only: the Challenge of Over-population* (Boston, 1955).

The behaviouristic aspect of zoology received several generous contributions. Konrad Lorenz (*Man Meets Dog*, Boston, 1955) revealed much about "man's best friend." Building on such blocks as this, W. H. Thorpe (*Learning and Instinct in Animals*, Cambridge, Mass., London, 1956) summarized the general ideas of the behaviour of all kinds of animals from the protozoa to the mammals. Heini Hediger (*Studies of the Psychology and Behaviour of Captive Animals in Zoos and Circuses*, London, 1955) detailed points of interest regarding some of the larger and showier mammals, types which are particularly difficult to study in the field (here, one cannot help recall Verheyen's study of the hippopotamus in the Congo).

The reporting of ideas on behaviour took a new slant in two volumes on *Group Processes* sponsored by the Macy foundation and edited by Bertram Schaffer (Madison, N.J., 1955 and 1956). Papers presented before a panel of experts were critically evaluated while being presented; paper, questions, answers and comments were recorded just as they transpired. The result was a condensation of views, a broad coverage of ideas which was refreshingly different.

Taxonomy, Biogeography and Natural History.—Knowledge of birds was reviewed in *Recent Studies in Avian Biology*, edited by Albert Wolfson (Urbana, Ill., 1955). Separate articles considered each facet of subject matter from migration to physiology; and made important contributions to several aspects of general zoology. Regarding birds, there was a return to the controversy of the reality of the palaeognathae versus the neognathae. Although some aspects of this were reported by Hofer (*Acta XI Congressus Internationalis Ornithologici Basel*) and Nils Holmgren, the over-all problem had not been reviewed.

The taxonomic study of fishes was being carried on by numerous osteological studies (Ramaswami and others). The translation of Klaus and Deckert (*Creatures of the Deep Sea*, New York, 1956) brought the deep-sea fishes up to the average reader.

Another aspect of the sea and of fish life was the study of plankton. This was described by A. C. Hardy (*The Open Sea, the World of Plankton*, New York, 1956). The beauty and interest of the minute animals making up this stuff called "plankton" leaves one searching for adjectives.

(See also ENDOCRINOLOGY; GENETICS; MARINE BIOLOGY; PALAEONTOLOGY; PHYSIOLOGY.) (M. J.)

ENCYCLOPÆDIA BRITANNICA FILMS.—*Ants* (1948); *Beach and Sea Animals* (1931); *Beetles* (1931); *Crustaceans* (Lobsters, Barnacles, Shrimp and Their Relatives) (1956); *The Frog* (1931); *Grouse of the Grasslands* (1950); *Honeybee* (1940); *Life Along the Waterways* (1952); *Life in the Desert* (1954); *Life in the Forest* (1955); *Life in the Grasslands* (1954); *Marine Life* (1953); *Mollusks* (Snails, Mussels, Octopuses, and Their Relatives) (1955); *Monarch Butterfly Story* (1951); *Mosquito* (1947); *Pond Life* (1950); *Reptiles* (1955); *Seashore Life* (1950); *Snapping Turtle* (1940); *Spiders*, 2nd ed. (1956); *Sunfish* (1941); *Sunrise Serenade* (1950); *Water Birds* (1945); *Worms* (The Annelida) (1955).

INDEX

The black type entries are article headings and cross references. These black type article entries do not show page notations because they are to be found in their alphabetical position in the body of the book, but they show the dates of the issues of the *Book of the Year* in which the articles appear. For example "Behavioral Sciences 57" indicates that the article "Behavioral Sciences" is to be found in the 1957 *Book of the Year*. The reference "Indochina: see Cambodia; Laos; Vietnam 57, 56. See Indochina 55, 54, 53" indicates that information on "Indochina" is to be found in the articles "Cambodia," "Laos" and "Vietnam" in the 1957 *Book of the Year* and in the 1956 *Book of the Year* but under the heading "Indochina" in the 1955 *Book of the Year*, the 1954 *Book of the Year* and the 1953 *Book of the Year*. All black type entries without dates indicate that the same entries appear in all the past five issues. Examples, not Advertising, 57, 56, 55, 54, 53, but Advertising; not Abyssinia: see Ethiopia 57, 56, 55, 54, 53, but Abyssinia: see Ethiopia.

The light type headings which are indented under black type article headings and cross references refer to articles elsewhere in the text (of this issue only) related to the entry listed in black type. The light type headings which are not indented refer to information in the text not given a special article. Those which show page references refer to this issue only. Those which refer to the article **Obituaries** are followed by the date of issue in which the obituary appears.

All headings whether consisting of a single word or more are treated for the purpose of alphabetization as single complete headings. Names beginning with "Mc" and "Mac" are alphabetized as "Mac"; "St." is treated as "Saint." All references below show the exact quarter of the page by means of the letters *a*, *b*, *c*, and *d*, signifying respectively the upper and lower halves of the first column and the upper and lower halves of the second column.
